The President and Fellows of Yale University

President
Richard Charles Levin, B.A., B.Litt., Ph.D.

Fellows
His Excellency the Governor of Connecticut, ex officio
Her Honor the Lieutenant Governor of Connecticut, ex officio
Byron Gerald Auguste, B.A., Ph.D., Washington, D.C.
George Leonard Baker, Jr., B.A., M.B.A., Palo Alto, California
Edward Perry Bass, B.S., Fort Worth, Texas
Francisco Gonzalez Cigarroa, B.S., M.D., Austin, Texas (June 2016)
Peter Brendan Dervan, B.S., Ph.D., San Marino, California (June 2014)
Donna Lee Dubinsky, B.A., M.B.A., Portola Valley, California
Mimi Gardner Gates, B.A., M.A., Ph.D., Seattle, Washington (June 2013)
Paul Lewis Joskow, B.A., Ph.D., Locust Valley, New York
Indra Nooyi, B.S., M.B.A., M.P.P.M., Greenwich, Connecticut
Emmett John Rice, Jr., B.A., M.B.A., Bethesda, Maryland (June 2017)
Fareed Zakaria, B.A., Ph.D., New York, New York
The Officers of Yale University

President
Richard Charles Levin, B.A., B.Litt., Ph.D.

Provost
Peter Salovey, A.B., M.A., Ph.D.

Vice President and Secretary
Linda Koch Lorimer, B.A., J.D.

Vice President and General Counsel
Dorothy Kathryn Robinson, B.A., J.D.

Vice President for New Haven and State Affairs and Campus Development
Bruce Donald Alexander, B.A., J.D.

Vice President for Development
Ingeborg Theresia Reichenbach, Staatsexamen

Vice President for Finance and Business Operations
Shauna Ryan King, B.S., M.B.A.

Vice President for Human Resources and Administration
Michael Allan Peel, B.S., M.B.A.
The Administration of the Graduate School

Thomas D. Pollard, M.D., Dean of the Graduate School
Pamela Schirmeister, Ph.D., Associate Dean of the Graduate School
Richard G. Sleight, Ph.D., Associate Dean of the Graduate School
Edward Barnaby, Ph.D., Assistant Dean of the Graduate School
Robert Harper-Mangels, Ph.D., Assistant Dean of the Graduate School
Michelle Nearon, Ph.D., Assistant Dean and Director, Office for Diversity and Equal Opportunity
Victoria A. Blodgett, M.Ed., Assistant Dean and Director, Graduate Career Services, McDougal Graduate Student Center
Lisa Brandes, Ph.D., Assistant Dean for Student Affairs and Director, Graduate Student Life, McDougal Graduate Student Center
Elena D. Kallestinova, Ph.D., Director, Graduate Writing Center, McDougal Graduate Student Center
Jennifer Mendelsohn, M.S., Associate Director, Graduate Student Life, McDougal Graduate Student Center
William C. Rando, Ph.D., Assistant Dean and Director, Graduate Teaching Center, McDougal Graduate Student Center
Jennifer Frederick, Ph.D., Associate Director, Science Education, Graduate Teaching Center, McDougal Graduate Student Center
Robert Colonna, M.B.A., Director of Admissions
Lisa Furino, Assistant Director of Admissions
Jane Lee, M.B.A., Director of Business Operations
Jennifer Brinley, B.S., Director, Financial Aid
Gabriel G. Olszewski, M.A., University Registrar
Stephen Goot, M.A., Deputy Registrar, Faculty of Arts and Sciences
Judith Dozier Hackman, Ph.D., Director, Teaching Fellow Program
Howard el-Yasin, M.A., Assistant Director, Teaching Fellow Program

A Message from the Dean

Welcome to the Graduate School of Arts and Sciences at Yale University, the first of its kind in North America. The Graduate School stands at the very heart of Yale’s mission as a university, and this publication, Programs and Policies, reveals the extraordinary breadth of opportunities for graduate study at Yale. As you peruse it, you likely will discover the intriguing ways in which graduate study differs from the undergraduate experience and the fulfillment brought by this intellectual progression. You have undertaken to explore a field in depth, master an area of inquiry, and learn to disseminate knowledge through classroom teaching. Graduate education culminates in a creative and original contribution in one’s field of study representing the ability to participate in the advancement of human knowledge.

Yale’s departments and programs constitute the center for most graduate student intellectual and social life at Yale. They comprise vital communities of scholars who share a common interest in advancing a particular discipline, and graduate students and faculty alike gain immeasurably from their intellectual and disciplinary collaborations. Yale’s excellent laboratory facilities, unique museum collections, and tremendous library holdings all enrich the experience of a Yale University graduate education.

The Graduate School of Arts and Sciences has worked to extend and enrich the community life found within these disciplines. Through interdisciplinary programs and institutes, as well as the McDougal Graduate Student Center’s seminars on teaching, writing, and career education that help graduate students prepare for their professional lives, the Graduate School enables students to connect with skilled experts with a shared commitment to careers in teaching, research, and an array of potential leadership opportunities.

Use Programs and Policies as a guide throughout your graduate study at Yale. It includes practical information about registration, financial aid, teaching experiences, University resources available to you, and the full range of assistance provided by the Graduate School. All of us in the Graduate School wish you good fortune as you pursue your advanced degree, and we want you to contact us if we can help you along the way. Graduate study is exhilarating and life-changing. For well over a century Yale has prepared men and women for truly extraordinary careers across many old, new, and evolving disciplines.

Thomas D. Pollard, M.D.
Dean, Graduate School of Arts and Sciences
Sterling Professor of Molecular, Cellular, and Developmental Biology and Professor of Molecular Biophysics and Biochemistry and Cell Biology
The Graduate School of Arts and Sciences

The Yale Graduate School of Arts and Sciences is one of fourteen schools composing Yale University and the only one that awards the degrees of Doctor of Philosophy, Master of Philosophy, Master of Arts, Master of Science, and Master of Engineering. The work of the Graduate School is carried on in the divisions of the Humanities, Social Sciences, and Biological and Physical Sciences. Fifty-five departments and programs offer courses of study leading to the Ph.D. degree. There are twenty-two programs that terminate with the master’s degree.

Yale began to offer graduate education in 1847, and in 1861 it conferred the first Ph.D. degrees in North America. In 1876 Yale became the first American university to award the Ph.D. to an African American. The Graduate School of Arts and Sciences was formally established in 1892, when the first dean was appointed. It was in that same year that women were first admitted as candidates for the doctorate.

The Graduate School community has grown vigorously since the early twentieth century; today it comprises 2,500 graduate students and a faculty of 900 who are among the world’s most distinguished teachers and scholars. Admission to the Graduate School is highly competitive; currently each entering class is made up of about 550 students.

The Graduate School’s purpose is to educate students in research, scholarship, and teaching in the arts and sciences. Under the guidance of the faculty, graduate students engage in advanced study of a discipline and then proceed to generate new knowledge and ideas through research. They learn to disseminate this knowledge in scholarly publications and teaching. Yale’s graduate students have built careers in colleges and universities, research laboratories, government, the nonprofit sector, and private industry. Their education equips them for leadership roles in all these callings.

Yale’s standing as a great international research university is based on the strength and attractiveness of its graduate programs. The pursuit of advanced learning and new knowledge takes place in the departments and programs of the Graduate School. Thus it is the Graduate School that makes Yale a university. Furthermore, graduate students as scholars in training and apprentice teachers engage with undergraduates and the faculty. A shared sense of common purpose makes Yale a community of scholars, and a place for an unusually intimate exchange of ideas.

MISSION STATEMENT

The mission of the Graduate School of Arts and Sciences is to seek students of the highest intellectual promise and achievement of all backgrounds, from across the nation and around the world, and to educate them to be scholars, teachers, and leaders for many sectors of society. The larger aim of this enterprise is to prepare and stimulate each new generation to perpetuate and advance human knowledge and to contribute to the health and development of the human community.
YALE AND THE WORLD

The Yale Graduate School has always comprised an international community, but it recognizes as well that now, more than ever, advanced scholarship must occur on transnational grounds. It is increasingly important that we prepare our students to participate in a global economy of research and knowledge and that we create institutional channels through which such participation can flourish. In addition to formal student exchanges that enable graduate students to perform research and fieldwork abroad, individual faculty members, departments, and the School participate in collaborative efforts with international partners.

Approximately one-third of full-time graduate students at Yale come from outside the United States. In addition, many international students come to the Graduate School as nondegree students in the Division of Special Registration (DSR). DSR students may undertake course work and/or research for periods of one term or one year. When appropriate the period may extend for a second year. These students are subject to the usual admissions procedure, are admitted to a department, and often work with a specific faculty member. See International Student Life for additional information regarding international student life at Yale.

A Global University

In a speech entitled “The Global University,” Yale President Richard C. Levin declared that as Yale enters its fourth century, its goal is to become a truly global university—educating leaders and advancing the frontiers of knowledge not simply for the United States, but for the entire world: “The globalization of the University is in part an evolutionary development. Yale has drawn students from outside the United States for nearly two centuries, and international issues have been represented in its curriculum for the past hundred years and more. But creating the global university is also a revolutionary development—signaling distinct changes in the substance of teaching and research, the demographic characteristics of students, the scope and breadth of external collaborations, and the engagement of the University with new audiences."

Yale University’s goals and strategies for internationalization are described in a report entitled “International Framework: Yale’s Agenda for 2009 to 2012,” which is available online at www.world.yale.edu/framework.

International activity is coordinated by several University-wide organizations in addition to the efforts within the individual schools and programs.

The Office of International Affairs supports the international activities of all schools, departments, offices, centers, and organizations at Yale; promotes Yale and its faculty to international audiences; and works to increase the visibility of Yale's international activities around the globe. See www.yale.edu/oa.

The Office of International Students and Scholars is a resource on immigration matters and hosts orientation programs and social activities for the University’s international community. See description in this bulletin and www.yale.edu/oiss.

The Whitney and Betty MacMillan Center for International and Area Studies is the University’s principal agency for encouraging and coordinating teaching and research on
international affairs, societies, and cultures. See description in this bulletin and www.yale.edu/macmillan.

Opened in fall 2010, the Jackson Institute for Global Affairs seeks to institutionalize the teaching of global affairs throughout the University and to inspire and prepare Yale students for global citizenship and leadership. See http://jackson.yale.edu.

The Yale Center for the Study of Globalization draws on the intellectual resources of the Yale community, scholars from other universities, and experts from around the world to support teaching and research on the many facets of globalization, and to enrich debate through workshops, conferences, and public programs. See www.ycsg.yale.edu.

The Yale World Fellows Program hosts fifteen emerging leaders from outside the United States each year for an intensive semester of individualized research, weekly seminars, leadership training, and regular interactions with the Yale community. See www.yale.edu/worldfellows.

For additional information, the “Yale and the World” Web site offers a compilation of resources for international students, scholars, and other Yale affiliates interested in the University’s global initiatives. See www.world.yale.edu.

THE DEAN

Thomas D. Pollard, M.D., 112 HGS, 203.432.2733, grad.dean@yale.edu

The dean of the Graduate School is appointed by the president of the University and is responsible for the educational mission of the Graduate School, its faculty, the quality of its programs, and the welfare of graduate students.

ASSOCIATE AND ASSISTANT DEANS FOR ACADEMIC AFFAIRS

Pamela Schirmeister, Associate Dean, 136 HGS, 203.432.7598, pamela.schirmeister@yale.edu
Richard G. Sleight, Associate Dean, 132 HGS, 203.432.2744, richard.sleight@yale.edu
Edward Barnaby, Assistant Dean, 135 HGS, 203.436.2628, edward.barnaby@yale.edu
Robert Harper-Mangels, Assistant Dean, 133 HGS, 203.432.1884, robert.harper-mangels@yale.edu

The academic deans of the Graduate School are responsible for the administration of graduate programs, normally in consultation with the directors of graduate studies, and for the academic and personal well-being of students. They participate in decisions regarding admissions, financial aid, academic performance, and the application of the regulations and policies of the Graduate School.

Dean Schirmeister and Dean Barnaby oversee Ph.D. and terminal master’s programs in African American Studies; African Studies; American Studies; Archaeological Studies; Architecture; Classics; Comparative Literature; East Asian Languages and Literatures; East Asian Studies; Economics; English Language and Literature; European and Russian Studies; Film Studies; French; Germanic Languages and Literatures; History; History of Art; History of Science and Medicine; International and Development Economics;
International Relations; Italian Language and Literature; Law; Management; Medieval Studies; Music; Near Eastern Languages and Civilizations; Philosophy; Political Science; Religious Studies; Renaissance Studies; Slavic Languages and Literatures; Sociology; and Spanish and Portuguese.

Dean Sleight and Dean Harper-Mangels oversee Ph.D. and terminal master’s programs in Anthropology; Applied Mathematics; Applied Physics; Astronomy; Biological and Biomedical Sciences; Biomedical Engineering; Cell Biology; Cellular and Molecular Physiology; Chemical & Environmental Engineering; Chemistry; Computational Biology and Bioinformatics; Computer Science; Ecology and Evolutionary Biology; Electrical Engineering; Epidemiology and Public Health; Experimental Pathology; Forestry & Environmental Studies; Genetics; Geology and Geophysics; Immunobiology; Investigative Medicine; Linguistics; Mathematics; M.D./Ph.D. Program; Mechanical Engineering & Materials Science; Microbiology; Molecular Biophysics and Biochemistry; Molecular, Cellular, and Developmental Biology; Neurobiology; Neuroscience; Nursing; Pharmacology; Physics; Psychology; and Statistics.

DIRECTORS OF GRADUATE STUDIES (DGS)
A senior faculty member, appointed by the dean, serves as director of graduate studies (DGS) for each department or program. The directors of graduate studies are responsible for the satisfactory administration of the programs of graduate study and function as advisers and guides to all graduate students in their respective departments and programs. They help graduate students to plan an appropriate course of study and research, and advise on and approve course schedules. The DGS acts as the liaison between each student in the department or program and the Office of the Dean.

DIVERSITY AND EQUAL OPPORTUNITY
Michelle Nearon, Assistant Dean, Director, 127 HGS, 203.436.1301
www.yale.edu/graduateschool/diversity

The Office for Diversity and Equal Opportunity’s mission is to expand the diversity of the student body and to enhance the intellectual experience of the entire scholarly community. The office coordinates efforts to recruit and retain students of color, women, and other diverse groups at Yale Graduate School. The assistant dean works collaboratively with departments and programs to support the needs of these students as they pursue graduate study. The assistant dean advises prospective and current minority graduate students, directs the Summer Undergraduate Research Fellowship (SURF) Program, oversees Diversity Recruitment Days, writes and administers grants, and provides reports on the Graduate School’s progress in recruiting and retaining diverse students. Graduate Diversity Fellows within the office are also appointed annually to assist the office in the development and implementation of a wide array of programs, such as application seminars, mentoring programs, discussions and lectures presented by diverse scholars, and social and cultural events. An Advisory Committee, appointed by the dean, meets regularly to discuss and review the office’s programmatic efforts.
MCDOUGAL GRADUATE STUDENT CENTER

Hall of Graduate Studies, 203.432.BLUE (2583)
www.yale.edu/graduateschool/mcdougal

A generous gift from Mr. Alfred McDougal ’53, a Yale alumnus, and his wife, Ms. Nancy Lauter, enabled Yale to create the McDougal Graduate Student Center in 1997. The McDougal Center provides space and programs for building intellectual, cultural, and social community, as well as facilitating professional development activities across the departments of the Graduate School.

Graduate Career Services

Victoria A. Blodgett, Assistant Dean and Director, 122 HGS, 203.432.7375,
mcdougal.careers@yale.edu
www.yale.edu/mcdougal/careers

Graduate Career Services (GCS) assists currently enrolled students of the Graduate School and its alumni with career education, decision making, and job search planning. Offerings include individual advising, workshops and programs, guest speakers, employer visits and information sessions, interview practice, print resources, and career-related Web links. The GCS director consults with directors of graduate studies to develop programs that supplement the department’s role in the professional development of students pursuing an academic career. For graduate students considering careers beyond the professoriate, the director and Career Services McDougal Fellows initiate programs and develop links with employers who seek graduate students’ skills. Students and alumni place requests through Interfolio to transmit their dossiers to employers, agencies, and schools considering them for permanent or short-term positions, and for grants and fellowships. Students are encouraged to begin using the services of the office and attending career and professional development programs and events early in their graduate careers in order to increase their opportunities upon the completion of their degree. Students interested in the activities planned by the GCS should visit the Web site to view the calendar of events and subscribe to the weekly GCS newsletter.

Graduate Student Life

Lisa Brandes, Assistant Dean for Student Affairs and Director, 126 HGS, 203.432.2583,
mcdougal.center@yale.edu
Jennifer Mendelsohn, Associate Director, 125 HGS, 203.432.2583,
mcdougal.center@yale.edu
www.yale.edu/mcdougal/studentlife

The Office of Graduate Student Life is responsible for student life programs in the McDougal Center and student services in the Graduate School. McDougal Graduate Fellows and staff produce a wide array of student life programs, including concerts; arts, literary, music, sports, and cultural events; health and wellness programs; outings; family activities and resources; international student events; public service opportunities; and monthly happy hours, dances, and events for various student groups. Graduate Student
Life provides advice and support to graduate student organizations, which may sponsor events at the center. Activities are announced in the weekly e-mail McDougal Life Notes, through specialized e-mail lists, and on the McDougal Center Student Life Web calendar at the site listed above. This office also oversees the facilities and general services of the McDougal Center, including meeting rooms and room requests, ticket sales, and lockers.

The assistant dean for student affairs coordinates general campus services for graduate students, serving as the student advocate and departmental liaison for graduate housing, dining services, health services, athletics, security, chaplains, child care, and parking and transit. The assistant dean and staff are available to answer questions or help with any problems that students may have, including speaking individually about issues concerning their life at Yale and other personal matters and concerns. The Graduate Student Life office also organizes recruitment activities, new student orientation, and other events for the Graduate School community, including the Graduate School's participation in the University's Commencement exercises.

**McDougal Graduate Teaching Center**

William C. Rando, Assistant Dean and Director, 120B HGS, 203.432.2583, william.rando@yale.edu, mcdougal.teaching@yale.edu

Jennifer Frederick, Associate Director, Science Education, 120A HGS, 203.432.2583, jennifer.frederick@yale.edu, mcdougal.teaching@yale.edu

www.yale.edu/mcdougal/teaching

The Graduate Teaching Center offers a full range of training, consultation, and development services to teachers and teaching fellows at Yale. The director and staff of fifteen graduate teaching consultants are available throughout the year and in a variety of capacities, providing assistance and training for brand-new teachers as well as experienced members of the faculty. Each year the center offers a comprehensive program of teaching workshops, dealing with topics such as effective discussion leading, classroom management, lecturing, and course design. The center also organizes four- to six-week courses in the fundamentals of teaching in each of four areas: humanities, social sciences, sciences, and foreign languages. Through its Spring Teaching Forum and lecture series, the GTC also provides a venue for members of the Yale community to discuss issues in undergraduate education and to explore the latest in teaching innovation. Anyone teaching at Yale can contact the center for an individual consultation at any time. Classroom visitations and videotaping are also available. The GTC works closely with academic departments to design discipline-specific training for teaching fellows and new faculty. The GTC publishes *Becoming Teachers: The Graduate Student Guide to Teaching at Yale* as well as *Tales from the Classroom*, which presents teaching cases from Yale as short, illustrated comics. Graduate students interested in the activities organized by the GTC should visit the Web site listed above and sign up for the GTC listserv, Teaching Notes.
McDougal Graduate Writing Center
Elena D. Kallestinova, Director, 35 Broadway, Rm. 210, 203.432.7725, grad.writing@yale.edu
www.yale.edu/graduateschool/writing

The Graduate Writing Center helps graduate students develop as successful academic writers. The center offers support and assistance through a full range of services including individual consultations, academic writing workshops, discussion panels, dissertation support groups, writing groups, and department-specific programs. Graduate student writing advisers are available throughout the year for individual consultations in which they provide feedback on written course work, grant proposals, fellowship applications, prospectuses, and dissertation chapters. In addition, the center offers a comprehensive program of workshops throughout the year relating to topics such as writing of scientific papers and proposals, choosing dissertation topics, and publishing books and articles. The center also organizes regular writing partner groups as well as eight-week support groups that help students with the process of dissertation writing. For a complete list of the offered programs, please see the Writing Center Web site and the newsletter circulated among graduate students by e-mail.

ADMISSIONS
Robert Colonna, Director, 117B HGS, 203.432.2771, graduate.admissions@yale.edu
Lisa Furino, Assistant Director, 117A HGS, 203.432.2771, graduate.admissions@yale.edu
www.yale.edu/graduateschool/admissions

The Office of Graduate Admissions coordinates and oversees all aspects of application to the Graduate School for individuals seeking master’s and doctoral degrees, as well as for nondegree study. The office also works with the associate deans and academic departments to provide relevant information and decisions to applicants.

BUSINESS OPERATIONS
Jane Lee, Director, 114 HGS, 203.432.7664, jane.lee@yale.edu

The Office of Business Operations is responsible for all financial transactions in the Graduate School, overseeing both financial aid and operating activities. Working with the dean and others, the office develops and monitors all Graduate School budgets and expenditures, maintaining compliance with internal and external policies and regulations. The office provides support to the dean and Graduate School supervisory staff in hiring, training, and related human resources activities of the School. The office is a resource to Graduate School, University, and external organizations seeking interpretation of policies and regulations, providing guidance about procedures, reporting, and interactive systems.
FINANCIAL AID

Jennifer Brinley, Director, 129 HGS, 203.432.7980, jennifer.brinley@yale.edu  
www.yale.edu/graduateschool/financial

The Office of Financial Aid is a resource to graduate students, departments, and non-Yale organizations needing guidance or assistance regarding financial aid policies and the administration of fellowships and student loan programs. The office oversees and maintains financial and data management systems and disburses all graduate student financial aid.

REGISTRAR’S OFFICE

Stephen Goot, Deputy Registrar, 246 Church Street, 203.432.2743, stephen.goot@yale.edu

The Office of the Registrar maintains the academic records of all students in the Graduate School. In addition, the office develops course and classroom schedules and oversees registration, tuition charges, academic holds, dissertation submission, final clearance at graduation, and release of diplomas for Commencement. Students should consult this office to report changes in name or Social Security number, to request transcripts, or to certify their enrollment in the Graduate School. Students can change their address listing at www.yale.edu/sis.

TEACHING FELLOW PROGRAM

Judith Dozier Hackman, Director, 139 HGS, 203.432.2757, judith.hackman@yale.edu  
Howard el-Yasin, Assistant Director, 139 HGS, 203.432.2757, howard.el-yasin@yale.edu  
teaching.fellows@yale.edu

The Teaching Fellow Program is the principal framework at Yale in which graduate students learn to become effective teachers. Learning to teach and to evaluate student work is fundamental to the education of graduate students. The Teaching Fellow Program provides opportunities for graduate students to develop teaching skills, under faculty guidance, through active participation in the teaching of Yale undergraduates. Teaching fellows who encounter problems or difficulties related to their teaching roles are encouraged to meet with the director of the Teaching Fellow Program or their associate dean.

COMMITTEES

Currently four standing committees are concerned with the policies and procedures of the Graduate School; as with all standing committees, their deliberations are confidential. Student members of these committees are selected by the Graduate Student Assembly.

The Executive Committee  A committee of faculty members and graduate students, chaired by the dean, advises the dean on broad matters of policy and procedure and makes recommendations to the faculty of the Graduate School.

The Degree Committees  There are three degree committees, serving the divisions of Humanities, Social Sciences, and Biological and Physical Sciences. The degree committees, composed of members of the division’s faculty and chaired by the dean, meet twice a
year and are responsible to the faculty of the Graduate School for maintaining standards of graduate education in the School and for recommending candidates for degrees. They review special academic problems of individual students and, when appropriate, the educational programs of the departments.

**Dean's Advisory Committee on Student Grievances** Composed of three graduate students, three faculty members, normally one from each division, and one administrator of the Graduate School, the committee reviews complaints brought by graduate students against a member of the faculty or administration of the Graduate School (see Grievance Procedures, under Policies and Regulations).

**The Committee on Regulations and Discipline** Composed of three graduate students, three faculty members, normally one from each division, and an associate dean, the committee reviews violations of the regulations governing academic and personal conduct (see Personal Conduct, under Policies and Regulations).

**GRADUATE STUDENT ASSEMBLY (GSA)**

B43 HGS, 203.432.8893, gsa@yale.edu
www.yale.edu/gsa

Students in the Graduate School are represented collectively by the Graduate Student Assembly, which provides a forum for students to address issues across the Graduate School and University. It consults with the dean and other administrators on proposed changes in Graduate School policy, raises concerns expressed by the student body, nominates the student members of all Graduate School standing committees, and administers a conference travel fund for graduate students. Representatives to the assembly are elected by students in individual departments and degree programs. Each department or program has at least one student representative, with additional representatives allotted proportionally by size of the student population.

**GRADUATE-PROFESSIONAL STUDENT SENATE (GPSS)**

gpss@yale.edu
www.yale.edu/gpss

The Graduate and Professional Student Senate (GPSS) is composed of elected representatives from each of the thirteen graduate and professional schools at Yale. Any student in one of these schools is eligible to run for a senate seat during fall elections. As a governing body, the GPSS advocates for student concerns and advancement within Yale, represents all graduate and professional students to the outside world, and facilitates interaction and collaboration among the schools through social gatherings, academic or professional events, and community service. GPSS meetings occur on alternating Thursdays and are open to the entire graduate and professional school community, as well as representatives from the Yale administration. GPSS also oversees the management of the Graduate-Professional Student Center at Yale (GPSCY), located at 204 York Street. GPSCY provides office and event space for GPSS and other student organizations and houses Gryphon’s Pub.
Degree-Granting Departments and Programs

This section provides information on all degree-granting departments and programs of the Graduate School of Arts and Sciences. Each listing provides a roster of faculty, special admissions and degree requirements, and course offerings for that department or program. The requirements appearing in the Graduate School of Arts and Sciences Programs and Policies take precedence over any statements published separately by individual departments and programs.

The degree requirements of the Graduate School itself appear later in this publication, under Policies and Regulations. These apply to all students in the Graduate School, although there are variations in the pattern of their fulfillment in individual departments and programs. The requirements of the Graduate School may change from time to time. If a requirement changes within the period normally required for completion of a student’s course of study, the student will normally be given the choice of completing either the new or the old requirement.

The requirements of individual departments also may change from time to time, with the approval of the Graduate School. After such approval has officially been given, students in that department or program will receive written notification. All changes in departmental degree requirements occurring after the publication closing date of the Graduate School of Arts and Sciences Programs and Policies are posted in the Faculty of Arts and Sciences Registrar’s Office, 246 Church Street, third floor.

The course listings and instructors that follow reflect information received by the registrar as of the publication date and are subject to change without notice. Students are advised to consult www.yale.edu/oci for the most recent information.

Fall-term courses are indicated by the letter “a,” spring-term courses by the letter “b.” Yearlong courses have no letter designation or list both “a” and “b.” Course numbers followed by a superscript “u” are also open to undergraduates in Yale College. Courses in brackets are not offered during the current academic year.
AFRICAN AMERICAN STUDIES

81 Wall Street, 203.432.1170
www.yale.edu/afamstudies
M.A., M.Phil., Ph.D.

Chair
Elizabeth Alexander

Director of Graduate Studies
Glenda Gilmore (81 Wall St., glenda.gilmore@yale.edu)

Professors Elizabeth Alexander, Elijah Anderson, David Blight, Hazel Carby (on leave [Sp]), M. Kamari Clarke, Glenda Gilmore, Jacqueline Goldsby, Ezra Griffith, Jonathan Holloway (on leave), Matthew Jacobson, Gerald Jaynes, Kobena Mercer, Christopher L. Miller, Patricia Pessar (Adjunct), Joseph Roach, Robert Stepto, John Szwed (Emeritus), Robert Thompson, Emilie Townes, Michael Veal

Associate Professor Terri Francis

Assistant Professors Jafari Allen, GerShun Avilez, Crystal Feimster, Erica James, Paige McGinley, Naomi Pabst, Anthony Reed, Edward Rugemer

Lecturers Kathleen Cleaver, Flemming Norcott, Deborah Thomas

Fields of Study

The Department of African American Studies offers a combined Ph.D. in conjunction with several other departments and programs. Departments and programs that currently offer a combined Ph.D. with African American Studies are: American Studies, Anthropology, English, Film Studies, French, History, History of Art, Political Science, Psychology, Religious Studies, Sociology, and Spanish and Portuguese. Within the field of study, the student will select an area of concentration in consultation with the directors of graduate studies of African American Studies and the joint department or program. An area of concentration in African American Studies may take the form of a single area study or a comparative area study: e.g., Caribbean or African American literature, a comparison of African American literature in a combined degree with the Department of English; an investigation of the significance of the presence of African cultures in the New World, either in the Caribbean or in Latin and/or South America in a combined degree with the Spanish and Portuguese department. An area of concentration may also follow the fields of study already established within a single discipline: e.g., race/minority/ethnic studies in a combined degree with Sociology. An area of concentration must either be a field of study offered by a department or fall within the rubric of such a field. Please refer to the description of fields of study of the prospective joint department or program.

Special Admissions Requirements

Strong undergraduate preparation in a discipline related to African American studies; writing sample; description of the fields of interest to be pursued in a combined degree. This is a combined degree program. To be considered for admission to this program you
must indicate both African American Studies and one of the participating departments/programs listed above. Additionally, please indicate both departments on all supporting documents (personal statement, letters of recommendation, transcripts, etc.).

Special Requirements for the Ph.D. Degree

Students will be subject to the combined Ph.D. supervision of the African American Studies department and the relevant participating department or program. The student’s academic program will be decided in consultation with an adviser, the director of graduate studies of African American Studies, and the director of graduate studies of the participating department or program and must be approved by all three. Students are required to take five courses in African American Studies, generally at least one course each term. Any variance in scheduling requires DGS approval. Core courses are (1) Theorizing Racial Formations (AFAM 505a/AMST 643a), which is a required course for all first-year graduate students in the combined program, and (2) Dissertation Prospectus Workshop (AFAM 895), which is a yearlong requirement of all third-year graduate students in the combined program. This workshop is intended to support preparation of the dissertation proposal; each student will be required to present his or her dissertation prospectus orally to the faculty and to turn in a written prospectus draft by the end of spring term. Three other graduate-level African American Studies courses are required: (1) a history course, (2) a social science course, and (3) a course in literature or culture.

Qualifying examinations and the dissertation proposal will be administered jointly by the program and participating department and must be passed within the time required by the participating department. The total number of courses required will adhere to the requirements of the participating department or program. Each student must complete the minimum number of courses required by the participating department or program; African American Studies courses (excepting the dissertation prospectus workshop) count toward the participating department’s or program’s total. For details of these requirements, see the special requirements of the combined Ph.D. for the particular department printed in this bulletin. Students will be required to meet the foreign language requirements of the participating department (see Degree Requirements under Policies and Regulations). Students will not be admitted to candidacy until all requirements, including the dissertation prospectus, have been met and approved by the Graduate Studies Executive Committee of the African American Studies department and the participating department. If a student intends to apply for this combined Ph.D. in African American Studies and another department, he or she should contact the prospective department and request a description of all Ph.D. requirements and courses.

The faculty in African American Studies consider teaching to be an essential component of graduate education, and students therefore will teach in their third and fourth years.

Master’s Degrees

M.Phil. See Degree Requirements under Policies and Regulations.

M.A. (en route to the joint Ph.D.) Students will be awarded a combined M.A. degree in African American Studies and the relevant participating department or program upon
successful completion of all course work except the Dissertation Prospectus Workshop, which is taken in the student’s third year of study. See also Degree Requirements under Policies and Regulations.

For further information, see the African American Studies Web site at www.yale.edu/afamstudies.

Courses

AFAM 505a/AMST 643a, Theorizing Racial Formations  Hazel Carby
A required course for all first-year students in the joint Ph.D. program in African American Studies; also open to students in American Studies. This interdisciplinary reading seminar focuses on new work that is challenging the temporal, theoretical, and spatial boundaries of the field. TH 9:25–11:15

AFAM 573a/ANTH 595a, Transnationalism, Modernity, and Rethinking Diaspora  M. Kamari Clarke
As anthropologists continue to grapple with changing notions of “the field” from local to global, this course covers recent and emerging scholarship that explores theoretical problems of modernity, transnationalism, and diaspora in specific historical and ethnographic contexts. Drawing on a range of ideas from world systems theories of globalization to notions of the invention of diasporas, to postmodern ideas of social constructions, the emphasis is on the interrelations between local and global cultural processes. These processes disrupt the once homogenizing tendencies of ethnography and instead push us to examine different criteria for analyzing and constructing communities. T 7–8:50

AFAM 588bu/AMST 710bu/ENGL 948bu, Autobiography in America  Robert Stepto
At least a dozen North American autobiographies are studied, mostly from the “American Renaissance” to the present. Discussion of various autobiographical forms and strategies as well as of various experiences of American selfhood and citizenship. Slave narratives, spiritual autobiographies, immigrant narratives, autobiographies of childhood or adolescence, relations between autobiography and class, region, or occupation. M 1:30–3:20

AFAM 621b/ANTH 603b, Theorizing Erotic Interiors, Interstices, and Margins  Jafari Allen
While a number of foundational thinkers have theorized “the erotic,” its intellectual (political and aesthetic) genealogies vary. Following Audre Lorde, the erotic is hermeneutical, and at once personal/individual and intersubjective—what she called “self-connection shared.” In this research seminar, we pursue deeply contextual theorizations of affect and sociality (e.g., sexuality and sensuality, mourning, humor, longing, hope, resilience) in primary ethnographic and archival data and cultural texts—inside, overlapping, “haunting,” or lurking just outside of the page, note, frame, or experience. The course begins with close readings of important critical works by, for example, Elizabeth Alexander, M. Jacqui Alexander, Lauren Berlant, Hazel Carby, Samuel Delany, Melvin Dixon, Michel Foucault, Paul Gilroy, Judith Halberstam, Michael Hanchard, Saidiya Hartman, Robin Kelley, Audre Lorde, Hortense Spillers, Ann Stoler, and Sylvia Wynter. Later, students research and “workshop” focused research papers on the meanings, historicity, and/or uses of the erotic.
AFAM 697a/HIST 713a, Research in Slavery and Abolition  Edward Rugemer
A research seminar in the history of slavery and its abolition in the Atlantic world from the emergence of African slavery in the late sixteenth century through the final emancipations of the 1880s. Potential topics include slavery, slave resistance, rebellions, abolitionism, and emancipation. W 9:25–11:15

AFAM 709b/AMST 709b/HIST 736b/WGSS 736b, Research in U.S. Political and Social History after 1865  Glenda Gilmore
Projects chosen from the post-Civil War period, with emphasis on twentieth-century social and political history, broadly defined. Research seminar. T 1:30–3:20

AFAM 723a/AMST 645a/CPLT 949a/WGSS 645a, Caribbean Diasporic Intellectuals  Hazel Carby
The course examines work by writers of Caribbean descent from different regions of the transatlantic world. In response to contemporary interest in issues of globalization, the premise of the course is that in the world maps of these black intellectuals we can see the intertwined and interdependent histories and relations of the Americas, Europe, and Africa. Thinking globally is not a new experience for black peoples, and we need to understand the ways in which what we have come to understand and represent as “Caribbeanness” is a condition of movement. Literature is most frequently taught within the boundaries of a particular nation, but this course focuses on the work of writers who shape the Caribbean identities of their characters as traveling black subjects and refuse to restrain their fiction within the limits of any one national identity. We practice a new and global type of cognitive mapping as we read and explore the meanings of terms like black transnationalism, migrancy, globalization, and empire. Diasporic writing embraces and represents the geopolitical realities of the modern, modernizing, and postmodern worlds in which multiple racialized histories are inscribed on modern bodies. T 1:30–3:20

AFAM 727a/HSAR 780a, Running Backs and Wide Receivers: The Influence of African Dance on American Sport  Robert Thompson
Starting with an intensive study of the main organizing principles in African dance and their variations among four key civilizations, Mandé, Yorùbá, Igbo, and Kongo, the seminar systematically compares these traits and gestures first with key black American dancing and then with action styles in black American sport. Emphasis is given to the transformation of soccer by the black superstar Pelé, and black influence in the reshaping of NFL football. TH 3:30–5:20

AFAM 728bU/AFST 778bU/HSAR 778bU, From West Africa to the Black Americas: The Black Atlantic Visual Tradition  Robert Thompson
Art, music, and dance in the history of key classical civilizations south of the Sahara—Mali, Asante, Dahomey, Yorùbá, Ejagham, Kongon—and their impact on the rise of New World art and music. TTH 11:35–12:50

AFAM 729aU/HSAR 779aU, New York Mambo: Microcosm of Black Creativity  Robert Thompson
Art, music, and dance in the history of key classical civilizations of the world of New York mambo and salsa. Emphasis on Palmieri, Cortijo, Roena, Harlow, and Colón.
Examination of panel traditions such as New York Haitian art, Dominican merengue and rastas of Jamaican Brooklyn, and the New York school of Brazilian capoeira. **TTH 11:35–12:50**

**AFAM 737b/HSAR 697b, Caribbean Art History**  Erica James
The Caribbean is a hyper-diaspora, both a site of dispersal and a point of departure for people of African, Indian, Chinese, European, and native heritages. Though it is often reduced to signs of sun, sand, sea, and sex, a closer engagement of the lived realities of the Caribbean complicates singular or essential readings of race, culture, identity, and aesthetics and poses a fundamental challenge to the writing of art histories of the region. This course offers a close examination of the written record of the art history and visual and performance cultures of the Caribbean. In process it attempts to critically engage fundamental aspects of art-historical scholarship, theory, methodology, historiography, aesthetics, exhibition practices, and the uses and limits of the term “Caribbean” in an effort to consider methods of art-historical scholarship beyond the moorings of postcolonial, postrevolutionary, postindependence, and post-national discourses. **M 3:30–5:20**

**AFAM 741b/HSAR 777b, Mambo in the Media, 1949–2011**  Robert Thompson
The impact of a midcentury dance on novels, films, aesthetic criticism, photography, and painting from 1949 to 2011. Discussion includes the novels of Jack Kerouac, Carlos Fuentes, and Gonzalo Martré; the films of Almodóvar and Fellini; and the history of mambo dance in Havana, Mexico City, New York, Tokyo, and London. **TH 3:30–5:20**

**AFAM 743b/AMST 654b/ENGL 845b, American Artists and the African American Book**  Robert Stepto
The visual art, decoration, and illustration of African American books (prose and poetry) since 1900. Topics include book art of the Harlem Renaissance (with special attention to Aaron Douglas and Charles Cullen), art imported to book production (e.g., Archibald Motley’s paintings used as book art), children’s books (e.g., *I Saw Your Face* by Kwame Dawes with drawings by Tom Feelings; *Ellington Was Not a Street*, illus. by Kadir Nelson), photography and literature (e.g., Paul Laurence Dunbar’s *Cabin and Field*, with Hampton Institute photographs; Richard Wright’s *12 Million Black Voices*). The seminar includes sessions at Beinecke Library and encourages research projects in the Beinecke’s holdings, especially the James Weldon Johnson collection. **W 1:30–3:20**

**AFAM 751b/ENGL 941b, James Baldwin and the Politics of Form**  Jacqueline Goldsby
In-depth examination of James Baldwin’s fictional canon, interrogating the reception of his late novels’ supposed “decline” against those works’ experiments in form(lessness). **W 9:25–11:15**

**AFAM 763b/AMST 731b/HIST 780b, Methods and Practices in U.S. Cultural History**  Matthew Jacobson
This sampling of U.S. cultural history from the early national period to the present is designed to unfold on two distinct planes. The first is a rendering of U.S. culture itself—a survey, however imperfect, of the major currents, themes, and textures of U.S. culture over time, including its contested ideologies of race and gender, its organization
of productivity and pleasure, its media and culture industries, its modes of creating and disseminating “information” and “knowledge,” its resilient subcultures, and its reigning nationalist iconographies and narratives. The second is a sampling of scholarly methods and approaches, a meta-history of “the culture concept” as it has informed historical scholarship in the past few decades. The cultural turn in historiography since the 1980s has resulted in a dramatic reordering of “legitimate” scholarly topics, and hence a markedly different scholarly landscape, including some works that seek to narrate the history of the culture in its own right (Kasson’s history of the amusement park, for instance), and others that resort to cultural forms and artifacts to answer questions regarding politics, nationalism, and power relations (Melani McAlister’s *Epic Encounters*). In addition to providing a background in U.S. culture, then, this seminar seeks to trace these developments within the discipline, to understand their basis, to sample the means and methods of “the cultural turn,” and to assess the strengths and shortcomings of culture-based historiography as it is now constituted.

**AFAM 764b/AMST 715b/HIST 715b, Readings in Nineteenth-Century America**

David Blight

The course explores recent trends and historiography on several problems through the middle of the nineteenth century: sectionalism; expansion; slavery and the Old South; northern society and reform movements; Civil War causation; the meaning of the Confederacy; why the North won the Civil War; the political, constitutional, and social meanings of emancipation and Reconstruction; violence in Reconstruction society; the relationships between social/cultural and military/political history; problems in historical memory; the tension between narrative and analytical history writing; and the ways in which race and gender have reshaped research and interpretive agendas.

**AFAM 769a/HSAR 696a, Violence, Race, and Modernity**

Erica James

The course engages the art and material culture of transatlantic slavery, slave societies, Emancipation, Reconstruction, Jim Crow, and contemporary times in the United States and the Caribbean through the indices of violence, trauma, and memory. It posits that violence (cultural, epistemic, ideological, systemic, physical, etc.) is a fundamental part of modernity within the African diaspora, but has thus far been under examined within art history and visual culture.

**AFAM 773a or b/SOCY 630a or b, Workshop in Urban Ethnography**

Elijah Anderson

The ethnographic interpretation of urban life and culture. Conceptual and methodological issues are discussed. Ongoing projects of participants are presented in a workshop format, thus providing participants with critical feedback as well as the opportunity to learn from and contribute to ethnographic work in progress. Selected ethnographic works are read and assessed.

**AFAM 823b/REL 926b, The Political Economy of Misery**

Emilie Townes

An examination of the ways in which the intersection of various forms of oppression—such as racism, sexism, ageism, heterosexism, and classism—coalesce to form lifestyles of misery that produce social patterns of domination and subordination. Consideration
of how conversations between Christian ethics and other disciplines help frame possible trajectories of justice and justice making. T 8:30–10:20

AFAM 826a/HSAR 783a, Theorizing Diaspora  Kobena Mercer
This seminar reviews different methods in the study of diasporas and demonstrates their application in research on visual culture and art history. Models addressed to African American, Caribbean, and black British contexts by Stuart Hall, Paul Gilroy, James Clifford, Brent Hayes Edwards, *inter alia*, are examined in relation to art, film, and photography that articulates cross-cultural aesthetics. Debates on hybridization that led to such cognate concepts as syncretism, creolization, and translation are tested in comparative case studies. Texts include Homi Bhabha, Sarat Maharaj, Jean Fisher, Eduoard Glissant, Jan Nederveen Pieterse, and book-length introductions by Robin Cohen, *Global Diasporas* (1997), and Sudesh Mishra, *Diaspora Criticism* (2007). W 1:30–3:20

AFAM 827b, Interdisciplinary Analysis in Race, Class, and Gender  Gerald Jaynes
Examination of some of the most influential social science texts treating theories of race, class, and gender. The seminar covers various theoretical and methodological paradigms common to social science disciplines. Authors discussed include classical (Marx, Weber) and more contemporary scholars (Giddens, Bourdieu, Butler, Moi, Hill-Collins, Wilson). Emphasis is placed on interdisciplinary analysis and critique of past and contemporary scholarship in African American studies and related fields. W 1:30–3:20

AFAM 829b/WGSS 715b, American Legal History: Citizenship and Race  Kathleen Cleaver
This seminar examines the evolution of U.S. citizenship as defined and interpreted by courts during the nineteenth and twentieth centuries, with particular attention to the way historical events that defined race have affected citizenship. Topics of study include the Thirteenth, Fourteenth, and Fifteenth Amendments to the U.S. Constitution; the 1866 Civil Rights Act; Reconstruction legislation; immigration restrictions imposed on Asians; legislation impacting the racial classification of Mexicans; statutes governing the citizenship of indigenous native peoples; racially based prohibitions against voting, education, and employment; and efforts to reduce them by civil rights legislation culminating with the 1964 Civil Rights Act. Each seminar participant has to research several topics and make a presentation to the class on at least one topic. Engagement in seminar discussion and the drafting of research papers are the basis for grading. This seminar is open to seniors. TH 3:30–5:20

AFAM 830a/AMST 656a/ENGL 944a, Canonizing African American Poetry  Elizabeth Alexander
African American poetry is under-studied, under-theorized, and under-archived. In this seminar we turn to the African American verse canon with a hand to edifying its scholarly apparatus. We ask questions about the politics of canon formation and anthologizing, as well as read relevant theory in the field. The first half of the course is devoted to the study and discussion of versions of this canon by examining critical editions that are variously exemplary: Gene Andrew Jarrett’s Paul Laurence Dunbar, Arnold Rampersad’s Langston Hughes, Verner Mitchell’s Helene Johnson, Rita Dove’s Melvin Tolson, various editions of Gwendolyn Brooks, and Kimberly Benston’s Amiri Baraka. We consider
the myriad approaches to writing and publishing on Phillis Wheatley and interrogate the idea of “foremother.” We also consider the specific work of anthologizing such as Maureen Honey’s work on African American women poets and Aldon Neilsen’s work on black experimentalism. For the latter half of the class students work archivally, at the Beinecke and elsewhere, on poets of their choosing in consultation with the instructor; possibilities include Fenton Johnson, Jean Toomer, Robert Hayden, Jay Wright, and Lucille Clifton. The final project is a complete critical edition of the work of a chosen poet—“lost” or “canonical”—or a blueprint for an anthology on some subset of African American poetry. T 9:25–11:15

AFAM 837a/REL 631a/RLST 848a, African American Moral and Social Thought
Emilie Townes
The course concentrates on the theo-ethical perspectives of selected African American Christian and humanist thinkers. This term, the course focuses on the writings of Maria Stewart, David Walker, Frederick Douglass, Ida B. Wells, W.E.B. Du Bois, Martin Luther King, Jr., Barbara Jordan, Peter Paris, Katie Cannon, and Traci West. Attention is given to implications for the contemporary church. W 8:30–10:20

AFAM 839b/HSAR 785b, Cross-Cultural Issues in Contemporary Art
Kobena Mercer
To what extent does the study of cross-cultural dynamics in art provide criteria for making critical distinctions within the bewildering variety of contemporary practices? This seminar reviews trends among art institutions since 1990 whereby the biennale exhibition model is now central to the way audiences experience contemporary art. Considering curatorial frameworks and the public reception of landmark exhibitions, the seminar tests the evaluative perspectives put forward by various cities. Artists include Yinka Shonibare, Kara Walker, Wangechi Mutu, Walid Raad; exhibitions include 1993 Whitney Biennale, Century City, Documenta XI, Afro-Modern; and critics include Thomas McEvilley, Okwui Enwezor, Terry Smith, and Geeta Kapur. W 1:30–3:20

AFAM 851b/CPLT 989b/FREN 943b, Creole Identities and Fictions
Christopher L. Miller
Focusing on the French and English Caribbean, the course analyzes the quintessential but ambiguous American condition: that of the “Creole.” Encompassing all non-native cultures, this term is inseparable from issues of race and slavery. Readings of historical and literary texts: Moreau de Saint-Méry, Bernardin de Saint-Pierre, Madame de Staël, Charlotte Brontë (and reinventions of Wuthering Heights by Jean Rhys and Maryse Condé), the Créolistes of Martinique. Attention to Louisiana and to the Haitian Revolution. Prerequisite: reading knowledge of French. TH 1:30–3:20

AFAM 880a or b, Directed Reading
By arrangement with faculty.

AFAM 895, Dissertation Prospectus Workshop
Glenda Gilmore
A noncredit, yearlong course required of all third-year students. Fall term consists of biweekly work-in-progress talks by Yale faculty, advanced graduate students, and outside speakers. Spring term has biweekly workshops that focus on the dissertation prospectus.

For course offerings in African languages, see African Studies.
AFRICAN STUDIES

Council on African Studies

M.A.

Chair
M. Kamari Clarke (Anthropology)

Director of Graduate Studies
Michael McGovern (203.432.3686, mike.mcgovern@yale.edu)

Director of Program in African Languages
Kiarie Wa’Njogu (203.432.0110, john.wanjogu@yale.edu; on leave [Sp])

Professors
Lea Brilmayer (Law), M. Kamari Clarke (Anthropology), John Darnell (Near Eastern Languages & Civilizations), Owen Fiss (Law), William Foltz (Emeritus, Political Science), Robert Harms (History), Andrew Hill (Anthropology), Roderick McIntosh (Anthropology), Christopher L. Miller (French; African American Studies), Catherine Panter-Brick (Anthropology), Lamin Sanneh (History; Divinity), Ian Shapiro (Political Science), Robert Thompson (History of Art), Christopher Udry (Economics), Michael Veal (Music), David Watts (Anthropology), Elisabeth Wood (Political Science)

Associate Professor
Ann Biersteker (Adjunct; Linguistics)

Assistant Professors
Robert Bailis (Forestry & Environmental Studies), Christopher Blattman (Political Science), Michael McGovern (Anthropology), Ato Onoma (Political Science), Edwige Tamalet Talbayev (French), Jonathan Wyrtzen (Sociology)

Senior Lecturer
Cheryl Doss (Global Affairs; Economics)

Lecturers
Anne-Marie Foltz (Epidemiology & Public Health), David Simon (Political Science)

Senior Lectors II
Sandra Sanneh (African Languages), Kiarie Wa’Njogu (African Languages; on leave [Sp])

Senior Lectors
Oluseye Adesola (African Languages), Matuku Ngamé (French)

Fields of Study
African Studies considers the arts, history, cultures, languages, literatures, politics, religions, and societies of Africa as well as issues concerning development, health, and the environment. Considerable flexibility and choice of areas of concentration are offered because students entering the program may have differing academic backgrounds and career plans. Enrollment in the M.A. program in African Studies provides students with the opportunity to register for the many African studies courses offered in the various departments of the Graduate School of Arts and Sciences and the professional schools.
The Program in African Studies also offers two interdisciplinary seminars to create dialogue and to integrate approaches across disciplines. In addition to the M.A. degree program, the Council on African Studies offers students in the University's doctoral and other professional degree programs the chance to obtain a Graduate Certificate of Concentration in African Studies by fulfilling a supplementary curriculum (see the section on the African Studies Council, under Non-Degree Granting Programs, Councils, and Research Institutes). Joint degrees are possible with the approval of the director of graduate studies (DGS) and the relevant officials in the schools of Forestry & Environmental Studies, Law, Management, and Public Health.

The African collections of the Yale libraries together represent one of the largest holdings on Africa found in North America. The University now possesses more than 220,000 volumes including, but not limited to, government documents, art catalogues, photographs, manuscripts, correspondence, and theses, many published in Africa.

Special Admissions Requirement
The GRE General Test is required.

Special Requirements for the M.A. Degree
The Yale University Master of Arts degree program in African Studies was instituted in 1986. The two-year interdisciplinary, graduate-level curriculum is intended for students who will later continue in a Ph.D. program or a professional school, or for those who will enter business, government service, or another career in which a sound knowledge of Africa is essential or valuable. A student may choose one of the following areas of concentration: history; anthropology; political science; sociology; arts and literatures; languages and linguistics; religion; environmental and development studies.

The program requires sixteen courses: two compulsory introductory interdisciplinary seminars, Research Methods in African Studies (AFST 501a) and Topics in African Studies (AFST 764b); four courses of instruction in an African language; four courses in one of the foregoing areas of concentration; four other approved courses offered in the Graduate School or professional schools; and two terms of directed reading and research (AFST 590a and 900b) during which students will complete the required thesis. A student who is able to demonstrate advanced proficiency in an African language may have the language requirement waived and substitute four other approved courses. The choice of courses must be approved by the DGS, with whom students should consult as soon as possible in the first term.

The Master’s Thesis
The master’s thesis is based on research on a topic approved by the director of graduate studies and advised by a faculty member with expertise or specialized competence in the chosen topic.
Program in African Languages

The language program offers instruction in three major languages from sub-Saharan Africa: Kiswahili (eastern and central Africa), Yorùbá (west Africa), and isiZulu (southern Africa). Language-related courses and language courses for professionals are also offered. African language courses emphasize communicative competence, and instructors use multimedia materials that focus on the contemporary African context. Course sequences are designed to enable students to achieve advanced competence in all skill areas by the end of the third year, and the African Languages program encourages students to spend one summer or term in Africa during their language study.

Noncredited instruction in other African languages is available by application through the Directed Independent Language Study program at the Center for Language Study. Contact the director of the Program in African Languages.

Program materials are available upon request from the Director of Graduate Studies, Council on African Studies, Yale University, PO Box 208206, New Haven CT 06520-8206; e-mail, africanstudies@yale.edu.

Courses

AFST 501a, Research Methods in African Studies  Jonathan Wyrtzen
The course considers disciplinary and interdisciplinary research methodologies in African studies. The focus of the course is on field methods and archival research in the social sciences and humanities. Topics include use of African studies and disciplinary sources (including bibliographical databases and African studies archives), research design, interviewing, survey methods, analysis of sources, and the development of databases and research collections. TH 1:30–3:20

[AFST 541b], Comparative Perspectives on African Literatures

AFST 590a, African Studies Colloquium  Ann Biersteker
Students conduct research for the master’s thesis, give presentations on their research, and prepare a bibliography, a prospectus, and a draft chapter of the master’s thesis. Discussion of model essays and other examples of writing. W 1:30–3:20

AFST 598a, Introduction to an African Language I  Kiarie Wa’Njogu and staff
Beginning instruction in an African language other than those regularly offered. Courses offered depend on availability of instructors. Methodology and materials vary with the language studied. Students may also study an African language through the noncredit Directed Independent Language Study program. Prerequisite: permission of the instructor. MTWTHF 9:25–10:15

AFST 599b, Introduction to an African Language II  Sandra Sanneh and staff
Continuing instruction in an African language other than those regularly offered. Courses offered depend on availability of instructors. Methodology and materials vary with the language studied. Students may also study an African language through the noncredit Directed Independent Language Study program. Prerequisites: AFST 598a and permission of the instructor. § HTBA
AFST 618bu, Communication and Healing  Sandra Sanneh
The course deals with practical issues of communication about health and healing in South Africa. It focuses on the Nguni language environment (Zulu/Xhosa/Swati/Ndebele) but also addresses some issues relating to other South African languages. The course offers an introduction to Zulu language in the context of health, and to social and cultural issues surrounding the origins of suffering, the articulation of symptoms, and the role of the family, traditional healers, and Western medical practitioners. Particular attention is given to HIV/AIDS in the community and to the status and attitudes of young people. HTBA

[AFST 630bu, Language Planning in Sub-Saharan Africa]

AFST 647au, The Rwandan Genocide in Comparative Context  David Simon
An examination of the 1994 Rwandan genocide: historical sources of the conflict, the motivations of the killers, actions and reactions of outside actors, efforts to reconstruct a post-genocide society, and continuation of the genocidal dynamic within the Great Lakes region. Consideration of other countries in similar situations, as well as other genocides in recent decades. T 3:30–5:20

AFST 650, Second Year in an African Language
By arrangement with faculty. Prerequisite: AFST 599b.

AFST 660, Third Year in an African Language
By arrangement with faculty. Prerequisite: AFST 650.

AFST 670, Fourth Year in an African Language
By arrangement with faculty. Prerequisite: AFST 660.

AFST 680bu, Nigeria and Its Diaspora  Oluseye Adesola
Nigerians in the modern diaspora, both those who endured forced migration and those who migrated voluntarily. Specific reference to the Igbos and the Yorùbás. The preservation and maintenance of Nigerian culture, history, dance, literature, traditional education, theater, politics, art, music, film, religion, and folklore, especially in African American and Nigerian American contexts.

AFST 764bu/ANTH 622bu, Topics in African Studies  Christopher L. Miller
The course provides a broad survey of key topics in African Studies. It introduces students to the study of Africa by examining how the field has developed over time while presenting foundational concepts and theories relevant for understanding the history of its debates. HTBA

AFST 766a/INRL 566au, Comparative Welfare Policy in Developing Countries  Jeremy Seekings
Examination of public and private welfare systems in the developing world. Analysis of the evolving relationships between kin or community and states and market. Particular attention is paid to the politics of contemporary reforms. W 2:30–4:20
AFST 778b/AFAM 728b/HSAR 778b, From West Africa to the Black Americas:
The Black Atlantic Visual Tradition  Robert Thompson
Art, music, and dance in the history of key classical civilizations south of the Sahara—Mali, Asante, Dahomey, Yorùbá, Ejagham, Kongon—and their impact on the rise of New World art and music. TTH 11:35–12:50

AFST 814a/REL 914a, Christian-Muslim Dialogue and Understanding  Lamin Sanneh
An introductory survey of Islam: its origin, history, law, theology, and religious tradition. An examination of the encounter of the medieval Muslim world with the West, and an assessment of intercultural influences between the two civilizations. The course explores interfaith issues in terms of convergence as well as contrast. HTBa

AFST 849a/HIST 849a, Agrarian History of Africa  Robert Harms
The course examines changes in African rural life from pre-colonial times to the present. Issues to be examined include land use systems, rural modes of production, gender roles, markets and trade, the impact of colonialism, cash cropping, rural-urban migration, and development schemes. W 9:25–11:15

AFST 900b, Master’s Thesis  Michael McGovern and faculty
Directed reading and research on a topic approved by the DGS and advised by a faculty member (by arrangement) with expertise or specialized competence in the chosen field. Readings and research are done in preparation for the required master’s thesis.

AFST 951a or b, Directed Reading and Research  Michael McGovern and faculty
By arrangement with faculty.

SWAH 610au, Beginning Kiswahili I  Kiarie Wa’Njogu
A beginning course with intensive training and practice in speaking, listening, reading, and writing. Initial emphasis is on the spoken language and conversation. Credit only on completion of SWAH 620b. MTWTHF 9:25–10:15

SWAH 620bu, Beginning Kiswahili II  Faculty
Continuation of SWAH 610a. Texts provide an introduction to the basic structure of Kiswahili and to the culture of the speakers of the language. Prerequisite: SWAH 610a. MTWTHF 9:25–10:15

SWAH 630au, Intermediate Kiswahili I  Kiarie Wa’Njogu
Further development of speaking, listening, reading, and writing skills. Prepares students for further work in literary, language, and cultural studies as well as for a functional use of Kiswahili. Study of structure and vocabulary is based on a variety of texts from traditional and popular culture. Emphasis on command of idiomatic usage and stylistic nuance. Prerequisite: SWAH 620b. MTWTHF 11:35–12:25

SWAH 640bu, Intermediate Kiswahili II  Ann Biersteker
Continuation of SWAH 630a. MTWTHF 11:35–12:25

SWAH 650au, Advanced Kiswahili I  Kiarie Wa’Njogu
Development of fluency through readings and discussions on contemporary issues in Kiswahili. Introduction to literary criticism in Kiswahili. Materials include Kiswahili
oral literature, prose, poetry, and plays, as well as texts drawn from popular and political culture. Prerequisite: SWAH 640b. TTH 11:35–12:50

**SWAH 660b**<sup>u</sup>, **Advanced Kiswahili II**  Ann Biersteker
Continuation of SWAH 650a. TTH 11:35–12:50

**SWAH 670a**<sup>u</sup> or **b**<sup>u</sup>, **Topics in Kiswahili Literature**  Ann Biersteker
Advanced readings and discussion with emphasis on literary and historical texts. Reading assignments include materials on Kiswahili poetry, Kiswahili dialects, and the history of Kiswahili. Prerequisite: SWAH 660b. TTH 11:35–12:50

**YORU 610a**<sup>u</sup>, **Beginning Yorùbá I**  Oluseye Adesola
Training and practice in speaking, listening, reading, and writing. Initial emphasis is on the spoken aspect, with special attention to unfamiliar consonantal sounds, nasal vowels, and tone, using isolated phrases, set conversational pieces, and simple dialogues. Multimedia materials provide audio practice and cultural information. Credit only on completion of YORU 620b. MTWTHF 10:30–11:20

**YORU 620b**<sup>u</sup>, **Beginning Yorùbá II**  Oluseye Adesola
Continuing practice in using and recognizing tone through dialogues. More emphasis is placed on simple cultural texts and role playing. Prerequisite: YORU 610a. MTWTHF 10:30–11:20

**YORU 630a**<sup>u</sup>, **Intermediate Yorùbá I**  Oluseye Adesola
Refinement of speaking, listening, reading, and writing skills. More natural texts are provided to prepare students for work in literary, language, and cultural studies as well as for a functional use of Yorùbá. Prerequisite: YORU 620b. MTWTHF 11:35–12:25

**YORU 640a**<sup>u</sup>, **Intermediate Yorùbá II**  Oluseye Adesola
Students are exposed to more idiomatic use of the language in a variety of interactions, including occupational, social, religious, and educational. Cultural documents include literary and nonliterary texts. Prerequisite: YORU 630a. MTWTHF 11:35–12:25

**YORU 650a**<sup>u</sup>, **Advanced Yorùbá I**  Oluseye Adesola
An advanced course intended to improve aural and reading comprehension as well as speaking and writing skills. Emphasis is on acquiring a command of idiomatic usage and stylistic nuance. Study materials include literary and nonliterary texts; social, political, and popular entertainment media such as video movies and recorded poems (ewi); and music. Prerequisite: YORU 640b. 3 HTBA

**YORU 660b**<sup>u</sup>, **Advanced Yorùbá II**  Oluseye Adesola
Continuing development of aural and reading comprehension, and speaking and writing skills, with emphasis on idiomatic usage and stylistic nuance. Study materials are selected to reflect research interests of the students. Prerequisite: YORU 650a. 3 HTBA

**YORU 670a**<sup>u</sup> or **b**<sup>u</sup>, **Topics in Yorùbá Literature and Culture**  Oluseye Adesola
The course provides students with the opportunity to acquire Yorùbá up to the superior level. It is designed to give an in-depth discussion on advanced readings on Yorùbá literature and culture. It focuses on Yorùbá history, poetry, novels, dramas, and oral folklore. It also seeks to uncover the basics of the Yorùbá culture in communities where Yorùbá is spoken across the globe, with particular emphasis on Nigeria. It examines movies,
texts, and written literature to gain insight into the Yorùbá philosophy and ways of life. TTH 4–5:15

**YORU 680a**, Advanced Topics in Yorùbá Literature and Culture  
Oluseye Adesola  
A course for students with advanced proficiency in Yorùbá who are interested in discussion and research in Yorùbá at a level not covered by existing courses. A term paper or its equivalent is required. TTH 1–2:15

**YORU 682b**, Advanced Topics in Yorùbá Literature and Culture II  
Oluseye Adesola  
Continuation of YORU 680a. TTH 1–2:15

**ZULU 610a**, Beginning isiZulu I  
Sandra Sanneh  
A beginning course in conversational isiZulu, using Web-based materials filmed in South Africa. Emphasis on the sounds of the language, including clicks and tonal variation, and on the words and structures needed for initial social interaction. Brief dialogues concern everyday activities; aspects of contemporary Zulu culture are introduced through readings and documentaries in English. Credit only on completion of ZULU 620b. MTWTHF 11:35–12:25

**ZULU 620b**, Beginning isiZulu II  
Sandra Sanneh  
Development of communication skills through dialogues and role play. Texts and songs are drawn from traditional and popular literature and song. Students research daily life in selected areas of South Africa. Prerequisite: ZULU 610a. MTWTHF 11:35–12:25

**ZULU 630a**, Intermediate isiZulu I  
Sandra Sanneh  
Development of basic fluency in speaking, listening, reading, and writing isiZulu, using Web-based materials filmed in South Africa. Students describe and narrate spoken and written paragraphs. Review of morphology; concentration on tense and aspect. Materials are drawn from contemporary popular culture, folklore, and mass media. Prerequisite: ZULU 620b. MTWTHF 9:25–10:15

**ZULU 640b**, Intermediate isiZulu II  
Sandra Sanneh  
Students read longer texts from popular media as well as myths and folktales. Students are prepared for initial research involving interaction with speakers of isiZulu in South Africa, and for the study of oral and literary genres. Prerequisite: ZULU 630a. MTWTHF 9:25–10:15

**ZULU 650a**, Advanced isiZulu I  
Sandra Sanneh  
Development of fluency in using idioms, speaking about abstract concepts, and voicing preferences and opinions. Excerpts are drawn from oral genres, short stories, and dramas made for television. Introduction to other South African languages and to issues of standardization, dialect, and language attitude. Prerequisite: ZULU 640b. 3 HTBA

**ZULU 660b**, Advanced isiZulu II  
Sandra Sanneh  
Readings may include short stories, a novel, praise poetry, historical texts, or contemporary political speeches, depending on student interests. Study of issues of language policy and use in contemporary South Africa; introduction to the Soweto dialect of isiZulu. Students are prepared for extended research in South Africa involving interviews with isiZulu speakers. Prerequisite: ZULU 650a.
AMERICAN STUDIES

230 Hall of Graduate Studies, 203.432.1186
www.yale.edu/amstud
M.A., M.Phil., Ph.D.

Chair
Matthew Jacobson (230 HGS, 203.432.1186)

Director of Graduate Studies
Joanne Meyerowitz [F] (230 HGS, 203.432.1186)
Kathryn Dudley [Sp] (230 HGS, 203.432.1186)

Assistant Professors  Birgit Brander Rasmussen (on leave), Crystal Feimster, Zareena Grewal, Kathryn Lofton (on leave [Sp]), Paige McGinley, Alyssa Mt. Pleasant, Naomi Pabst, Caleb Smith

Lecturers  James Berger, Ronald Gregg

Fields of Study
Fields include American literature, history, the arts and material culture, philosophy, cultural theory, and the social sciences.

Special Admissions Requirement
A twenty-page writing sample is required with the application.

Special Requirements for the Ph.D. Degree
During the first two years of study students are required to take twelve term courses; at least half of these courses must be in American Studies. First-year students are also required to take AMST 600a, American Scholars (graded Satisfactory/Unsatisfactory). The student's program will be decided in consultation with the adviser and the director of graduate studies (DGS). In each of the two years, the student should take at least one seminar devoted to research or requiring a substantial original paper, and must achieve two grades of Honors, with an average overall of High Pass.

Students are required to show proficiency in a language other than English; they may fulfill this requirement by (1) conducting substantial research in the chosen language as
part of the course requirements for one of the twelve required seminars, (2) passing a
translation test, offered each term by various language departments, or (3) receiving a
grade of B or higher in a Yale College intermediate- or advanced-level language course
or in a Yale language-for-reading course, such as French for Reading or German for
Reading.

Upon completion of course work, students in their third year of study are required
to participate in at least one term of a monthly prospectus workshop (AMST 902a and
b). Intended to complement the work of the prospectus committee, the workshop is
designed as a professionalization experience that culminates in students’ presentation of
the dissertation prospectus at their prospectus colloquium.

Students should schedule the oral qualifying examinations in four fields, in the fifth
term of study. Preparation, submission, and approval of the dissertation prospectus
should be completed by the end of the sixth term, with a final deadline at the end of the
seventh term with permission from the DGS. Students are admitted to candidacy for the
Ph.D. upon completion of all predissertation requirements, including the prospectus.
The faculty in American Studies considers training in teaching to be an important part
of the program. Students in American Studies normally teach in years three and four.

**Combined Ph.D. Programs**

**American Studies and African American Studies**

The American Studies Program also offers, in conjunction with the Department of Afri-
can American Studies, a combined Ph.D. in American Studies and African American
Studies. This combined degree is most appropriate for students who intend to concen-
trate in and write a dissertation on any aspect of African American history, literature,
or culture in the United States and other parts of the Americas. Applicants to the joint
program must indicate on their application that they are applying both to American Stud-
ies and to African American Studies. All documentation within the application should
include this information.

**American Studies and Film Studies**

The American Studies Program also offers, in conjunction with the Film Studies Pro-
gram, a joint Ph.D. in American Studies and Film Studies. For further details, see Film
Studies. Applicants to the joint program must indicate on their application that they are
applying both to American Studies and to Film Studies. All documentation within the
application should include this information.

**Master’s Degrees**

**M.Phil.** See Degree Requirements under Policies and Regulations.

**M.A. (en route to the Ph.D.)** The M.A. is granted upon the completion of six term
courses (two grades must be Honors and the other four grades must average High Pass),
and the successful completion of the language requirement. It can be petitioned for in the
term following completion of the requirements. Candidates in combined programs will
be awarded the master’s degree only when the master’s requirements for both programs
have been met.
Public Humanities Concentration  The M.A. with a concentration in Public Humanities is granted upon the completion of all requirements for the en route M.A. Of the six term courses required, students must take four Public Humanities courses, including AMST 903, 904, 905.

Terminal Master’s Degree Program  The basic requirements for this terminal degree are six term courses, including a special writing project, and the successful completion of the language examination. The project involves the submission of substantial written work either in conjunction with one course or as a tutorial that substitutes for one course. Students must earn a grade of Honors in two of their courses and an average grade of High Pass in the others.

For further information, see the American Studies Web site: www.yale.edu/amstud.

Courses

AMST 600a, American Scholars  Kathryn Dudley

“What would we really know the meaning of? The meal in the firkin; the milk in the pan; the ballad in the street; the news of the boat; the glance of the eye; the form and the gait of the body. The literature of the poor, the feelings of the child, the philosophy of the street, the meaning of household life, are the topics of the time.”

—Ralph Waldo Emerson, The American Scholar, 1837

A half-century ago American studies was a movement; now it is an institution. But it remains an anomaly in the academy, with neither method nor discipline: a modest program, not a department, that immodestly claims the space between disciplines, beyond disciplines, and perhaps encompassing disciplines.

In the early days, American studies was imagined as a home for Emerson’s American scholar; these days Emerson’s scholar is apt to be eyed more skeptically. Nevertheless the philosophy of the street and the meaning of household life continue to be the topics of the time, and American studies remains an oddly Emersonian place for nurturing intellectuals.

To explore the various kinds of American scholars and American studies, the American Scholars colloquium meets weekly. Each week, we ask a member of the American Studies faculty: What are the key works that shape your intellectual project? What works pose the crucial issues? What works engage what you would really know the meaning of? Each speaks briefly and leads a discussion of the works chosen. There is no writing assignment, and students receive a credit for participating. This course is mandatory for first-year American Studies graduate students. W 9:25–11:15

AMST 622a and 623b/CPLT 622a, Working Group on Globalization and Culture  Michael Denning

A continuing collective research project, a cultural studies “laboratory,” that has been running since the fall of 2003. The group is made up of graduate students and faculty from several disciplines. The working group meets regularly to discuss common readings, to develop collective and individual research projects, and to present that research publicly. The general theme for the working group is globalization and culture, with three principal aspects: (1) the globalization of cultural industries and goods, and its consequences
for patterns of everyday life as well as for forms of fiction, film, broadcasting, and music;
(2) the trajectories of social movements and their relation to patterns of migration, the
rise of global cities, the transformation of labor processes, and forms of ethnic, class, and
gender conflict; (3) the emergence of and debates within transnational social and cultural
theory. The specific focus, projects, and directions of the working group are determined
by the interests, expertise, and ambitions of the members of the group, and change as its
members change. There are a small number of openings for second-year graduate stu-
dents. Students interested in participating should contact michael.denning@yale.edu.

AMST 635b/WGSS 706b, Cultural Studies in the Americas
Alicia Schmidt Camacho
A seminar in American cultural studies with readings from Latin America, the Carib-
bean, and the United States devoted to culture, popular movements, and social theory.
The course pairs cultural texts with theoretical readings and historical monographs. We
consider questions of global political and economic transformations in the region; dis-
courses and practices of migration and displacements; nationalism and transnational
movements; processes of racial, gender, class, and sexual formation; and vernacular and
official discourses of rights and justices. We address these themes through an examina-
tion of popular movements and expressive cultures, and mass media. Prerequisite: stu-
dents need basic familiarity with the Spanish language to participate fully. W 9:25–11:20

AMST 636a, Writing for the Present  Alicia Schmidt Camacho
An interdisciplinary approach to the processes of social documentation and literary non-
fiction, as practiced in the fields of cultural and ethnic studies. The challenges of rep-
resenting ongoing social processes with authority and integrity; writing as a social act;
methods of developing a contemporary archive. Readings from the works of authors
whose narratives cross the boundary between scholarship and literature. M 9:25–11:20

AMST 643a/AFAM 505a, Theorizing Racial Formations  Hazel Carby
A required course for all first-year students in the joint Ph.D. program in African Ameri-
can Studies; also open to students in American Studies. This interdisciplinary reading
seminar focuses on new work that is challenging the temporal, theoretical, and spatial
boundaries of the field. TH 9:25–11:15

AMST 645a/AFAM 723a/CPLT 949a/WGSS 645a, Caribbean Diasporic Intellectuals
Hazel Carby
The course examines work by writers of Caribbean descent from different regions of
the transatlantic world. In response to contemporary interest in issues of globalization,
the premise of the course is that in the world maps of these black intellectuals we can
see the intertwined and interdependent histories and relations of the Americas, Europe,
and Africa. Thinking globally is not a new experience for black peoples, and we need
to understand the ways in which what we have come to understand and represent as
“Caribbeaness” is a condition of movement. Literature is most frequently taught within
the boundaries of a particular nation, but this course focuses on the work of writers who
shape the Caribbean identities of their characters as traveling black subjects and refuse
to restrain their fiction within the limits of any one national identity. We practice a new
and global type of cognitive mapping as we read and explore the meanings of terms like black transnationalism, migrancy, globalization, and empire. Diasporic writing embraces and represents the geopolitical realities of the modern, modernizing, and postmodern worlds in which multiple racialized histories are inscribed on modern bodies. T 1:30–3:20

**AMST 650a/ANTH 510a/HIST 807a, Resistance, Rebellion, and Survival Strategies in Modern Latin America** Gilbert Joseph, Patricia Pessar
An interdisciplinary examination of new conceptual and methodological approaches to such phenomena as peasants in revolution, millenarianism, “banditry,” refugee movements, and transnational migration. F 1:30–3:20

**AMST 653a, Recording Vernacular Music** Michael Denning
An introduction to the cultural study of vernacular musics in the era of sound recording. Topics include the rise of the music industry from sheet music to MP3s; the critical debates over vernacular musics associated with figures like Theodor Adorno, Charles Seeger, Alejo Carpentier, and Amiri Baraka; the rise of ethnographic field recording and the twentieth-century revivals of folk musics; the popular urban music cultures of ports and industrial cities; and the global circulation of commercial vernacular musics from jazz, tango, and hula to salsa and hip hop. TTH 1–2:15

**AMST 654bU/AFAM 743bU/ENGL 845bU, American Artists and the African American Book** Robert Stepto
The visual art, decoration, and illustration of African American books (prose and poetry) since 1900. Topics include book art of the Harlem Renaissance (with special attention to Aaron Douglas and Charles Cullen), art imported to book production (e.g., Archibald Motley’s paintings used as book art), children’s books (e.g., *I Saw Your Face* by Kwame Dawes with drawings by Tom Feelings; *Ntozake Shange’s Ellington Was Not a Street*, illus. by Kadir Nelson), photography and literature (e.g., Paul Laurence Dunbar’s *Cabin and Field*, with Hampton Institute photographs; Richard Wright’s *12 Million Black Voices*). The seminar includes sessions at Beinecke Library and encourages research projects in the Beinecke’s holdings, especially the James Weldon Johnson collection. W 1:30–3:20

**AMST 656a/AFAM 830a/ENGL 944a, Canonizing African American Poetry** Elizabeth Alexander
African American poetry is under-studied, under-theorized, and under-archived. In this seminar we turn to the African American verse canon with a hand to edifying its scholarly apparatus. We ask questions about the politics of canon formation andanthologizing, as well as read relevant theory in the field. The first half of the course is devoted to the study and discussion of versions of this canon by examining critical editions that are variously exemplary: Gene Andrew Jarrett’s Paul Laurence Dunbar, Arnold Rampersad’s Langston Hughes, Verner Mitchell’s Helene Johnson, Rita Dove’s Melvin Tolson, various editions of Gwendolyn Brooks, and Kimberly Benston’s Amiri Baraka. We consider the myriad approaches to writing and publishing on Phillis Wheatley and interrogate the idea of “foremother.” We also consider the specific work of anthologizing such as Maureen Honey’s work on African American women poets and Aldon Neilsen’s work on black experimentalism. For the latter half of the class students work archivally, at the Beinecke and elsewhere, on poets of their choosing in consultation with the instructor;
possibilities include Fenton Johnson, Jean Toomer, Robert Hayden, Jay Wright, and Lucille Clifton. The final project is a complete critical edition of the work of a chosen poet—"lost" or "canonical"—or a blueprint for an anthology on some subset of African American poetry. T 9:25–11:15

AMST 661a/ENGL 868a, Antebellum American Literature and Culture

Caleb Smith

The literature and culture of the United States in the antebellum period, roughly 1830–1861. Readings include literary works by Melville, Emerson, Hawthorne, Dickinson, Douglass, Thoreau, Whitman, and Poe, as well as important documents from the political, legal, and intellectual history of the age. A study of a single, transformative period, the seminar is also designed to introduce students to the modern history of Americanist criticism, from F.O. Matthiessen's *American Renaissance* (1941), through the various critiques of identity and ideology, to the historicism and renewed transnationalism of contemporary "New Americanists." Special attention is paid to the problems of judgment and justice that have animated the critical debates. W 9:25–11:15

AMST 682b/DRAM 376b/ENGL 953b, The American Avant-Garde

Marc Robinson

Topics include the Living Theater, Happenings, Cunningham/Cage, Open Theater, Judson Dance Theater, Grand Union, Bread and Puppet Theater, Ontological-Hysteric Theater, Theater of the Ridiculous, Meredith Monk, Robert Wilson, and the Wooster Group. TH 10–11:50

AMST 683b/CPLT 571b/RUSS 675b, Promised Lands: Slavery, Literature, and Modernity in Russia and the United States

John MacKay

Close, comparative, contextualized examination of literary and other forms of cultural production associated with U.S. slavery and Russian serfdom. Special attention is paid to the relation between bondage and national, cultural, and personal identity; the role of bondage in definitions of "aesthetic experience" in the pre- and post-emancipation periods; the relation between literacy and the literary; literature of protest in the two countries; and connections between geographical and subjective space within cultures of enslavement. We examine works by Pushkin, Aksakov, Gogol, Simms, Cooper, Crévecœur, Radishchev, Karamzin, Goncharov, Tolstoy, Kennedy and the "plantation novelists," Stowe, Melville, Turgenev, slave and serf autobiographers, freedman's textbooks, Fet, Lanier, Page, Chesnutt, and Bunin; historical treatments by Kolchin, Genovese, and others; and theoretical works by Said, Jameson, Saidiya Hartman, Bakhtin, and others. Requirements: in-class presentations and research paper. No knowledge of Russian required. M 3:30–5:20

AMST 693a/HSAR 720a/WGSS 693a, Material Sensations: Sense and Contention in Material Religious Practice

Sally Promey

This interdisciplinary graduate seminar explores the sensory and material histories of religious images, objects, buildings, and performances. With a focus on American things and religions, the course also considers broader geographical and categorical parameters so as to invite intellectual engagement with the most challenging and decisive developments in relevant fields. The goal is to study not only the visual cultures of religions but also to investigate possibilities for scholarly examination of a more robust human
sensorium of sound, taste, touch, scent, and sight—and even “sixth senses”—the points where the senses meet material things (and vice versa) in religious life and practice. Topics for consideration include the cultural construction of the senses and sensory hierarchies; investigation of the sensory capacities of (religious) things; and episodes of sensory contestation in and among various religious traditions. In addition, the course invites thinking beyond the “Western” five senses to other locations and historical possibilities for identifying the dynamics of sensing human bodies in (trans)national religious practices, experience, and ideas. Prerequisite: permission of the instructor. T 1:30–3:20

AMST 695a/HSAR 728a, Craft in Colonial and Independent India
Edward Cooke, Jr.
This seminar focuses upon South Asian craftsmen and their products from the eighteenth century to the present. Looking closely at materials, techniques, forms, and decoration and paying attention to the training of craftsmen and the function and circulation of their work, the course probes the full complexity of textiles, metalwork, ceramics, and woodworking in regard to issues of colonialism, hybridity, and control of work. W 1:30–3:20

AMST 696b/HSAR 736b, Modern Craft in America
Edward Cooke, Jr.
This seminar explores the development and rise of modern craft in America, focusing upon the ideology, pedagogy, and commercialization of the Arts and Crafts Movement as well as the overlap of craft, design, and folk art in the interwar years. Students consider such topics as regional modes of production, the connection between craft and identity, the interdependence of rural production and urban consumption, the necessity of craft, and the choice of craft. W 3:30–5:20

AMST 697a/HSAR 735a, 1930s America: Photography, Literature, Painting, Film
Alexander Nemerov
The course explores the 1930s in America, year by year and place by place, by the light and darkness of a phenomenological conception of history. That is, it is a study in which the historian's states of knowing and not knowing are conceived as an intermixed chiaroscuro affording depth, shade, and softness to what can be seen or maybe only imagined about the past. The focus of our imperceptions is a recovery, by glimpses and conjurings, of day-to-day life as it might have been then: namely, the routines and habits cresting now and then to moments of philosophical power, envisioned as such by the historian's art of casting a shadow on what he or she sees. Neither then nor now, the photography, fiction, paintings, and films we study can be seen as glimmers or half-articulations of something that is not our mirror image but, as Robert Frost put it, “For once, then, something.” Among the many figures we consider: William Faulkner, Dorothea Lange, Margaret Bourke-White, Walker Evans, Nathanael West, Aaron Douglas, William Edmondson, Frank Capra, and Judy Garland. W 3:30–5:20

AMST 700a/HIST 700a, Introduction to the Historiography of the United States
Ned Blackhawk
Readings and discussion of scholarly work on U.S. history from the settlement era to the present. Members of the department faculty visit the class on a rotating basis. T 9:25–11:15
AMST 709b/AFAM 709b/HIST 736b/WGSS 736b, Research in U.S. Political and Social History after 1865  Glenda Gilmore
Projects chosen from the post-Civil War period, with emphasis on twentieth-century social and political history, broadly defined. Research seminar. T 1:30–3:20

AMST 710b/AFAM 588b/ENGL 948b, Autobiography in America  Robert Stepto
At least a dozen North American autobiographies are studied, mostly from the “American Renaissance” to the present. Discussion of various autobiographical forms and strategies as well as of various experiences of American selfhood and citizenship. Slave narratives, spiritual autobiographies, immigrant narratives, autobiographies of childhood or adolescence, relations between autobiography and class, region, or occupation. M 1:30–3:20

AMST 715b/AFAM 764b/HIST 715b, Readings in Nineteenth-Century America  David Blight
The course explores recent trends and historiography on several problems through the middle of the nineteenth century: sectionalism; expansion; slavery and the Old South; northern society and reform movements; Civil War causation; the meaning of the Confederacy; why the North won the Civil War; the political, constitutional, and social meanings of emancipation and Reconstruction; violence in Reconstruction society; the relationships between social/cultural and military/political history; problems in historical memory; the tension between narrative and analytical history writing; and the ways in which race and gender have reshaped research and interpretive agendas. W 2:30–4:20

AMST 719a, Interrogating the Crisis of Islam  Zareena Grewal

AMST 731b/AFAM 763b/HIST 780b, Methods and Practices in U.S. Cultural History  Matthew Jacobson
This sampling of U.S. cultural history from the early national period to the present is designed to unfold on two distinct planes. The first is a rendering of U.S. culture itself—a survey, however imperfect, of the major currents, themes, and textures of U.S. culture over time, including its contested ideologies of race and gender, its organization of productivity and pleasure, its media and culture industries, its modes of creating and disseminating “information” and “knowledge,” its resilient subcultures, and its reigning nationalist iconographies and narratives. The second is a sampling of scholarly methods and approaches, a meta-history of “the culture concept” as it has informed historical scholarship in the past few decades. The cultural turn in historiography since the 1980s has resulted in a dramatic reordering of “legitimate” scholarly topics, and hence a markedly different scholarly landscape, including some works that seek to narrate the history of the culture in its own right (Kasson’s history of the amusement park, for instance), and others that resort to cultural forms and artifacts to answer questions regarding politics, nationalism, and power relations (Melani McAlister’s Epic Encounters). In addition to providing a background in U.S. culture, then, this seminar seeks to trace these developments within the discipline, to understand their basis, to sample the means and methods of “the cultural turn,” and to assess the strengths and shortcomings of culture-based historiography as it is now constituted. F 9:25–11:15
AMST 738b/HIST 738b, Readings in Western and Frontier History
John Mack Faragher
An introduction to recent work on the history of North American frontiers and the shifting region of the American West. Critical consideration of readings, participation in discussion, and completion of short weekly writing assignments and a term project. W 9:25–11:15

AMST 746b/ANTH 543b, Ethnographic Writing and Representation
Kathryn Dudley
What kind of literary project is ethnography? How do ethnographers conceptualize the relationship between their readers and their subjects as well as themselves as authors and subjects of their own texts? This seminar moves beyond the “crisis of representation” in anthropology to take stock of what experimental approaches to writing ethnography have contributed to our understanding of the ethnographic encounter and its place in the production of knowledge. In addition to genre-bending examples of recent ethnography, we read works of literary criticism, social theory, and cultural analysis that problematize classic representational conventions. We also consider the unique challenges of writing ethnographically for a public audience. W 9:25–11:15

AMST 767b/HIST 724b, Research Seminar in U.S. Urban History
Mary Lui
Students conduct archival research to write an original article-length essay on any aspect of U.S. urban history in any century. The first half of the seminar consists of weekly readings and discussions while the latter half consists of article workshop meetings focused on student writing. T 9:25–11:15

AMST 770a/HIST 770a/WGSS 750a, Research in Gender and Sexuality
George Chauncey, Joanne Meyerowitz
Students conduct research in primary sources and write original monographic essays on the history of gender and sexuality. Readings include key theoretical works as well as journal articles that might serve as models for student research projects. W 1:30–3:20

AMST 779a/HIST 737a, Research in Twentieth-Century U.S. Political Economy
Jennifer Klein
Research seminar oriented around themes and issues in U.S. political economy, from the late nineteenth century through the end of the twentieth. Readings in the first part of the term look at various approaches to writing about political economy: for example, business history, intellectual history, labor history, biography, local monograph, or transnational history. Research projects explore new possibilities for writing about labor, business, the state, and capitalism. TH 1:30–3:20

AMST 796a/HIST 796a, Approaches to the History of Capitalism and Culture
Jean-Christophe Agnew
A reading- and discussion-intensive seminar that draws on different disciplines (e.g., intellectual history, anthropology, sociology, geography, political science, and literary criticism) to explore the historical intersections between capitalism and culture in the United States and elsewhere. At the broadest level of transactionality, the readings
attempt to unravel the knotted relation between market-making and meaning-making—between commerce and culture and between labor and value. More specifically, we consider the impact of commodification upon culture(s), and vice versa, under historically specific regimes of labor discipline, capital accumulation and circulation, from slavery through the so-called financialization, experientialization, and virtualization of the post-Fordist economy. One long and one short paper. W 1:30–3:20

**AMST 801b/HIST 789b, U.S. Intellectual Formations in the Twentieth Century**
Jean-Christophe Agnew

This seminar aims to do two things: to introduce students to recent work on some of the more important intellectual movements in twentieth-century U.S. history and to explore the widely different contextualist approaches that historians have taken toward them. Our first set of questions focuses on the intellectuals as a social type or formation: How did they mobilize themselves and others differently over the course of the century as the institutional ground shifted beneath their feet, the culture industries multiplied, and the communication revolution unfolded? How should we understand the real and imagined spaces that intellectuals fashioned for themselves and the impact of those geographies upon their identities and ideas? What effects have the changing forms of intellectual collaboration had on the genesis, refinement, and articulation of ideas in this country? Our second set of questions focuses on some of the ideas, ideologies, paradigms, “imaginarics,” and intellectual identities that have taken hold over the course of the century, with a view toward comparing the different visions in relation to one another and against the circumstances of their efflorescence. One short and one long paper. W 9:25–11:15

**AMST 803a/HIST 703a, Research in Early National America**
Joanne Freeman

A research seminar focused on the early national period of American history, broadly defined. Early weeks familiarize students with sources from the period and discuss research and writing strategies. Students produce a publishable article founded on primary materials. T 1:30–3:20

**AMST 832au and 833bu/FILM 735au and 736bu, Documentary Film Workshop**
Charles Musser

A yearlong workshop designed primarily for Film Studies majors making documentaries, and for graduate students making a documentary to fulfill the methods and final project components of the M.A. in Public Humanities. W 12:30–3:20, screenings T 7

**AMST 834b/FILM 733bu, Documentary and the Environment**
Charles Musser

The environmental documentary has emerged as one of cinema’s most vital genres of the last ten years (in documentary its only rivals are probably those concerned with the Second Gulf War). As the world’s environment faces a growing crisis, documentary has come to serve as a key means to draw public attention to specific issues. This course combines screenings with readings on documentary such as Bill Nichols’s important book *Representing Reality*. Often films have book tie-ins, and we consider how they complement each other and work together to maximize the impact of their message. Readings also focus on news items, debates, Web sites, and other media forms that are employed in conjunction with the films. T 1:30–3:20, screenings M 7
AMST 839b/F&ES 843b/HIST 743b/HSHM 744b, Readings in Environmental History
   Paul Sabin
Reading and discussion of key works in environmental history. The course explores major forces shaping human-environment relationships, such as markets, politics, and ecological dynamics, and compares different approaches to writing about social and environmental change. M 1:30–3:20

AMST 849a/ENGL 924a, American Literary Production, 1945 to the Present
   Amy Hungerford
The course surveys the conditions of cultural production and reception that shape American fiction since the end of World War II. We track both the history itself and the evolving critical approaches used to understand it. Topics include the New York Intellectuals; politics and the cultural turn from the 1960s through 1990s (focusing on the Black Arts Movement, feminist literature, and identity theory); literature and economic theory; reading practices and the rise of critical interest in them; the history of publishing; and globalizing American literature. Readings to include Bellow, Roth, Howe, McCarthy, Penn Warren, Mailer, Pynchon, Didion, Jong, Reed, Kelley, Morrison, DeLillo, Octavia Butler, and others. Critical and theoretical readings to include Trilling, Howe, McLuhan, Ohmann, Bourdieu, Guillory, Jameson, English, Michaels, Glass, McGurl, Farland, Ngai, Casanova, and others. TH 9:25–11:15

AMST 861b/ARCH 4241b, Built Environments
   Dolores Hayden
M 9:25–11:15

AMST 879au/HIST 914au/HSHM 634au, Media and Medicine in Modern America
   John Harley Warner, Gretchen Berland
An exploration of the relationships among medicine, health, and the media in the United States from 1870 through the present. Focus on newspapers, magazines, professional journals, advertising, exhibitions, radio, film, television, and the Internet; and on interactions among researchers, health professions, medical and public health institutions, journalists, advocacy organizations, the state, industry, and the public. Topics include the changing role of the media in shaping conceptions of the body; creating new diseases; influencing health and health policy; crafting the image of the medical profession; informing expectations of medicine and constructions of citizenship; and the medicalization of American life. TTH 10:30–11:20

AMST 886b/CPLT 635b/ENGL 851b, American Literature: Genres, Media, Webs
   Wai Chee Dimock
A survey of American literature as a multi-genre and cross-media field. The course addresses some of these issues: the movement from the linguistic medium to image, music, and theater; genealogies between poetry and prose; adaptations and rewritings from the nineteenth century to the twenty-first; the translational dynamics between the local and the global. We read Moby-Dick along with Agha Shahid Ali’s poems, Call Me Ishmael Tonight, and Frank Stella’s mixed-media installations; Whitman’s Leaves of Grass with Michael Cunningham’s Specimen Days and the songs of Kurt Weill, Vaughan Williams, and Ned Rorem; Henry James’s The Golden Bowl with the Merchant Ivory film;
and Hawthorne's *The Scarlet Letter*, and Faulkner's *Light in August* and *As I Lay Dying*, with Suzan-Lori Parks's *The Red Letter Plays* and *Getting Mother's Body*. W 1:30–3:20

**AMST 900, Independent Research**

**AMST 901, Directed Reading**

**AMST 902a and b, Prospectus Workshop** Joanne Meyerowitz

Upon completion of course work, students are required to participate in at least one term of the prospectus workshop, ideally the term before the prospectus colloquium is held. Open to all students in the program and joint departments, the workshop serves as a forum for discussing the selection of a dissertation topic, refining a project's scope, organizing research materials, and evaluating work in progress. The workshop meets once a month. M 12–1:30

**AMST 903a/HIST 746a, Introduction to Public Humanities** Matthew Jacobson

What is the relationship between knowledge produced in the university and the circulation of ideas among a broader public, between academic expertise on the one hand and nonprofessionalized ways of knowing and thinking on the other? What is possible? This seminar provides an introduction to various institutional relations and to the modes of inquiry, interpretation, and presentation by which practitioners in the humanities seek to invigorate the flow of information and ideas among a public more broadly conceived than the academy, its classrooms, and its exclusive readership of specialists. Topics include public history, museum studies, oral and community history, public art, documentary film and photography, public writing and educational outreach, the socially conscious performing arts, and fundraising. In addition to core readings and discussions, the seminar includes presentations by several practitioners who are currently engaged in different aspects of the Public Humanities. With the help of Yale faculty and affiliated institutions, participants collaborate in developing and executing a Public Humanities project of their own definition and design. Possibilities might include, but are not limited to, an exhibit or installation, a documentary, a set of walking tours, a Web site, a documents collection for use in public schools. Required for the master’s degree in Public Humanities. M 3:30–5:20

**AMST 904, Practicum in Public Humanities**

**AMST 905, Master’s Project in Public Humanities**
ANTHROPOLOGY

www.yale.edu/anthropology
M.A., M.Phil., Ph.D.

Chair
Richard Bribiescas

Director of Graduate Studies
Anne Underhill

Professors  Richard Bribiescas, Richard Burger, M. Kamari Clarke, Michael Dove (Forestry & Environmental Studies), Kathryn Dudley (American Studies), J. Joseph Errington, Inderpal Grewal (Women’s, Gender & Sexuality Studies; on leave [Sp]), Andrew Hill, Marcia Inhorn (Middle East Studies), William Kelly, Enrique Mayer, Roderick McIninch, Catherine Panter-Brick, Patricia Pessar (Adjunct; American Studies), Eric Sargis, James Scott (Political Science), Helen Siu, Kalyanakrishanan Sivaramakrishnan, Anne Underhill, David Watts, Harvey Weiss (Near Eastern Languages & Civilizations)

Associate Professor  Karen Nakamura (on leave)

Assistant Professors  Jafari Allen (African American Studies), Brenda Bradley, Sean Brotherton, Narges Erami (Middle East Studies), Erik Harms (Southeast Asia Studies), Karen Hébert (Forestry & Environmental Studies), William Honeychurch, Michael McGovern, Douglas Rogers, Sara Shneiderman

Lecturers  Carol Carpenter (Forestry & Environmental Studies), Madhavi Murty (South Asian Studies)

Edward P. Bass Distinguished Environmental Scholar  Alison Richard

Fields of Study

The department covers three subfields: archaeology; sociocultural and linguistic anthropology; and physical anthropology. Archaeology focuses on ritual complexes and writing, ceramic analysis, warfare, ancient civilizations, origins of agriculture, and museum studies. Sociocultural anthropology provides a range of courses: classics in ethnography and social theory, religion, myth and ritual, kinship and descent, historical anthropology, culture and political economy, agrarian studies, ecology, environment and social change, medical anthropology, emotions, public health, sexual meanings and gender, postcolonial development, ethnicity, identity politics and diaspora, urban anthropology, global mass culture, and alternate modernity. Linguistic anthropology includes language, nationalism and ideology, structuralism and semiotics, and feminist discourse. Physical anthropology focuses on paleoanthropology, evolutionary theory, human functional anatomy, race and human biological diversity, and primate ecology. There is strong geographical coverage in Africa, the Caribbean, East Asia (China and Japan), Latin America and South America, Southeast Asia (Indonesia), South Asia and the Indian Ocean, the Near East, Europe, and the United States.
Special Requirements for the Ph.D. Degree

Although there are a few required courses or seminars for each subfield, more than three-fourths of a student’s program consists of electives, including course work in other departments. Admission to candidacy requires (1) completion of two years of course work (sixteen term courses); (2) independent study and research; (3) satisfactory performance on qualifying examinations; and (4) a dissertation research proposal submitted and approved before the end of the third year. Qualifying examinations, normally taken at the end of the second year, consist of eight hours written (four hours on one of the subfields, four hours on the student’s special interest), and two hours oral. Dissertations are normally based on field or laboratory research.

Combined Ph.D. Programs

The Anthropology department also offers a combined Ph.D. in Anthropology and Forestry & Environmental Studies in conjunction with the School of Forestry & Environmental Studies, and a combined Ph.D. in Anthropology and African American Studies in conjunction with the Department of African American Studies. These combined programs are ideal for students who intend to concentrate in, and to write dissertations on, thematic and theoretical issues centrally concerned with anthropology and one of these other areas of study. Students in the combined degree programs will be subject to the combined supervision of faculty members in the Anthropology department and in the respective department or school.

Admission into the combined degree program in Anthropology and African American Studies is based on mutual agreement between these two departments. Individual students will develop courses of study in consultation with their academic advisers and with the directors of graduate study for both departments. Students in the program must take core courses in Anthropology and in African American Studies, plus related courses in both departments approved by their advisory committees. In addition, they must successfully complete the African American Studies third-year Research Workshop. Oral and written qualifying examinations must include two topics in the field of African American Studies and two topics in Anthropology. The examination committee must include at least one faculty member from each department. The dissertation prospectus must be submitted to the directors of graduate study of both departments and approved by the faculty of both. The thesis readers committee must also include at least one faculty member from each department, and the faculties of both departments must approve its composition.

Master’s Degrees

M.Phil.  See Degree Requirements under Policies and Regulations.

M.A.  Applications for a terminal master’s degree are not accepted. This degree is granted to students not continuing in the Ph.D. program. The student must complete eight graduate-level term courses approved for credit in the Anthropology department and maintain an average grade of High Pass.
Courses

ANTH 500a, The Development of the Discipline: Historical Trajectories
William Kelly
The seminar emphasizes the characteristics of anthropology as a discipline and as a profession, and the historical trajectory of sociocultural anthropology from the late nineteenth century to the 1970s. The seminar is reserved for first-year doctoral students in Anthropology. M 1:30–3:20

ANTH 500b, The Development of the Discipline: Contemporary Themes
Kalyanakrishnan Sivaramakrishnan
The major theoretical orientations in social and cultural anthropology (especially in the United States and Europe), their historical development and importance, their relation to one another and to other disciplines. The seminar is reserved for first-year doctoral students in Anthropology, and students are presumed to have taken ANTH 500a in the fall term. M 9:25–11:15

ANTH 501a, Anthropology and Classical Social Theory
Readings of primary texts in classical social theory, especially the writings of Marx, Weber, and Durkheim. Particular emphasis is placed on the role of these theorists in the early development of anthropology and social science more broadly. The course is reserved for first-year graduate students in Anthropology. TH 2:30–4:20

ANTH 501b, Anthropology and Contemporary Social Theory
M. Kamari Clarke
An overview of central themes and debates in contemporary social theory, with a focus on the integration of theory and research, rather than a hermeneutical analysis of particular theoretical texts. Concentrating on questions of power, inequality, the self, and community, assessment of the relevance of sociological theory to advancing an understanding of the complexities of late twentieth-century Western society. Critical theory, feminist theories, postmodernism, and the contributions of individual theorists reviewed and critiqued. T 7–8:50

ANTH 502b, Research in Sociocultural Anthropology: Design and Methods
Helen Siu
The course offers critical evaluation of the nature of ethnographic research. Research design includes the rethinking of site, voice, and ethnographic authority. T 9:25–11:15

ANTH 503a, Research in Sociocultural Anthropology: Ethnographic Writing and Representation
Jafari Allen
The course examines the representational practices that inform the doing and making of ethnography, broadly construed as the depiction of social life in the past and present. We consider classic and contemporary approaches to ethnography as a literary form as well as explore precedents and possibilities in the visual and performing arts. HTBA
ANTH 508b\textsuperscript{U}/WGSS 701b\textsuperscript{U}, Queer Ethnographies

ANTH 510a/AMST 650a/HIST 807a, Resistance, Rebellion, and Survival Strategies in Modern Latin America  Gilbert Joseph, Patricia Pessar
An interdisciplinary examination of new conceptual and methodological approaches to such phenomena as peasants in revolution, millenarianism, “banditry,” refugee movements, and transnational migration. F 1:30–3:20

ANTH 513b\textsuperscript{U}, Language, Culture, and Ideology  J. Joseph Errington
Influential anthropological theories of culture are reviewed with critical reference to theories of language that inspired or informed them. Topics include American and European structuralism; cognitivist and interpretivist approaches to cultural description; work of Bakhtin, Bourdieu, and various “critical theorists.” W 9:25–11:15

ANTH 515a, Culture, History, Power, and Representation  Helen Siu
This seminar is a critical introduction to anthropological formulations of the junctures of meaning, interest, and power. Readings include classical and contemporary ethnographies that are theoretically informed and historically situated. W 1:30–3:20

ANTH 540a\textsuperscript{U}, Religion, Culture, and the State  M. Kamari Clarke
The course examines the workings of religion, culture, and politics as they relate to understanding contemporary challenges of religious freedom and the management of cultural and religious pluralism in North America, Europe, and select postcolonial states. T 1:30–3:20

ANTH 541a/F&ES 836a/HIST 965a/PLSC 779a, Agrarian Societies: Culture, Society, History, and Development  James Scott, Michael McGovern, Kalyanakrishnan Sivaramakrishnan
An interdisciplinary examination of agrarian societies, contemporary and historical, Western and non-Western. Major analytical perspectives from anthropology, economics, history, political science, and environmental studies are used to develop a meaning-centered and historically grounded account of the transformations of rural society. Team-taught. M 1:30–5:20

ANTH 542a\textsuperscript{U}, Cultures and Markets: Asian Connections through Time and Space  Helen Siu
Historical and contemporary movement of people, goods, and cultural meanings that have connected an Asian region spanning East Asia, Indian Ocean, Middle East, and Africa. The course rethinks state-centered and land-based perspectives by highlighting the dynamism in multiethnic commercial nodes, port cities, transregional institutions, and their impact on local societies. It focuses on agents of trade, colonial encounters, diverse religious traditions, and global finance flows. It examines the cultures of capital and market in the age of empires, the neoliberal and postsocialist worlds. M 3:30–5:20

ANTH 543b/AMST 746b, Ethnographic Writing and Representation  Kathryn Dudley
What kind of literary project is ethnography? How do ethnographers conceptualize the relationship between their readers and their subjects as well as themselves as authors and
subjects of their own texts? This seminar moves beyond the “crisis of representation” in anthropology to take stock of what experimental approaches to writing ethnography have contributed to our understanding of the ethnographic encounter and its place in the production of knowledge. In addition to genre-bending examples of recent ethnography, we read works of literary criticism, social theory, and cultural analysis that problematize classic representational conventions. We also consider the unique challenges of writing ethnographically for a public audience. W 9:25–11:15

ANTH 545a/ARCG 545a, Organic Latin American Anthropologists of the Twentieth Century Richard Burger, Enrique Mayer

In addition to Latin American anthropology’s development as an academic discipline, its practitioners played important roles in developing policy, educational programs, museums, government institutions, and international forums and institutions in an age of “science” and “nation building.” We study the lives and works of seven famous anthropologists to understand the changing but interactive context of scholarship between the United States and Latin America. Prerequisite: reading knowledge of Spanish. Open to advanced undergraduate students with permission of the instructors. W 1:30–3:20

ANTH 552b, Epistemologies of Health, Medicine, and Science Sean Brotherton

M 1:30–3:20

ANTH 553b/U/SAST 569b/U, Himalayan Languages and Cultures Mark Turin

Exploration of social, linguistic, and political aspects of the Himalayan region. Issues include classifications of communities and their languages; census taking and other state enumeration projects; the crisis of endangered oral cultures and speech forms; the creation and adoption of writing systems; and the challenges of developing mother tongue literacy materials. Case studies are drawn from Bhutan, northern India, Nepal, and Tibet. T 3:30–5:20

ANTH 557a/U, Anthropology of the Body Sean Brotherton

Drawing on a wide and interdisciplinary range of texts, both classic and more recent, the course examines the theoretical debates of the body as a subject of anthropological, historical, psychological, medical, and literary inquiry. We explore specific themes, for example, the persistence of the mind/body dualism; experiences of embodiment/alienation; phenomenology of the body; Foucauldian notions of biopolitics, bio-power, and the ethic of the self; the medicalized body; and the gendered body, among other salient themes. T 1:30–3:20

ANTH 561a/F&ES 877a, Anthropology of the Global Economy for Development and Conservation Carol Carpenter

The seminar explores topics in the anthropology of the global economy that are relevant to development and conservation policy and practice. Anthropologists are often assumed to focus on micro- or local-level research, and thus to have limited usefulness in the contemporary, global world of development and conservation policy. In fact, however, they have been examining global topics since at least the 1980s, and very little current anthropological research is limited to the village level. More importantly, the anthropological perspective on the global economy is unique and important. TH 11:30–2:20
ANTH 569a, Economic Anthropology  Enrique Mayer
An introduction to understanding economic systems in other cultures and societies. How work and leisure are organized, who gets what and how, and how economic concerns tie into other aspects of social life. Major debates and controversies are examined, and examples from different parts of the world are presented. No prior training in economics or anthropology necessary. TH 1:30–3:20

[ANTH 572b/F&ES 869b, Disaster, Degradation, Dystopia: Social Science Approaches to Environmental Perturbation and Change]

ANTH 581a/F&ES 520a, Society and Environment: Introduction to Theory and Method  Michael Dove
An introductory graduate core course on the scope of social scientific contributions to environmental and natural resource issues. Section I presents an overview of the field and course. Section II deals with the way that environmental problems are initially framed. Case studies focus on placing problems in their wider political context, new approaches to uncertainty and failure, and the importance of how the analytical boundaries to resource systems are drawn. Section III focuses on questions of method, including the dynamics of working within development projects, and the art of rapid appraisal and short-term consultancies. Section IV is concerned with local peoples and the environment, with case studies addressing myths of tropical forest use and abuse development discourse, and with the question of indigenous peoples and knowledge. This is a foundations course for the M.E.M. curriculum and a core course in the curriculum for the joint F&ES/Anthropology doctoral program. Three hours lecture/seminar. Enrollment limited to thirty. TH 2:30–5:20

ANTH 582b/F&ES 882b, The Black Box of Implementation: Households, Communities, Gender  Carol Carpenter
The implementation of development projects has been described as existing in a “black box”: development and conservation policy (even participatory policy) is often not defined to inform effective implementation, and data on actual implementation is rarely incorporated into policy. This course examines the invisibility of implementation, and the common, mistaken assumptions about implementation targets (like households, communities, and gender) that take the place of absent data in policy. The course also makes an effort to use anthropology to shed light into this black box, to allow students to think more critically about the varied and dynamic social field in which project implementation occurs. The focus of the course is on the political and economic relations between households, communities, and gender, on the one hand, and the world of development and conservation, on the other. How do households and communities respond to the differential opportunities and restrictions that development and conservation introduce? What are the implications of the fact that those responses are often invisible to policy makers? Three hours lecture/seminar.

ANTH 595a/AFAM 573a, Transnationalism, Modernity, and Rethinking Diaspora  M. Kamari Clarke
As anthropologists continue to grapple with changing notions of “the field” from local to global, this course covers recent and emerging scholarship that explores theoretical
problems of modernity, transnationalism, and diaspora in specific historical and ethnographic contexts. Drawing on a range of ideas from world systems theories of globalization to notions of the invention of diasporas, to postmodern ideas of social constructions, the emphasis is on the interrelations between local and global cultural processes. These processes disrupt the once homogenizing tendencies of ethnography and instead push us to examine different criteria for analyzing and constructing communities. T 7–8:50

**ANTH 597a/F&ES 839a, Social Science of Development and Conservation**  
Carol Carpenter  
The course provides M.E.M., M.E.Sc., and doctoral students with the opportunity to master the essential social science literature on sustainable development and conservation. Social science makes two contributions to the practice of development and conservation. First, it provides ways of thinking about, researching, and working with social groupings—including rural households and communities, but also development and conservation institutions, states, and NGOs. Second, social science tackles the analysis of the knowledge systems that implicitly shape development and conservation policy and impinge on practice. The goal of the course is to stimulate students to apply informed and critical thinking to whatever roles they play in sustainable development and conservation, in order to move toward more environmentally and socially sustainable projects and policies. Three hours lecture/seminar. T 10:30–1:20

**ANTH 598b/F&ES 965b, Advanced Readings: Social Science of Development and Conservation**  
Carol Carpenter  
An advanced seminar on the social science theory of sustainable development and conservation, designed as an M.E.M. capstone course and to provide theory for M.E.Sc. and doctoral students to use to place their own work in a wider theoretical context in analyzing and writing up their research. The course traces the conceptual history of the social science theory of sustainable development and conservation, focusing on theories of discursive power, governmentality, and capitalism. It examines relations between these theories, alternative theories, and how this history influences the field. The course covers the works of Michel Foucault most relevant to development and conservation, important social scientists who have used Foucault’s ideas (e.g., James Ferguson, Arturo Escobar, Timothy Mitchell, Tania Li, Donald Moore), alternative theories of power (e.g., James Scott, Bruno Latour), applications of Foucault’s ideas to development (selections change every year), applications of Foucault’s ideas to the environment (especially Arun Agrawal, Timothy Luke, Bruce Braun), theories of resistance (Michel Foucault, James Scott, and others), Foucauldian views of the economy, capitalism, and governmentality (Aiwa Ong, Anna Tsing), and other views of capitalism (Tania Li, James Ferguson, Timothy Mitchell). Students are expected to use the course to develop, and present in class, their own research and writing. Three hours lecture/seminar. Enrollment limited to twelve. Prerequisite: ANTH 561a, 582b, or 597a. TH 11:30–2:20

**ANTH 603b/AFAM 621b, Theorizing Erotic Interiors, Interstices, and Margins**  
Jafari Allen  
While a number of foundational thinkers have theorized “the erotic,” its intellectual (political and aesthetic) genealogies vary. Following Audre Lorde, the erotic is hermeneutical, and at once personal/individual and intersubjective—what she called “self-connection
shared.” In this research seminar, we pursue deeply contextual theorizations of affect and sociality (e.g., sexuality and sensuality, mourning, humor, longing, hope, resilience) in primary ethnographic and archival data and cultural texts—inside, overlapping, “haunting,” or lurking just outside of the page, note, frame, or experience. The course begins with close readings of important critical works by, for example, Elizabeth Alexander, M. Jacqui Alexander, Lauren Berlant, Hazel Carby, Samuel Delany, Melvin Dixon, Michel Foucault, Paul Gilroy, Judith Halberstam, Michael Hanchard, Saidiya Hartman, Robin Kelley, Audre Lorde, Hortense Spillers, Ann Stoler, and Sylvia Wynter. Later, students research and “workshop” focused research papers on the meanings, historicity, and/or uses of the erotic.

**ANTH 622b/AFST 764b, Topics in African Studies**  Christopher L. Miller
The course provides a broad survey of key topics in African Studies. It introduces students to the study of Africa by examining how the field has developed over time while presenting foundational concepts and theories relevant for understanding the history of its debates. HTBA

**ANTH 632a, Politics of Language**  J. Joseph Errington
The course centers on aspects of language difference and inequality as often neglected but crucial shapers of the political dynamics and social change in plural societies. The first part of the course involves broad comparative and theoretical approaches to the politics of sociolinguistic difference. The second part is devoted to case studies that foreground specific issues: “problems” of substandard languages, bilingual identities, globalization and language shift, language death, and others. TH 1:30–3:20

**ANTH 633bu, The Anthropology of Time**  Michael McGovern
Cross-cultural variability in conceptions of time and space. Nearly one hundred years ago, Durkheim (1912) insisted that the category of time was neither a universal a priori category nor an individualized processing of experience. The category of time, like space, number, and cause, is itself a cultural product, issuing forth from words and actions in society. In turn, the culturally specific understanding of time is foundational to individuals’ attempts to exercise agency in the societies in which they live. W 9:25–11:15

**ANTH 636b, Production and Consumption of Culture**  Douglas Rogers
Theoretical works and case studies on how cultural identities are produced and consumed in the context of contemporary global capitalism. The marketing of “tradition”; city branding; cultural tourism; new transnational, national, and local identities. T 7–8:50

**ANTH 638au, Culture, Power, Oil**  Douglas Rogers
The course analyzes the production, circulation, and consumption of petroleum in order to explore key topics in recent social and cultural theory, including globalization, empire, cultural performance, natural resource extraction, and the nature of the state. Case studies from the United States, Saudi Arabia, Nigeria, Venezuela, and the former Soviet Union, among others. W 9:25–11:15

**ANTH 640a/INRL 624a, Global Health: Ethnographic Perspectives**  Marcia Inhorn
This interdisciplinary seminar, designed for graduate students in Anthropology and Global Health, explores in an in-depth fashion anthropological ethnographies on many
of the serious health problems facing populations in resource-poor societies around the
globe. The course focuses on three major issues: (1) poverty, structural violence, and
health as a human right; (2) struggles with infectious disease; and (3) the health of
women and children (and men, too). Within these three themes, many major issues of
global health concern are addressed, including the health-demoting effects of poverty,
racism, patriarchy, and inhumane conditions of life and labor in many countries; men’s
and women’s sexuality in the era of HIV/AIDS; the politics of epidemic disease con-
trol and other disasters, and the role of communities, nation-states, and international
organizations in responding to such crises; issues of coercion in population control and
the quest for reproductive rights; and how child health is ultimately dependent on the
health and well-being of mothers. The underlying purpose of the course is to develop
students’ awareness of the political, socioeconomic, ecological, and cultural complexity
of most health problems in so-called developing nations and the consequent need for
anthropological sensitivity, contextualization, and activist involvement in the field of
global health. The course is also designed to expose students to salient health issues in
many parts of the world from the United States to China. However, the primary focus is
on global health issues facing sub-Saharan Africa and Latin America. M 2–5

ANTH 651b/WGSS 651b, Intersectionality on Women’s Health  Marcia Inhorn
This interdisciplinary seminar explores how the intersections of race, class, gender, and
other axes of “difference” (age, sexual orientation, disability status, nation, religion)
affect women’s health, primarily in the contemporary United States. Recent feminist
approaches to intersectionality and multiplicity of oppressions theory are introduced. In
addition, the course demonstrates how anthropologists studying women’s health issues
have contributed to social and feminist theory at the intersections of race, class, and
gender. T 9:25–11:15

ANTH 655b/WGSS 659b, Masculinity and Men’s Health  Marcia Inhorn
This interdisciplinary seminar, designed for students in Anthropology; Women’s, Gen-
der, and Sexuality Studies; and Global Health, explores in an in-depth fashion ethno-
graphic approaches to masculinity and men’s health around the globe. The course begins
with two theoretical texts on masculinity, followed by eleven anthropological ethnogra-
phies on various dimensions of men’s health and well-being. Students gain broad expo-
sure to a number of exigent global men’s health issues, issues of ethnographic research
design and methodology, and the interdisciplinary theorizing of masculinity scholars in
anthropology, sociology, and cultural studies. In particular, the course demonstrates how
anthropologists studying men’s health issues in a variety of Western and non-Western
sites, including the Middle East, Africa, Latin America, and Asia, have contributed to both
social theory and ethnographic scholarship of importance to health policy. M 2:30–4:20

ANTH 664a, Ethnicity and Indigeneity in a Mobile World  Sara Shneiderman
This seminar brings together classical social theory on ethnicity with more recent lit-
erature on indigeneity to explore the concepts of “the group” and “the community” as
they are experienced, represented, and analyzed in scholarly, political, and popular dis-
course and practice. We discuss the historical and contemporary trajectories of terms like
“ethnicity,” “indigeneity,” “identity,” and “belonging” as categories for understanding social difference and making claims based upon it. We focus in particular on the relationships between discourses of homogeneity and fixity that underlie many claims to categorical difference, and the practices of geographical and social mobility that characterize the lives of many who place themselves in such categories. We examine the overlapping ideological, pragmatic, and affective dimensions of such membership. Our discussions are situated within broader debates over the relationships between states, societies, and individuals, which we explore through the themes of agency, citizenship, multiculturalism, and the nation-state. We also consider the role of ethnography in shaping such debates and discuss the methodological implications for students wishing to explore these issues further.

ANTH 670b, Affirmative Action in South Asia and the United States
Sara Shneiderman
Explorations of the concept, policy implementation, and sociocultural effects of affirmative action. Focusing on South Asia and the United States, we look comparatively at specific histories and practices of inequality; state strategies for combating inequality through the classification of social difference around concepts like “caste,” “ethnicity,” “race,” and “class”; and consider the role of social science in crafting such policies. These concepts are linked to broader anthropological debates over citizenship, democracy, and the nation-state.

ANTH 674b, Anthropologies of Insurgency
Michael McGovern
The course explores the interlinked categories of rebel, bandit, and freedom fighter to understand insurgency from an anthropological viewpoint. Privileging sociological and micropolitical analysis, the course approaches specific instances of illegal use of force in their sociocultural and historic settings, and builds toward a consideration of insurgency from “the actors’ points of view.”

ANTH 705Lb/ARCG 705Lb, Archaeology Laboratory II
Roderick McIntosh
Practical experience in preparation, analysis, and interpretation of artifacts and nonartificial archaeological data. Students undertake term projects.

ANTH 707b/ARCG 707b, Origins of Complex Society in West Africa
Roderick McIntosh
Using original readings of site reports and primary source articles, we explore the great diversity of expressions of emerging complexity in prehistoric West Africa.

ANTH 720b/ARCG 720b, Mesopotamian Origins
Harvey Weiss
Analysis of the archaeological and paleoenvironmental data for rain-fed and irrigation agriculture settlement, subsistence, and politico-economic innovation from the earliest sedentary agriculture villages, to the earliest cities and states, to the earliest empire. What combinations of dynamic social and environmental forces drove these developments in these regions during this ten thousand year span?

ANTH 731a/ARCG 731a, Introduction to GIS
William Honeychurch
ANTH 732a\textsuperscript{u} and 733La\textsuperscript{u} / ARCG 732a\textsuperscript{u} and 733La\textsuperscript{u}, Archaeological Field Techniques and Archaeology Lab  
Roderick McIntosh

An introduction to the practice and techniques of modern archaeology including methods of excavation, recording, mapping, dating, and ecological analysis. The lab offers instruction in the field at an archaeological site in Connecticut in stratigraphy, mapping, artifact recovery, and excavation strategy. The courses must be taken concurrently and are counted together as 1 credit. W 2:30 – 5:30, lab HTBA

ANTH 748b / ARCG 748b, Contemporary Archaeological Theory  
Richard Burger

This seminar explores contemporary theory in all of its diversity. The course examines multiple critiques of New Archaeology and its remaining legacy; the diversity of competing approaches, sometimes called postprocessualist, currently employed in the United States and the United Kingdom, including critical archaeology, the archaeology of gender, structuralist approaches, various Marxist and neo-Marxist formulations of archaeological theory, and applications of evolutionary theory; as well as the differing trajectory of approaches outside the English-speaking world. W 9:25 – 11:15

ANTH 754a\textsuperscript{u} / ARCG 754a\textsuperscript{u}, Statistics for Archaeological Analysis  
William Honeychurch

An introduction to quantitative data collection, analysis, and argumentation for archaeologists. Lectures, readings, and exercises emphasize the exploration, visualization, and analysis of specifically archaeological data using simple statistical approaches. No prior knowledge of statistics is required. T 2:30 – 4:20

ANTH 759a / ARCG 759a, Social Complexity in Ancient China  
Anne Underhill

This seminar explores the variety of archaeological methods and theoretical approaches that have been employed to investigate the development and nature of social complexity in ancient China. The session meetings focus on the later prehistoric and early historic periods, and several geographic regions are included. They also consider how developments in ancient China compare to other areas of the world. Most of the readings emphasize archaeological remains, although relevant information from early historical texts is considered. T 9:25 – 11:15

ANTH 763a\textsuperscript{u} / ARCG 763a\textsuperscript{u} / NELC 589a\textsuperscript{u}, Archaeologies of Empire  
Harvey Weiss

Comparative study of origins, structures, efficiencies, and limitations of imperialism, ancient and modern, in the Old and New World, from Akkad to “Indochine,” and from Wari to Aztec. The contrast between ancient and modern imperialisms examined from the perspectives of nineteenth- and twentieth-century archaeology and political economy. TH 2:30 – 4:20

ANTH 769b / ARCG 769b, Landscapes of Meaning: Museums and Their Objects  
Anne Underhill, David Odo

This seminar explores how museums convey various meanings about ethnographic, art, and archaeological objects through the processes of collecting, preparing exhibitions, and conducting research. Participants also discuss broader theoretical and methodological issues such as the roles of museums in society, relationships with source communities, management of cultural heritage, and various specializations valuable for careers in art, natural history, anthropology, history, and other museums. TH 9:25 – 11:15
ANTH 773bu/ARCG 773bu/NELC 588bu, Civilizations and Collapse  Harvey Weiss
Collapse documented in the archaeological and early historical records of the Old and New Worlds, including Mesopotamia, Mesoamerica, the Andes, and Europe. Analysis of politico-economic vulnerabilities, resiliencies, and adaptations in the face of abrupt climate change, anthropogenic environmental degradation, resource depletion, “barbarian” incursions, or class conflict. TH 2:30–4:20

ANTH 776bu/ARCG 776bu, GIS and Spatial Analysis for Archaeology  William Honeychurch
Introduction to the practice of Geographical Information Systems in anthropology with attention to archaeological applications. The growing use of GIS among anthropologists has transformed the way we carry out research and conceive of space. The course draws on research examples from a range of theoretical, analytical, and geographical contexts and introduces students to current software. Emphasis is placed on understanding how anthropological archaeologists have employed GIS as part of generating evidence to assess their hypotheses. HTBA

ANTH 780bu/ARCG 780bu, The Archaeology of Religion  Richard Burger
The course explores archaeological approaches to the study of religion. While the term “religion” is hard to define, it is generally agreed that religious phenomena occur in almost all cultures and that this realm played a significant part in most prehistoric cultures. In order to provide a broad vision of this theme, the course begins by considering influential schools of thought on the definition, origins, and social significance of religious behavior. The course then reviews a variety of methods that scholars may use to reconstruct ancient beliefs and rituals. The course assesses the applicability and success of these methodologies across the broad spectrum of ancient cultures representing differing degrees of sociopolitical complexity. Finally, we explore case studies from a diverse range of ancient societies and consider the impact of religious behaviors within their broader cultural contexts. TTH 11:35–12:50

ANTH 791au/ARCG 791au, Paleoclimate and Human Response  Roderick McIntosh
Explores the recursive interaction of climate change with human perception and manipulation of the landscape. Combines a primer on mechanisms and measures of climate change with three case studies of historical response to change at different scales. W 7–8:50

ANTH 810bu, Mammology  Eric Sargis
The evolution and diversity of mammals, including primates. Origin, evolutionary history, systematics, morphology, biogeography, physiology, behavior, and ecology of major mammalian lineages. Accompanying laboratories focus on diagnostic morphological features of mammalian groups through examination of specimens from the Peabody Museum. TTH 2:30–3:45

ANTH 812au, Topics in Anthropological Genetics  Brenda Bradley
A detailed examination of molecular approaches to understanding human evolution and diversity. Emphasis is on current research findings and new methodologies exploring topics such as human origins and hominin evolution, population genomics, molecular adaptations, epigenetics, and gene-culture interactions. We also consider relevant
social and ethical issues, including commercial DNA testing and ownership of biological samples. W 2:30–4:20

**ANTH 820b, Primate Genomics**  Brenda Bradley
A detailed exploration of molecular approaches to understanding primate behavior, ecology, and evolution. The course examines how the new wealth of genomic data aid primateological research on issues such as sexual selection; sociality and cooperation among kin and non-kin; phylogenomics and taxonomy; dietary, morphological, and behavioral adaptations; and migration, distribution, and conservation. W 2:30–4:20

**ANTH 842b/ARCG 842b, Climate and Human Evolution**  Andrew Hill
W 1:30–3:20

**ANTH 849a, Primate Models for Human Evolution**  David Watts
Review of ways in which the study of living nonhuman primates can be used to address questions about hominin evolution and modern human behavior. Covers such topics as chimpanzees as referential models, intergroup aggression, sexual conflict and sexual selection, social cognition, and inferring diets and social systems of extinct hominins. TH 2:30–4:20

**ANTH 851a, Topics and Issues in Evolutionary Theory**  Andrew Hill, Eric Sargis
Focus on current literature in theoretical evolutionary biology, intended to give new graduate students intensive training in critical analysis of theoretical models and in scientific writing. W 1:30–3:20

**ANTH 852a, Primate and Comparative Life History Evolution**  Richard Bribiescas, Alison Richard
This seminar surveys topics in life history theory with special focus and attention on the evolution of primate life histories, comparing them with humans and other vertebrate animal cases. Topics include the constraints, trade-offs, demography, and proximate mechanisms of growth, maintenance, reproductive investment, and aging. The course is open to all graduate students and advanced undergraduates with permission of the instructors. T 9:25–11:15

**ANTH 856a/ARCG 856au, Reconstructing Human Evolution: An Ecological Approach**  Andrew Hill
If human evolutionary change has been determined or affected by ecological factors, such as changes in climate, competition with other animals, and availability and kinds of food supply, then it is important to determine ecological and environmental information about the regions and time period in which human evolution has occurred. Examination of methods for obtaining data relevant to such information, and for evaluating the techniques and results of such other fields as geology, paleobotany, and paleozoology. Ethnographic, primateological, and other biological models of early human behavior. TH 1:30–3:20
ANTH 941a and b, Research Seminar in Japan Anthropology  William Kelly
The seminar offers professional preparation for doctoral students in Japan anthropology through systematic readings and analysis of the anthropological literature, in English and in Japanese. Prerequisite: permission of the instructor. HTBA

ANTH 942b, Research Seminar in South Asia Anthropology  Kalyanakrishnan Sivaramakrishnan
The seminar is for students preparing to become scholars of South Asia. It consists of systematic reading, analysis, discussion, and writing about the anthropological literature in English. It deals with a selection of key ethnographic monographs that cover important topics and debates in the anthropology of South Asia and India including caste, class, community, gender, language, development, environment, politics, and popular culture. Students actively prepare and lead discussions, and write either a proposal or research paper at the end of the term. The seminar is designed for doctoral students working on South Asia. Others with appropriate background and interests may be admitted by permission of the instructor. T 1:30–3:20

ANTH 951a and b, Directed Research in Ethnology and Social Anthropology
By arrangement with faculty.

ANTH 952a and b, Directed Research in Linguistics
By arrangement with faculty.

ANTH 953a and b, Directed Research in Archaeology and Prehistory
By arrangement with faculty.

ANTH 954a and b, Directed Research in Biological Anthropology
By arrangement with faculty.
APPLIED MATHEMATICS

A. K. Watson Hall, 203.432.1278
www.cs.yale.edu/appliedmath2
M.S., M.Phil., Ph.D.

Director of Graduate Studies
Peter Jones

Professors  Andrew Barron (Statistics), Donald Brown (Economics; Mathematics; School of Management), Joseph Chang (Statistics), Ronald Coifman (Mathematics; Computer Science), Gustave Davis (Pathology), Eric Denardo (Operations Research), Stanley Eisenstat (Computer Science), Michael Fischer (Computer Science), Roger Howe (Mathematics), Peter Jones (Mathematics), David Pollard (Statistics), Nicholas Read (Physics; Applied Physics; Mathematics), Vladimir Rokhlin (Computer Science; Mathematics), Herbert Scarf (Emeritus, Economics), Martin Schultz (Emeritus, Computer Science), Mitchell Smooke (Mechanical Engineering; Applied Physics), Daniel Spielman (Computer Science), Günter Wagner (Ecology & Evolutionary Biology), John Wettlaufer (Geology & Geophysics; Physics), Huibin Zhou (Statistics), Steven Zucker (Computer Science; Biomedical Engineering)

Associate Professors  John Emerson (Statistics), Josephine Hoh (Epidemiology & Public Health), Sekhar Tatikonda (Electrical Engineering; Statistics; Computer Science)

Assistant Professors  Lisha Chen (Statistics), Thierry Emonet (Molecular, Cellular & Developmental Biology; Physics), Adam Marcus, Mokshay Madiman (Statistics), Andrei Osipov, Neta Rabin, Ronen Talmon, Andrew Wells

Fields of Study
The graduate Program in Applied Mathematics comprises the study and application of mathematics to problems motivated by a wide range of application domains. Areas of concentration include the analysis of data in very high-dimensional spaces, the geometry of information, computational biology, and randomized algorithms. Topics covered by the program include classical and modern applied harmonic analysis, linear and nonlinear partial differential equations, numerical analysis, scientific computing and applications, discrete algorithms, combinatorics and combinatorial optimization, graph algorithms, geometric algorithms, discrete mathematics and applications, statistical theory and applications, probability theory and applications, information theory, econometrics, financial mathematics, statistical computing, and applications of mathematical and computational techniques to fluid mechanics, combustion, and other scientific and engineering problems.

Requirements for the Ph.D. in Applied Mathematics
All students are required to: (1) complete twelve term courses (including reading courses) at the graduate level, at least two with Honors grades; (2) pass a qualifying examination on their general applied mathematical knowledge (in algebra, analysis, and probability and statistics) by the end of their second year; (3) submit a dissertation prospectus;
(4) participate in the instruction of undergraduates; (5) be in residence for at least three years; and (6) complete a dissertation that clearly advances understanding of the subject it considers. Prior to registering for a second year of study, and in addition to all other academic requirements, students must successfully complete MATH 991a, Ethical Conduct of Research, or another approved course on responsible conduct in research. Teaching is considered an integral part of training at Yale University, so all students are expected to complete two terms of teaching within their first two years. The normal time for completion of the Ph.D. program is four years.

Requirement (1) normally includes four core courses in each of the methods of applied analysis, numerical computation, algorithms, and probability; these should be taken during the first year. The qualifying examination is normally taken by the end of the third term and will test knowledge of the core courses as well as more specialized topics. The thesis is expected to be independent work, done under the guidance of an adviser. This adviser should be contacted not long after the student passes the qualifying examinations. A student is admitted to candidacy after completing requirements (1)–(5) and obtaining an adviser.

Master's Degrees

M. Phil.  See Degree Requirements under Policies and Regulations.

M.S. (en route to the Ph.D.)  The M.S. degree is a terminal degree and is not awarded en route to the Ph.D. Students who withdraw from the Ph.D. program may be eligible for the M.S. if they meet the requirements of the terminal master's degree program (below).

Master's Degree Program  Students may also be admitted to a terminal master's degree program directly. This program is normally completed in one year, but a part-time program may be spread over as many as four years. To qualify for the M.S., the student must pass eight graduate-level courses. Courses taken as part of the M.S. program must be pre-approved by the director of graduate studies to ensure that a suitable distribution of topics is covered.

Honors Requirement

Students must meet the Graduate School's Honors requirement by the end of the fourth term of full-time study.

Program materials and additional information concerning degrees offered and admissions requirements are available upon request to the Graduate School of Arts and Sciences, Yale University, PO Box 208323, New Haven CT 06520-8323.

Courses

[AMTH 561a, Spectral Graph Theory]

[AMTH 562a/CPSC 562au, Graphs and Networks]

[AMTH 605b/ENAS 503b/STAT 667b, Probabilistic Networks, Algorithms, and Applications]
[AMTH 664b, Topics in Computational Biology]

AMTH 665b/MCDB 561b/PHYS 529b, Systems Modeling in Biology
Thierry Emonet, Steven Kleinstein, Kathryn Miller-Jensen, Xiao-Jing Wang, Steven Zucker
An introduction to the techniques of integrating knowledge from mathematics, physics, and engineering into the analysis of complex living systems. Use of these techniques to address key questions about the design principles of biological systems. Discussion of experiments and corresponding mathematical models. Reading of research papers from the literature. Students build their own models using MATLAB. TTH 2:30–3:45

AMTH 666b/ASTR 666b/G&G 666b, Statistical Thermodynamics for Astrophysics and Geophysics
John Wettlaufer
Classical thermodynamics is derived from statistical thermodynamics. Using the multi-particle nature of physical systems, we derive ergodicity, the central limit theorem, and the elemental description of the second law of thermodynamics. We then develop kinetics, transport theory, and reciprocity from the linear thermodynamics of irreversible processes. Topics of focus include Onsager reciprocal relations, the Fokker-Planck equation, stability in the sense of Lyapunov, and time invariance symmetry. We explore phenomena that are of direct relevance to astrophysical and geophysical settings. No quantum mechanics is necessary as a prerequisite. HTBA

AMTH 667b, Advanced Computational Vision
Steven Zucker
An advanced course in computational vision, with emphasis on object recognition, shape analysis, learning, and perceptual organization. A background in computer vision, biological vision, or equivalent is necessary. Prerequisite: CPSC 575b or equivalent, or permission of the instructor.
APPLIED PHYSICS

Becton Center, 203.432.9654

Chair
A. Douglas Stone

Director of Graduate Studies
Michel Devoret (413 BCT, 203.432.4277)

Associate Professors  Jack Harris, Sohrab Ismail-Beigi, Karyn Le Hur

Fields of Study
Fields include areas of theoretical and experimental condensed-matter and materials physics, optical and laser physics, quantum engineering, and nanoscale science. Specific programs include surface and interface science, first principles electronic structure methods, photonic materials and devices, complex oxides, magnetic and superconducting artificially engineered systems, quantum computing and superconducting device research, quantum transport and nanotube physics, quantum optics, and random lasers.

Special Admissions Requirements
The prerequisites for work toward a Ph.D. degree in Applied Physics include a sound undergraduate training in physics and a good mathematical background. The GRE General Test is required, and the Subject Test in Physics is strongly recommended.

Integrated Graduate Program in Physical and Engineering Biology (IGPPEB)
The Yale IGPPEB program brings together faculty drawn mainly from five member areas (MB&B, MCDB, Physics, Applied Physics, and Engineering). All faculty involved recognize the importance of interdisciplinary research at the interface of the biological and physical sciences, and have recently developed interdisciplinary research collaborations among IGPPEB colleagues. Core courses for Applied Physics students in this Ph.D. program are listed below.

Special Requirements for the Ph.D. Degree
The student plans his/her course of study in consultation with faculty advisers (the student’s advisory committee). A minimum of twelve term courses is required. These
courses must be full-credit graduate courses with clear technical, scientific, or mathematical focus, and they are to be completed in the first two years. These twelve courses must include seven core courses. The first core course satisfies the math requirement, must be fulfilled in the first year, and is met by taking Mathematical Methods I (APHY 500a) or Mathematical Methods of Physics (PHYS 506a). The remaining six core courses are Solid State Physics I (APHY 548a) and II (APHY 549b), Quantum Mechanics I (PHYS 508a) and II (PHYS 608b), Electromagnetic Theory I (PHYS 502b), and Statistical Physics I (PHYS 512b). It is expected that most of these six core courses will be taken in the first year; no more than two may be taken in the second year. No more than two of the twelve courses can be Special Investigations, and at least two must be outside the area of the dissertation.

Students in the IGPPEB program must also take Methods and Logic in Interdisciplinary Research (ENAS 517a), Biological Physics (ENAS 541a), Biology Boot Camp (MB&B 520a1), Integrated Workshop (ENAS 991b), and Systems Modeling in Biology (MCDB 561b).

Well-prepared students may be able to place out of up to two of the seven required core courses after demonstrating equivalent training and competence by passing a written exam in the relevant subject. Success in such an exam will reduce the total course requirement by one for each exam passed.

All students must complete the one-term course Responsible Conduct of Research (APHY 508b) in the first year of study.

Each term, the faculty review the overall performance of the student and report their findings to the director of graduate studies (DGS), who determines whether the student may continue toward the Ph.D. degree. By the end of the second term, it is expected that a faculty member has agreed to accept the student as a research assistant. By December 5 of the third year, an area examination must be passed and a written prospectus submitted before dissertation research is begun. These events result in the student’s admission to candidacy. Subsequently, the student will report orally each year to the full advisory committee on progress. When the research is nearing completion, but before the thesis writing has commenced, the full advisory committee will advise the student on the thesis plan. A final oral presentation of the dissertation research is required to be given during term time.

There is no foreign language requirement.

Teaching experience is regarded as an integral part of the graduate training program at Yale University, and all Applied Physics graduate students are required to serve as a Teaching Fellow for one term, typically during year two. Teaching duties normally involve assisting in laboratories or discussion sections and grading papers and are not expected to require more than ten hours per week. Students are not permitted to teach during the first year of study.

If a student was admitted to the program having earned a score of less than 26 on the Speaking Section of the Internet-based TOEFL, the student will be required to take an English as a Second Language (ESL) course each term at Yale until the Graduate School’s Oral English Proficiency standard has been met. This must be achieved by the end of the third year in order for the student to remain in good standing.
**Honors Requirement**

Students must meet the Graduate School’s Honors requirement in at least two term courses (excluding Special Investigations) by the end of the second term of full-time study. An extension of one term may be granted at the discretion of the DGS.

**Master’s Degrees**

**M.Phil.** See Degree Requirements under Policies and Regulations.

**M.S. (en route to the Ph.D.)** To qualify for the M.S., the student must pass eight term courses; no more than two may be Special Investigations. An average grade of at least High Pass is required, with at least one grade of Honors.

**Master’s Degree Program** Students may also be admitted directly to a terminal master’s degree program. The requirements are the same as for the M.S. en route to the Ph.D., although there are no core course requirements for students in this program. This program is normally completed in one year, but a part-time program may be spread over as many as four years. Some courses are available in the evening, to suit the needs of students from local industry.

Program materials are available upon request to the Director of Graduate Studies, Department of Applied Physics, Yale University, PO Box 208267, New Haven CT 06520-8267; e-mail, applied.physics@yale.edu; Web site, www.yale.edu/appliedphysics.

**Courses**

The list of courses may be slightly modified by the time the term begins. Please check the Web site http://students.yale.edu/oci for the most up-to-date course listing.

**APHY 500a/ENAS 500a, Mathematical Methods I** Charles Ahn
TTH 9–10:15

**APHY 506a, Basic Quantum Mechanics** Robert Schoelkopf
Basic concepts and techniques of quantum mechanics essential for solid state physics and quantum electronics. Topics include the Schrödinger treatment of the harmonic oscillator, atoms and molecules and tunneling, matrix methods, and perturbation theory.
TTH 2:30–3:45

**APHY 508b/ENAS 508b, Responsible Conduct of Research** Staff
Required for first-year students. Presentation and discussion of topics and best practices relevant to responsible conduct of research including academic fraud and misconduct, conflict of interest and conflict of commitment, data acquisition and human subjects, use and care of animals, publication practices and responsible authorship, mentor/trainee responsibilities and peer review, and collaborative science. HTBA
APHY 548a\textsuperscript{u} and 549b\textsuperscript{u}/ENAS 850a\textsuperscript{u} and 851b\textsuperscript{u}/PHYS 548a\textsuperscript{u} and 549b\textsuperscript{u}, Solid State Physics I and II  Paul Fleury, A. Douglas Stone
A two-term sequence covering the principles underlying the electrical, thermal, magnetic, and optical properties of solids, including crystal structures, phonons, energy bands, semiconductors, Fermi surfaces, magnetic resonance, phase transitions, and superconductivity. Fall: TTH 1–2:15; Spring: TTH 2:30–3:45

APHY 610b/PHYS 610b, Quantum Many-Body Theory  Leonid Glazman
Second quantization, quantum statistical mechanics, Hartree-Fock approximation, linear response theory, random phase approximation, perturbation theory and Feynman diagrams, Landau theory of Fermi liquids, BCS theory, Hartree-Fock-Bogoliubov method. Applications to solids and finite-size systems such as quantum dots, nuclei, and nanoparticles. TTH 11:35–12:50

APHY 633b/PHYS 633b, Introduction to Superconductivity  Daniel Prober
The fundamentals of superconductivity, including both theoretical understandings of basic mechanism and description of major applications. Topics include historical overview, Ginzburg-Landau (mean field) theory, critical currents and fields of type ii superconductors, BCS theory, Josephson junctions and microelectronic and quantum-bit devices, and high Tc oxide superconductors. MW 11:35–12:50

APHY 634a/PHYS 634a, Mesoscopic Physics I  Michel Devoret
Introduction to the physics of nanoscale solid state systems, which are large and disordered enough to be described in terms of simple macroscopic parameters like resistance, capacitance, and inductance, but small and cold enough that effects usually associated with microscopic particles, like quantum-mechanical coherence and/or charge quantization, dominate. Emphasis is placed on transport and noise phenomena in the normal and superconducting regimes. MW 9–10:15

[APHY 667b/PHYS 667b, Special Topics in Condensed Matter Physics: Quantum Hall Effect and Conformal Field Theory]

APHY 675a/PHYS 675a, Principles of Optics with Applications  Hui Cao
Introduction to the principles of optics and electromagnetic wave phenomena with applications to microscopy, optical fibers, laser spectroscopy, nanophotonics, plasmonics, and metamaterials. Topics include propagation of light, reflection and refraction, guiding light, polarization, interference, diffraction, scattering, Fourier optics, and optical coherence. TTH 11:35–12:50

[APHY 677a/PHYS 677a, Noise, Dissipation, Amplification, and Information]

[APHY 679a/PHYS 679a, Non-linear Optics and Lasers]

[APHY 816b, Techniques of Microwave Measurements and RF Design]
ARCHAEOLOGICAL STUDIES

10 Sachem Street, 203.432.3670
www.yale.edu/archaeology
M.A.

Chair and Director of Graduate Studies
Richard Burger (Anthropology)

Professors  Richard Burger (Anthropology), Edward Cooke, Jr. (History of Art), John Darnell (Near Eastern Languages & Civilizations), Eckart Frahm (Near Eastern Languages & Civilizations), Valerie Hansen (History), Leo Hickey (Geology & Geophysics), Andrew Hill (Anthropology), Diana Kleiner (Classics; History of Art), Roderick McIntosh (Anthropology), Mary Miller (History of Art), Eric Sargis (Anthropology), Ronald Smith (Geology & Geophysics), Anne Underhill (Anthropology), Harvey Weiss (Near Eastern Languages & Civilizations)

Assistant Professors  Milette Gaifman (History of Art; Classics), William Honeychurch (Anthropology), Colleen Manassa (Near Eastern Languages & Civilizations)

Lecturer  Karen Foster (Near Eastern Languages & Civilizations)

The aims of the program are to give students the academic background needed for careers in museums, the conservation of archaeological resources, and teaching in community colleges and secondary schools, and to provide the opportunity for teachers, curators, and administrators to refresh themselves on recent developments in archaeology. In addition, the program allows some of our students to strengthen their background in archaeology before applying to Ph.D. programs. The program is administered by Yale's Council on Archaeological Studies, with faculty from the departments of Anthropology, Classics, Geology & Geophysics, History, History of Art, and Near Eastern Languages & Civilizations.

Special Admissions Requirements
The GRE General Test; an archaeology background is recommended but not required.

Special Requirements for the M.A. Degree
Courses are drawn from the graduate programs of the participating departments and from those undergraduate courses that are also open to graduate students. Eight courses are required. Unless previously taken for credit, these will include the two-term Field Techniques sequence; at least one laboratory course; a course related to archaeology in each of the following three groups: (1) Anthropology; (2) Classics, History of Art, or Near Eastern Languages & Civilizations; (3) Ecology & Evolutionary Biology, Forestry & Environmental Studies, or Geology & Geophysics; and three electives. In addition, each student will write a master’s thesis. Degree candidates are required to pay a minimum of one year of full tuition. Full-time students can complete the course requirements in one academic year, and all students are expected to complete the program within a maximum period of three academic years.
For further information, visit the Archaeological Studies Web site, www.yale.edu/archaeology. Inquiries may be directed to Director of Graduate Studies, c/o Registrar, Archaeological Studies, Department of Anthropology, Yale University, PO Box 208277, New Haven CT 06520-8277, or via e-mail, archaeology@yale.edu.

### Courses

**ARGC 545a/ANTH 545a, Organic Latin American Anthropologists of the Twentieth Century**  
Richard Burger, Enrique Mayer  
In addition to Latin American anthropology’s development as an academic discipline, its practitioners played important roles in developing policy, educational programs, museums, government institutions, and international forums and institutions in an age of “science” and “nation building.” We study the lives and works of seven famous anthropologists to understand the changing but interactive context of scholarship between the United States and Latin America. Prerequisite: reading knowledge of Spanish. Open to advanced undergraduate students with permission of the instructors. W 1:30–3:20

**ARGC 705Lb/ANTH 705Lb, Archaeology Laboratory II**  
Roderick McIntosh  
Practical experience in preparation, analysis, and interpretation of artifacts and nonartificial archaeological data. Students undertake term projects. W 2:30–5:30

**ARGC 707b/ANTH 707b, Origins of Complex Society in West Africa**  
Roderick McIntosh  
Using original readings of site reports and primary source articles, we explore the great diversity of expressions of emerging complexity in prehistoric West Africa. MW 9–10:15

**ARGC 720b/ANTH 720b, Mesopotamian Origins**  
Harvey Weiss  
Analysis of the archaeological and paleoenvironmental data for rain-fed and irrigation agriculture settlement, subsistence, and politico-economic innovation from the earliest sedentary agriculture villages, to the earliest cities and states, to the earliest empire. What combinations of dynamic social and environmental forces drove these developments in these regions during this ten thousand year span? TH 9:30–11:20

**ARGC 731a/ANTH 731a, Introduction to GIS**  
William Honeychurch

**ARGC 732a and 733La/ANTH 732a and 733La, Archaeological Field Techniques and Archaeology Lab**  
Roderick McIntosh  
An introduction to the practice and techniques of modern archaeology including methods of excavation, recording, mapping, dating, and ecological analysis. The lab offers instruction in the field at an archaeological site in Connecticut in stratigraphy, mapping, artifact recovery, and excavation strategy. The courses must be taken concurrently and are counted together as one credit. W 2:30–5:30, lab HTBA

[**ARGC 744b/NELC 509b, The Age of Akhenaton**]

**ARGC 748b/ANTH 748b, Contemporary Archaeological Theory**  
Richard Burger  
This seminar explores contemporary theory in all of its diversity. The course examines multiple critiques of New Archaeology and its remaining legacy; the diversity of competing approaches, sometimes called postprocessualist, currently employed in the
United States and the United Kingdom, including critical archaeology, the archaeology of gender, structuralist approaches, various Marxist and neo-Marxist formulations of archaeological theory, and applications of evolutionary theory; as well as the differing trajectory of approaches outside the English-speaking world. W 9:25–11:15

ARCG 749a/CLSS 846a/HSAR 570a, Becoming Hadrian: Autobiography and Art in the Second Century A.D. Diana Kleiner
Marguerite Yourcenar’s famed fictional Memoirs of Hadrian serves as the starting point for an exploration of Hadrian and the art he commissioned in Rome and abroad. Hadrian’s passion for life, quest after peace, romantic wanderlust, veneration of Greek culture, and craving for love, along with his acceptance of death’s inexorableness, led him to commission some of Rome’s greatest monuments. The emperor’s flair for leadership and talent as an amateur architect inform student projects on the sculpture, mosaics, and buildings of the age, among them the portraiture of Hadrian’s lover Antinous, the Pantheon, and Hadrian’s Wall in Britain. Special attention is paid to Hadrian’s Villa at Tivoli, an empire unto itself where Hadrian’s autobiography was fully realized. Qualified undergraduates who have taken Roman Art: Empire, Identity, and Society and/or Roman Architecture may be admitted with permission of the instructor. T 1:30–3:20

ARCG 754a/ANTH 754a, Statistics for Archaeological Analysis William Honeychurch
An introduction to quantitative data collection, analysis, and argumentation for archaeologists. Lectures, readings, and exercises emphasize the exploration, visualization, and analysis of specifically archaeological data using simple statistical approaches. No prior knowledge of statistics is required. T 2:30–4:20

ARCG 759a/ANTH 759a, Social Complexity in Ancient China Anne Underhill
This seminar explores the variety of archaeological methods and theoretical approaches that have been employed to investigate the development and nature of social complexity in ancient China. The session meetings focus on the later prehistoric and early historic periods, and several geographic regions are included. They also consider how developments in ancient China compare to other areas of the world. Most of the readings emphasize archaeological remains, although relevant information from early historical texts is considered. T 9:25–11:15

ARCG 762b/EMD 548b/F&ES 726b/G&G 562b, Remote Sensing: Observing the Earth from Space Ronald Smith
A practical introduction to satellite image analysis of Earth’s surface. Topics include the spectrum of electromagnetic radiation, satellite-borne radiometers, data transmission and storage, computer image analysis, the merging of satellite imagery with GIS and applications to weather and climate, oceanography, surficial geology, ecology and epidemiology, forestry, agriculture, archaeology, and watershed management.

ARCG 763a/ANTH 763a/NELC 589a, Archaeologies of Empire Harvey Weiss
Comparative study of origins, structures, efficiencies, and limitations of imperialism, ancient and modern, in the Old and New World, from Akkad to “Indochine,” and from Wari to Aztec. The contrast between ancient and modern imperialisms examined from
the perspectives of nineteenth- and twentieth-century archaeology and political economy. TH 2:30–4:20

**ARCG 769b/ANTH 769b, Landscapes of Meaning: Museums and Their Objects**  
Anne Underhill, David Odo  
This seminar explores how museums convey various meanings about ethnographic, art, and archaeological objects through the processes of collecting, preparing exhibitions, and conducting research. Participants also discuss broader theoretical and methodological issues such as the roles of museums in society, relationships with source communities, management of cultural heritage, and various specializations valuable for careers in art, natural history, anthropology, history, and other museums. TH 9:25–11:15

**ARCG 773b/U/ANTH 773b/U/NELC 588b/U, Civilizations and Collapse**  
Harvey Weiss  
Collapse documented in the archaeological and early historical records of the Old and New Worlds, including Mesopotamia, Mesoamerica, the Andes, and Europe. Analysis of politico-economic vulnerabilities, resiliencies, and adaptations in the face of abrupt climate change, anthropogenic environmental degradation, resource depletion, “barbarian” incursions, or class conflict. TH 2:30–4:20

**ARCG 776b/U/ANTH 776b/U, GIS and Spatial Analysis for Archaeology**  
William Honeychurch  
Introduction to the practice of Geographical Information Systems in anthropology with attention to archaeological applications. The growing use of GIS among anthropologists has transformed the way we carry out research and conceive of space. The course draws on research examples from a range of theoretical, analytical, and geographical contexts and introduces students to current software. Emphasis is placed on understanding how anthropological archaeologists have employed GIS as part of generating evidence to assess their hypotheses. HTBA

**ARCG 780b/U/ANTH 780b/U, The Archaeology of Religion**  
Richard Burger  
The course explores archaeological approaches to the study of religion. While the term “religion” is hard to define, it is generally agreed that religious phenomena occur in almost all cultures and that this realm played a significant part in most prehistoric cultures. In order to provide a broad vision of this theme, the course begins by considering influential schools of thought on the definition, origins, and social significance of religious behavior. The course then reviews a variety of methods that scholars may use to reconstruct ancient beliefs and rituals. The course assesses the applicability and success of these methodologies across the broad spectrum of ancient cultures representing differing degrees of sociopolitical complexity. Finally, we explore case studies from a diverse range of ancient societies and consider the impact of religious behaviors within their broader cultural contexts. TTH 11:35–12:50

**ARCG 791a/U/ANTH 791a/U, Paleoclimate and Human Response**  
Roderick McIntosh  
Explores the recursive interaction of climate change with human perception and manipulation of the landscape. Combines a primer on mechanisms and measures of climate change with three case studies of historical response to change at different scales. W 7–8:50
ARCG 842b/ANTH 842b, Climate and Human Evolution  Andrew Hill
W 1:30–3:20

ARCG 856a/ANTH 856a, Reconstructing Human Evolution: An Ecological Approach  Andrew Hill
If human evolutionary change has been determined or affected by ecological factors, such as changes in climate, competition with other animals, and availability and kinds of food supply, then it is important to determine ecological and environmental information about the regions and time period in which human evolution has occurred. Examination of methods for obtaining data relevant to such information, and for evaluating the techniques and results of such other fields as geology, paleobotany, and paleozoology. Ethnographic, primatological, and other biological models of early human behavior. TH 1:30–3:20

ARCG 953a or b, Directed Research in Archaeology and Prehistory
By arrangement with faculty.

Fields of Study
The five-year doctoral program prepares candidates for careers in university teaching, cultural advocacy and administration, museum curatorship, and publishing. It aims chiefly, however, to educate teachers capable of effectively instructing future architects in the history of their own field and its manifold connections with the culture at large. The program forges a unique combination of professional knowledge with a historical and analytical grasp of key phases in the history of architecture, especially those that have a demonstrable share in the field’s current state and its critical issues.

The program secures sound training in historical study and historiography, imparting technical knowledge and awareness of intellectual trends that inform the reception and role of architecture around the world. The history of science and technology (as well as its reception in popular culture and the arts), the history of media, and an understanding of architectural practice are as important as the fine arts and literature.

Admission Requirements
Applicants shall have appropriate academic credentials (a master’s degree or equivalent in Architecture, Engineering, Environmental Design, or, exceptionally, in a related field) and at least two years of work experience in an appropriate professional setting. The Graduate Record Examination (GRE) General Test taken no more than five years prior to application is required. All applicants whose native language is not English are required to take the Internet-based Test of English as a Foreign Language (TOEFL iBT), a test that includes a section on spoken English. The TOEFL requirement is waived only for
applicants who will have received a baccalaureate degree, or its international equivalent, prior to matriculation at Yale, from a college or university where English is the primary language of instruction. In addition to meeting qualifying criteria, candidates are required as part of the application to submit a portfolio of their own architectural work, a writing sample in the form of a research paper or publication, and an explanation of their motivation for engaging in this course of study. Qualified applicants may be invited to interview with a member of the doctoral faculty.

Special Requirements for the Ph.D. Degree

Entering students with sound professional preparation engage in a concerted course of study that leads directly to dissertation research and a doctoral degree.

All students must spend their first two years in residence at Yale enrolled as full-time students in the School of Architecture. During the first two years of study, students will normally take at least eight courses, consisting of graduate seminars. During each of the four terms in residence, a student must take a Ph.D. seminar taught by a member of the Ph.D. committee, which will introduce the student to various methodologies and areas of study. Some seminars will encourage primary research on a narrow topic or focus on producing a collective body of work, such as an exhibition. Others offer a broader survey of historiographies. Another will focus on the close reading of a body of texts. These four required seminars form the methodological core of the program.

Students will be encouraged to take courses outside the School of Architecture but related to their specific areas of interest. For example, a student working on Italian modernism would be encouraged to take a course in Italian history or literature. Typically, at least two of the four elective seminars would be in related fields. Students can also opt to do independent readings with individual faculty members on their specific areas of interest.

Students will also be expected to demonstrate competence in at least one foreign language relevant to their field of study, not later than the end of their second year. Language competence is more than a formality and requires some acquaintance with the literature in the chosen language. Competency may be determined by either a grade of B or better in a yearlong intermediate-level language course or through examination.

Ideally, the student’s field of interest will be defined after the first year. At this point, the student will be assigned an adviser by the director of doctoral studies. At the end of the second year the student will be assigned an additional three faculty members, who will constitute his or her dissertation committee. One of these additional faculty members should be from outside the School of Architecture, with selection based on the student’s area of interest, and in consultation with the Ph.D. adviser and the director of doctoral studies.

Upon completion of all course requirements and the language requirement, normally during the fall of the third year, students will take a qualifying exam, which requires an approximately 8,000-word research paper and an oral examination during which members of his/her dissertation committee will question the candidate in three fields of study. During the spring term of the third year, candidates will present and defend a preliminary proposal for a dissertation topic, consisting of a topic statement, program of research and study, and annotated bibliography.
By the end of the third year, students will begin a period of dissertation research and writing. A student is asked to submit a draft of the dissertation half a year before the final defense. After successful completion of the defense, students are given three months to complete the final submission.

*Graduate Research Assistant and Teaching Fellow Experience*

The program in Architecture considers teaching to be an important part of graduate training. Therefore, before completing the Ph.D., all candidates will be required to have at least two terms of teaching experience in their area of study at the School of Architecture or elsewhere in the University. At least one of these should be a history and theory survey course requiring direction of a discussion session. Students will also be encouraged to assist in studio teaching. Students in the Ph.D. program normally serve as teaching fellows for four terms.

*Master’s Degree*

**M.Phil.** The M.Phil. degree is awarded en route to the Ph.D. The minimum requirements for this degree are that a student shall have completed all requirements for the Ph.D. except the teaching fellow experience, the prospectus, and the dissertation.

For information on the master’s degrees offered by the Yale School of Architecture (the Master of Architecture and the Master of Environmental Design), visit the School’s Web site, www.architecture.yale.edu, or contact Office of Admissions, Yale School of Architecture, PO Box 208242, New Haven CT 06520-8242.

ASTRONOMY

J. W. Gibbs Laboratories, 203.432.3000
www.astro.yale.edu
M.S., M.Phil., Ph.D.

Chair
Pieter van Dokkum

Director of Graduate Studies
Robert Zinn (203.432.3017, robert.zinn@yale.edu)

Professors  Charles Bailyn, Charles Baltay (Physics), Sarbani Basu, Paolo Coppi, Pierre Demarque (Emeritus), Debra Fischer, Jeffrey Kenney, Richard Larson (Emeritus), Priyamvada Natarajan, Peter Parker (Physics), Sabatino Sofia (Emeritus), C. Megan Urry (Physics), William van Altena (Emeritus), Pieter van Dokkum, Robert Zinn

Associate Professor  Richard Easther (Physics)

Assistant Professors  Héctor Arce, Marla Geha, Frank van den Bosch

Fields of Study
Fields include observational and theoretical galactic astronomy, solar and stellar astrophysics, astrometry, exoplanets, extragalactic astronomy, radio astronomy, high-energy astrophysics, and cosmology.

Special Admissions Requirements
Applicants are expected to have a strong undergraduate preparation in physics and mathematics. Although some formal training in astronomy is useful, it is by no means a prerequisite for admission. Applicants are required to take the General GRE as well as the subject test in Physics.

Special Requirements for the Ph.D. Degree
A typical program of study includes twelve courses taken during the first four terms, and must include the core courses listed below:

   Computational Methods in Astrophysics and Geophysics (ASTR 520), Observational Astronomy (ASTR 555), Interstellar Matter and Star Formation (ASTR 560), either Stellar Populations (ASTR 510) or Stellar Astrophysics (ASTR 550), and either Galaxies (ASTR 530) or The Evolving Universe (ASTR 565).

   Students require the permission of the instructor and the director of graduate studies (DGS) to skip a core class if they think that they have sufficient knowledge of the field. Students will be required to demonstrate their knowledge of the field before they are allowed to skip any core class.

   Two of the twelve courses must be research credits, each earned by working in close collaboration with a faculty member. Of the two research credits, one must be earned doing a theoretical project and one doing an observational research project. The students need to present the results of the project as a written report and will be given an evaluation of their performance.
The choice of the five remaining courses depends on the candidate’s interest and background and must be decided in consultation with the DGS and/or the prospective thesis adviser. Advisers may require students to take particular classes and obtain a specified minimum grade in order for a student to work with them for their thesis. Students must take any additional course that their supervisors require even after their fourth term. In addition, all students, regardless of their term of study, have to attend Professional Seminar (ASTR 710) every term. The fall term of this course discusses ethics and responsible conduct in scientific research and fulfills the requirement stipulated by the National Science Foundation for all students and for all postdoctoral researchers funded by the NSF. Note that ASTR 710 may not be used to fulfill the twelve-course requirement.

Students are encouraged to take graduate courses in physics or related subjects. On an irregular basis, special topic courses and seminars are offered, which provide the opportunity to study some fields in greater depth than is possible in standard courses. To achieve both breadth and depth in their education, students are encouraged to take a few courses beyond their second year of study.

There is no foreign language requirement. A written comprehensive examination, normally taken at the end of the fourth term of graduate work, tests the student’s familiarity with the entire field of astronomy and related branches of physics and mathematics. Particular attention will be paid to the student’s performance in the field in which the student plans to do research. An oral examination, held a few weeks after the written examination, is based on the student’s chosen field of research. Satisfactory performance in these examinations, an acceptable record in course and research work, and an approved dissertation prospectus are required for admission to candidacy for the Ph.D. degree. The dissertation should present the results of an original and thorough investigation, worthy of publication. Most importantly, it should reflect the candidate’s capacity for independent research. An oral dissertation defense is required.

Teaching experience is an integral part of graduate education in astronomy. All students will serve as teaching fellows and complete a total of nine TF units. Both the level of teaching assignments and the scheduling of teaching are flexible and determined by the needs of the department. By the end of the third term, however, most students will have completed six TF units. The additional three TF units will normally be carried out after the fourth term of study.

**Honors Requirement**

Students must meet the Graduate School’s Honors requirement by the end of the fourth term of full-time study.

**Master’s Degrees**

**M.Phil.** See Degree Requirements under Policies and Regulations.

**M.S. (en route to the Ph.D.)** Upon application, the department will recommend for the award of the M.S. degree any student who has satisfactorily completed the first year of the program leading to the Ph.D. degree. Satisfactory is defined as having taken at least four courses (not including ASTR 710) and one research project. The student should
have a grade average of High Pass in the courses taken and a grade of High Pass or above in the research project.

Program materials are available upon request to the Director of Graduate Studies, Department of Astronomy, Yale University, PO Box 208101, New Haven CT 06520-8101.

Courses

[ASTR 510bU, Stellar Populations]

ASTR 518b, Stellar Dynamics Marla Geha
The dynamics and evolution of star clusters; structure and dynamics of our galaxy; theories of spiral structure; dynamical evolution of galaxies. TTH 4–5:15

ASTR 520a/G&G 538a, Computational Methods in Astrophysics and Geophysics Paolo Coppi
The analytic and numerical/computational tools necessary for effective research in astronomy, geophysics, and related disciplines. Topics include numerical solutions to differential equations, spectral methods, and Monte Carlo simulations. Applications are made to common astrophysical and geophysical problems including fluids and N-body simulations. MW 4–5:15

[ASTR 530aU, Galaxies]

[ASTR 540aU/G&G 501aU, Radiative Processes in Astrophysics/Stellar Atmospheres]

[ASTR 550aU, Stellar Astrophysics]

ASTR 555bU, Observational Astronomy Robert Zinn
The design and use of optical telescopes, cameras, spectrographs, and detectors to make astronomical observations. The reduction and analysis of photometric and spectroscopic observations. MW 4–5:15

ASTR 560b, Interstellar Matter and Star Formation Héctor Arce
The composition, extent, temperature, and density structure of the interstellar medium (ISM). Excitation and radiative processes; the properties of dust; the cold and hot ISM in the Milky Way and other galaxies. Dynamics and evolution of the ISM, including interactions between stars and interstellar matter. Physics and chemistry of molecular clouds and the process of star formation. TTH 9–10:15

ASTR 565aU, The Evolving Universe Pieter van Dokkum
Overview of cosmic history from the formation of the first star to the present day, focusing on direct observations of the high-redshift universe. TTH 9–10:15

[ASTR 570a/PHYS 570a, High-Energy Astrophysics]

ASTR 575b, Exoplanets Debra Fischer
In recent years hundreds of exoplanets have been discovered orbiting around other stars. The course reviews the physics of planetary orbits and current exoplanet detection techniques, recent progress in characterizing exoplanet interiors and atmospheres, and the implications of these findings for our understanding of planet formation and evolution. MW 9–10:15
ASTR 580a or b, Research
By arrangement with faculty.

[ASTR 585a, Radio Astronomy]

[ASTR 590b, Solar Physics]

ASTR 600a/PHYS 600a, Cosmology  Priyamvada Natarajan
A comprehensive introduction to cosmology at the graduate level. The standard paradigm for the formation, growth, and evolution of structure in the universe is covered in detail. Topics include the inflationary origin of density fluctuations; the thermodynamics of the early Universe; assembly of structure at late times; and current status of observations. The basics of general relativity required to understand essential topics in cosmology are covered. TTH 4–5:15

ASTR 666b/AMTH 666b/G&G 666b, Statistical Thermodynamics for Astrophysics and Geophysics  John Wettlaufer
Classical thermodynamics is derived from statistical thermodynamics. Using the multiparticle nature of physical systems, we derive ergodicity, the central limit theorem, and the elemental description of the second law of thermodynamics. We then develop kinetics, transport theory, and reciprocity from the linear thermodynamics of irreversible processes. Topics of focus include Onsager reciprocal relations, the Fokker-Planck equation, stability in the sense of Lyapunov, and time invariance symmetry. We explore phenomena that are of direct relevance to astrophysical and geophysical settings. No quantum mechanics is necessary as a prerequisite. HTBA

[ASTR 705, Research Seminar in Stellar Populations]

ASTR 710a and b, Professional Seminar  Staff
A weekly seminar covering science and professional issues in astronomy and ethics and responsible conduct in scientific research.

ASTR 715a/G&G 744a, Research Seminar in Solid-Earth Geophysics  Jeffrey Park
BIOMEDICAL ENGINEERING

Dunham Laboratory, 203.432.4250
M.S., M.Phil., Ph.D.

Chair
Mark Saltzman

Director of Graduate Studies
Richard Carson (richard.e.carson@yale.edu)

Professors  Richard Carson, Todd Constable, James Duncan, Jay Humphrey, Fahmeed Hyder, Laura Niklason, Douglas Rothman, Mark Saltzman, Fred Sigworth, Steven Zucker (Computer Science)

Associate Professors  Robin de Graaf, Tarek Fahmy, Themis Kyriakides, Michael Levene, Evan Morris, Xenophon Papademetris, Lawrence Staib, Hemant Tagare

Assistant Professors  Joerg Bewersdorf, Rong Fan, Anjelica Gonzalez, Kathryn Miller-Jensen, Smita Sampath, Erik Shapiro

Fields of Study

Fields include the physics of image formation (MRI, optics, ultrasound, nuclear medicine, and X-ray), MRI, MRS, PET and modeling, digital image analysis and processing, computer vision, biological signals and sensors, biomechanics, physiology and human factors engineering, drug delivery, biotechnology, biophotonics, immune response to biomaterials, tissue engineering, and biomedical device systems biology and medicine.

For admissions and degree requirements, and for course listings, see Engineering & Applied Science.
CELL BIOLOGY

C-207 Sterling Hall of Medicine, 203.737.5603
www.cellbiology.yale.edu
M.S., M.Phil., Ph.D.

Chair
James Rothman

Director of Graduate Studies
Carl Hashimoto (C-215 SHM, 203.737.2746, carl.hashimoto@yale.edu)

Professors  Michael Caplan (Cellular & Molecular Physiology), Lynn Cooley (Genetics), Peter Cresswell (Immunobiology), Pietro De Camilli, Jorge Galán (Microbial Pathogenesis), Fred Gorelick, Carl Hashimoto, James Jamieson, Diane Krause (Laboratory Medicine), Thomas Lentz (Emeritus), Haifan Lin, Vincent Marchesi (Pathology), Mark Mooseker (Molecular, Cellular & Developmental Biology), Michael Nathanson (Internal Medicine/Digestive Diseases), Thomas Pollard (Molecular, Cellular & Developmental Biology), James Rothman, Michael Simons (Internal Medicine/Cardiology), Elisabetta Ullu (Internal Medicine/Infectious Diseases), Sandra Wolin

Associate Professors  Karin Reinisch, Elke Stein (Molecular, Cellular & Developmental Biology), Derek Toomre, Agnes Vignery (Orthopaedics)

Assistant Professors  Joerg Bewersdorf, Jonathan Bogan (Internal Medicine/Endocrinology), Daniel Colón-Ramos, Eric Dufresne (Mechanical Engineering), Shawn Ferguson, Megan King, Patrick Lusk, Thomas Melia, Peter Takizawa, Tobias Walter, Yongli Zhang

Fields of Study
Fields include membrane traffic and protein sorting, organelle biogenesis, epithelial cell polarity, membrane function in the nervous system (synapse formation and function), axon guidance, neural circuit development, cell biology of protozoan parasites and of pathogen/host interactions, cell biology of the immune response, mRNA biogenesis and localization, RNA folding, non-coding RNAs, stem cells, cell biology of the cytoskeleton and of the nucleus, cellular signaling and motility, cytokinesis. Approaches to these topics include biochemistry, molecular biology, and crystallography; bacterial, yeast, Drosophila, C. elegans, and mouse genetics; immunocytochemistry and electron microscopy; live cell and super-resolution imaging.

Special Admissions Requirements
An undergraduate major in the biological sciences is recommended. GRE General Test is required; GRE Subject Test is recommended (in Biology or in Biochemistry, Cell and Molecular Biology).

To enter the Ph.D. program, students apply to an interest-based track, usually the Molecular Cell Biology, Genetics, and Development track, in the combined program in Biological and Biomedical Sciences (BBS), http://info.med.yale.edu/bbs.
**Special Requirements for the Ph.D. Degree**

Students are required to take at least five graduate-level courses. No specific curriculum of courses is required, but CBIO 602 (Molecular Cell Biology) is recommended for all students to attain a solid foundation in molecular cell biology. Also recommended is a seminar course, such as CBIO 603 (Seminar in Molecular Cell Biology), in which students can develop the skill for critical analysis of research papers. Students design their own curriculum of courses to meet individual interests and needs, in consultation with the director of graduate studies. During the first year, students participate in three laboratory rotations. In the second year, a committee of faculty members determines whether each student is qualified to continue in the Ph.D. program. There is an oral qualifying examination by the end of the third term. In order to be admitted to candidacy, students must have met the Graduate School Honors requirement, maintained a High Pass average in course work, passed the qualifying examination, submitted an approved prospectus, and received a positive evaluation of their laboratory work from the thesis committee. All students are required to present a talk at the departmental progress report series each year after passing the qualifying exam. The remaining degree requirements include completion of the dissertation project and the writing of the dissertation and its oral defense, the formal submission of copies of the written dissertation to the Graduate School, and the deposit of an additional copy with the department. Laboratory rotations and thesis research may be conducted outside of the department.

An important aspect of graduate training in cell biology is the acquisition of teaching skills through participation in courses appropriate for the student’s scientific interests. These opportunities can be drawn from a diverse menu of lecture, laboratory, and seminar courses given at the undergraduate, graduate, and medical school levels. Ph.D. students are required to participate in two terms (or the equivalent) of teaching. Students are not expected to teach during their first year.

In addition to all other requirements, students must successfully complete CBIO 901b, First-Year Introduction to Research—Ethics: Scientific Integrity in Biomedical Research, prior to the end of their first year of study.

**M.D./Ph.D. Students**

M.D./Ph.D. students are required to take a total of five graduate-level courses for a grade, including Molecules to Systems (CBIO 502), Molecular and Cellular Basis of Human Disease (CBIO 601), and a seminar course that involves the reading and class discussion of research papers. The two remaining courses can be in areas such as Genetics, Neurobiology, Immunology, Microbiology, Pharmacology, and Physiology. Students must meet the Graduate School requirement of a grade of Honors in two courses, if necessary taking additional courses beyond the five required in the department to fulfill this requirement. Students must also maintain an average grade of High Pass in all courses. One term of teaching is required.

**Master’s Degrees**

**M.Phil.** Requirements for the M.Phil. degree are the same as for admission to candidacy (see above).
M.S. This degree is normally granted only to students who are withdrawing from the Ph.D. program. To be eligible for the degree, a student must pass at least five graduate-level term courses at Yale, including CBIO 602, Molecular Cell Biology, and a seminar course as recommended above, with at least one grade of Honors or three of High Pass.

Prospective applicants are encouraged to visit the BBS Web site (http://info.med.yale.edu/bbs), MCGD Track. Program materials are available upon request to the Director of Graduate Studies, Department of Cell Biology, Yale University, PO Box 208002, New Haven CT 06520-8002.

Courses

CBIO 502a/b, Molecules to Systems  James Jamieson, Thomas Lentz, Fred Gorelick, Peter Takizawa, and staff

This full-year course is designed to provide medical students with a current and comprehensive review of biologic structure and function at the cellular, tissue, and organ system levels. Areas covered in the first term include replication and transcription of the genome; regulation of the cell cycle and mitosis; protein biosynthesis and membrane targeting; cell motility and the cytoskeleton; signal transduction; nerve and muscle function. The second term covers cell and tissue organization of organ systems including respiratory, renal, gastrointestinal, endocrine, and reproductive systems. Clinical correlation sessions, which illustrate the contributions of cell biology to specific medical problems, are interspersed in the lecture schedule. Histophysiology laboratories provide practical experience with an understanding of exploring cell and tissue structure. The course is offered only to M.D. and M.D./Ph.D. students. It runs from September to mid-May and is equivalent to three graduate credits.

CBIO 601a/b, Molecular and Cellular Basis of Human Disease  Fred Gorelick, James Jamieson, and staff

The course emphasizes the connections between diseases and basic science using a lecture and seminar format. It is designed for students who are committed to a career in medical research, those who are considering such a career, or students who wish to explore scientific topics in depth. The first half of the course is organized in four- to five-week blocks that topically parallel CBIO 502a/b. Examples of blocks from past years include “Diseases of protein folding” and “Diseases of ion channels.” Each topic is introduced with a lecture given by the faculty. The lecture is followed by sessions in which students review relevant manuscripts under the supervision of a faculty mentor. The second half of the course focuses on the relationship of basic science to disease processes while emphasizing translational and clinical research. In addition, sessions are devoted to academic careers and cover subjects such as obtaining an academic position, promotions, and grant writing. The course is open to M.D. and M.D./Ph.D. students who are taking or have taken CBIO 502a/b. Student evaluations are based on attendance, participation in group discussions, formal presentations, and a written review of an NIH proposal. The course runs from September to mid-May and is equivalent to three graduate credits.
CBIO 602a/MB&B 602a/MCDB 602a, Molecular Cell Biology  Sandra Wolin, Michael Caplan, Craig Crews, Pietro De Camilli, Megan King, Joseph Madri, Thomas Melia, Mark Mooseker, Thomas Pollard, James Rothman
A comprehensive introduction to the molecular and mechanistic aspects of cell biology for graduate students in all programs. Emphasizes fundamental issues of cellular organization, regulation, biogenesis, and function at the molecular level. MW 1:45–3

CBIO 603a/MCDB 603a, Seminar in Molecular Cell Biology  Sandra Wolin, Michael Caplan, Craig Crews, Pietro De Camilli, Megan King, Joseph Madri, Thomas Melia, Mark Mooseker, Thomas Pollard, James Rothman
A graduate-level seminar course in modern cell biology. The class is devoted to the reading and critical evaluation of classical and current papers. The topics are coordinated with the CBIO 602a lecture schedule. Thus, concurrent or previous enrollment in CBIO 602a is required. TH 9–11

CBIO 604b, Systems Cell Biology  Carl Hashimoto, Daniel Colón-Ramos, and faculty
Introduction to the organization and function of cells within complex multicellular systems as encountered in the human body. Covers major tissues and organs as well as the cardiovascular, immune, and nervous systems, with special emphasis on the molecular and cellular bases of developmental processes and human diseases. Lectures supplemented by electronic-based tutorials on the histology of tissues and organs. T 9:30–10:30, TH 9:30–11

CBIO 606b, Advanced Topics in Cell Biology  Karin Reinisch and faculty
This seminar course, which meets once weekly, covers advanced topics in cell biology. Each topic is spread over two or three sessions, which start with an introductory overview and are followed by a discussion of key papers led by an expert in the field. Special emphasis is given to application of state-of-the-art imaging techniques to topical areas covering a wide range of contemporary cell biology. T 4:15–6

CBIO 701b, Illuminating Cellular Function  Derek Toomre, Joerg Bewersdorf, and faculty
Introduction to the principles and practical methods of live cell imaging. Covers principles of fluorescent microscopy (including genetically encoded probes and physiological indicators), image formation, image detection, and image analysis. Includes hands-on demonstrations of state-of-the-art instrumentation, such as video-rate confocal and multi-photon microscopes. WF 12:30–1:30

CBIO 900a/GENE 900a/MCDB 900a, First-Year Introduction to Research and Rotations  Frank Slack and faculty
Lab rotations and grant writing for Molecular Cell Biology, Genetics, and Development track students. M 4–5:30

CBIO 901b/GENE 901b/MCDB 901b, First-Year Introduction to Research—Ethics: Scientific Integrity in Biomedical Research  Valerie Horsley
Lab rotations and ethics for Molecular Cell Biology, Genetics, and Development track students. TH 4–5:30
CELLULAR AND MOLECULAR PHYSIOLOGY

B147 Sterling Hall of Medicine, 203.785.4041
www.physiology.yale.edu
M.Phil., Ph.D.

Chair
Michael Caplan

Director of Graduate Studies
Emile Boulpaep (SHM B142, 203.785.4055, emile.boulpaep@yale.edu)

Professors  Peter Aronson (Internal Medicine/Nephrology), Emile Boulpaep, Thomas Brown (Psychology), Cecilia Canessa, Lloyd Cantley (Internal Medicine/Nephrology), Michael Caplan, Nancy Carrasco, Lawrence Cohen, Barbara Ehrlich (Pharmacology), Biff Forbush III, John Geibel (Surgery), Leonard Kaczmarek (Pharmacology), Patricia Preisig (Internal Medicine/Nephrology), W. Mark Saltzman (Biomedical Engineering), Joseph Santos-Sacchi (Surgery/Otolaryngology), Gerald Shulman (Internal Medicine/Endocrinology), Fred Sigworth, Carolyn Slayman (Genetics), Clifford Slayman, Fred Wright (Internal Medicine/Nephrology), Lawrence Young (Internal Medicine/Cardiology), Z. Jimmy Zhou (Ophthalmology)

Associate Professors  Nadia Ameen (Pediatrics), Angelique Bordey (Neurosurgery), Jonathan Demb (Ophthalmology), Marie Egan (Pediatrics), Michael Nitabach, Vincent Pieribone, Susumu Tomita, David Zenisek

Assistant Professors  Nii Addy (Psychiatry), Richard Kibbey (Internal Medicine/Endocrinology), Satinder Singh, Jesse Rinehart, Xiaoyong Yang (Comparative Medicine)

Fields of Study
Fields of study range from cellular and molecular physiology to integrative medical biology. Areas of current interest include: ion channels, transporters and pumps, membrane biophysics, cellular and systems neurobiology, protein trafficking, epithelial transport, signal transduction pathways, cardiovascular biology, organ physiology, genetic models of human disease, pathophysiology, structural biology of membrane proteins, and physiological genomics.

Special Admissions Requirements
We welcome applications from students with backgrounds in the biological, chemical, and/or physical sciences. These include majors in biology, biochemistry, physiology, genetics, chemistry, physics, mathematics, engineering, computer science, and psychology. Courses in biology, biochemistry, organic and physical chemistry, and mathematics through elementary calculus are recommended. The GRE General Test is required. To enter the Ph.D. program, students will apply to the Physiology and Integrative Medical Biology track within the interdepartmental graduate program in the Biological and Biomedical Sciences.
Special Requirements for the Ph.D. Degree

Formal requirements for the Ph.D. degree include two or three terms of course work, a qualifying examination taken by the end of the second year, submission of a thesis prospectus, two terms of teaching, and completion and satisfactory defense of the thesis.

Students are expected to design a suitable program of courses in consultation with a faculty adviser. The director of graduate studies (DGS) will provide general oversight of the course selections. These courses will provide a coherent background for the expected area of thesis research and also satisfy the department’s subject and proficiency requirements. Students must satisfactorily pass at least six graduate-level courses, including C&MP 520a, C&MP 550a, and C&MP 560b. Also during the first two terms, each student should explore research projects by performing rotations in at least three laboratories to create an informed basis upon which to select a thesis project by the end of the first year. There is no foreign language requirement. The qualifying examination, which must be passed by the end of the student’s fourth term, will cover areas of physiology that complement the student’s major research interest.

An important dimension of graduate training in Cellular and Molecular Physiology is the acquisition of teaching skills through participation in courses appropriate for the student’s academic interests. Ph.D. students are expected to participate in two terms (or the equivalent) of teaching, at least at the level of Teaching Fellow 2. Students are not expected to teach during their first year.

In addition to all other requirements, students must successfully complete MB&B 676b, Responsible Conduct of Research, prior to the end of their first year of study.

After satisfying the departmental predissertation requirements, passing the qualifying examination, submitting a satisfactory thesis prospectus, and having fulfilled the teaching requirement, students are admitted to candidacy. The completed dissertation must describe original research making a significant contribution to knowledge.

Honors Requirement

Students must meet the Graduate School’s Honors requirement by the end of the fourth term of full-time study.

Master’s Degrees

M.Phil. See Degree Requirements under Policies and Regulations. Awarded to students who have fulfilled all the requirements for the Ph.D. except the prospectus, teaching requirement, and dissertation, normally at the end of the second year. Students are not admitted for this degree.

M.S. Awarded only to students who are not continuing for the Ph.D. degree but who have successfully completed one year of the doctoral program (i.e., passing of at least four courses, including two Honors grades, and three successful laboratory rotations). Students are not admitted for this degree.

Program materials are available upon request to the Department Registrar, Department of Cellular and Molecular Physiology, Yale School of Medicine, PO Box 208026, New Haven CT 06520-8026.
Courses

C&MP 520a, Current Perspectives in Physiology  Susumu Tomita
The seminar explores a diverse range of current topics in physiology, emphasizing readings and discussions of recent primary literature. A variety of expert physiologists present topics such as structural biology, membrane transport, signal transduction, sensory systems, and neurophysiology. Instructors guide the discussion regarding the background, the experiments, the methods, and most importantly the impact of relevant research papers. The aim of the course is to understand how physiological approaches integrate the study of organismal function from genes, to systems, to behavior and disease. TTH 2:30–3:45

C&MP 550a/ENAS 550a/MCDB 550a/PHAR 550a, Physiological Systems  Emile Boulpaep, W. Mark Saltzman
The course develops a foundation in human physiology by examining the homeostasis of vital parameters within the body, and the biophysical properties of cells, tissues, and organs. Basic concepts in cell and membrane physiology are synthesized through exploring the function of skeletal, smooth, and cardiac muscle. The physical basis of blood flow, mechanisms of vascular exchange, cardiac performance, and regulation of overall circulatory function are discussed. Respiratory physiology explores the mechanics of ventilation, gas diffusion, and acid-base balance. Renal physiology examines the formation and composition of urine and the regulation of electrolyte, fluid, and acid-base balance. Organs of the digestive system are discussed from the perspective of substrate metabolism and energy balance. Hormonal regulation is applied to metabolic control and to calcium, water, and electrolyte balance. The biology of nerve cells is addressed with emphasis on synaptic transmission and simple neuronal circuits within the central nervous system. The special senses are considered in the framework of sensory transduction. Weekly discussion sections provide a forum for in-depth exploration of topics. Graduate students evaluate research findings through literature review and weekly meetings with the instructor. MWF 9:25–10:15

C&MP 560b/ENAS 570b/MCDB 560b/PHAR 560b, Cellular and Molecular Physiology: Molecular Machines in Human Disease  Emile Boulpaep, Fred Sigworth
The course focuses on understanding the processes that transfer molecules across membranes at the cellular, molecular, biophysical, and physiological levels. Students learn about the different classes of molecular machines that mediate membrane transport, generate electrical currents, or perform mechanical displacement. Emphasis is placed on the relationship between the molecular structures of membrane proteins and their individual functions. The interactions among transport proteins in determining the physiological behaviors of cells and tissues are also stressed. Molecular motors are introduced and their mechanical relationship to cell function is explored. Students read papers from the scientific literature that establish the connections between mutations in genes encoding membrane proteins and a wide variety of human genetic diseases. MWF 9:25–10:15
The course provides an overview of the mammalian special sensory systems, including molecular and cellular bases of vision, audition, taste, olfaction, and somatosensation. Faculty with focus in those areas lead presentations and discussions on peripheral and central mechanisms. Psychophysical aspects of sensation are introduced. TTH 2:30–3:45

**C&MP 600, Medical Physiology Case Conferences**  Emile Boulpaep and staff
Two-term course taught in groups of 10–12 students by the same group leader(s) throughout the year. Workshop format permits students to apply basic concepts of physiology to clinical syndromes and disease processes. Students are expected to participate actively in a weekly discussion of a clinical case that illustrates principles of human physiology and pathophysiology at the whole-body, system, organ, cellular, or molecular level. Prerequisites: C&MP 550a and permission of the instructor. Credit for full year only. TH 11–12:30

**C&MP 610, Medical Research Scholars Program: Mentored Clinical Experience**  Raymond Russell, Michael Caplan
The goals of the course are to introduce MRSP students to aspects of clinically important human diseases. Students explore each disease over three one-and-one-half-hour sessions led by a clinician-scientist who is an expert in the relevant organ system. Students explore two disease processes per term. The first of the three sessions is devoted to a discussion of the clinical presentation, natural history, pathology, epidemiology, treatment, and prognosis of the disease process. During this session students have the opportunity to view gross or microscopic specimens of diseased tissue in association with members of the Pathology faculty. Students are assigned readings in pathology, pathophysiology, and clinical texts to prepare for the first class session. The second session focuses on translational aspects of the disease process. Students read and present papers relevant to the molecular basis of the disease and cutting-edge approaches to its therapy. In the third session students meet with patients who have experienced the disease and/or visit and explore facilities associated with diagnosis and treatment of the disease process. Prior to the third session students receive guidance as to what they will observe and how to approach the experience; and at the end of the session, the group discusses its thoughts and impressions. Students are expected to prepare for sessions, to participate actively, and to be scrupulously respectful of patients and patient facilities.

**C&MP 620b/NBIO 610b, Fundamentals in Neurophysiology**  Vincent Pieribone, Fred Sigworth
The course is designed for students who wish to gain a theoretical and practical knowledge of modern neurophysiology. Graduate students specializing in neurophysiology and non-neurophysiology are encouraged to attend, as the course begins at a very basic level and progresses to more complicated topics. Topics include properties of ion channels, firing properties of neurons, synaptic transmission, and neurophysiology methodology. HTBA
Understanding cellular function requires structural and biochemical studies at an ever-increasing level of complexity. The course is an introduction to the concepts and applications of high-resolution electron cryo-microscopy. This rapidly emerging new technique is the only method that allows biological macromolecules to be studied at all levels of resolution from cellular organization to near atomic detail. Counts as 0.5 credit. TTH 9–10:15

Discussion and analysis of current work on the neurobiological foundations of learning and memory systems in mammals. Informal weekly discussions span several levels of analysis, including molecular and biophysical studies, cellular and systems neurophysiology and neuro-anatomy, and contemporary behavioral neuroscience. HTBA
CHEMICAL & ENVIRONMENTAL ENGINEERING

Dunham Laboratory, 203.432.4250
M.S., M.Phil., Ph.D.

Chair
Paul Van Tassel

Director of Graduate Studies
William Mitch (william.mitch@yale.edu)

Professors  Eric Altman, Gaboury Benoit, Ruth Blake, Menachem Elimelech, Abbas Firoozabadi (Adjunct), Thomas Graedel, Gary Haller, Edward Kaplan, Yehia Khalil (Adjunct), Michael Loewenberg, Robert McGraw (Adjunct), Lisa Pfefferle, Joseph Pignatello (Adjunct), Daniel Rosner, James Saiers, Mark Saltzman, Udo Schwartz, T. Kyle Vanderlick, Paul Van Tassel, Kurt Zilm

Associate Professors  Michelle Bell, Tarek Fahmy, William Mitch, Jordan Peccia

Assistant Professors  Eric Dufresne, Chinedum Osuji, Andre Taylor, Corey Wilson, Julie Zimmerman

Fields of Study
Fields include nanomaterials, soft matter, interfacial phenomena, biomolecular engineering, energy, water, and sustainability.

For admissions and degree requirements, and for course listings, see Engineering & Applied Science.
CHEMISTRY

Sterling Chemistry Laboratory, 203.432.3913
www.chem.yale.edu
M.S., Ph.D.

Chair
Scott Miller (1 SCL, 203.432.3912, chemistry.chair@yale.edu)

Director of Graduate Studies
Charles Schmuttenmaer (1 SCL, 203.432.3913, chemistry.dgs@yale.edu)

Professors  Sidney Altman (Molecular, Cellular & Developmental Biology), Victor Batista, Jerome Berson (Emeritus), Gary Brudvig, Robert Crabtree, Craig Crews (Molecular, Cellular & Developmental Biology), R. James Cross, Jr. (Emeritus), Donald Crothers (Emeritus), Jonathan Ellman, John Faller (Emeritus), Gary Haller (Engineering & Applied Science), Francesco Iachello (Physics), Mark Johnson, William Jorgensen, J. Patrick Loria, J. Michael McBride, Scott Miller, Peter Moore (Emeritus), Andrew Phillips, Lynne Regan (Molecular Biophysics & Biochemistry), James Rothman (Cell Biology), Martin Saunders, Alanna Schepartz, Charles Schmuttenmaer, Dieter Söll (Molecular Biophysics & Biochemistry), Thomas Steitz (Molecular Biophysics & Biochemistry), Scott Strobel (Molecular Biophysics & Biochemistry), John Tully, Patrick Vaccaro, Harry Wasserman (Emeritus), Kenneth Wiberg (Emeritus), Frederick Ziegler (Emeritus), Kurt Zilm

Assistant Professors  Richard Baxter, Nilay Hazari, Seth Herzon, David Spiegel, Elsa Yan

Fields of Study
Fields include bio-inorganic chemistry, bio-organic chemistry, biophysical chemistry, chemical biology, chemical physics, inorganic chemistry, organic chemistry, physical chemistry, physical-inorganic chemistry, physical-organic chemistry, synthetic-organic chemistry, and theoretical chemistry.

Special Admissions Requirements
Applicants are expected to have completed or be completing a standard undergraduate chemistry major including a year of elementary organic chemistry, with laboratory, and a year of elementary physical chemistry. Other majors are acceptable if the above requirements are met. The GRE General Test and the Subject Test in Chemistry are required. Students whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) and the Test of Spoken English (TSE) if the TOEFL Internet-based test is not taken.

Special Requirements for the Ph.D. Degree
A foreign language is not required. Three term courses are required in each of the first two terms of residence, and participation in additional courses is encouraged in subsequent terms. Courses are chosen according to the student’s background and research area. To
be admitted to candidacy a student must (1) receive at least two term grades of Honors, exclusive of those for research; (2) pass either three cumulative examinations and one oral examination (organic students) or two oral examinations (nonorganic students) by the end of the second year of study; and (3) submit a thesis prospectus no later than the end of the third year of study. Remaining degree requirements include completing eight cumulative examinations (organic students), a written thesis describing the research, and an oral defense of the thesis. The ability to communicate scientific knowledge to others outside the specialized area is crucial to any career in chemistry. Therefore, all students are required to teach a minimum of two terms at the level of Teaching Fellow 3 or higher. All students are required to take CHEM 590b, Ethical Conduct and Scientific Research, by the end of their first year of study.

**Master’s Degree**

**M.S. (en route to the Ph.D.)** A student must pass at least five graduate-level term courses in the Chemistry department exclusive of seminars and research. In addition, an overall average (exclusive of seminars and research) of High Pass must be maintained in all courses. One full year of residence is required.

Program materials are available upon request to the Director of Graduate Studies, Department of Chemistry, Yale University, PO Box 208107, New Haven CT 06520-8107.

**Courses**

**CHEM 505a, Alternative Energy** Robert Crabtree, Gary Brudvig, Charles Schmuttenmaer, Victor Batista

**CHEM 518a**, Advanced Organic Chemistry William Jorgensen

Concise overview of structure, properties, thermodynamics, kinetics, reactions, and intermolecular interactions for organic molecular systems. MW 11:35–12:50

**CHEM 519b, Advanced Organic Chemistry II**

**CHEM 521au, Chemical Biology** Alanna Schepartz

A one-term introduction to the origins and emerging frontiers of chemical biology. Discussion of the key molecular building blocks of biological systems and the history of macromolecular research in chemistry. TTH 9–10:15

**CHEM 523a**, Synthetic Methods in Organic Chemistry David Spiegel

A discussion of modern methods. Functional group manipulation, synthesis and functionalization of stereodefined double bonds, carbonyl addition chemistry, and synthetic designs. Normally taken only by students with a special interest in organic synthesis; for others, CHEM 518a is more appropriate. MWF 10:30–11:20
[CHEM 524b, Advanced Synthetic Methods in Chemistry]

CHEM 525bu, Spectroscopic Methods of Structure Determination  Martin Saunders
The background and use of spectroscopic methods emphasizing NMR in organic chemistry. The course includes the use of programs for simulating spin-spin coupling and rapid rearrangement reactions in NMR. All methods commonly used by organic chemists for determining molecular structures of species in solution, in the gas phase, and in solids are included. MWF 11:35–12:25

[CHEM 526bU, Computational Chemistry and Biochemistry]

CHEM 528b, Natural Product Synthesis  Andrew Phillips
Survey of natural products syntheses, with an emphasis on those that contain unique strategies, transformations, or reagents. Key transformations are introduced in the context of various syntheses. Retrosynthetic analysis and synthetic planning are discussed. MWF 9–10:15

CHEM 530bu, Statistical Methods and Thermodynamics  John Tully
The fundamentals of statistical mechanics developed and used to elucidate gas phase and condensed phase behavior, as well as to establish a microscopic derivation of the postulates of thermodynamics. Topics include ensembles; Fermi, Bose, and Boltzmann statistics; density matrices; mean field theories; phase transitions; chemical reaction dynamics; time-correlation functions; Monte Carlo and molecular dynamics simulations. MWF 9:25–10:15

[CHEM 535a, Chemical Dynamics]

CHEM 540aU, Molecules and Radiation I  Kurt Zilm
An integrated treatment of quantum mechanics and modern spectroscopy. Basic wave and matrix mechanics, perturbation theory, angular momentum, group theory, time-dependent quantum mechanics, selection rules, coherent evolution in two-level systems, line shapes, and NMR spectroscopy. MWF 8:20–9:10

CHEM 542bu, Molecules and Radiation II  Mark Johnson
An extension of the material covered in CHEM 540a to atomic and molecular spectroscopy, including rotational, vibrational, and electronic spectroscopy, as well as an introduction to laser spectroscopy. MW 11:35–12:50

[CHEM 547b, Electron Paramagnetic Resonance]

[CHEM 548b, Nuclear Magnetic Resonance in Liquids]

CHEM 549bu, Biophysical Chemistry  Richard Baxter
A detailed discussion of several important experimental techniques used to study the properties of biological macromolecules, focusing on the application of Fourier methods and concepts to NMR spectroscopic, optical, and electron microscopy, image reconstruction, X-ray scattering/diffraction, and mass spectrometry. Emphasis on the physical chemistry that underlies both the execution of such experiments and the interpretation of the resulting data. TTH 9–10:15
CHEM 550b, Theoretical and Inorganic Chemistry  Nilay Hazari
Elementary group theory, molecular orbitals, states arising from molecular orbitals containing several electrons, ligand field theory, and electronic structure of metal complexes. Introduction to physical methods used in the determination of molecular structure and the bonding of polyatomic molecules. TTH 9–10:15

CHEM 552a, Organometallic Chemistry  Robert Crabtree
A survey of the organometallic chemistry of the transition elements and of homogeneous catalysis. TTH 9–10:15

CHEM 554b, Bio-Inorganic Chemistry  Gary Brudvig
An advanced introduction to biological inorganic chemistry. Important topics in metalloprotein chemistry are illustrated. Objective is to define and understand function in terms of structure. Topics include catalysis with and without electron transfer, and carbon, oxygen, and nitrogen metabolism. MWF 8:20–9:10

CHEM 555b, Inorganic Mechanisms

CHEM 556a, Biochemical Rates and Mechanisms  J. Patrick Loria
An advanced treatment of enzymology. Topics include transition state theory and derivation of steady-state and pre-steady-state rate equations. The role of entropy and enthalpy in accelerating chemical reactions is considered, along with modern methods for the study of enzyme chemistry. These topics are supplemented with in-depth analysis of the primary literature. MWF 9:25–10:15

CHEM 557a, Modern Coordination Chemistry  Nilay Hazari
The principles of modern inorganic chemistry. Main group and transition element chemistry: reactions, bonding, structure, and spectra. TTH 11:35–12:50

CHEM 558b, Biophysical Spectroscopy  Elsa Yan
A discussion of application of spectroscopy to biomolecules. Topics include Raman, single-molecule, fluorescence, FTIR, optical ultrafast, NMR and EPR spectrosopies. Emphasis is placed on interpreting spectroscopic data to gain structural and dynamic information to answer biological questions at the molecular level. MW 11:35–12:50

CHEM 560La, Advanced Physical Methods in Molecular Science I  Faculty
A laboratory course introducing physical chemistry tools used in the experimental and theoretical investigation of large and small molecules. Modules include electronics, vacuum technology, optical spectroscopy and lasers, and computer programming. F 3–4

CHEM 560Lb, Advanced Physical Methods in Molecular Science II  R. James Cross, Jr.
A laboratory course introducing physical chemistry tools used in the experimental and theoretical investigation of large and small molecules. Modules include machining materials, magnetic resonance, optical spectroscopy and lasers, and computational tools. F 3–4
CHEM 562L, Laboratory in Instrument Design and the Mechanical Arts  Kurt Zilm, David Johnson
Familiarization with modern machine shop practices and techniques. Use of basic metal-working machinery and instruction in techniques of precision measurement and properties of commonly used metals, alloys, and plastics.

CHEM 564L, Advanced Mechanical Instrumentation  Kurt Zilm, David Johnson
A course geared for both the arts and sciences that goes beyond the basic introductory shop courses, offering an in-depth foundation study utilizing hands-on instructional techniques that must be learned from experience. Prerequisite: CHEM 562L.

CHEM 565L, Introduction to Glass Blowing  Patrick Vaccaro, Daryl Smith
The course provides a basic introduction to the fabrication of scientific apparatus from glass. Topics covered include laboratory setup, the fundamental skills and techniques of glass blowing, the operation of glass fabrication equipment, and requisite safety procedures.

CHEM 570aU, Introductory Quantum Chemistry  Victor Batista
The elements of quantum mechanics developed and illustrated with applications to chemical problems. Suitable for first-year graduate students in chemistry who have had some exposure to quantum mechanics as part of an undergraduate chemistry course.

TTH 9–10:15

[CHEM 572a, Advanced Quantum Mechanics]

CHEM 590b, Ethical Conduct and Scientific Research  Jonathan Parr
A survey of ethical questions relevant to the conduct of research in the sciences with particular emphasis on chemistry. A variety of issues, including plagiarism, the falsification of data, and financial malfeasance, are discussed, using as examples recent cases of misconduct by scientists. Enrollment is restricted to graduate students in chemistry. HTBA

CHEM 600–670, Research Seminars  Faculty
Presentation of a student's research results to his/her adviser and fellow research group members. Extensive discussion and literature review are normally a part of the series.

CHEM 700, Laboratory Rotation for First-Year Biophysical and Chemical Biology Graduate Students  Gary Brudvig, Craig Crews

CHEM 720, Current Topics in Organic Chemistry  Faculty
A seminar series based on invited speakers in the general area of organic chemistry.

CHEM 730, Molecular Science Seminar  Faculty
A seminar series based on invited speakers in the areas of physical, inorganic, and biological chemistry.

CHEM 990, Research  Faculty
Individual research for Ph.D. degree candidates in the Department of Chemistry, under the direct supervision of one or more faculty members.
CLASSICS
402 Phelps Hall, 203.432.0977
www.yale.edu/classics
M.A., M.Phil., Ph.D.

Chair
Christina S. Kraus

Director of Graduate Studies
J.G. Manning (311 Phelps, 203.432.0989)

Professors  Egbert Bakker, Victor Bers (on leave [Sp]), Kirk Freudenburg (on leave [F]), Emily Greenwood (on leave [Sp]), Verity Harte (Classics; Philosophy), Donald Kagan (Classics; History), Diana Kleiner (Classics; History of Art), Christina S. Kraus, J.G. Manning (Classics; History; on leave [F]), John Matthews (Classics; History), William Metcalf (Adjunct; Curator of Coins & Medals, Art Gallery)

Associate Professor  Milette Gaifman (Classics; History of Art)

Assistant Professors  Jay Fisher, Pauline LeVen, Irene Peirano

Lecturers  Veronika Grimm, Timothy Robinson, Joseph Solodow

Affiliated Faculty  Susanne Bobzien (Philosophy), Dimitri Gutas (Near Eastern Languages & Civilizations), Bentley Layton (Religious Studies), Dale Martin (Religious Studies), Susan Matheson (Curator of Ancient Art, Art Gallery), David Quint (Comparative Literature), Barbara Sattler (Philosophy), Barbara Shailor (Deputy Provost; Paleography)

The degree program in Classical Philology seeks to provide an overall knowledge of Greek and Roman civilization, combined with specialized work in a number of fields or disciplines within the total area of classical antiquity.

Admission Requirements
A minimum of three years (four preferred) of college training in one of the classical languages and two years (three preferred) in the other.

Requirements for the Ph.D. Degree in Classics
1. Proficiency sight translation examinations in Greek and Latin (these are taken before the beginning of the first term and must have been passed at the latest by the end of the second term in residence).
2. A proseminar, in the first term, offering an introduction to the discipline of Classics and its various subdisciplines.
3. Departmental reading examinations in French (or Italian) and German. The first (in either language) to be passed by the end of the first year, the second by the end of the second year in residence.
4. A minimum of fourteen term courses, at least eight of which must be seminars (including four courses in the history of Greek and Latin literature, two literary seminars in one language, and one in the other); one course in historical or comparative
linguistics; one course in ancient history (either an 800-level seminar or a 600-level materials course); and one course in classical art and archaeology.

5. Greek and Latin composition (this requirement may—but need not—be satisfied by courses taken under [4] above).

6. Translation examinations in Greek and Latin, based on the Classics Ph.D. reading list, by the beginning of the fifth term in residence.

7. Oral examinations in Greek and Latin literature, based on the Classics Ph.D. reading list, by the end of the fifth term in residence.

Starting with the class of students in the Classical Philology track entering in 2011, this requirement is as follows: Oral examinations in Greek and Latin literature, based on the Classics Ph.D. reading list, as well as in Greek and Roman history, by the beginning of the sixth term in residence.

8. Special fields oral examinations will occur at the end of the sixth term, and consist of three areas of special concentration selected by the candidate in consultation with the DGS. One of the special fields should be related to the student’s chosen dissertation topic; the two other fields are in each of the two ancient languages. In addition to the oral exam, the student will be asked to write a short summary of the dissertation topic and submit this summary and a working dissertation title to the special fields examiners and to the dissertation adviser (who may or may not have worked on the project as a “special topic” with the student). The summary should discuss where the student’s work stands at the end of the term and how the student expects research will progress over the course of the summer as he or she writes the formal dissertation prospectus. A prospectus defense will take place in September of the seventh term.

10. A dissertation.

In addition to the Graduate School’s requirement of Honors grades in at least one year course or two term courses, students must have a High Pass average in the remaining courses. Admission to candidacy for the Ph.D. is granted upon completion of all pre-dissertation requirements not later than the end of the seventh term of study.

The faculty considers experience in the teaching of language and literature to be an important part of this program. Students in Classics typically teach in their third and fourth years of study.

Combined Programs

Classics and Ancient History

Admission requirements Students may apply to either the Department of Classics or the Department of History. In the former case, the requirements are the same as for Classical Philology; in addition, at least two term courses in Greek or Roman history are required for admission to the program.

Requirements for the Ph.D. degree in Classics and Ancient History

1. Proficiency sight translation examinations in Greek and Latin (these are taken before the beginning of the first term and must have been passed at the latest by the end of the second term in residence).
2. A proseminar, in the first term, offering an introduction to the discipline of Classics and its various subdisciplines.

3. Departmental reading examinations in French (or Italian) and German. The first (in either language) to be passed by the end of the first year, the second by the end of the second year in residence.

4. A minimum of fourteen term courses, including two courses in the history of Greek or Latin literature; one seminar in Greek or Latin literature; six courses in Greek and Roman history (three of these must be either seminars or materials courses, two in one language, one in the other); and two courses in another period of history.

5. A translation examination in Greek and Latin, based on the Ancient History Ph.D. reading list, by the beginning of the fifth term in residence.

6. An oral examination in Greek and Latin literature, based on the Ancient History Ph.D. reading list, by the end of the fifth term in residence.

7. Oral examinations in Greek and Roman history on four topics (two for each language) approved by the DGS, by the end of the sixth term in residence. One of the topics studied is normally related to the student's dissertation topic.

8. A dissertation prospectus by the end of the seventh term in residence.

CLASSICAL ART AND ARCHAEOLOGY

The program is designed to give a general knowledge of the development of art and architecture in the classical world from the Bronze Age to Late Antiquity, combined with a detailed study of one particular period and area; and an acquaintance with the contribution made by field archaeology. The program has a strong art historical component, and it is expected that each student will take advantage of available opportunities to visit the major sites and monuments.

Requirements for the Ph.D. degree in Classical Art and Archaeology

1. Proficiency sight translation examinations in Greek and Latin (these are taken before the beginning of the first term and must have been passed at the latest by the end of the second term in residence).

3. Departmental reading examinations in Italian (or French) and German. To be passed by the beginning of the second year in residence.

4. A minimum of fourteen term courses, including a minimum of six courses in Greek and/or Roman art and/or archaeology (at least four must be seminars); a minimum of two courses in a related field of the history of art, for example Medieval or Renaissance; a minimum of two courses in Greek or Roman history, numismatics, or papyrology. Of the remaining four courses, at least two should be seminars in Greek or Latin literature.

5. Competence in Greek and Latin, usually demonstrated by passing at least one 400/700-level course in each language.

6. A written examination in classical art and archaeology (identifications of works of art and architecture, essays, and twenty-four-hour research paper), followed by an oral examination in four areas of concentration, guided by the following topics set in
advance by consultation with the faculty adviser and approved by the DGS: period (for example, the fourth century B.C.), genre (for example, Roman painting), site or geographical area (for example, Mycenae or Roman Africa), and free topic, normally by the end of the sixth term in residence.

7. A dissertation prospectus, normally by the end of the seventh term in residence.

CLASSICS AND COMPARATIVE LITERATURE

Admission requirements Prerequisites for admission through the Department of Classics: same as for Classical Philology. (For admission requirements in the Department of Comparative Literature, consult the DGS of that department.) After admission to the Department of Classics, qualified students may apply to be admitted to this joint program, normally during the first term of residence; the directors of graduate studies of both departments should be consulted before application to the joint program is made.

Requirements for the Ph.D. degree in Classics and Comparative Literature
1. Proficiency sight translation examinations in Greek and Latin (these are taken before the beginning of the first term and must have been passed at the latest by the beginning of the second term in residence).
3. Fourteen term courses including at least seven in Classics, including two courses in the history of Greek or Latin literature and two seminars; and at least six courses in Comparative Literature, including at least four courses on postclassical European literature and two courses on literary theory or methodology.
4. Literary proficiency in German and one other modern language, to be demonstrated during the first two years.
5. Translation examinations in Greek and Latin, based on the Classics Ph.D. reading list, by the beginning of the fifth term in residence.
6. Oral examinations in Greek and Latin literature, based on the Classics Ph.D. reading list, by the end of the fifth term in residence.
7. An oral examination in the Comparative Literature department on six topics appropriate to both disciplines, selected in consultation with the two directors of graduate studies, by the end of the sixth term.
8. A dissertation prospectus by the end of the seventh term in residence.

CLASSICS AND PHILOSOPHY JOINT-PH.D. PROGRAM

The Classics and Philosophy Program is a joint program, offered by the Departments of Classics and Philosophy, for students wishing to pursue graduate study in ancient philosophy. Suitably qualified students may apply for entry to the program either through the Classics department for the Classics track or through the Philosophy department for the Philosophy track.

Applicants for the Classics track of the joint program must satisfy the general requirements for admission to the Classics graduate program, in addition to the requirements of
the Classics track of the joint program. Details of the Classics track of the program may be found online at www.yale.edu/classics/research_philosophy_program.html.

Applicants for the Philosophy track of the joint program must satisfy the general requirements for admission to the Philosophy graduate program, in addition to the requirements of the Philosophy track of the joint program. Details of the Philosophy track of the program may be found online at www.yale.edu/philos/grad_classics.html.

The Classics and Philosophy Program is overseen by an Interdepartmental Committee currently consisting of Professors Susanne Bobzien, Verity Harte, and Barbara Sattler, together with the DGS in Classics and the DGS in Philosophy.

CLASSICS AND RENAISSANCE STUDIES

Admission requirements Same as for Classical Philology. Applications should be submitted directly to Classics with an indication that the student wishes to apply for the combined degree in Classics and Renaissance Studies.

Requirements for the Ph.D. degree in Classics and Renaissance Studies
1. Proficiency sight translation examinations in Greek and Latin (these are taken before the beginning of the first term and must have been passed at the latest by the end of the second term in residence).
3. Sixteen term courses, eight of which will be courses in Classics and will include at least four courses in Greek and Latin literature, a course in historical or comparative linguistics, and at least three seminars; the eight remaining courses making up the Renaissance Studies portion of the degree will be broken down as follows: two terms of the Renaissance Studies Core Course, six additional term courses to be taken in at least two disciplines (such as literature, history, history of art, music, religious studies, etc.); one of these courses should meet the normal Classics requirements of a course in classical art or archaeology.
4. Literary proficiency in Italian, as examined by Renaissance Studies, and a second language, normally German or French.
5. Translation examinations in Greek and Latin, based on the Classics Ph.D. reading list, by the end of the fifth term in residence.
6. Oral examinations on six topics appropriate to both disciplines, selected in consultation with the directors of graduate studies in both disciplines, by the end of the sixth term in residence.
7. Oral examinations in Greek and Latin literature, based on the Classics Ph.D. reading list, by the end of the seventh term in residence.

For information about the Ph.D. program in Graeco-Arabic Studies, please contact Professor Gutas, Department of Near Eastern Languages and Civilizations.
Master’s Degrees

M.Phil.  See Degree Requirements under Policies and Regulations.

M.A. (en route to the Ph.D.)  Students enrolled in the Ph.D. program qualify for the M.A. degree upon completion of seven courses, ordinarily with a High Pass average in two successive terms.

Program materials are available upon request to the Director of Graduate Studies, Department of Classics, Yale University, PO Box 208266, New Haven CT 06520–8266.

Courses

**GREK 727au/PHIL 600au**, Aristotle’s *Metaphysics XII*  John Hare, Verity Harte
In Book XII of his *Metaphysics*, Aristotle embarks on an investigation into substance, in the course of which he sets out to prove and to characterize the existence of a divine substance. The course reads and discusses the Greek text of *Metaphysics* XII and considers the philosophical issues it raises. W 3:30–5:20

**GREK 734au**, Thucydides  Emily Greenwood
An intensive reading of selections from Thucydides’ *History*, interpreting the Greek text in relation to its historical, intellectual, and cultural contexts. Philological and historical interpretation of the text to be related to debates in Thucydidean scholarship. TTH 11:35–12:50

**GREK 743bu**, Homer  Egbert Bakker
Readings of selected books of the *Iliad*, with attention to Homeric language and style, the Homeric view of heroes and gods, and the reception of Homer in antiquity. TTH 1–2:15

**GREK 756bu**, Advanced Comparative Greek Grammar  Jay Fisher
A historical and comparative study of the morphology of the Greek language. Emphasis on the earliest records of Greek, the development of Greek verbal and nominal systems from Proto-Indo-European, and a comparison of this development with that of Latin, English, and other Indo-European languages, including Sanskrit. TTH 2:30–3:45

**GREK 757bu**, Rhetoric Philosophy  Egbert Bakker
A study of Greek rhetoric and its treatment by philosophers (Plato and Aristotle). TTH 4–5:15

**GREK 762au**, Hellenistic Poetry  Egbert Bakker
Close reading of poetic selections from the Hellenistic period. Authors include Callimachus, Theocritus, and Apollonius of Rhodes. Attention to language, style, genre, and the cultural context of Alexandria. MW 1–2:15

**GREK 790au**, Greek Prose Composition  Victor Bers
Stylistic analysis and extended prose composition in imitation of particular genres and “subgenres,” concentrating on classical Attic prose. Students enrolled in GREK 790a are normally required to attend and do the work in GREK 390a, a review of accidence and syntax, elementary composition, and stylistic and analysis of Greek prose of the fifth and fourth centuries B.C., including a comparison of “prosaic” and Poetic” syntax. TTH 9–10:15, T 10:30–11:20
LATN 723b\textsuperscript{b}, Roman Tragedy  Jay Fisher
A close reading of the Phaedra, Thyestes, and Medea of Seneca, with particular attention to the literary, social, and political contexts of the plays. TTH 11:35–12:50

LATN 731a\textsuperscript{a}, Catullus  Irene Peirano
Reading of most of the Catullan corpus, with close attention to language and style. Topics include Catullus's cultural context, intertextuality, genre, obscenity, realism, gender, and the reception of Catullus through the ages. MW 1–2:15

LATN 747a\textsuperscript{b}, Roman Social History in Latin Texts  John Matthews
The course, which is intended for graduate students and senior undergraduates, studies issues in the social and economic life of the Roman Empire of the first to fifth century through readings in the legal, documentary, and epigraphic as well as literary sources of the period. A strong knowledge of Latin is required, and emphasis is given to the variety of literary and nonliterary styles of the documents. HTBA

LATN 762b\textsuperscript{b}, Tacitus  William Metcalf
Close reading of Tacitus's Histories and parallel passages from the other works, with attention to his syntax and style. The influence of Tacitus's background and experience on his narrative is focal throughout. TTH 1–2:15

LATN 763b\textsuperscript{b}, Ciceronian Invective  Irene Peirano
A close reading of Cicero's Philippics 1 and 2 in Latin; selected readings from other texts in English. Emphasis on Cicero's language, style, and rhetorical technique, and on invective as a literary genre. MW 4–5:15

LATN 790b\textsuperscript{b}, Latin Syntax and Stylistics  Joseph Solodow
A systematic review of syntax and an introduction to Latin style. Selections from Latin prose authors are read and analyzed, and students compose short pieces of Latin prose. For students with some experience reading Latin literature who desire a better foundation in forms, syntax, idiom, and style. MW 9–10:15

LATN 791a\textsuperscript{b}, Comparative Latin Grammar  Jay Fisher
Introduction to the historical and comparative study of the Latin language, with emphasis on the earliest records of archaic Latin, the development of Latin grammar and vocabulary from Proto-Indo-European, and a comparison of this development with the grammar and vocabulary of Greek, English, and other Italic languages, including Oscan and Umbrian. TTH 2:30–3:45

CLSS 601b/MDVL 552b, Introduction to Latin Paleography  Barbara Shailor
Latin paleography from the fourth century C.E. to ca. 1500. Topics include the history and development of national hands; the introduction and evolution of Caroline minuscule, pre-gothic, gothic, and humanistic scripts (both cursive and bookhands); the production, circulation, and transmission of texts (primarily Latin, with reference to Greek and Middle English); advances in the technical analysis and digital manipulation of manuscripts. Seminars are based on the examination of codices and fragments in the Beinecke Library; students select a manuscript for class presentation and final paper. Prerequisites: proficiency in Latin; reading knowledge of French, German, Italian, or classical Greek.
CLSS 605a, Greek Papyrology  Ann Hanson
Study of literary and documentary papyri from the desert regions of the Eastern Mediterranean. Although most papyri in the collection at Yale’s Beinecke Library derive from Ptolemaic and Roman Egypt, a few were excavated at Dura Europos, a Seleucid foundation on the Euphrates in what is modern Syria. The class meets each week in the Beinecke Library and concentrates on published and unpublished documents housed there. Scans of papyri from other collections in the United States and Europe are also studied. Topics to be considered include reading literary and documentary hands written in scriptio continua; understanding and interpreting published transcripts; becoming familiar with the language of documents; manipulating the electronic databases that help to find texts with similar concerns and phrasing and to identify ancient copies of Greek literature. In addition to using papyri as sources for social history, we can also consider such recently published literary texts as the Posidippus epigrams, the much-debated Artemidorus papyrus, and the surprising Codex Tchacos (a.k.a., Gospel of Judas). Prerequisites: proficiency in reading Greek; reading knowledge (with a dictionary) of German, French, and Italian. T 1:30–3:20

CLSS 804a, Homer’s Iliad  Egbert Bakker
This seminar has two aims: (1) a comprehensive reading and interpretation of the poem, with an eye to the fact that a classics Ph.D. will sooner or later have to teach the Iliad in translation as part of a literature or myth course; and (2) an introduction to Homeric philology (analysis, neo-analysis, Homeric language, oral poetry, performance) on the basis of in-depth readings of selected passages. M 3:30–5:20

CLSS 806b/HIST 511b/RLST 514b, Hellenistic Civilization and the Jews  J.G. Manning, John J. Collins
This seminar examines two incidents in the Hellenistic world that can be construed as persecution of the Jews. The first was in the years 167–164 B.C.E., when the Seleucid Antiochus Epiphanes tried to suppress the traditional Jewish cult in Jerusalem. The second was in Alexandria in 38 C.E., when the Jewish community came under attack from its Gentile neighbors and the Roman authorities. The seminar examines these incidents in the context of Seleucid and Roman policies toward subject peoples. TH 3:30–5:20

CLSS 810a, Livy  Christina S. Kraus
Historiographical study of Livy’s Ab urbe condita. We read approximately five books in Latin (more in English), concentrating on Livy’s historical and literary techniques. This is not a history course, though historians are welcome. W 3:30–5:20

CLSS 825b, Euripides  Pauline LeVen
Close reading of two late plays of Euripides, Helen and Ion. Class discussion focuses on Euripides’ literary and dramatic technique and on the issues of myth, geography, as well as cultural and personal identity in these tragedies. We also consider how the plays (qualified as “romantic tragedies,” “paratragedies,” and “tragicomedies”) question the identity of the tragic genre and open new dramatic possibilities at the end of the fifth century B.C. A range of modern critical approaches is introduced. M 2:30–4:20
CLSS 846a/ARCG 749a/HSAR 570a, Becoming Hadrian: Autobiography and Art in the Second Century A.D. Diana Kleiner
Marguerite Yourcenar’s famed fictional Memoirs of Hadrian serves as the starting point for an exploration of Hadrian and the art he commissioned in Rome and abroad. Hadrian’s passion for life, quest after peace, romantic wanderlust, veneration of Greek culture, and craving for love, along with his acceptance of death’s inexorableness, led him to commission some of Rome’s greatest monuments. The emperor’s flair for leadership and talent as an amateur architect inform student projects on the sculpture, mosaics, and buildings of the age, among them the portraiture of Hadrian’s lover Antinous, the Pantheon, and Hadrian’s Wall in Britain. Special attention is paid to Hadrian’s Villa at Tivoli, an empire unto itself where Hadrian’s autobiography was fully realized. Qualified undergraduates who have taken Roman Art: Empire, Identity, and Society and/or Roman Architecture may be admitted with permission of the instructor. T 1:30–3:20

CLSS 850b/PHIL 602b, Plato’s Philebus Verity Harte
The seminar reads, in translation, and discusses Plato’s Philebus, the late work in which he examines the competing claims of pleasure and reason to be the basis of human happiness and provides a portrait of the best human life. W 3:30–5:20

CLSS 881a, Proseminar: Classical Studies Egbert Bakker
An introduction to the bibliography and disciplines of classical scholarship. Faculty address larger questions of method and theory, as well as specialized subdisciplines such as linguistics, papyrology, epigraphy, and numismatics. Required for all entering graduate students. TTH 11:35–12:50

CLSS 885b/HIST 512b, Aristotle’s Athenaeon Politeia Donald Kagan
A study of the historical portion of Aristotle’s Constitution of the Athenians. TH 1:30–3:20

CLSS 888b/PHIL 601b, Ancient Philosophy of Science Barbara Sattler
This seminar focuses on the evolution and development of notions central to the philosophy of science that arose in ancient times. Topics include time, space, motion, matter, continuity, and infinity. We concentrate on the discussion of these topics in the Presocratics, Plato, and Aristotle. M 3:30–5:20

CLSS 892b, Vision in Ancient Epic Kirk Freudenburg
This seminar explores the theory and practice of image-production (enargeia, descriptio: the production of a full visual presence through verbal means) in ancient epic, with special focus on the narratological ends to which the poet’s special “visualizing effects” are the means. The main epic poet studied is Virgil, but accounting for his visual practices requires a much fuller accounting of enargeia in the various “visualizing” poetic traditions to which he refers (especially Homer, Lucretius, and Catullus); in rhetoric, both its theory and practice (Aristotle, Cicero, and Quintilian); in historiography (Livy and Tacitus); and in other “actual” visual media such as wall paintings, sculpture, and architecture. We look at the related topics of ecphrasis, Roman concepts of “nobility” and “spectacle,” and to further developments in the production of visualization in the epics of Ovid, Statius, Lucan, and Valerius Flaccus, as well as to the basic practices, categories, and theorizations of film narratology (Bordwell, Mulvey, Verstraten). W 2:30–4:20
CLSS 896a, History of Latin Literature  Jay Fisher
A survey of Latin literature from the earliest texts to the sixth century C.E., with the main focus on the period from the second century B.C.E. to the C.E. Diachronic, synchronic, generic, and topical models of organization. TTH 4–5:15

CLSS 897b, History of Latin Literature  Irene Peirano
For description, see CLSS 896a. MW 11:35–12:50

CLSS 900a/b, Directed Reading
By arrangement with faculty.

CLSS 910a/b, Directed Reading
By arrangement with faculty.
COMPARATIVE LITERATURE

451 College Street, Rm. 202, 203.432.2760
www.yale.edu/complit
M.A., M.Phil., Ph.D.

Chair
Dudley Andrew

Director of Graduate Studies
Katie Trumpener (katie.trumpener@yale.edu)

Professors  Rolena Adorno (Spanish & Portuguese), Dudley Andrew, R. Howard Bloch (French), Rüdiger Campe (German), Francesco Casetti (Film Studies), Katerina Clark, Michael Denning (American Studies), Wai Chee Dimock (English), Paul Fry (English), Roberto González Echevarría, Beatrice Gruendler (Near Eastern Languages & Civilizations), Karsten Harries (Philosophy), Benjamin Harshav (Emeritus), Geoffrey Hartman (Emeritus), Michael Holquist (Emeritus), Carol Jacobs, Pericles Lewis, Tinu Lu (East Asian Languages & Civilizations), John MacKay (Slavic Languages & Literatures), Giuseppe Mazzotta (Italian), Christopher L. Miller (French), Rainer Nägele, David Quint, Joseph Roach (English), Maurice Samuels (French), Henry Sussman (Visiting, German), Katie Trumpener, Christopher Wood (History of Art), Ruth Yeazell (English)

Associate Professors  Moira Fradinger, Barry McCrea

Assistant Professor  David Gabriel

Fields of Study

The Department of Comparative Literature introduces students to the study and understanding of literature beyond linguistic or national boundaries; the theory, interpretation, and criticism of literature; and its interactions with adjacent fields like visual and material culture, linguistics, film, psychology, law, and philosophy. The comparative perspective invites the exploration of such transnational phenomena as literary or cultural periods and trends (Renaissance, Romanticism, Modernism, postcolonialism) or genres and modes of discourse. Students may specialize in any cultures or languages, to the extent that they are sufficiently covered at Yale. The Ph.D. degree qualifies the candidate to teach comparative literature as well as the national literature(s) of her or his specialization.

Special Admissions Requirements

Applicants must hold a B.A. or equivalent degree and should normally have majored in comparative literature, English, a classical or foreign literature, or in an interdepartmental major that includes literature. They must be ready to take advanced courses in two foreign literatures in addition to English upon admission. The GRE General Test is required. A ten- to twenty-page writing sample, written in English, should be submitted with the application.
Special Requirements for the Ph.D. Degree

Students must successfully complete fourteen term courses, including at least seven listed under the departmental heading. The student’s overall schedule must fulfill the following requirements: (1) at least one course in medieval or classical European literature, philology, or linguistics (or their equivalents in other cultures); one course in the Renaissance or Baroque (or equivalents); and one course in the modern period; (2) three courses in literary theory or methodology; (3) course work dealing with texts from three literatures, one of which may be English or American. Any course may be counted for several requirements simultaneously.

Languages: Literary proficiency in four languages (including English, at least one other modern language, and one classical or ancient language, such as Latin, Greek, Biblical Hebrew, Classical Arabic, Classical Chinese, Provençal). The fulfillment of this requirement will be demonstrated by a written exam consisting of a translation of a literary or critical text, to be held by the end of the sixth term; or by an equivalent level in the student’s course work.

Orals: An oral examination to be taken in the third year of studies, demonstrating both the breadth and specialization as well as the comparative scope of the student’s acquired knowledge. The examination consists of seven topics that include texts from at least three national literatures and several historical periods (at least one modern and one before the Renaissance). The texts discussed should also include representatives of the three traditional literary genres (poetry, drama, narrative fiction).

The Ph.D. dissertation, supervised by a dissertation director (or directors) and approved by the departmental faculty, completes the degree. Its initial step is a dissertation prospectus, to be submitted and approved by the dissertation director and a standing faculty committee no later than halfway through the seventh term of study. Admission to candidacy for the Ph.D. is granted after six terms of residence and the completion of all requirements (courses, languages, orals, prospectus) except the dissertation.

Teaching: Training in teaching, through teaching fellowships, is an important part of every student’s program. Normally students will teach in their third and fourth years.

Combined Ph.D. Programs

COMPARATIVE LITERATURE AND CLASSICS

The Department of Comparative Literature also offers, in conjunction with the Department of Classical Languages and Literatures, a combined Ph.D. in Comparative Literature and Classics. For further details, see Classics.

COMPARATIVE LITERATURE AND FILM STUDIES

The Department of Comparative Literature also offers, in conjunction with the Program in Film Studies, a joint Ph.D. in Comparative Literature and Film Studies. For further details, see Film Studies. Applicants to the joint program must indicate on their application that they are applying both to Film Studies and to Comparative Literature. All documentation within the application should include this information.
COMPARATIVE LITERATURE AND RENAISSANCE STUDIES

The Department of Comparative Literature also offers, in conjunction with the Renaissance Studies program, a combined Ph.D. in Comparative Literature and Renaissance Studies. For further details, see Renaissance Studies.

Master’s Degrees

M.Phil.  See Degree Requirements under Policies and Regulations. Additionally, students in Comparative Literature are eligible to pursue a supplemental M.Phil. degree in Medieval Studies. For further details, see Medieval Studies.

M.A. (en route to the Ph.D.)  Students enrolled in the Ph.D. program may receive the M.A. upon completion of ten courses with at least two grades of Honors and a maximum of three grades of Pass, and the demonstration of proficiency in two of the languages, ancient or modern, through course work or departmental examinations. No student is admitted to a terminal M.A.

Program materials are available upon request to the Director of Graduate Studies, Department of Comparative Literature, Yale University, PO Box 208299, New Haven CT 06520–8299.

Courses

CPLT 501a/HIST 564a/ITAL 600a/RNST 500a, Introduction to Renaissance Studies: Renaissance Italy  Angela Capodivacca, Francesca Trivellato
An introduction to the major texts, issues, and methods in the interdisciplinary study of the Renaissance, with an emphasis on Italy. T 7–8:50

CPLT 501b/HIST 564b/RNST 500b, Introduction to Renaissance Studies: Northern Europe  Bruce Gordon, David Scott Kastan
An introduction to the major texts, issues, and methods in the interdisciplinary study of the Renaissance, with an emphasis on northern Europe. T 1:30–3:20

CPLT 511b, Introduction to Theory of Literature  Carol Jacobs
An examination of concepts and assumptions active in contemporary views of literature, with their history. Shifting definitions of “literary theory”; accounts of meaning, interpretation, and representation; examinations of historicist, formalist, psychoanalytic, Marxist, structuralist, poststructuralist, feminist, and media-centered approaches to theory and literature. TTH 11:35–12:25

CPLT 515b, Proseminar in Comparative Literature  Carol Jacobs
Introductory proseminar for all first-year students in Comparative Literature (and other interested graduate students). Critical, close readings of formative texts that theorize interpretation, language, and literature, leading to a complex meditation on such questions as: What is truth? How does it relate to the concepts of authority and language and the assumptions we tend to make about them? What are the implications for a conceptualization of the individual self? We are concerned, on the one hand, with the unique contributions of individual authors. To complicate matters I wish to work through these issues by investigating the subtleties of formulation in these writers, their
theatrical gestures, their claims to singular truth, their often difficult turns of phrase or even inconsistencies. Students in the proseminar must also concurrently take CPLT 511b, Introduction to Theory of Literature. TH 3:30–5:20

CPLT 544a/ARBC 832a, Introduction to Classical Arabic Literary Criticism
Beatrice Gruendler
Practical and theoretical criticism of Arabic poetry considered in the light of its communicative and cultural roles in a multiethnic medieval society. Themes include the classification of poetry, composition, form and content, influence vs. originality, talent vs. craft, lie and truth, theory of imagery, rhetorics, the literary challenge of the Koran, and the dynamics of poetry and prose. TH 2:30–4:20

CPLT 571b/AMST 683b/RUSS 675b, Promised Lands: Slavery, Literature, and Modernity in Russia and the United States
John MacKay
Close, comparative, contextualized examination of literary and other forms of cultural production associated with U.S. slavery and Russian serfdom. Special attention is paid to the relation between bondage and national, cultural, and personal identity; the role of bondage in definitions of “aesthetic experience” in the pre- and post-emancipation periods; the relation between literacy and the literary; literature of protest in the two countries; and connections between geographical and subjective space within cultures of enslavement. We examine works by Pushkin, Aksakov, Gogol, Simms, Cooper, Crèvecoeur, Radishchev, Karamzin, Goncharov, Tolstoy, Kennedy and the “plantation novelists,” Stowe, Melville, Turgenev, slave and serf autobiographers, freedman’s textbooks, Fet, Lanier, Page, Chesnutt, and Bunin; historical treatments by Kolchin, Genovese, and others; and theoretical works by Said, Jameson, Saidiya Hartman, Bakhtin, and others. Requirements: in-class presentations and research paper. No knowledge of Russian required. M 3:30–5:20

CPLT 577a/MDVL 559a/SPAN 519a, Framed Narratives of Medieval Europe
María Rosa Menocal
A study of the vernacular storytelling traditions central to the cultural transformation of medieval Europe that begins in the twelfth century. The framed tale collections include intertwined texts, and stories many times retold, in a half dozen different linguistic and cultural traditions, beginning with the Disciplina Clericalis and the Kalila wa Dimna and their many versions, and culminating in the fourteenth-century masterpieces considered foundational to the national language traditions: the Decameron, the Conde Lucanor, and the Canterbury Tales. Topics of special interest include: translation, variations, and originality; the transition from oral storytelling to written texts; and the flourishing of the tradition in postmedieval literature, often with a distinct self-consciousness of the “medievalness” of the form. TH 1:30–3:20

CPLT 592a/GMAN 645a, Urban Phantasmagoria: Berlin, Vienna, and Paris
Henry Sussman
Grounding itself in Walter Benjamin’s The Arcades project, a print-medium Web site of the rise of modernity, malls, advertising, gambling, amusement parks, and urban-cruising in nineteenth-century Paris, this course pursues these developments as they revolutionize the environment in the major German-speaking cities and as they are
documented in literary and cultural criticism. Readings include Aragon, Balzac, Barthes, Baudelaire, Zola, and Rem Koolhas. W 3:30–5:20

CPLT 622a/AMST 622a, Working Group on Globalization and Culture
Michael Denning
A continuing collective research project, a cultural studies “laboratory,” that has been running since the fall of 2003. The group is made up of graduate students and faculty from several disciplines. The working group meets regularly to discuss common readings, to develop collective and individual research projects, and to present that research publicly. The general theme for the working group is globalization and culture, with three principal aspects: (1) the globalization of cultural industries and goods, and its consequences for patterns of everyday life as well as for forms of fiction, film, broadcasting, and music; (2) the trajectories of social movements and their relation to patterns of migration, the rise of global cities, the transformation of labor processes, and forms of ethnic, class, and gender conflict; (3) the emergence of and debates within transnational social and cultural theory. The specific focus, projects, and directions of the working group are determined by the interests, expertise, and ambitions of the members of the group, and change as its members change. There are a small number of openings for second-year graduate students. Students interested in participating should contact michael.denning@yale.edu. M 1:30–3:20

CPLT 634b/NEC 563b, From Pictograph to Pixel: Changing Ways of Human Communication
John Darnell, Michael Fischer, Beatrice Gruendler
An exploration of the five pivotal stages of the development of human communication throughout world history: pictographic and syllabic ways of writing, the consonantal or phonetic alphabet, the invention of paper, movable type, and acoustic/electronic/digital media and the Internet. These technologies are considered for their innovative features, new capabilities, social and ideological implications, and the instrumental roles they play in contemporary periods of change. TTH 1–2:15

CPLT 635b/AMST 886b/ENGL 851b, American Literature: Genres, Media, Webs
Wai Chee Dimock
A survey of American literature as a multi-genre and cross-media field. The course addresses some of these issues: the movement from the linguistic medium to image, music, and theater; genealogies between poetry and prose; adaptations and rewritings from the nineteenth century to the twenty-first; the translational dynamics between the local and the global. We read *Moby-Dick* along with Agha Shahid Ali's poems, *Call Me Ishmael Tonight*, and Frank Stella's mixed-media installations; Whitman's *Leaves of Grass* with Michael Cunningham's *Specimen Days* and the songs of Kurt Weill, Vaughan Williams, and Ned Rorem; Henry James's *The Golden Bowl* with the Merchant Ivory film; and Hawthorne's *The Scarlet Letter*, and Faulkner's *Light in August* and *As I Lay Dying*, with Suzan-Lori Parks's *The Red Letter Plays* and *Getting Mother's Body*. W 1:30–3:20

CPLT 648b/GMAN 648b, Repetition
Rainer Nägele
Repetition emerges in the nineteenth century as a particular preoccupation. We concentrate on some specific philosophical and theoretical texts: Karl Marx (the Eighteenth Brumaire), Kirkegaard, Nietzsche, Freud. But we also discuss some of the ramifications of
repetition in poetry, literature, and rhetoric (rhythm, rhyme, refrain, and literary motifs).
W 1:30–3:20

CPLT 672b/ENGL 672b, Milton  David Quint
A study of Milton’s poetry and some of his controversial prose. We investigate the relation of the poetry to Milton’s literary tradition and historical contexts, focusing on issues of genre and on the religious, social, and political forces that shaped Milton’s writing.
TH 9:25–11:15

CPLT 674a/SPAN 660a, Cervantes’s Don Quijote  Roberto González Echevarría
A close reading of Cervantes’s masterpiece with emphasis on its significance for modern fiction. The relationship of author, character, and reader; reality and fantasy in fiction; literary imitation vs. literary invention. Conducted in Spanish, but Comparative Literature students may do their presentation and paper in English. W 3:30–5:20

CPLT 711b/ITAL 703b, Vico and European Thought  Giuseppe Mazzotta
Examination of Vico’s thought globally and in the historical context of the late Renaissance and the Baroque. Starting with Vico’s Autobiography, working to his University Inaugural Orations and On the Study of Methods of Our Time, the seminar delves into his juridical-political texts and submits the second New Science (1744) to a detailed analysis. Some attention is given to Vico’s poetic production; the encomia he wrote; and the polemics with Machiavelli, Bacon, Descartes, and the classics. The overarching idea of the seminar is the definition of Vico’s new discourse for the modern age and his vision of a modern Europe in the widening space of the globe. To this end, discussion deals prominently with issues such as Baroque encyclopedic representations, the heroic imagination, the senses of “discovery” of the new world, the redefinition of “science,” the reversal of neo-Aristotelian and neo-Platonic poetics, the crisis of the Renaissance, and the role of the myth and education. T 3:30–5:20

CPLT 713b/PHIL 706b, Time and Value  Karsten Harries
The seminar begins with a consideration of Plato’s Symposium as the paradigmatic statement of what we can call an ethics of satisfaction. Other versions are examined. All are shown to be inseparable from a view of time that gives priority to the present. This view is criticized and contrasted with another that gives primacy to the future. Its consequences for value theory are examined. Readings in Plato, Augustine, Kant, Nietzsche, Heidegger, Sartre, Eliade, and Marcuse. T 1:30–3:20

CPLT 714a/PHIL 701a/PLSC 606a, From Weber to Derrida  Seyla Benhabib
Topics discussed include modernity and rationalization; science and the problem of values; the concept of public sphere; decisionism and the friend/foe distinction; Heidegger’s ontology and politics; Derrida on cosmopolitanism, and Habermas and Derrida on terror and philosophy. This course can only be taken in conjunction with the lecture course European Political Thought from Weber to Derrida (PLSC 604a), since it is not an independent seminar but the graduate seminar attached to the lecture course. W 5–6:50
CPLT 785a/GMAN 665a, Thinking Poetry: Hölderlin, Heidegger, Blanchot
Rainer Nägele

Poetry, in this seminar, is both the object and subject of thinking. In close readings of Hölderlin’s major poetic work, we investigate the specific mode in which poetry thinks, while, at the same time, the impact of this poetry on philosophical language and its awareness of being (in) language is discussed in the encounter of Heidegger and Blanchot with Hölderlin. T 1:30–3:20

CPLT 898a/FREN 898a, Fin-de-siècle France  Maurice Samuels

The course examines major French literary and artistic movements of the last decades of the nineteenth century (Naturalism, Decadence, Symbolism) in their cultural context. Weekly reading assignments pair literary texts with contemporary theoretical/medical/political discourse on such topics as disease, crime, sex, poverty, colonialism, nationalism, and technology. Literary authors include Barbey, Mallarmé, Maupassant, Rachilde, Villiers, and Zola. Theorists include Bergson, Freud, Krafft-Ebing, Le Bon, Nordau, Renan, and Simmel. Some attention also paid to the visual arts. Prerequisite: reading knowledge of French. TH 9:25–11:15

CPLT 900a, Directed Reading  Faculty

CPLT 900b, Directed Reading  Faculty

CPLT 901a, Individual Research  Faculty

CPLT 901b, Individual Research  Faculty

CPLT 908a/ENGL 910a, James Joyce  Barry McCrea

This seminar is a close examination of the works of James Joyce and the critical debates surrounding them. Most of the seminar is devoted to the close reading of Ulysses and portions of Finnegans Wake. T 9:25–11:15

CPLT 916b/FILM 830b/ITAL 590b, Literature into Film  Millicent Marcus

The course undertakes a series of case studies of Italian films adapted from literary works, identifying the challenges that specific texts present to filmmakers in the process of transforming verbal fictions into audiovisual spectacles. Although we consider a variety of critical approaches to comparative study of the two arts (semitic, psychoanalytic, ideological, feminist, etc.), we do not develop a universal theory of adaptation, but instead analyze each case in sui generis terms, making allowances for the specificity of the textual sources, and for the “authorial” freedom that must be granted filmmakers in their cinematic rewriting of them. Among our twelve case studies, reading and screening include the Tavianis’ Kaos and Pirandello’s short stories; Moravia’s and De Sica’s Two Women; Sophocles’ and Pasolini’s Oedipus Rex; Boito’s and Visconti’s Senso; Ledda’s and the Tavianis’ Padre padrone; Bassani’s and De Sica’s Garden of the Finzi-Continis; and Mann’s and Visconti’s Death in Venice. W 3:30–5:20, screenings SU 7:30

CPLT 917a/FILM 601a, Films and Their Study  Dudley Andrew

The course sets in place some undergirding for graduate students who want to anchor their film interest to something like the “professional discourse” of this field. A coordinated set of topics in film theory is interrupted first by the often discordant voice of
history and second by the obtuseness of the films examined each week. As the title of the seminar is meant to convey, films themselves take the lead in our discussions. T 1:30–3:20, screenings SU 7

CPLT 949a/AFAM 723a/AMST 645a/WGSS 645a, Caribbean Diasporic Intellectuals
Hazel Carby
The course examines work by writers of Caribbean descent from different regions of the transatlantic world. In response to contemporary interest in issues of globalization, the premise of the course is that in the world maps of these black intellectuals we can see the intertwined and interdependent histories and relations of the Americas, Europe, and Africa. Thinking globally is not a new experience for black peoples, and we need to understand the ways in which what we have come to understand and represent as “Caribbeanness” is a condition of movement. Literature is most frequently taught within the boundaries of a particular nation, but this course focuses on the work of writers who shape the Caribbean identities of their characters as traveling black subjects and refuse to restrain their fiction within the limits of any one national identity. We practice a new and global type of cognitive mapping as we read and explore the meanings of terms like black transnationalism, migrancy, globalization, and empire. Diasporic writing embraces and represents the geopolitical realities of the modern, modernizing, and postmodern worlds in which multiple racialized histories are inscribed on modern bodies. T 1:30–3:20

CPLT 957b/FILM 769b, World Cinema and Continental Philosophy
Thomas Elsaesser
Examining the recent but still expanding interest of major contemporary philosophers in the cinema and the corresponding interest of film scholars in contemporary philosophy, the seminar focuses on the reasons for this turn, the key philosophical questions raised, and what each side can expect to gain from the other. After a flashback to philosophers who in the earlier part of the twentieth century found the cinema a challenge worth their attention (from Henri Bergson via Jean Paul Sartre to Stanley Cavell), the seminar traces the reverberations of Gilles Deleuze’s “Cinema” books across continental philosophy, often setting the terms for the debate even among those who dissent from his thought or choose a quite different path. Philosophers discussed include Jean-François Lyotard, Jacques Rancière, Alain Badiou, and Jean-Luc Nancy, but also others, such as Slavoj Žižek, Martin Seel, Torben Grodal, Lorenz Engell, and Josef Früchtl, who have found cinema/philosophy a fertile reference point for reviving questions of politics, the subject, and aesthetics. W 1:30–3:20

CPLT 962b/SPAN 904b, Latin American Intellectual Debates
Moira Fradinger
The seminar looks at the development of central cultural debates in the region over two centuries, mainly through the form of the essay, but including poems, novels, and films. We explore polemics over the “Idea of America” and the foundations of the regional nation-states in authors such as Bolívar, Martí, and Sarmiento; debates over the cultural independence from Europe, over the Indian question and the movement of indigenismo; issues of cultural hybridity and mestizaje, the movement of negritude; and the question of modernity and postmodernity. Twentieth-century authors include Rodó, Vasconcelos,
Reyes, de Andrade, Mariátegui, Roumain, Césaire, Fanon, Rama, Retamar, Galeano, Glissant, and García Canclini. W 3:30–5:20

CPLT 964a/GMAN 615a, Meaning and History: Blumenberg, Derrida, Foucault
Rüdiger Campe
We discuss seminal works by Blumenberg, Derrida, and Foucault from the early 1960s. All three authors developed models of critical hermeneutics from their respective readings of Husserl (and Heidegger) on science and technology (Crisis of European Sciences). We explore how a general rethinking of interpretation and criticism in the humanities started from the questioning of science and technology, and what this means in today’s humanities. M 3:30–5:20

CPLT 989b/AFAM 851b/FREN 943b, Creole Identities and Fictions
Christopher L. Miller
Focusing on the French and English Caribbean, the course analyzes the quintessential but ambiguous American condition: that of the “Creole.” Encompassing all non-native cultures, this term is inseparable from issues of race and slavery. Readings of historical and literary texts: Moreau de Saint-Méry, Bernardin de Saint-Pierre, Madame de Staël, Charlotte Brontë (and reinventions of Wuthering Heights by Jean Rhys and Maryse Condé), the Créolistes of Martinique. Attention to Louisiana and to the Haitian Revolution. Prerequisite: reading knowledge of French. TH 1:30–3:20
COMPUTATIONAL BIOLOGY AND BIOINFORMATICS

300 George Street, Suite 501, 203.737.6029
http://cbb.yale.edu
M.S., Ph.D.

Directors of Graduate Studies
Mark Gerstein (Bass 432A, 203.432.6105, mark.gerstein@yale.edu)
Perry Miller (300 George St., Suite 501, 203.737.2903, perry.miller@yale.edu)

Professors  James Aspnes (Computer Science), Joseph Chang (Statistics), Ronald Coifman (Mathematics; Computer Science), Xing Wang Deng (Molecular, Cellular & Developmental Biology), Donald Engelman (Molecular Biophysics & Biochemistry), Mark Gerstein (Biomedical Informatics; Molecular Biophysics & Biochemistry; Computer Science), William Jorgensen (Chemistry), Douglas Kankel (Molecular, Cellular & Developmental Biology), Kenneth Kidd (Genetics; Ecology & Evolutionary Biology), Paul Lizardi (Pathology), Elias Lolis (Pharmacology), Perry Miller (Anesthesiology; Medical Informatics; Molecular, Cellular & Developmental Biology), Willard Miranker (Computer Science), Anna Pyle (Molecular Biophysics & Biochemistry), Lynne Regan (Molecular Biophysics & Biochemistry; Chemistry), Martin Schultz (Computer Science), Gordon Shepherd (Neuroscience), Abraham Silberschatz (Computer Science), Dieter Söll (Molecular Biophysics & Biochemistry; Chemistry), Günter Wagner (Ecology & Evolutionary Biology), Xiao-Jing Wang (Neurobiology), Heping Zhang (Epidemiology & Public Health; Statistics), Hongyu Zhao (Epidemiology & Public Health; Genetics), Steven Zucker (Computer Science; Electrical Engineering; Biomedical Engineering)

Associate Professors  Kei-Hoi Cheung (Anesthesiology; Computer Science; Genetics), Alison Galvani (Epidemiology & Public Health), Yuval Kluger (Pathology), Michael Krauthammer (Pathology), Andrew Miranker (Molecular Biophysics & Biochemistry), Corey O’Hearn (Mechanical Engineering; Physics), Valerie Reinke (Genetics)

Assistant Professors  Chris Cotsapas (Neurology), Thierry Emonet (Molecular, Cellular & Developmental Biology), Antonio Giraldez (Genetics), Tae Hoon Kim (Genetics), Steven Kleinstein (Pathology), Jun Lu (Genetics), Steven Ma (Epidemiology & Public Health), James Noonan (Genetics), Jeffrey Townsend (Ecology & Evolutionary Biology), Jing Zhang (Statistics)

Fields of Study

Computational biology and bioinformatics (CB&B) is a rapidly developing multidisciplinary field. The systematic acquisition of data made possible by genomics and proteomics technologies has created a tremendous gap between available data and their biological interpretation. Given the rate of data generation, it is well recognized that this gap will not be closed with direct individual experimentation. Computational and theoretical approaches to understanding biological systems provide an essential vehicle to help close this gap. These activities include computational modeling of biological processes, computational management of large-scale projects, database development
and data mining, algorithm development, and high-performance computing, as well as statistical and mathematical analyses.

To enter the Ph.D. program, students apply to an interest-based track within the interdepartmental program in the Biological and Biomedical Sciences.

**Special Admissions Requirements**

Applicants are expected (1) to have a strong foundation in the basic sciences, such as biology, chemistry, and mathematics, and (2) to have training in computing/informatics, including significant computer programming experience. The Graduate Record Examination (GRE) General Test is required, and the GRE Subject Test in cell and molecular biology, biology, biochemistry, chemistry, computer science, or other relevant discipline is recommended. Alternatively, the Medical College Admission Test (MCAT) may be substituted for the GRE tests. Applicants for whom English is not their native language are required to submit results from the Test of English as a Foreign Language (TOEFL).

**Special Requirements for the Ph.D. Degree**

With the help of a faculty advisory committee, each student plans a program that includes courses, seminars, laboratory rotations, and independent reading. Students are expected to gain competence in three core areas: (1) computational biology and bioinformatics, (2) biological sciences, and (3) informatics (including computer science, statistics, and applied mathematics). While the courses taken to satisfy the core areas of competency may vary considerably, all students are required to take the following courses: CB&B 740a, CB&B 750b, and CB&B 752b. A typical program will include nine courses. Completion of the core curriculum will typically take three to four terms, depending in part on the prior training of the student. With approval of the CB&B director of graduate studies (DGS), students may take one or two undergraduate courses to satisfy areas of minimum expected competency. Students will typically take two to three courses each term and three research rotations during the first year. After the first year, students will start working in the laboratory of their Ph.D. thesis supervisor. Students must pass a qualifying examination normally given at the end of the second year or the beginning of the third year. There is no language requirement. Students will serve as teaching assistants in two term courses. In addition to all other requirements, students must successfully complete MB&B 676b, Responsible Conduct in Research (or another course that covers the material).

**M.D./Ph.D. Students**

Students pursuing the joint M.D./Ph.D. degrees must satisfy the course requirements listed above for Ph.D. students. With approval of the DGS, some courses taken toward the M.D. degree can be counted toward the nine required courses. Such courses must have a graduate course number, and the student must register for them as graduate courses (in which grades are received). Laboratory rotations are available but not required. One teaching assistantship is required.
Master’s Degree

M.S. (en route to the Ph.D.) To qualify for the awarding of the M.S. degree a student must (1) complete two years (four terms) of study in the Ph.D. program, with nine required courses taken at Yale, (2) complete the required course work for the Ph.D. program with an average grade of High Pass, (3) successfully complete three research rotations, and (4) meet the Graduate School’s Honors requirement.

Terminal M.S. The CB&B terminal master’s program has limited availability and is intended primarily for postdoctoral fellows supported by training grants and for students with sponsored funding, e.g., from industry. The curriculum requirements are the same as in the CB&B Ph.D. program, except that there are no requirements for laboratory research rotations, for serving as a teaching assistant, and for a Ph.D. dissertation. Terminal M.S. students will be expected to complete an M.S. project, including a project report. Completion of the terminal M.S. degree will typically take four terms of full-time study. Applicants should contact the CB&B registrar before submitting an M.S. application.

Courses

[CB&B 550b/NBIO 550b/NSCI 550b, Introduction to Neuroinformatics]

CB&B 645b/STAT 645b, Statistical Methods in Genetics and Bioinformatics
Jing Zhang
Introduction to problems, algorithms, and data analysis approaches in computational biology and bioinformatics; stochastic modeling and statistical methods applied to problems such as mapping disease-associated genes, analyzing gene expression microarray data, sequence alignment, SNP analysis, transcription regulation and sequence motif finding, and RNA/protein structure prediction. Statistical methods include maximum likelihood, EM, Bayesian inference, Markov chain Monte Carlo, and some methods of classification and clustering; models include hidden Markov models, Bayesian networks, and the coalescent. The limitations of current models, and the future opportunities for model building, are critically addressed. Prerequisite: STAT 361, 538a, or 542b. Prior knowledge of biology is not required, but some interest in the subject and a willingness to carry out calculations using R is assumed. TTH 10:30–11:45

CB&B 740a, Clinical and Translational Informatics Richard Shiffman,
Michael Krauthammer
The course provides an introduction to clinical and translational informatics. Topics include (1) overview of biomedical informatics, (2) design, function, and evaluation of clinical information systems, (3) clinical decision making and practice guidelines, (4) clinical decision support systems, (5) informatics support of clinical research, (6) privacy and confidentiality of clinical data, (7) standards, (8) issues in defining the clinical phenotype, and (9) topics in translational bioinformatics. Permission of the instructor required. HTBA
Introduction to common unifying themes that serve as the foundation for different areas of biomedical informatics, including clinical, neuro-, and genome informatics. The course is designed for students with significant computer experience and course work who plan to build computational tools for use in bioscience research. Emphasis is on understanding basic principles underlying informatics approaches to biomedical data modeling, interoperation among biomedical databases and software tools, standardized biomedical vocabularies and ontologies, modeling of biological systems, and other topics of interest. The course involves lectures, class discussions, student presentations, and computer programming assignments. Prerequisites: previous computer programming experience and permission of the instructor. HTBA

Bioinformatics encompasses the analysis of gene sequences, macromolecular structures, and functional genomics data on a large scale. It represents a major practical application for modern techniques in data mining and simulation. Specific topics to be covered include sequence alignment, large-scale processing, next-generation sequencing data, comparative genomics, phylogenetics, biological database design, geometric analysis of protein structure, molecular-dynamics simulation, biological networks, normalization of microarray data, mining of functional genomics data sets, and machine learning approaches for data integration. Prerequisites: MB&B 301b and MATH 115a or b, or permission of the instructor. MW 1–2:15

Additional courses focused on the biological sciences and on areas of informatics are selected by the student in consultation with CB&B faculty.
COMPUTER SCIENCE

A. K. Watson Hall, 203.432.1246

M.S., M.Phil., Ph.D.

Chair
Holly Rushmeier

Director of Graduate Studies
Vladimir Rokhlin (108 AKW, 203.432.1283, vladimir.rokhlin@yale.edu)

Professors Dana Angluin, James Aspnes, Dirk Bergeman (Economics), Julie Dorsey, Stanley Eisenstat, Joan Feigenbaum, Michael Fischer, David Gelernter, Mark Gerstein (Molecular Biophysics & Biochemistry), Paul Hudak, Drew McDermott, Vladimir Rokhlin, Holly Rushmeier, Martin Schultz (Emeritus), Zhong Shao, Avi Silberschatz, Daniel Spielman, Steven Zucker

Associate Professors Yiorgos Makris (Electrical Engineering), Andreas Savvides (Electrical Engineering), Brian Scassellati, Sekhar Tatikonda (Electrical Engineering), Yang Richard Yang, Edmund Yeh (Electrical Engineering)

Assistant Professors Daniel Abadi, Kei-Hoi Cheung (Medical Informatics), Bryan Ford

Fields of Study
Artificial intelligence (vision, robotics, planning, computational neuroscience, knowledge representation, neural networks); programming languages (functional programming, parallel languages and architectures, programming environments, formal semantics, compilation techniques, modern computer architecture, type theory/systems, and meta-programming); systems (databases, operating systems, networks, software engineering); scientific computing (numerical linear algebra, numerical solution of partial differential equations, mathematical software, parallel algorithms); theory of computation (algorithms and data structures, complexity, distributed systems, learning, online algorithms, graph algorithms, geometric algorithms, fault tolerance, reliable communication, cryptography, security, and electronic commerce); and topics of discrete mathematics with application to computer science (combinatorics, graph theory, combinatorial optimization).

Research Facilities
The department operates a high-bandwidth, local-area computer network based mainly on distributed workstations and servers, with connections to worldwide networks. Workstations include Dell dual-processor PCs (running Linux or Windows/XP). Laboratory contains specialized equipment for graphics, vision, and robotics research. Various printers, including color printers, as well as image scanners, are also available. The primary educational facility consists of thirty-seven PC workstations supported by a large Intel PC server. This facility is used for courses and unsponsored research by Computer Science majors and first-year graduate students. Access to computing, through both the workstations and remote login facilities, is available to everyone in the department.
Special Admissions Requirements

Applicants for admission should have strong preparation in mathematics, engineering, or science. They should be competent in programming but need no computer science beyond that basic level. The GRE General Test and a pertinent Subject Test are required.

Special Requirements for the Ph.D. Degree

There is no foreign language requirement. To be admitted to candidacy, a student must (1) pass ten courses (including CPSC 690 and CPSC 691) with at least two grades of Honors, the remainder at least High Pass, including three advanced courses in an area of specialization; (2) take six advanced courses in areas of general computer science; (3) successfully complete a research project in CPSC 690, 691, and submit a written report on it to the faculty; (4) pass a qualifying examination in an area of specialization; (5) be accepted as a thesis student by a regular department faculty member; (6) serve as a teaching assistant for two terms; and (7) submit a written dissertation prospectus, with a tentative title for the dissertation. To satisfy the distribution requirement (requirement 2 above), the student must take one course in programming languages or systems, one programming-intensive course, two theory courses, and two in application areas. In order to gain teaching experience, all graduate students are required to serve as teaching assistants for two terms during their first three years of study. All requirements for admission to candidacy must be completed prior to the end of the third year. In addition to all other requirements, students must successfully complete CPSC 991, Ethical Conduct of Research, prior to the end of their first year of study. This requirement must be met prior to registering for a second year of study.

Master’s Degrees

M.Phil. See Degree Requirements under Policies and Regulations.

M.S. (en route to the Ph.D.) To qualify for the M.S., the student must pass eight courses at the 500 level or above from an approved list. An average grade of at least High Pass is required, with at least one grade of Honors.

Terminal Master’s Degree Program Students may also be admitted to a terminal master’s degree program directly. The requirements are the same as for the M.S. en route to the Ph.D. This program is normally completed in one year, but a part-time program may be spread over as many as four years.

A brochure providing additional information about the department, faculty, courses, and facilities is available from the Graduate Coordinator, Department of Computer Science, Yale University, PO Box 208285, New Haven CT 06520-8285; e-mail, cs-admissions@cs.yale.edu.

Courses

[CPSC 521a\textsuperscript{a}, Compilers and Interpreters]

[CPSC 522b\textsuperscript{b}, Operating Systems]
CPSC 524b\textsuperscript{U}, Parallel Programming Techniques  
Andrew Sherman  
Practical introduction to parallel programming, emphasizing techniques and algorithms suitable for scientific and engineering computations. Aspects of processor and machine architecture. Techniques such as multithreading, message passing, and data parallel computing using graphics processing units. Performance measurement, tuning, and debugging of parallel programs. Parallel file systems and I/O. TTH 2:30–3:45

[CPSC 526a\textsuperscript{U}, Building Decentralized Systems]

CPSC 527a\textsuperscript{U}, Object-Oriented Programming  
Michael Fischer  
Object-oriented programming as a means to efficient, reliable, modular, reusable code. Use of classes, derivation, templates, name-hiding, exceptions, polymorphic functions, and other features of C++. TTH 2:30–3:45

[CPSC 528b\textsuperscript{U}, Language-Based Security]

CPSC 530a\textsuperscript{U}, Formal Semantics  
Zhong Shao  
Introduction to formal approaches to programming language design and implementation. Topics include lambda calculus, type theory, denotational semantics, type-directed compilation, higher-order modules, and application of formal methods to systems software and Internet programming. MW 1–2:15

[CPSC 531a\textsuperscript{U}, Computer Music: Algorithmic and Heuristic Composition]

CPSC 532b\textsuperscript{U}, Computer Music: Sound Representation and Synthesis  
Paul Hudak  
Study of the theoretical and practical fundamentals of computer-generated music, with a focus on low-level sound representation, acoustics and sound synthesis, scales and tuning systems, and programming languages for computer music generation. Theoretical concepts are supplemented with pragmatic issues expressed in a high-level programming language. Ability to read music is assumed. MW 2:30–3:45

CPSC 533b\textsuperscript{U}, Computer Networks  
Yang Richard Yang  
An introduction to the design, implementation, analysis, and evaluation of computer networks and their protocols. Topics include layered network architectures, applications, transport, congestion, routing, data link protocols, local area networks, performance analysis, multimedia networking, network security, and network management. Emphasis on protocols used in the Internet. TTH 1–2:15

[CPSC 534b\textsuperscript{U}, Mobile Computing and Wireless Networking]

[CPSC 535b\textsuperscript{U}, Internet-Scale Applications]

CPSC 536a\textsuperscript{U}/ENAS 960a\textsuperscript{U}, Networked Embedded Systems and Sensor Networks  
Andreas Savvides and staff  
Introduction to the fundamental concepts of networked embedded systems and wireless sensor networks, presenting a cross-disciplinary approach to the design and implementation of smart wireless embedded systems. Topics include embedded systems programming concepts; low-power and power-aware design; radio technologies; communication protocols for ubiquitous computing systems; and mathematical foundations of sensor behavior. Laboratory work includes programming assignments on low-power wireless devices. HTBA
CPSC 537bu, Introduction to Databases  
Daniel Abadi
A study of systems programming techniques, with a focus on database systems. In the first half of the term, students analyze the design of a traditional DBMS and build components of a DBMS prototype, e.g., a catalog-manager, a buffer-manager, and a query execution engine. In the second half, students examine nontraditional architectures such as parallel databases, data warehouses, stream databases, and Web databases. MW 2:30–3:45

CPSC 538bu, Database System Implementation and Architectures  
Daniel Abadi
A study of systems programming techniques, with a focus on database systems. In the first half of the term, students analyze the design of a traditional DBMS and build components of a DBMS prototype, e.g., a catalog-manager, a buffer-manager, and a query execution engine. In the second half, students examine nontraditional architectures such as parallel databases, data warehouses, stream databases, and Web databases. MW 2:30–3:45

CPSC 540bu, Numerical Computation  
Vladimir Rokhlin
Algorithms for numerical problems in the physical, biological, and social sciences: solution of linear and nonlinear systems of equations, interpolation and approximation of functions, numerical differentiation and integration, optimization. TTH 1–2:15

CPSC 545a, Introduction to Data Mining  
Vladimir Rokhlin
A study of algorithms and systems that allow computers to find patterns and regularities in databases, to perform prediction and forecasting, and to improve their performance generally through interaction with data. MW 1–2:15

CPSC 555bu/ECON 563a, Economics and Computation  
Joan Feigenbaum
A mathematically rigorous investigation of the interplay of economic theory and computer science, with an emphasis on the relationship of incentive-compatibility and algorithmic efficiency. Particular attention to the formulation and solution of mechanism-design problems that are relevant to data networking and Internet-based commerce. TTH 2:30–3:45

CPSC 557a, Sensitive Information in a Wired World  
Joan Feigenbaum
Issues of ownership, control, privacy, and accuracy of the huge amount of sensitive information about people and organizations that is collected, stored, and used by today’s ubiquitous information systems. Readings consist of research papers that explore both the power and the limitations of existing privacy-enhancing technologies such as encryption and “trusted platforms.” TTH 1–2:15

CPSC 562au/AMTH 562a, Graphs and Networks

CPSC 563bu, Machine Learning

CPSC 565au, Theory of Distributed Systems  
James Aspnes
Models of asynchronous distributed computing systems. Fundamental concepts of concurrency and synchronization, communication, reliability, topological and geometric constraints, time and space complexity, and distributed algorithms. MWF 11:35–12:25

CPSC 567bu, Cryptography and Computer Security  
Michael Fischer
A survey of such private and public key cryptographic techniques as DES, RSA, and zero-knowledge proofs, and their application to problems of maintaining privacy and security in computer networks. Focus on technology, with consideration of such societal issues as balancing individual privacy concerns against the needs of law enforcement, vulnerability of societal institutions to electronic attack, export regulations and international competitiveness, and development of secure information systems. MW 1–2:15
Introduction to artificial intelligence research, focusing on reasoning and perception. Topics include knowledge representation, predicate calculus, temporal reasoning, vision, robotics, planning, and learning. MWF 10:30–11:20

**CPSC 573b, Intelligent Robotics**  
Brian Scassellati  
Introduction to the construction of intelligent, autonomous systems. Sensory-motor coordination and task-based perception. Implementation techniques for behavior selection and arbitration, including behavior-based design, evolutionary design, dynamical systems, and hybrid deliberative-reactive systems. Situated learning and adaptive behavior. MWF 10:30–11:20

**CPSC 575a/ENAS 575a, Computational Vision and Biological Perception**  
Steven Zucker  
An overview of computational vision with a biological emphasis. Suitable as an introduction to biological perception for computer science and engineering students, as well as an introduction to computational vision for mathematics, psychology, and physiology students. Prerequisites: MATH 120a or b and CPSC 112a or b, or permission of the instructor. MW 2:30–3:45

**CPSC 578b, Computer Graphics**  
Holly Rushmeier  
Introduction to the basic concepts of two- and three-dimensional computer graphics. Topics include affine and projective transformations, clipping and windowing, visual perception, scene modeling and animation, algorithms for visible surface determination, reflection models, illumination algorithms, and color theory. MW 1–2:15

**CPSC 579a, Advanced Topics in Computer Graphics**  
Julie Dorsey  
An in-depth study of advanced algorithms and systems for rendering, modeling, and animation in computer graphics. Topics vary and may include reflectance modeling, global illumination, subdivision surfaces, NURBS, physically based fluids systems, and character animation. TTH 1–2:15

**CPSC 662a, Spectral Graph Theory**

**CPSC 671a, Advanced Artificial Intelligence**

**CPSC 675b, Computational Vision and Biological Perception**  
Steven Zucker  
Advanced topics in computational vision and biological perception. MW 2:30–3:45

**CPSC 690a or b, Independent Project I**  
By arrangement with faculty.

**CPSC 691a or b, Independent Project II**  
By arrangement with faculty.
CPSC 692a or b, Independent Project
Individual research for students in the M.S. program. Requires a faculty supervisor and the permission of the director of graduate studies.

CPSC 723b, Graduate Seminar
TH 2:30–3:45

CPSC 772a, Graduate Seminar
TH 2:30–3:45

CPSC 752b/U/CB&B 752b/MB&B 752b/MB&B 752bu/MCDB 752bu, Bioinformatics: Practical Application of Simulation and Data Mining  Mark Gerstein
Bioinformatics encompasses the analysis of gene sequences, macromolecular structures, and functional genomics data on a large scale. It represents a major practical application for modern techniques in data mining and simulation. Specific topics to be covered include sequence alignment, large-scale processing, next-generation sequencing data, comparative genomics, phylogenetics, biological database design, geometric analysis of protein structure, molecular-dynamics simulation, biological networks, normalization of microarray data, mining of functional genomics data sets, and machine learning approaches for data integration. Prerequisites: MB&B 301b and MATH 115a or b, or permission of the instructor. MW 1–2:15

CPSC 820a or b, Directed Readings in Programming Languages and Systems
By arrangement with faculty.

CPSC 840a or b, Directed Readings in Numerical Analysis
By arrangement with faculty.

CPSC 860a or b, Directed Readings in Theory
By arrangement with faculty.

CPSC 870a or b, Directed Readings in Artificial Intelligence
By arrangement with faculty.

Lector Yukie Mammoto

Fields of Study
Fields for doctoral study are Chinese literature and Japanese literature. (See also the Combined Ph.D. Program in Film Studies.) Although the primary emphasis is on these East Asian subjects, the department welcomes applicants who are seeking to integrate their interests in Chinese or Japanese literature with interdisciplinary studies in such fields as history, history of art, linguistics, religious studies, comparative literature, film studies, literary theory and criticism, and the social sciences.

Special Admissions Requirements
The department requires entering students in Chinese or Japanese (and the Combined Program in Film Studies) to have completed at least three years of study, or the equivalent, of either Chinese or Japanese. Students applying in Chinese are expected to have completed at least one year of literary Chinese. Students applying in premodern Japanese are expected to have completed at least one year of literary Japanese. This is a doctoral program; no students are admitted for terminal master’s degrees.

Special Requirements for the Ph.D. Degree
During the first three years of study, students are required to take at least fourteen term courses. Usually students complete twelve term courses in the first and second years, and then take two tutorials or two seminars in the third year. Students concentrating in
Chinese or Japanese literature are encouraged to take at least one term course in Western literature or literary theory. By the end of the second year, all students must prove their proficiency in a language other than their primary language of study that is relevant to their course of study and is approved by the director of graduate studies (DGS). By the end of the third year, students specializing in premodern Japanese literature must pass a reading test in literary Chinese. At the end of the second full academic year, the student must take a written examination in the language of his or her specialization, including both its modern and premodern forms.

At the end of each academic year, until a student is admitted to candidacy, a faculty committee will review the student’s progress. For the second-year review, the student must submit a revised seminar research paper, on a topic selected in consultation with the adviser, no later than April 1 of the fourth term. No later than the end of the sixth term the student will take the qualifying oral examination. The exam will cover three fields distinguished by period and/or genre in one or more East Asian national literatures or in other fields closely related to the student’s developing specialization. These fields and accompanying reading lists will be selected in consultation with the examiners and the director of graduate studies in order to allow the student to demonstrate knowledge and command of a range of topics. After having successfully passed the qualifying oral examination, students will be required to submit a dissertation prospectus to the department for approval by October 1 of the seventh term in order to complete the process of admission to candidacy for the Ph.D.

Opportunities to obtain experience in teaching language and literature form an important part of this program. Students in East Asian Languages and Literatures normally teach in their third and fourth years in the Graduate School.

Combined Ph.D. Program

The Department of East Asian Languages and Literatures also offers, in conjunction with the Film Studies Program, a combined Ph.D. in East Asian Languages and Literatures and Film Studies. For further details, see Film Studies. Applicants to the combined program must indicate on their application that they are applying both to Film Studies and to East Asian Languages and Literatures. All documentation within the application should include this information.

Master’s Degrees

M.Phil. The successful completion of all predissertation requirements, including the qualifying examination, will make a student eligible for an M.Phil. degree.

M.A. (en route to the Ph.D.) The successful completion of twelve term courses and languages required in the first two years of study will make a student eligible for an M.A. degree.

Additional program materials are available at the department Web site, www.yale.edu/eall.
Courses

EALL 530a¹, Homosexual Desire in East Asian Literatures   John Treat

EALL 560a/RLST 584a, Introduction to the Chinese Buddhist Canon
   Koichi Shinohara
The course introduces students to the critical study of diverse documents in the Chinese Buddhist canon. It begins with a brief survey of the history of the canon. The main part is devoted to the close reading of sections of the seventh-century thematic Chinese Buddhist encyclopedia, the Fayuan zhulin (“The Jade Forest of the Dharma Garden”). Each entry in this encyclopedia consists of quotations from a wide range of sources. We study a chosen section together in class, and each student traces these citations to their original contexts scattered throughout the entire canon and examines them in their original contexts. Prerequisite: sufficient skill in literary Chinese or kanbun to be able to begin reading the canon in the original. T 3:30—5:30

Courses in Chinese language at the elementary, intermediate, and advanced levels are listed in Yale College Programs of Study.

CHNS 500a¹, Man and Nature in Chinese Literature   Kang-i Sun Chang
Concepts of man and nature in traditional Chinese literature, with special attention to aesthetics and cultural meanings. Topics include Taoism, Buddhism, and lyricism; body and sexuality, contemplation, and self-cultivation; travel in literature; landscape and the art of description; images of Utopian communities as compared to the Western notion of Utopia; ideas of self-identity; and dream, pilgrimage, and allegory. No knowledge of Chinese required. TTH 1—2:15

CHNS 501b¹/WGSS 770b¹, Women and Literature in Traditional China
   Kang-i Sun Chang
The course focuses on major women writers in traditional China, as well as representations of women in works by male authors. Topics include the power of women’s writing; women and material culture; women in exile; courtesans; Taoist and Buddhist nuns; widow poets; the cross-dressing women; the female body and its metaphors; foot binding and its implications; women’s notion of love and death; the aesthetic of illness; women and revolution; women’s poetry clubs; the function of memory in women’s literature; problems of gender and genre. All readings in translation; no knowledge of Chinese required. Chinese texts provided from time to time for students who read Chinese. TTH 1—2:15

CHNS 520b, Romance in Late Imperial Literature   Tina Lu
Introduction to the drama and fiction of late imperial China. Focus on the theme of romance with examples from the Tang to the Qing dynasty. Ways in which literature about romantic love negotiated social constraints that proscribed contact between unrelated men and women. No knowledge of Chinese required. MW 4—5:15
CHNS 540a/FILM 753a/RUSS 677a, Cinemas of Late and Post-Socialist China and Russia  John MacKay
Close, contextualized, comparative analysis and interpretation of major Chinese and Russian films, fiction and nonfiction, from the mid-1980s to the present. We examine the films in terms of their formal structures and their reception, in relation to the revolutionary political and cultural legacies of both countries, and in light of the epochal social and economic changes occurring in China and Russia during this period. Filmmakers to be studied include Wang Bing, Sergei Dvortsevoy, Alexei German, Chen Kaige, Alexander Sokurov, and Jia Zhangke. Open to both undergraduate and graduate students; no knowledge of Russian or Chinese required. M 3:30–5:20, screenings W 7

CHNS 560a, Introduction to Literary Chinese I  Zhengguo Kang
Reading and interpretation of texts in various styles of literary Chinese (wenyan), with attention to basic problems of syntax and literary style. Prerequisite: CHNS 142b or 151b or equivalent. TTH 11:35–12:50

CHNS 571b, Introduction to Literary Chinese II  Zhengguo Kang
Continuation of CHNS 560a. Prerequisite: CHNS 560a or equivalent. TTH 11:35–12:50

CHNS 580b, Classical Tales from Tang to Qing  Tina Lu
Close reading and translation of classical tales from the Tang, Ming, and Qing dynasties. Focus on strengthening students’ reading ability in classical Chinese. Attention to canonical Chinese narratives as well as some lesser-known texts. Discussion of themes such as romance, magical transformations, and proto-martial arts, including how these themes were transformed over time. MW 11:35–12:50

CHNS 602b, Readings in Classical Chinese Prose  Kang-i Sun Chang
Readings of classical Chinese prose with commentaries and notes in modern Chinese. Exploration of a variety of themes and styles. Lectures and discussion in English and Chinese. Because readings are different year to year, this course may be repeated for credit. W 1:30–3:20

CHNS 603a, Readings in Classical Chinese Poetry  Kang-i Sun Chang
Fundamentals of classical Chinese poetry and poetics. Primary readings in Chinese, lectures and discussion in English and Chinese. Because readings are different year to year, this course may be repeated for credit. W 1:30–3:20

CHNS 835b/HIST 857b, Readings in the Mencius, the Xunzi, and the Zhuangzi  Annping Chin
The course focuses on three Chinese texts from the Warring States period (481–221): the Mencius, the Xunzi, and the Zhuangzi. We consider not only the cognitive powers of the authors but also their distinct styles of argumentation and their art as storytellers and analogists. We explore the texts as historical sources and as means to understand the characters and the intellectual and aesthetic proclivities of the early Chinese professional elite (shi). Readings are in Chinese. T 3:30–5:20
CHNS 900, Directed Readings  Faculty
Offered by permission of instructor and DGS to meet special needs not met by regular courses.

CHNS 990, Directed Research  Faculty
Offered as needed with permission of instructor and DGS for student preparation of dissertation prospectus.

Courses in Japanese language at the elementary, intermediate, and advanced levels are listed in Yale College Programs of Study.

JAPN 500a, Japan’s Classics in Text and Image  Edward Kamens
Fiction, poetry, and plays from the eighth through nineteenth century, studied alongside related works of art and illustrated books in Yale collections and beyond. The course is both an introduction to the Japanese classics and an example of interdisciplinary study in the humanities, in this case Japan-centered. No knowledge of Japanese required. TTH 2:30–3:45

JAPN 570a, Introduction to Literary Japanese  Edward Kamens
Introduction to the grammar and style of the premodern literary language (bungotai) through a variety of texts. Prerequisite: JAPN 151 or equivalent. MWF 9:25–10:15

JAPN 571b, Readings in Literary Japanese  Edward Kamens
Close analytical reading of a selection of texts from the Nara through Tokugawa period: prose, poetry, and various genres. Introduction of kanbun. Prerequisite: JAPN 570a or equivalent. MW 9–10:15

JAPN 574b/FILM 870b, The Japanese Period Film  Aaron Gerow
An exploration of Japan’s most popular category of cinema: the period or samurai film. Survey of transformations from the silent era to the present day, focusing on the relationship with Japan’s cultural history and world cinema, as well as with related media such as literature, theater, television, and comic books. Particular focus on the problem of genre in Japanese film. Directors discussed include Kurosawa, Ito, Itami, Yamanaka, Miike, and Yamada. TTH 2:30–3:45

JAPN 578a, Modern Japanese Fiction  John Treat
An introduction to Japanese fiction from the 1890s to the 1980s. Novels and stories by such writers as Natsume Soseki, Tanizaki Jun’ichiro, and Oe Kenzaburo; discussion of major trends such as modernism and writing by women. No knowledge of Japanese required. TTH 11:35–12:50

JAPN 702b, Readings in Heian Period Prose and Poetry  Edward Kamens
Close reading of works in various genres and styles from the eighth through the twelfth century; research in traditional commentaries and contemporary criticism. This year, the seminar focuses on classical poetry, poetry contests, and karon. T 2:30–4:20
JAPN 872a/FILM 880a, Theories of Subculture and Popular Culture in Japan
    Aaron Gerow
Exploration of postwar theories of popular culture and subculture in Japan, particularly focusing on the intellectual debates over television and new media. M 1:30–3:20

JAPN 900, Directed Readings  Faculty
Offered by permission of instructor and DGS to meet special needs not met by regular courses.

JAPN 990, Directed Research  Faculty
Offered as needed with permission of instructor and DGS for student preparation of dissertation prospectus.

Courses in Korean language at the elementary, intermediate, and advanced levels are listed in *Yale College Programs of Study.*

Chair
To be announced

Director of Graduate Studies
Deborah Davis (140 Prospect St., 203.432.3327, deborah.davis@yale.edu)

Professors  Daniel Botsman (History), Kang-i Sun Chang (East Asian Languages & Literatures), Deborah Davis (Sociology), Aaron Gerow (East Asian Languages & Literatures; Film Studies), Koichi Hamada (Economics), Valerie Hansen (History), Edward Kamens (East Asian Languages & Literatures), William Kelly (Anthropology), Tina Lu (East Asian Languages & Literatures), Peter Perdue (History), Frances Rosenbluth (Political Science), Helen Siu (Anthropology), William Summers (Therapeutic Radiology; History of Science & Medicine), John Treat (East Asian Languages & Literatures), Jing Tsu (East Asian Languages & Literatures), Anne Underhill (Anthropology), Mimi Hall Yiengpruksawan (History of Art)

Associate Professor  Karen Nakamura (Anthropology)

Assistant Professors  Seok-Ju Cho (Political Science), Fabian Drixler (History), William Honeychurch (Anthropology), Andrew Quintman (Religious Studies), Jun Saito (Political Science), Chloë Starr (Divinity; East Asian Languages & Literatures), Eric Weese (Economics), Jessica Weiss (Political Science)

Senior Lecturers  Annping Chin (History), Koichi Shinohara (Religious Studies; East Asian Languages & Literatures)

Lecturers  William Fleming, Fumiko Jōo, Jin Woong Kang, Yuhang Li

Senior Lectors  Hsiu-hsien Chan, Min Chen, Seungja Choi, Koichi Hiroe, Zhengguo Kang, Angela Lee-Smith, Rongzhen Li, Ninghui Liang, Fan Liu, Yoshiko Maruyama, Ling Mu, Michiaki Murata, Hiroyo Nishimura, Masahiko Seto, Jianhua Shen, Mari Stever, Wei Su, Haiwen Wang, Yu-lin Wang Saussy, Peisong Xu, William Zhou

Lector  Yukie Mammoto

Fields of Study

The Master of Arts program in East Asian Studies offers a concentrated course of study designed to provide a broad understanding of the people, history, culture, contemporary society, politics, and economy of China, Japan, or a transnational region within East Asia. This program is designed for students preparing to go on to the doctorate in one of the disciplines of East Asian Studies (i.e., anthropology; economics; history; history of art; language and literature including comparative literature, film studies, and theater
studies; political science; sociology; etc.), as well as for those students seeking a terminal M.A. degree before entering the business world, the media, government service, or a professional school.

Course of Study for the M.A. Degree
The program is designed to be completed by successfully taking eight courses approved for graduate credit by the director of graduate studies (DGS) over the course of one academic year. Normally, students entering the program are expected to have already completed the equivalent of at least two years of Chinese, Japanese, or Korean language, so that the three-year language requirement can be completed in the two terms spent at Yale. A program of study for completion of the degree in one year consists of at least eight term courses that normally include two terms of language study at Yale’s third-year level (unless the language requirement has already been met through previous study) and six other term courses selected from the current year’s offerings of advanced language courses and lecture courses or seminars in any relevant subject area, with the approval of the DGS.

Special Requirements for the M.A. Degree
Students must earn two Honors grades (“H”) over the course of their two terms at Yale. Honors grades earned in any Chinese, Japanese, or Korean language class cannot be counted toward satisfying this requirement, except with the permission of the DGS.

Joint-Degree Programs
As the East Asian Studies M.A. degree is a one-year program, there are no joint-degree programs available. Students interested in pursuing additional degrees in the Yale professional schools should consider applying separately to those programs in order to complete such degrees before or after the East Asian Studies M.A. degree.

Program materials are available upon request to the Council on East Asian Studies, Yale University, PO Box 208206, New Haven CT 06520-8206; e-mail, eastasian.studies@yale.edu; Web site, http://eastasianstudies.research.yale.edu. Applications are available online at www.yale.edu/graduateschool/admissions; e-mail, graduate.admissions@yale.edu.

Courses
Please consult the course information available online at http://eastasianstudies.research.yale.edu/academic.php and http://students.yale.edu/oci for a complete list of East Asian-related courses offered at Yale University.

EAST 501/SOCY 507, Social Science Workshop on Contemporary China
Deborah Davis
A yearlong course for one credit. Students must register for and complete both disciplinary perspectives, including anthropology, economics, law, political science, and sociology. At each session, Yale faculty, visitors, and advanced graduate students deliver short presentations of current works in progress, circulated in advance, for group discussion
and critique. In addition there are two weekend data analysis workshops in each term to which seminar members are invited. One unit of course credit is available to students who attend the colloquium in both terms and submit a thirty-page paper. Prerequisite: permission of the instructor. M 12–1

**EAST 525a/HIST 902a/HSHM 707a, Impact of Epidemic Disease in Context: Focus on Asia**  William Summers

The course brings historical, geopolitical, medical, and public health perspectives to bear on the study of specific epidemics, with a focus on Asia. Case studies include major epidemics such as cholera in the Philippines and plague in Manchuria in the early twentieth century, the story of Japan’s biological warfare Unit 731 in World War II, recurrent influenza pandemics, and more recently, Nipah virus outbreaks in Malaysia, SARS in China, and pneumonic plague in Gujarat, India. T 1:30–3:20
ECOLOGY AND EVOLUTIONARY BIOLOGY

Osborn Memorial Laboratories, 203.432.3837
www.eeb.yale.edu
M.S., Ph.D.

Chair
Paul Turner

Director of Graduate Studies
David Post (OML 426B, david.post@yale.edu)

Professors  Leo Buss (on leave [Sp]), Peter Crane (Forestry & Environmental Studies), Michael Donoghue (on leave), Vivian Irish (Molecular, Cellular & Developmental Biology), Kenneth Kidd (Genetics; Psychiatry), Nancy Moran, David Ochman, Jeffrey Powell, Richard Prum (on leave), Oswald Schmitz (Forestry & Environmental Studies), David Skelly (Forestry & Environmental Studies), Stephen Stearns (on leave [F]), Paul Turner, J. Rimas Vaisnys (Electrical Engineering), Günter Wagner (on leave [Sp])

Associate Professors  Suzanne Alonzo, Alison Galvani (Epidemiology & Public Health), Walter Jetz, David Post, Melinda Smith

Assistant Professors  Antónia Monteiro, Thomas Near (on leave), Jeffrey Townsend, David Vasseur

Senior Lecturer  Marta Martínez Wells

Lecturers  Adalgisa Caccone, Wendy Clement, Mary Beth Decker

Fields of Study
The Department of Ecology and Evolutionary Biology (E&EB) offers training programs in organismal biology, ecology, and evolutionary biology including molecular evolution, phylogeny, molecular population genetics, developmental evolution, and evolutionary theory.

Special Admissions Requirements
Applicants should have had training in one of the following fields: biology, mathematics, chemistry, physics, statistics, and/or geology. Candidates are selected, regardless of their major, based on overall preparation for a career in research in ecology and evolutionary biology. Some, planning for careers in applied fields, may have prepared with courses in public policy, economics, and agriculture.

Special Requirements for the Ph.D. Degree
Each entering student, in consultation with the director of graduate studies (DGS), develops a specific program of courses, seminars, laboratory research, and independent reading tailored to the student’s interests, background, and goals. There are normally no foreign language requirements. All first-year students carry out two research rotations. Students have the option of a rotation over their first summer. Students must participate
in (1) E&EB 500, Advanced Topics in Ecology and Evolutionary Biology; (2) E&EB 545b, a course on the responsible conduct of research; (3) weekly E&EB seminars; and (4) symposia of faculty and graduate student research. In addition, during their first two years of study, graduate students must enroll in a minimum of three additional graduate-level courses (numbered 500 and above). Teaching experience is regarded as an integral part of the graduate training program. All students are required to teach three courses, normally at the TF 3 level, during their first two years of study.

By the middle of the fourth term of study, each student organizes a formal preprospectus consultative meeting with his/her advisory committee to discuss the planned dissertation research. Before the beginning of the fifth term, students present and defend their planned dissertation research at a prospectus meeting, at which the department determines the viability and appropriateness of the student's Ph.D. proposal. A successful prospectus meeting and completion of course requirements result in admission to candidacy for the Ph.D. The remaining requirements include completion, presentation, and successful defense of the dissertation, and submission of copies of the dissertation to the Graduate School and to the Kline Science Library.

In cases where the dissertation committee decides that preliminary field work during the summer after the fourth term is necessary prior to the prospectus, the prospectus meeting can be delayed by one term. A request for a delay must come from the dissertation committee adviser and must be approved by the DGS. In these exceptional cases admission to candidacy may not be required for registration for the third year of graduate study.

**Honors Requirement**

Students must meet the Graduate School’s requirement of Honors in two courses by the end of the fourth term of study. The E&EB department also requires an average grade of at least High Pass in course work during the first two years of study.

**Master’s Degree**

**M.S. (en route to the Ph.D.)** Satisfactory completion of the first two years of study leading to the Ph.D. up to, but not necessarily including, the prospectus.

Additional material providing information on the department, faculty, courses, and facilities is available from Karen Broderick, Office of the Director of Graduate Studies, Department of Ecology and Evolutionary Biology, Yale University, PO Box 208106, New Haven CT 06520-8106; e-mail, karen.broderick@yale.edu; tel., 203.432.3837; fax, 203.432.2374; Web site, www.eeb.yale.edu.

**Courses**

**E&EB 500a/b, Advanced Topics in Ecology and Evolutionary Biology** Staff

Topics to be announced. 2 HTBA

**E&EB 510a/STAT 501a, Introduction to Statistics: Life Sciences** Günter Wagner, Jonathan Reuning-Scherer

Statistical and probabilistic analysis of biological problems presented with a unified foundation in basic statistical theory. Problems are drawn from genetics, ecology,
epidemiology, and bioinformatics. Graduate students are expected to finish a course project in addition to regular homework and exams. TTH 1–2:15

**E&EB 515a**, Conservation Biology  Jeffrey Powell, Walter Jetz
An introduction to ecological and evolutionary principles underpinning efforts to conserve Earth’s biodiversity. Efforts to halt the rapid increase in disappearance of both plants and animals. Discussion of sociological and economic issues. WF 10:30–11:20

**E&EB 520a**, General Ecology  David Post, David Vasseur
A broad consideration of the theory and practice of ecology, including the ecology of individuals, population dynamics and regulation, community structure, ecosystem function, and ecological interactions on broad spatial and temporal scales. Topics such as climate change, fisheries management, and infectious disease are placed in an ecological context. MWF 10:30–11:20

**E&EB 522b**, Principles of Evolution, Ecology, and Behavior  Stephen Stearns
The major principles of evolution, ecology, and behavior explained and illustrated by recent advances that have changed the field. Emphasis on major events in the history and key transitions in the organization of life. Ecological processes from organisms through populations and communities to the biosphere. Foraging, mating, and selfish and cooperative behavior placed in evolutionary and ecological context. MWF 11:35–12:25

**E&EB 523Lb**, Laboratory for Principles of Evolution, Ecology, and Behavior  Marta Martínez Wells
Experimental approaches to organismal and population biology, including study of the diversity of life. TWTH 1:30

**E&EB 525b**, Evolutionary Biology  Nancy Moran
An overview of evolutionary biology as the discipline uniting all of the life sciences. Evolution explains the origin of life and Earth’s biodiversity, and how organisms acquire adaptations that improve survival and reproduction. This course uses reading and discussion of scientific papers to emphasize that evolutionary biology is a dynamic science, involving active research to better understand the mysteries of life. We discuss principles of population genetics, paleontology, and systematics; application of evolutionary thinking in disciplines such as developmental biology, ecology, microbiology, molecular biology, and human medicine. Recommended preparation: E&EB 522. TTH 11:35–12:50

**E&EB 526Lb**, Laboratory for Evolutionary Biology  Adalgisa Caccone
The companion laboratory to E&EB 525b. Study of patterns and processes of evolution, including collection and interpretation of molecular and morphological data in a phylogenetic context. Focus on methods of analysis of species-level and population-level variation in natural populations. TH 1:30–4:30

[E&EB 535a, Evolutionary Medicine]

**E&EB 540a**, Animal Behavior  Suzanne Alonzo
An introduction to the study of animal behavior from an evolutionary and ecological perspective. History and methods of studying animal behavior. Topics include foraging, predation, communication, reproduction, cooperation, and the role of behavior in conservation. MWF 9–10:15
E&EB 545b, Problems in Bioethics/Ethics Course for Advanced Topics  David Post
M 2:30–4:30

E&EB 546bU, Plant Diversity and Evolution  Wendy Clement
Introduction to the evolutionary relationships of plant lineages. Exploration of the complexity, diversity, and characteristics of the major plant groups, including the green algae, mosses, ferns, conifers, and flowering plants, within a phylogenetic context. MW 1–2:15

E&EB 547LbU, Laboratory for Plant Diversity and Evolution  Wendy Clement
Local flora field research; hands-on experience with the plant groups examined in the accompanying lectures. T 1–4

[E&EB 548bU, Insect Development and Evolution]

[E&EB 549LbU, Laboratory for Insect Development and Evolution]

E&EB 550aU, Biology of Terrestrial Arthropods  Marta Martínez Wells
Evolutionary history and diversity of terrestrial arthropods (body plan, phylogenetic relations, fossil record); physiology and functional morphology (water relations, thermoregulation, energetics of flying and singing); reproduction (biology of reproduction, life cycles, metamorphosis, parental care); behavior (migration, communication, mating systems, evolution of sociality); ecology (parasitism, mutualism, predator-prey interactions, competition, plant-insect interactions). TTH 11:35–12:50

E&EB 551Lau, Laboratory for Biology of Terrestrial Arthropods  Marta Martínez Wells
Comparative anatomy, dissections, identification, and classifications of terrestrial arthropods; specimen collection; field trips. W 1:30

[E&EB 555b, Invertebrates I]

[E&EB 556Lb, Laboratory for Invertebrates I]

E&EB 557a, Invertebrates II  Leo Buss
A comprehensive survey of the phyla comprising the Lophotrochozoa and the Ecdysozoa emphasizing anatomy, functional organization, systematics, and evolutionary history.

E&EB 558La, Laboratory for Invertebrates II  Leo Buss
Study of the anatomy of representative living invertebrates comprising the Lophotrochozoa and the Ecdysozoa, accompanied by examination of museum specimens of both extant and fossil invertebrates.

[E&EB 564aU, Ichthyology]

[E&EB 565aU, Laboratory for Ichthyology]

E&EB 575a, Biological Oceanography  Mary Beth Decker
Exploration of a range of coastal and pelagic ecosystems. Relationships between biological systems and the physical processes that control the movements of water and productivity of marine systems. Anthropogenic impacts on oceans, such as the effects of fishing and climate change. Includes three Friday field trips. TTH 11:35–12:50
E&EB 610b, Evolutionary Genetics

E&EB 626a, Molecular Ecology

E&EB 627a or b, Research Topics in Molecular Ecology

E&EB 630a/F&ES 730a, Ecosystem Ecology Melinda Smith, Peter Raymond
An outdoor overview of the study of ecosystems. How the structure of ecosystems develops (e.g., biodiversity) and how ecosystems function (e.g., process nutrients or pollutants). The impact of global changes, such as climate change and eutrophication, on ecosystem structure and function. Field-based group and independent projects focused on New England ecosystems.

E&EB 630bu, Evolutionary Genetics

E&EB 630au, Molecular Ecology

E&EB 631a, Research Topics in Molecular Ecology

E&EB 632b, The Analysis of Ecological Time Series

E&EB 640b, Community Ecology

E&EB 660bu, Conservation Genetics Adalgisa Caccone
An introduction to conservation genetics for advanced undergraduates and graduate students. The importance of genetic diversity and the means for preserving it.

E&EB 660bu/F&ES 500a, Landscape Ecology David Skelly
An introduction to the study of large-scale ecological patterns and processes. Landscape ecology is a relatively young, rapidly changing field. The topics covered reflect the diverse interests of ecologists: species-area relationships, island biogeography, metapopulation theory, individual-based models, cellular automata, models of biodiversity, etc. Throughout the course the emphasis is on when and how to integrate a spatial perspective into consideration of major ecological questions. Readings from the primary literature augment material covered in lectures. Students complete a project resulting in a manuscript on a landscape-related topic.

E&EB 670a/F&ES 738a, Aquatic Ecology

E&EB 672b, Ornithology

E&EB 673Lb, Laboratory for Ornithology

E&EB 678b, Mathematical Models and Quantitative Methods in Evolution and Ecology

E&EB 690a, Evolution of Development Antónia Monteiro
An introduction to the ways that developmental mechanisms change through time to give rise to organismal diversity. Topics include how mutations influence the processes of gene regulation, tissue growth, and cell and organ differentiation.

E&EB 710b, Sexual Selection and Social Evolution

E&EB 729a, Microbial Ecology and Evolution

E&EB 810a, Dynamics of Evolving Systems

E&EB 826a, Phylogenetics and Macroevolution
E&EB 827La, Laboratory for Phylogenetics and Macroevolution

E&EB 900a–b, First-Year Introduction to Research and Rotations  DGS

E&EB 930a, Seminar in Systematics  Staff

E&EB 950a or b, Second-Year Research
By arrangement with faculty.

E&EB 960b/EMD 695b, Studies in Evolutionary Medicine  Stephen Stearns, Durland Fish, Alison Galvani, Paul Turner
The first term of a two-term course that begins in January. Students learn the major principles of evolutionary biology and apply them to issues in medical research and practice by presenting and discussing original papers from the current research literature. Such issues include lactose and alcohol tolerance; the hygiene hypothesis and autoimmune disease; human genetic variation in drug response and pathogen resistance; spontaneous abortions, immune genes, and mate choice; parental conflicts over reproductive investment mediated by genetic imprinting; life history tradeoffs and the evolution of aging; the evolution of virulence and drug resistance.

E&EB 961a/EMD 695a, Studies in Evolutionary Medicine II  Paul Turner
Continuation of E&EB 960b.
ECONOMICS
28 Hillhouse Avenue, 203.432.3575
www.econ.yale.edu
M.A., M.Phil., Ph.D.

Chair
Benjamin Polak (28 Hillhouse, 203.432.3571)

Director of Graduate Studies
Truman Bewley (30 Hillhouse, Rm. 30, 203.432.3719, truman.bewley@yale.edu)

Professors
Joseph Altonji, Donald Andrews, Dirk Bergemann, Steven Berry, Truman Bewley, Donald Brown, Xiaohong Chen, Zhiwu Chen (School of Management), Eduardo Engel, Ray Fair, Howard Forman (School of Public Health), John Geanakoplos, Pinelophe Goldberg, Timothy Guinnane, Philip Haile, Koichi Hamada, Johannes Hörner, Jonathan Ingersoll (School of Management), Gerald Jaynes, Dean Karlan, Yuichi Kitamura, Alvin Klevorick, Naomi Lamoreaux, Richard Levin, Giovanni Maggi, Costas Meghir, Robert Mendelsohn (Forestry & Environmental Studies), Giuseppe Moscarini, William Nordhaus, Peter Phillips, Benjamin Polak, Mark Rosenzweig, Larry Samuelson, Robert Shiller, Anthony Smith, Aleh Tsyvinski, Christopher Udry, Edward Vytlacil

Associate Professors
Fabian Lange, Taisuke Otsu, Ebonya Washington

Assistant Professors
Konstantinos Arkolakis, David Atkin, Eduardo Faingold, Daniel Keniston, Amanda Kowalski, Guillermo Ordoñez, Nancy Qian, Kareen Rozen, Melissa Tartari, Eric Weese

Fields of Study
Fields include economic theory, including microeconomics, macroeconomics, mathematical economics; econometrics; economic history; labor economics; industrial organization; financial economics; behavioral finance; public economics; public finance; international trade; international finance; economic development; behavioral economics; law and economics.

Special Admissions Requirements
Please see www.econ.yale.edu/graduate/application_info.htm.

Special Requirements for the Ph.D. Degree
The following requirements must be satisfied in addition to those prescribed by the Graduate School.

Prior to registration for the second year. (a) Students must have taken for credit and passed at least six economics graduate courses. (b) Students must pass written comprehensive examinations in micro- and macroeconomics. These examinations, which are given in May and late August of each year, must be taken in the spring term of the first year. Each exam will be graded separately, and in the event of failure, students will
Graduate School of Arts and Sciences

retake only the part of the exam they did not pass. Students may take the comprehensive examination no more than twice.

Prior to registration for the third year. (a) Students must have taken at least fourteen term courses in Economics and have received a grade of at least Pass in each of them. With the permission of the director of graduate studies, courses in related fields and independent reading courses can be used to fulfill this requirement. Workshops may not be used to satisfy it. (b) Students must have received an average of at least High Pass in the courses they have taken. The admissibility of courses for this requirement is the same as for the fourteen-course requirement mentioned above. Grades within the Economics department include pluses and minuses. A failure counts as a zero, a P– as a 1, a P as a 2, a P+ as a 3, and so on up to a 9 for H+. The arithmetic average of these numbers must be at least 4.5.

Admission to candidacy. Students must be admitted to candidacy prior to registration for the fourth year of study. Students are recommended to the Graduate School for admission to candidacy by the Department of Economics after having completed department requirements listed above, the Graduate School’s prospectus requirement, and the following additional requirements: (a) Students must have completed two one-term prospectus workshops. In order for workshops to count toward the prospectus requirement, students must make a presentation in each workshop and present original work in one of them. If students can find no workshop whatsoever in their areas of interest, they may substitute independent study guided by a faculty member, provided the independent study leads to a dissertation prospectus that is accepted. (b) Students must receive a grade of High Pass– or better in ECON 551b (Econometrics II) or 552b (Econometrics III). More advanced courses may be substituted for these with special permission of the director of graduate studies. (c) Students must receive a grade of Satisfactory on an applied econometrics paper, which is evaluated by the faculty adviser of the paper and another faculty member. (d) Students must complete with a grade of at least High Pass– a term of economic history, drawn from a list of courses approved by the director of graduate studies and economic history instructors. (e) Students must pass an oral examination in two fields. At least one field must have substantial empirical and institutional content. The choice of fields must be approved by the director of graduate studies. In the event of failure, students may take the oral examination no more than twice.

Submitting the dissertation. A student’s dissertation research is guided by a committee of two Graduate School faculty members, at least one of whom must be a member of the Economics department. One of the committee members is designated as chair. When a first draft of the dissertation is completed, the director of graduate studies appoints a third reader.

Programs in Law and Economics

The Economics department participates in the J.D./M.A. and J.D./Ph.D. programs, which are described under Policies and Regulations.
Master’s Degrees

M.Phil. The M.Phil. degree is awarded to students in the Ph.D. program upon completion of fourteen term courses, with at least two grades of Honors. In addition, students must satisfy the qualifying requirements in economic theory, econometrics, economic history, and two special fields, as well as the oral examination.

M.A. (en route to the Ph.D.) The M.A. degree is awarded upon completion of eight term courses with an average grade of High Pass, and satisfactory completion of one of the following: the comprehensive examination in economic theory, the course requirement in econometrics, or the course requirement in economic history.

The M.A. in International and Development Economics is described under International and Development Economics.

Program materials are available on our Web site: www.econ.yale.edu.

Courses

ECON 500a, General Economic Theory: Microeconomics Truman Bewley, Kareen Rozen
Introduction to optimization methods and partial equilibrium. Theories of utility and consumer behavior production and firm behavior. Introduction to uncertainty and the economics of information, and to noncompetitive market structures.

ECON 501b, General Economic Theory: Microeconomics Eduardo Faingold, Larry Samuelson

ECON 502a, Mathematics for Economists Johannes Hörner
This course covers mathematical methods important in economic theory, including Kuhn-Tucker theory, continuous time optimal control theory, dynamic programming, zero sum games, and repeated sum games.

ECON 510a, General Economic Theory: Macroeconomics Eduardo Engel, Aleh Tsyvinski
Analysis of short-run determination of aggregate employment, income, prices, and interest rates in closed and open economies. Stabilization policies.

ECON 511b, General Economic Theory: Macroeconomics Giuseppe Moscarini, Gauti Eggertsson
Theories of saving, investment, portfolio choice, and financial markets. Longer-run developments; economic growth, capital accumulation, income distribution.

ECON 520a, Advanced Microeconomic Theory I Johannes Hörner, Drew Fudenberg
A formal introduction to game theory and information economics. Alternative non-cooperative solution concepts are studied and applied to problems in oligopoly, bargaining, auctions, strategic social choice, and repeated games.
ECON 521b, Advanced Microeconomic Theory II  Dirk Bergemann, Juuso Välimäki
Contracts and the economics of organization. Topics may include dynamic contracts (both explicit and implicit), career concerns, hierarchies, Bayesian mechanism design, renegotiation, and corporate control.

ECON 522a and 523b, Microeconomic Theory Lunch  Staff
A forum for advanced students to critically examine recent papers in the literature and present their own work.

[ECON 524a, Behavioral Applied Theory]

ECON 525a, Advanced Macroeconomics I  Eduardo Engel, Per Krusell
Heterogeneous agent economics, investment, scrapping and firing, nonquadratic adjustment costs, financial constraints, financial intermediation, psychology of decision making under risk, optimal risk management, financial markets, consumption behavior, monetary policy, term structure of interest rates.

ECON 526b, Advanced Macroeconomics II  Aleh Tsyvinski
Macroeconomic equilibrium in the presence of uninsurable labor income risk. Implications for savings, asset prices, unemployment.

ECON 527a/LAW 20083/MGT 565a, Behavioral and Institutional Economics  Robert Shiller
Behavioral economics incorporates insights from other social sciences, such as psychology and sociology, into economic models, and attempts to explain anomalies that defy standard economic analysis. Institutional economics is the study of the evolution of economic organizations, laws, contracts, and customs as part of a historical and continuing process of economic development. Behavioral economics and institutional economics are naturally treated together, since so much of the logic and design of economic institutions has to do with complexities of human behavior. The course emphasizes two main topics—behavioral macroeconomics and behavioral finance—though references are made to other branches of economics as well. Because macroeconomics is a major part of this course, it is part of the graduate macroeconomics sequence (including also ECON 510a, 511b, 525a, and 526b). However, this course does not list these other courses as requirements.

ECON 530a, Mathematical Economics I  John Geanakoplos
This is a first course in general equilibrium analysis of market economies. The focus of the course is Walrasian competition, monopolistic competition, and competition in markets with affective agents, i.e., affective competition. Topics include testable implications of these models, counterfactual analysis, and algorithms for solving calibrated models. The mathematical framework is Tame Topology and O-minimal Structures, where the Tarski-Seidenberg Theorem on Quantifier Elimination and Laskowski’s Theorem on the VC-Dimension of Definable Sets are the basis of our analysis.

ECON 531b, Mathematical Economics II  Eduardo Faingold, Mihai Manea
This course examines the foundations of money and finance from the perspective of general equilibrium with incomplete markets. The relevant mathematical tools from
elementary stochastic processes to differential topology are developed in the course. Topics include asset pricing, variations of the capital asset pricing model, the “Hahn paradox” on the value of flat money, default and bankruptcy, collateral equilibrium, market crashes, adverse selection and moral hazard with perfect competition, credit card equilibrium, and general equilibrium with asymmetric information.

[ECON 535a and b, Prospectus Workshop in Mathematical Economics]

ECON 537a and 538b, Microeconomic Theory Workshop  Staff
Presentations by research scholars and participating students.

ECON 540a and 541b, Student Workshop in Macroeconomics  Staff
A course that gives third- and fourth-year students doing research in macroeconomics an opportunity to prepare their prospectuses and to present their dissertation work. Each student is required to make at least two presentations per term. For third-year students and beyond, at least one of the presentations in the first term should be a mock job talk.

ECON 542a and 543b, Macroeconomics Workshop  Staff
A forum for presentation and discussion of state-of-the-art research in macroeconomics. Presentations by research scholars and participating students of papers in closed economy and open economy macroeconomics and monetary economics.

ECON 544a/INRL 560a, Economic Analysis  Cheryl Doss
Introduces International Relations students to more advanced concepts in economics. Course emphasizes reading and evaluating the economic content of articles on a wide range of topics, including consumer behavior, firm behavior, comparisons of welfare, labor markets, capital markets, and public goods. These articles represent research from both developed and developing economies. Prerequisite: microeconomics. MW 9–10:15

ECON 545a, Microeconomics  Michael Boozer
A survey of the main features of current economic analysis and of the application of the theory to a number of important economic questions, covering microeconomics and demand theory, the theory of the firm, and market structures. For IDE students.

ECON 546a, Macroeconomics  Irasema Alonso
This course presents a basic framework to understand macroeconomic behavior and the effects of macroeconomic policies. Topics include consumption and investment, labor market, short-run income determinations, unemployment, inflation, growth, and the effects of monetary and fiscal policies. The emphasis is on the relation between the underlying assumptions of macroeconomic framework and policy implications derived from it. For IDE students.

ECON 550a, Econometrics I  Donald Andrews
Probability: concepts and axiomatic development. Data: tools of descriptive statistics and data reduction. Random variables and probability distributions; univariate distributions (continuous and discrete); multivariate distributions; functions of random variables and transformations; the notion of statistical inference; sampling concepts and distributions; asymptotic theory; point and interval estimation; hypothesis testing.
ECON 551b, Econometrics II  Xiaohong Chen
Provides a basic knowledge of econometric theory, and an ability to carry out empirical work in economics. Topics include linear regression and extensions, including regression diagnostics, generalized least squares, statistical inference, dynamic models, instrumental variables and maximum likelihood procedures, simultaneous equations, nonlinear and qualitative-choice models. Examples from cross-section, time series, and panel data applications.

ECON 552b, Econometrics III  Yuichi Kitamura
The treatment of the subject is rigorous, attentive to modern developments, and proceeds to research level in several areas. Linear models from core curriculum. Topics include linear estimation theory, multiple and multivariate regressions, Kruskal’s theorem and its applications, classical statistical testing by likelihood ratio, Lagrange multiplier and Wald procedures, bootstrap methods, specification tests, Stein-like estimation, instrumental variables, and an introduction to inferential methods in simultaneous stochastic equations.

ECON 553a, Econometrics IV: Time Series Econometrics  Peter Phillips
A sequel to ECON 552, the course proceeds to research level in time series econometrics. Topics include an introduction to ergodic theory, Wold decomposition, spectral theory, martingales, martingale convergence theory, mixing processes, strong laws, and central limit theory for weak dependent sequences with applications to econometric models and model determination.

ECON 554b, Econometrics V  Donald Andrews, Xiaohong Chen

ECON 555b, Applied Econometrics II: Microeconometrics  Edward Vytlacil
This course develops the concepts needed to approach empirical problems in microeconomics with econometrics. The focus is less on developing a catalogue of econometric methods than on developing a conceptual basis for understanding how data, econometric methodology, and assumptions combine to produce statistical inference.

ECON 558a, Econometrics  Michael Boozer
Application of statistical analysis to economic data. Basic probability theory, linear regression, specification and estimation of economic models, time series analysis, and forecasting. The computer is used. For IDE students.

[ECON 561a, Computational Method for Economic Dynamics]
ECON 563a/CPSC 555a, Economics and Computation  Joan Feigenbaum
A mathematically rigorous investigation of the interplay of economic theory and computer science, with an emphasis on the relationship of incentive-compatibility and algorithmic efficiency. Particular attention to the formulation and solution of mechanism-design problems that are relevant to data networking and Internet-based commerce. TTH 2:30–3:45

ECON 567a and 568b, Econometrics Workshop  Staff
A forum for state-of-the-art research in econometrics. Its primary purpose is to disseminate the results and the technical machinery of ongoing research in theoretical and applied fields.

ECON 570a and 571b, Prospectus Workshop in Econometrics  Staff
A course for third- and fourth-year students doing research in econometrics to prepare their prospectus and present dissertation work.

ECON 580a, General Economic History: Western Europe  Timothy Guinnane
A survey of some major events and issues in the economic development of Western Europe during the eighteenth and nineteenth centuries, stressing the causes, nature, and consequences of the industrial revolution in Britain and on the Continent, and the implications of the historical record for modern conceptions of economic growth. Prerequisites: simultaneous enrollment in or successful completion of ECON 500a and ECON 510a; permission of the instructor.

ECON 581b, American Economic History  Naomi Lamoreaux
This course examines both the long-term factors (such as industrialization and the development of markets) and the epochal events (such as the Revolution, Civil War, and Great Depression) that have shaped the development of the American economy. The objectives of this course are to familiarize students with the major topics and debates in American economic history. Prerequisites: concurrent enrollment in or successful completion of ECON 501b and ECON 510a.

[ECON 582a, General Economic History: Latin America]

[ECON 583a, Topics in Economic History]

[ECON 585b, Readings in Economic History]

ECON 588a and 589b, Economic History Workshop  Timothy Guinnane
A forum for discussion and criticism of research in progress. Presenters include graduate students, Yale faculty, and visitors. Topics concerned with long-run trends in economic organization are suitable for the seminar. Special emphasis given to the use of statistics and of economic theory in historical research.

ECON 600a, Industrial Organization I  Steven Berry, Philip Haile
 Begins by locating the study of industrial organization within the broader research traditions of economics and related social sciences. Alternative theories of decision making, of organizational behavior, and of market evolution are sketched and contrasted with standard neoclassical theories. Detailed examination of the determinants and consequences of industrial market structure.
ECON 601b, Industrial Organization II  Steven Berry, Michael Dickstein
Examination of alternative modes of public control of economic sectors with primary emphasis on antitrust and public utility regulation in the U.S. economy. Public policy issues in sectors of major detailed governmental involvement.

ECON 606a and 607b, Prospectus Workshop in Industrial Organization  Staff
For third-year students in microeconomics, intended to guide students in the early stages of theoretical and empirical dissertation research. Emphasis on regular writing assignments and oral presentations.

ECON 608a and 609b, Industrial Organization Seminar  Staff
For advanced graduate students in applied microeconomics, serving as a forum for presentation and discussion of work in progress of students, Yale faculty members, and invited speakers.

ECON 630a, Labor Economics  Costas Meghir
Topics include static and dynamic approaches to demand, human capital and wage determination, wage income inequality, unemployment and minimum wages, matching and job turnover, immigration and international trade, unions, implicit contract theory, and efficiency wage hypothesis.

ECON 631b, Labor Economics  Melissa Tartari
Topics include static and dynamic models of labor supply, human capital wage function estimation, firm-specific training, compensating wage differentials, discrimination, household production, bargaining models of household behavior, intergenerational transfers, and mobility.

ECON 638a and 639b, Labor and Population Workshop  Staff
A forum primarily for graduate students to present their research plans and findings. Discussions encompass empirical microeconomic research relating to both high- and low-income countries.

ECON 640a/b, Prospectus Workshop in Labor Economics and Public Finance  Staff
Workshop for students doing research in labor economics and public finance.

ECON 670a/MGMT 740a, Financial Economics I  Zhiwu Chen
Current issues in theoretical financial economics are addressed through the study of current papers. Focuses on the development of the problem-solving skills essential for research in this area. T 2:30–5:20

ECON 671b/MGMT 741b, Financial Economics II  Jonathan Ingersoll
Continuation of ECON 670a/MGMT 740a.

[ECON 672a/MGMT 745a, Behavioral Finance]

ECON 674b/MGMT 746b, Financial Crises  Gary Gorton, Andrew Metric
An elective doctoral course covering theoretical and empirical research on financial crises. The first half of the course focuses on general models of financial crises and historical episodes from the nineteenth and twentieth centuries. The second half of the course
focuses on the recent financial crisis. Prerequisites: MGMT 740a and 741b (doctoral students in Economics may substitute the core microeconomics sequence), and permission of the instructor.

**ECON 680a, Public Finance I**  Staff
**ECON 681b, Public Finance II**  Aleh Tsyvinski
Topics include theory of public goods, an introduction to preference revelation, the problem of externalities and their control, and the methodology of cost-benefit analysis and some applications.

**ECON 702b, International Economics**  Staff
International monetary theory and its implications for economic policy. Topics include mechanisms of adjustment in the balance of payments; fiscal, monetary, and exchange rate policy for internal and external balance; international movements of capital. For IDE students.

**ECON 708b/INRL 561b, International Economic Analysis**  Cheryl Doss
A continuation of ECON 544a. Extends the use of economic analysis to international economic issues with a focus on international trade and growth and development. In addition, emphasis is placed on quantitative tools and analysis of data to address international economic issues and evaluate policies. The second half of the course focuses on readings of current issues and debates on international economic issues, including relationships among trade liberalization, poverty and inequality, economic growth, and globalization.

**ECON 720a, International Trade I**  Giovanni Maggi
This course covers the theory of international trade, policy, and institutions. Discussion of Classical, Neo-classical, and more recent imperfect-Competition-Scale-Economies-based static models of trade. The course presents dynamic extensions of some of the models that explore the relations among trade, innovation, and growth. The analytics of trade policy issues, such as gains from trade, tariffs and quotas, customs unions and free trade areas, and the political economy of trade policy making, are discussed.

**ECON 721b, International Trade II**  Konstantinos Arkolakis, Pinelope Goldberg
The course covers empirical topics in international trade with particular emphasis on current research areas. Topics include tests of international trade theories; studies of the relationship between international trade, labor markets, and income distribution; recent trade liberalization episodes in developing countries; empirical assessment of various trade policies, such as VERs and Anti-Dumping; productivity (and its relation to international trade liberalization); and exchange rates, market integration, and international trade. Methodologically, the course draws heavily on empirical models used in the fields of industrial organization and to a lesser degree labor economics; taking these courses is thus recommended though not required.

**ECON 724b, International Finance**  Konstantinos Arkolakis
ECON 730a, Economic Development I  Daniel Keniston, Mark Rosenzweig, Christopher Udry
Development theory at both aggregate and sectoral levels; analysis of growth, employment, poverty, and distribution of income in both closed and open developing economy contexts.

ECON 731b, Economic Development II  Mark Rosenzweig, Christopher Udry
Analysis of development experiences since World War II. Planning and policy making across countries and time. Models of development, growth, foreign trade, and investment. Trade, capital, and technology flows and increasing interdependence. The political economy of policy making and policy reform.

ECON 732b, Economic Development IDE  Michael Boozer
Examines the models of classical and modern economists to explain the transition of developing economies into modern economic growth, as well as their relevance to income distribution, poverty alleviation, and human development. For IDE students.

[ECON 735bU, Economics of Agriculture]
[ECON 736aU, Economics of Technology]

ECON 737aU, Economics of Natural Resources  Robert Mendelsohn
Linking of abstract economic concepts to concrete policy and management decisions. Application of theoretical tools of economics to global warming, pollution control, fisheries, forestry, recreation, and mining.

ECON 738a or b, Workshop on Environmental and Natural Resources  William Nordhaus, Robert Mendelsohn

ECON 749a and 750b, Trade and Development Workshop  Staff
A forum for graduate students and faculty with an interest in the economic problems of developing countries. Faculty, students, and a limited number of outside speakers discuss research in progress.

ECON 756a/b, Prospectus Workshop in Development  Staff
Workshop for students doing research in development to present and discuss work.

[ECON 776bu, Economics of Population]

ECON 790a/PLSC 725a, Political Economy  Marco Battaglini
Political competition in democracies is party competition. We develop, from the formal viewpoint, theories of party competition in democracies. We develop a theory in which parties (1) compete over several issues, not just one issue as in A. Downs; (2) are uncertain about how citizens respond to platforms; and (3) represent interest groups in the population. Applications, particularly to the theory of income distribution and tax. HTBA

ECON 790b, Political Economy  Ebonya Washington

ECON 899a or b, Individual Reading and Research
By arrangement with faculty.
ELECTRICAL ENGINEERING

Dunham Laboratory, 203.432.4250
M.S., M.Phil., Ph.D.

Chair
Jung Han

Director of Graduate Studies
Hongxing Tang (hong.tang@yale.edu)

Professors  Richard Barker (Emeritus), James Duncan, Jung Han, Peter Kindlmann (Adjunct), Roman Kuc, Tso-Ping Ma, A. Stephen Morse, Kumpati Narendra, Mark Reed, Peter Schultheiss (Emeritus), J. Rimas Vaisnys, Yang Richard Yang

Associate Professors Eugenio Culurciello, Hür Köser, Richard Lethin (Adjunct), Andreas Savvides, Lawrence Staib, Hemant Tagare, Hongxing Tang, Sekhar Tatikonda

Assistant Professor Minjoo Lee

Fields of Study
Fields include biomedical sensory systems, communications and signal processing, computer engineering, control systems, microelectromechanical and nanomechanical systems (MEMS and NEMS), nanoelectronic science and technology, neural networks, optoelectronic materials and devices, sensor networks, semiconductor materials and devices, wireless networks, and VLSI design and testing.

For admissions and degree requirements, and for course listings, see Engineering & Applied Science.
ENGINEERING & APPLIED SCIENCE

Dunham Laboratory, 203.432.4250
www.seas.yale.edu
M.S., M.Phil., Ph.D.

Dean
T. Kyle Vanderlick

Deputy Dean
Vincent Wilczynski

Associate Dean for Educational Affairs
Roman Kuc

Programs of study are offered in the areas of applied mechanics, mechanical engineering and materials science, chemical and environmental engineering, electrical engineering, and biomedical engineering. All programs are under the School of Engineering & Applied Science.

Biomedical Engineering
Chair
Mark Saltzman

Director of Graduate Studies
Richard Carson (richard.e.carson@yale.edu)

Professors  Richard Carson, Todd Constable, James Duncan, Jay Humphrey, Fahmeed Hyder, Laura Niklason, Douglas Rothman, Mark Saltzman, Fred Sigworth, Steven Zucker (Computer Science)

Associate Professors  Robin de Graaf, Tarek Fahmy, Themis Kyriakides, Michael Levene, Evan Morris, Xenophon Papademetris, Lawrence Staib, Hemant Tagare

Assistant Professors  Joerg Bewersdorf, Rong Fan, Anjelica Gonzalez, Kathryn Miller-Jensen, Smita Sampath, Erik Shapiro

FIELDS OF STUDY
Fields include the physics of image formation (MRI, optics, ultrasound, nuclear medicine, and X-ray), MRI, MRS, PET and modeling, digital image analysis and processing, computer vision, biological signals and sensors, biomechanics, physiology and human factors engineering, drug delivery, biotechnology, biophotonics, immune response to biomaterials, tissue engineering, and biomedical device systems biology and medicine.

Chemical & Environmental Engineering
Chair
Paul Van Tassel
Director of Graduate Studies
William Mitch (william.mitch@yale.edu)

Professors  Eric Altman, Gaboury Benoit, Ruth Blake, Menachem Elimelech, Abbas Firoozabadi (Adjunct), Thomas Graedel, Gary Haller, Edward Kaplan, Yehia Khalil (Adjunct), Michael Loewenberg, Robert McGraw (Adjunct), Lisa Pfefferle, Joseph Pignatello (Adjunct), Daniel Rosner, James Saiers, Mark Saltzman, Udo Schwartz, T. Kyle Vanderlick, Paul Van Tassel, Kurt Zilm

Associate Professors  Michelle Bell, Tarek Fahmy, William Mitch, Jordan Peccia

Assistant Professors  Eric Dufresne, Chinedum Osuji, Andre Taylor, Corey Wilson, Julie Zimmerman

FIELDS OF STUDY
Fields include nanomaterials, soft matter, interfacial phenomena, biomolecular engineering, energy, water, and sustainability.

Electrical Engineering

Chair
Jung Han

Director of Graduate Studies
Hongxing Tang (hong.tang@yale.edu)

Professors  Richard Barker (Emeritus), James Duncan, Jung Han, Peter Kindlmann (Adjunct), Roman Kuc, Tso-Ping Ma, A. Stephen Morse, Kumpati Narendra, Mark Reed, Peter Schultheiss (Emeritus), J. Rimas Vaisnys, Yang Richard Yang

Associate Professors  Eugenio Culurciello, Hür Köser, Richard Lethin (Adjunct), Andreas Savvides, Lawrence Staib, Hemant Tagare, Hongxing Tang, Sekhar Tatikonda

Assistant Professor  Minjoo Lee

FIELDS OF STUDY
Fields include biomedical sensory systems, communications and signal processing, computer engineering, control systems, microelectromechanical and nanomechanical systems (MEMS and NEMS), nanoelectronic science and technology, neural networks, optoelectronic materials and devices, sensor networks, semiconductor materials and devices, wireless networks, and VLSI design and testing.

Mechanical Engineering & Materials Science

Chair
Mitchell Smooke

Director of Graduate Studies
Udo Schwarz (udo.schwarz@yale.edu)

Associate Professors  Eric Dufresne, Corey O’Hern, Ainissa Ramirez, Jan Schroers

Assistant Professors  Aaron Dollar, John Morrell, Nicholas Ouellette, Hong Tang

Lecturers  Beth Anne Bennett, Kailasnath Purushothaman

FIELDS OF STUDY

**Fluids and thermal sciences**  Dynamics and stability of drops and bubbles; dynamics of thin liquid films; macroscopic and particle-scale dynamics of emulsions, foams, and colloidal suspensions; electrospay theory and characterization; electrical propulsion applications; combustion and flames; computational methods for fluid dynamics and reacting flows; turbulence; particle tracking in fluid mechanics; laser diagnostics of reacting and nonreacting flows.

**Soft matter/complex fluids**  Jamming and slow dynamics in gels, glasses, and granular materials; mechanical properties of soft and biological materials; dynamics of macromolecules. Several faculty in Mechanical Engineering are also affiliated with the Integrated Graduate Program in Physical and Engineering Biology (www.peb.yale.edu).

**Materials science**  Characterization of crystallization and other phase transformations; studies of thin films; MEMS; smart materials such as shape memory alloys, amorphous metals, and nanomaterials including nanocomposites; NEMS; nano-imprinting; classical and quantum optomechanics; atomic-scale investigations of surface interactions and properties; classical and quantum nanomechanics; nanotribology.

**Robotics/mechatronics**  Machine and mechanism design; dynamics and control; robotic grasping and manipulation; human-machine interface; rehabilitation robotics; haptics; electromechanical energy conversion; biomechanics of human movement; human-powered vehicles.

**Integrated Graduate Program in Physical and Engineering Biology (IGPPEB)**

The Yale IGPPEB program brings together faculty drawn mainly from five member areas (MB&B, MCDB, Applied Physics, Physics, and Engineering). All faculty involved recognize the importance of interdisciplinary research at the interface of the biological and physical sciences, and have recently developed interdisciplinary research collaborations among IGPPEB colleagues. Core courses for Engineering students in this Ph.D. program are listed in the core course list below for each participating department.

**Special Requirements for the Ph.D. Degree**

A pamphlet titled *Qualification Procedure for the Ph.D. Degree in Engineering & Applied Science* describes the requirements in detail. The student is strongly encouraged to read it carefully. Here, key requirements are briefly summarized.
The student plans his/her course of study in consultation with faculty advisers (the student’s advisory committee). A minimum of ten term courses is required, to be completed in the first two years. Well-prepared students may petition for course waivers based on courses taken in a previous graduate degree program. Similarly, students may place out of certain ENAS courses via an examination prepared by the course instructor. Placing out of the course will not reduce the total number of required courses. Core courses, as identified by each department/program, should be taken in the first year unless otherwise noted by the department. With the permission of the departmental director of graduate studies (DGS), students may substitute more advanced courses that cover the same topics. No more than two courses can be Special Investigations, and at least two must be outside the area of the dissertation. All students must complete a one-term course, ENAS 508b, Responsible Conduct of Research, in the first year of study.

Each term, the faculty review the overall performance of the student and report their findings to the DGS who, in consultation with the associate dean, determines whether the student may continue toward the Ph.D. degree. By the end of the second term, it is expected that a faculty member has agreed to accept the student as a research assistant. By December 5 of the third year, an area examination must be passed and a written prospectus submitted before dissertation research is begun. These events result in the student’s admission to candidacy. Subsequently, the student will report orally each year to the full advisory committee on progress. When the research is nearing completion, but before the thesis writing has commenced, the full advisory committee will advise the student on the thesis plan. A final oral presentation of the dissertation research is required to be given during term time. There is no foreign language requirement.

Teaching experience is regarded as an integral part of the graduate training program at Yale University, and all Engineering graduate students are required to serve as a Teaching Fellow for one term, typically during year two. Teaching duties normally involve assisting in laboratories or discussion sections and grading papers and are not expected to require more than ten hours per week. Students are not permitted to teach during the first year of study.

If a student was admitted to the program having earned a score of less than 26 on the Speaking Section of the Internet-based TOEFL, the student will be required to take an English as a Second Language (ESL) course each semester at Yale until the Graduate School’s Oral English Proficiency standard has been met. This must be achieved by the end of the third year in order for the student to remain in good standing.

Core Course Requirements for the Ph.D. Degree
The core courses for each department and program are as follows:

**Biomedical Engineering** Physiological Systems (ENAS 550), Physical and Chemical Basis of Bioimaging and Biosensing (ENAS 510). One of these courses may be taken in the second year. In addition, there is a math requirement that must be met by taking Mathematical Methods I (ENAS 500) or Advanced Engineering Mathematics (ENAS 505) in the first year.

**Chemical & Environmental Engineering (Chemical track)** Classical and Statistical Thermodynamics (ENAS 521), Energy, Mass, and Momentum Processes (ENAS 603),
Chemical Reaction Engineering (ENAS 602). In addition, there is a math requirement that must be met by taking Mathematical Methods I (ENAS 500) or Advanced Engineering Mathematics (ENAS 505) in the first year. Students in the IGPPEB program must also take Methods and Logic in Interdisciplinary Research (ENAS 517), Biological Physics (ENAS 541), Boot Camp Biology (MB&B 520), Integrated Workshop (ENAS 991), and Systems Modeling in Biology (MCDB 561).

**Chemical & Environmental Engineering (Environmental track)** Aquatic Chemistry (ENAS 640), Biological Processes in Environmental Engineering (ENAS 641), Environmental Physicochemical Processes (ENAS 642). In addition, there is a math requirement that must be met by taking one of the following courses in the first year: Mathematical Methods I (ENAS 500), Advanced Engineering Mathematics (ENAS 505), Applied Spatial Statistics (F&ES 781), Multivariate Statistical Analysis in the Environmental Sciences (F&ES 758), or Multivariate Statistical Methods for the Social Sciences (STAT 660).

**Electrical Engineering (Computer Engineering track)** Introduction to VLSI System Design (ENAS 875), Advanced Topics in Computer Engineering (ENAS 921).

**Electrical Engineering (Microelectronics track)** Solid State Physics I (ENAS 850), Semiconductor Silicon Devices and Technology (ENAS 986).

**Electrical Engineering (System and Signals track)** Linear Systems (ENAS 902), Stochastic Processes (ENAS 502).

**Mechanical Engineering & Materials Science** Students must demonstrate competence in one of four areas: Fluid and Thermal Sciences, Soft Matter/Complex Fluids, Materials Science, or Robotics/Mechatronics. As a minimum requirement, students must take at least one of the following courses in the first year of study: Intelligent Robotics (CPSC 573), Classical and Statistical Thermodynamics (ENAS 521), Biological Physics (ENAS 541), Polymer Physics (ENAS 606), Synthesis of Nanomaterials (ENAS 615), Statistical Physics II (PHYS 628), Theoretical Fluid Dynamics (ENAS 704), Fundamentals of Combustion (ENAS 708), Introduction to Robot Analysis (ENAS 777), Intermolecular and Surface Forces (ENAS 787), Soft Condensed Matter Physics (ENAS 848), Solid State Physics I (ENAS 850), Solid State Physics II (ENAS 851), Linear Systems (ENAS 902) — if not used to satisfy the math requirement — and Systems and Control (ENAS 936). In addition, there is a math requirement that must be met by taking Mathematical Methods I (ENAS 500), Mathematical Methods of Physics (PHYS 506), or Linear Systems (ENAS 902), depending on the research area. Students in the IGPPEB program must also take Methods and Logic in Interdisciplinary Research (ENAS 517), Biological Physics (ENAS 541), Boot Camp Biology (MB&B 520), Integrated Workshop (ENAS 991), and Systems Modeling in Biology (MCDB 561).

**Honors Requirement**

Students must meet the Graduate School’s Honors requirement in at least two term courses (excluding Special Investigations) by the end of the second term of full-time study. An extension of one term may be granted at the discretion of the DGS.
Master’s Degrees

M.Phil. See Degree Requirements under Policies and Regulations.

M.S. (en route to the Ph.D.) To qualify for the M.S., the student must pass eight term courses; no more than two may be Special Investigations. An average grade of at least High Pass is required, with at least one grade of Honors.

Master’s Degree Program Students may also be admitted directly to a terminal master’s degree program. The requirements are the same as for the M.S. en route to the Ph.D., although there are no core course requirements for students in this program. This program is normally completed in one year, but a part-time program may be spread over as many as four years. Some courses are available in the evening, to suit the needs of students from local industry.

Program materials are available upon request to the Office of Graduate Studies, School of Engineering & Applied Science, Yale University, PO Box 208267, New Haven CT 06520-8267; e-mail, engineering@yale.edu; Web site, www.seas.yale.edu.

Courses

The list of courses may be slightly modified by the time term begins. Please check the Web site http://students.yale.edu/oci for the most updated course listing.

ENAS 500a/APHY 500a, Mathematical Methods I Charles Ahn
TTH 9–10:15

ENAS 501b, Mathematical Methods II Juan de la Mora
Special functions, the Laplace transformations, Fourier series, Fourier integrals, and partial differential equations including separation of variables, methods of characteristics, variational techniques, and a brief discussion of numerical methods. TTH 1–2:15

ENAS 502b, Stochastic Processes Staff

[ENAS 503b/AMTH 605b/STAT 667b, Probabilistic Networks, Algorithms, and Applications]

[ENAS 505a, Advanced Engineering Mathematics]

ENAS 506b, Ethics and Professional Development for Biomedical Engineers and Scientists Evan Morris
A seminar class that explores ethical issues, frameworks for understanding issues, and boundaries of honorable execution of science and engineering through relevant reading of a broad variety of historical nonfiction, novels, case studies, newspaper and magazine articles, and other resource material. Lively but reasoned and respectful debate is
encouraged and expected. Essentials of the practice of science are also addressed. Short writing exercises are used to foster good writing, thinking, and communication skills. Acquired skills are applied to ethical issues of science and engineering in the news. F 1:30–3:20

**ENAS 508b/APHY 508b, Responsible Conduct of Research**  Staff
Required for first-year students. Presentation and discussion of topics and best practices relevant to responsible conduct of research including academic fraud and misconduct, conflict of interest and conflict of commitment, data acquisition and human subjects, use and care of animals, publication practices and responsible authorship, mentor/trainee responsibilities and peer review, and collaborative science. HTBA

**ENAS 509au, Electronic Materials: Fundamentals and Applications**  Jung Han
Survey and review of fundamental issues associated with modern microelectronic and optoelectronic materials. Topics include band theory, electronic transport, surface kinetics, diffusion, materials defects, elasticity in thin films, epitaxy, and Si integrated circuits. MW 11:35–12:50

**ENAS 510au, Physical and Chemical Basis of Bioimaging and Biosensing**  Douglas Rothman, Fred Sigworth, Richard Carson, Erik Shapiro
Basic principles and technologies for imaging and sensing the chemical, electrical, and structural properties of living tissues and biological macromolecules. Topics include magnetic resonance spectroscopy, MRI, positron emission tomography, and molecular imaging with MRI and fluorescent probes. TTH 1–2:15

**ENAS 511bu, Physics and Devices of Optical Communication**  Jung Han
A survey of the enabling components and devices that constitute modern optical communication systems. Focus on the physics and principles of each functional unit, its current technological status, design issues relevant to overall performance, and future directions. Permission of the instructor required. MW 1–2:15

**ENAS 513au, Introduction to Analysis**  Staff
Foundations of real analysis, including metric spaces and point set topology, infinite series, and function spaces. TTH 1–2:15

**ENAS 514bu, Real Analysis**  Philip Gressman
The Lebesgue integral, Fourier series, applications to differential equations. TTH 1–2:15

**ENAS 517b/MB&B 517b3/MCDB 517b3/PHYS 517b3, Methods and Logic in Interdisciplinary Research**  Lynne Regan, Enrique De La Cruz, Eric Dufresne, Thierry Emonet, Paul Forscher, Megan King, Michael Levene, Simon Mochrie, Corey O’Hern, Thomas Pollard, Elizabeth Rhoades, Corey Wilson, and staff
This half-term IGPPEB class is intended to introduce students to integrated approaches to research. Each session is led by faculty with complementary expertise and discusses papers that use different approaches to the same topic (for example, physical and biological or experiment and theory). Counts as 0.5 credit toward graduate course requirements. Required for students in IGPPEB. MW 5–7
ENAS 518a/MB&B 635a**, Mathematical Methods in Biophysics  
Elizabeth Rhoades, Yong Xiong, Corey O’Hern

Applied mathematical methods relevant to analysis and interpretation of biophysical and biochemical data, including statistics and error analysis, differential equations, linear algebra, and Fourier transforms. The class covers both analytical and numerical implementations of these topics. Prerequisites: MATH 120a or b and MB&B 300a or equivalents, or permission of the instructors. MWF 10:30–11:20

ENAS 521a, Classical and Statistical Thermodynamics  
Abbas Firoozabadi

A unified approach to bulk-phase equilibrium thermodynamics, bulk-phase irreversible thermodynamics, and interfacial thermodynamics in the framework of classical thermodynamics, and an introduction to statistical thermodynamics. Both the activity coefficient and the equations of state are used in the description of bulk phases. Emphasis on classical thermodynamics of multicomponents, including concepts of stability and criticality, curvature effect, and gravity effect. The choice of Gibbs free energy function covers applications to a broad range of problems in chemical, environmental, biomedical, and petroleum engineering. The introduction includes theory of Gibbs canonical ensembles and the partition functions, fluctuations, and Boltzmann’s statistics, Fermi-Dirac and Bose-Einstein statistics. Application to ideal monatomic and diatomic gases is covered. MW 9–10:15

ENAS 525a**, Optimization I  
Eric Denardo

A problem-based introduction to linear programs and their generalizations. Includes theory, algorithms, uses and connections to economic reasoning. Optimality conditions for linear and nonlinear programs. Solution methods for linear, integer, and nonlinear programs. Solution concepts for games. Computation of Nash equilibria and Brouwer fixed points. TTH 1–2:15

ENAS 530a, Optimization Techniques  
A. Stephen Morse

Fundamental theory and algorithms of optimization, emphasizing convex optimization. The geometry of convex sets, basic convex analysis, the principle of optimality, duality. Numerical algorithms: steepest descent, Newton’s method, interior point methods, dynamic programming, unimodal search. MW 2:30–3:45

ENAS 534a, Biomaterials  
Anjelica Gonzalez

Introduction to materials, classes of materials from atomic structure to physical properties. Major classes of materials: metals, ceramics and glasses, and polymers, addressing their specific characteristics, properties, and biological applications. Throughout the presentation of the synthesis, characterization, and properties of the classes of materials, a connection is made to the selection of materials for use in specific biological applications by matching the material’s properties to those necessary for success in the application. Case studies address the successes and failures of particular materials from each of the classes in biological applications. TTH 9–10:15

ENAS 535b/PATH 630b, Biomaterial-Tissue Interactions  
Themis Kyriakides

The course addresses the interactions between tissues and biomaterials, with an emphasis on the importance of molecular- and cellular-level events in dictating the performance
and longevity of clinically relevant devices. In addition, specific areas such as biomaterials for tissue engineering and the importance of stem/progenitor cells, and biomaterial-mediated gene and drug delivery are addressed. TTH 9–10:15

**ENAS 541a/MB&B 523a/PHYS 523a, Biological Physics**  Eric Dufresne
An introduction to the physics of several important biological phenomena, including molecular motors, protein folding, bacterial locomotion, and allostery. The material and approach are positioned at the interface of the physical and biological sciences. Required for students in IGPPEB. TTH 2:30–3:45

**ENAS 549b, Biomedical Data Analysis**  Richard Carson
The course focuses on the analysis of biological and medical data associated with applications of biomedical engineering. It provides basics of probability and statistics, and analytical approaches for determination of quantitative biological parameters from noisy, experimental data. Programming in MATLAB to achieve these goals is a major portion of the course. Applications include Michaelis-Menten enzyme kinetics, Hodgkin Huxley, neuroreceptor assays, receptor occupancy, MR spectroscopy, PET neuroimaging, brain image segmentation and reconstruction, and molecular diffusion. MWF 9:25–10:15

**ENAS 550au/C&MP 550au/MCDB 550au/PHAR 550a, Physiological Systems**  Emile Boulpaep, W. Mark Saltzman
The course develops a foundation in human physiology by examining the homeostasis of vital parameters within the body, and the biophysical properties of cells, tissues, and organs. Basic concepts in cell and membrane physiology are synthesized through exploring the function of skeletal, smooth, and cardiac muscle. The physical basis of blood flow, mechanisms of vascular exchange, cardiac performance, and regulation of overall circulatory function are discussed. Respiratory physiology explores the mechanics of ventilation, gas diffusion, and acid-base balance. Renal physiology examines the formation and composition of urine and the regulation of electrolyte, fluid, and acid-base balance. Organs of the digestive system are discussed from the perspective of substrate metabolism and energy balance. Hormonal regulation is applied to metabolic control and to calcium, water, and electrolyte balance. The biology of nerve cells is addressed with emphasis on synaptic transmission and simple neuronal circuits within the central nervous system. The special senses are considered in the framework of sensory transduction. Weekly discussion sections provide a forum for in-depth exploration of topics. Graduate students evaluate research findings through literature review and weekly meetings with the instructor. MWF 9:25–10:15

**ENAS 551au, Biomedical Engineering I: Quantitative Physiology**  Tarek Fahmy
Demonstration of the use of engineering analysis and synthesis in problems in the life sciences and medicine; focus on modeling of molecular physiological processes and design of artificial organs. The lectures in the course are coordinated with the sequence of lectures in ENAS 550a to illustrate how engineering analysis can be used to understand physiological processes. In addition, the course presents elements of pharmacokinetics, heat and mass transfer in physiological systems, hemodialysis, drug delivery, and tissue engineering. TTH 11:35–12:50
ENAS 553b, Immuno-Engineering  Tarek Fahmy
An advanced class that introduces immunology principles and methods to engineering students. The course focuses on biophysical principles and biomaterial applications in understanding and engineering immunity. The course is divided into three parts. The first part introduces the immune system: organs, cells, and molecules. The second part introduces biophysical characterization and quantitative modeling in understanding immune system interactions. The third part focuses on intervention, modulation, and techniques for studying the immune system with emphasis on applications of biomaterials for intervention and diagnostics. TTH 2:30–3:45

ENAS 554bu, Continuum Biomechanics  Jay Humphrey
The course is designed to enable students to learn advanced and state-of-the-art methods of continuum and computational biomechanics, especially related to the need to formulate new theories of soft tissue growth, remodeling, disease progression, healing, and aging. Emphasis is placed on ensuring that the mechanics is driven by advances in the vascular mechanobiology. TTH 2:30–3:15

[ENAS 555bu, Vascular Mechanics]

ENAS 557bu, Musculoskeletal Biomechanics  Jing Zhou
An introduction to the application of mechanical engineering principles to biological materials and systems. Topics include ligaments, tendons, bones, muscles; joints, gait analysis; exercise physiology. The basic concepts are directed toward an understanding of the science of orthopaedic surgery and sports medicine. TTH 2:30–3:45

[ENAS 563bu, Fault Tolerant Computer Systems]

ENAS 564bu, Tissue Engineering  Laura Niklason
Introduction to the major aspects of tissue engineering, including materials selection, scaffold fabrication, cell sources, cell seeding, bioreactor design, drug delivery, and tissue characterization. Class sessions include lectures and hands-on laboratory work. MW 9:25–10:15, W 2:30–4:20

ENAS 570bu/C&MP 560bu/MCDB 560bu/PHAR 560b, Cellular and Molecular Physiology: Molecular Machines in Human Disease  Emile Boulpaep, Fred Sigworth
The course focuses on understanding the processes that transfer molecules across membranes at the cellular, molecular, biophysical, and physiological levels. Students learn about the different classes of molecular machines that mediate membrane transport, generate electrical currents, or perform mechanical displacement. Emphasis is placed on the relationship between the molecular structures of membrane proteins and their individual functions. The interactions among transport proteins in determining the physiological behaviors of cells and tissues are also stressed. Molecular motors are introduced and their mechanical relationship to cell function is explored. Students read papers from the scientific literature that establish the connections between mutations in genes encoding membrane proteins and a wide variety of human genetic diseases. MWF 9:25–10:15
ENAS 575au/CPSC 575au, Computational Vision and Biological Perception  
Steven Zucker  
An overview of computational vision with a biological emphasis. Suitable as an introduction to biological perception for computer science and engineering students, as well as an introduction to computational vision for mathematics, psychology, and physiology students. Prerequisites: MATH 120a or b and CPSC 112a or b, or permission of the instructor. MW 2:30–3:45

ENAS 580a, Clinical Research in Biomedical Engineering  
Mark Saltzman, James Duncan  
The course is designed to provide graduate students in Biomedical Engineering with a broad perspective of research topics in their field, with a particular focus on topics directed toward clinically oriented research. Students attend a series of lectures by speakers from both inside and outside the Yale BME research community covering the areas of biomaterials/tissue engineering, drug delivery systems, biomechanics, and bioimaging. The week after each lecture, students gather to address questions posed by the lecturing faculty and the course organizers, with discussion led by the students themselves. In addition, each student picks a topic related to one of the lectures given during the term and submits an extended written analysis. HTBA

ENAS 585bu, Fundamentals of Neuroimaging  
Fahmeed Hyder, Douglas Rothman  
The neuroenergetic and neurochemical basis of several dominant neuroimaging methods, including fMRI. Topics range from technical aspects of different methods to interpretation of the neuroimaging results. Controversies and/or challenges for application of fMRI and related methods in medicine are identified. TH 3:30–5:20

ENAS 600au, Computer-Aided Engineering  
Marshall Long  
Aspects of computer-aided design and manufacture including reasons for increased use of CAD/CAM, the computer’s role in the mechanical engineering design and its manufacturing process, hardware and software elements of typical commercial systems, and computer graphics and drafting. TTH 9–10:15

[ENAS 601a, Materials Chemistry]  
ENAS 602b, Chemical Reaction Engineering  
Eric Altman  
Applications of physical-chemical and chemical-engineering principles to the design of chemical process reactors. Ideal reactors treated in detail in the first half of the course, practical homogeneous and catalytic reactors in the second. TTH 1–2:15

ENAS 603b, Energy, Mass, and Momentum Processes  
Daniel Rosner  
Application of continuum mechanics approach to the understanding and prediction of fluid flow systems that may be chemically reactive, turbulent, or multiphase. HTBA

[ENAS 605b, Colloidal Chemical Engineering]  
[ENAS 606b, Polymer Physics]  
[ENAS 608b, Surface and Surface Processes]  
[ENAS 610au, Biomolecular Engineering]
**ENAS 611a**, Separation Processes  Daniel Rosner  
Theory and design of separation processes for multicomputer and/or multiphase mixtures via equilibrium and rate phenomena. Included are single-stage and cascaded absorption, adsorption, extraction, distillation, filtration, and crystallization processes. MW 9–10:15

**ENAS 612a**, Biomolecular Engineering Laboratory  Corey Wilson  
A survey of biomolecular engineering laboratory methods and strategies. An advanced workshop on a broad range of concepts at the interface of applied mathematics, biology, biophysical chemistry, and chemical engineering whose express purpose is developing novel molecular tools, materials, and approaches based on biological building blocks and machinery. Topics include understanding and modeling the physicochemical properties that confer function in biological systems, low- and high-resolution protein engineering, and the design of synthetic interactomes. HTBA

[ENAS 614b, Surface and Thin-Film Characterization]

[ENAS 615b, Synthesis of Nanomaterials]

[ENAS 616b, Multiscale Modeling and Design in Biology]

[ENAS 618a, Principles and Practice of Heterogeneous Catalysis]

[ENAS 626a, Chemical Engineering Process Control]

[ENAS 628b, Sensors and Biosensors]

**ENAS 639a, Management of Water Resources and Environmental Systems**  Gideon Oron  
Management tools to analyze problems related to water resources and environmental systems. A focus on characterizing, defining, and solving natural and water resources (quality, location, treatment) and environmental problems (soil, water, air pollution, risks) implementing Operation Research (OR) methods. Topics include introduction to OR methods and their role in natural resources and water resources, environmental systems, economic criteria, and optimization criteria. Management modeling refers to application of linear programming (e.g., river contamination), integer programming and fixed charge problems (e.g., solid waste disposal and renovation), nonlinear programming (e.g., optimal water blending), goal programming, and Analytic Hierarchy Processes (AHP) (selection of preferable membrane treatment systems; selection of preferable waste treatment method). Main principles of multi-objective optimization are presented. HTBA

**ENAS 640b/F&ES 707b**, Aquatic Chemistry  Gabriel Benoit  
A detailed examination of the principles governing chemical reactions in water. Emphasis is on developing the ability to predict the aqueous chemistry of natural and perturbed systems based on a knowledge of their biogeochemical setting. Focus is on inorganic chemistry, and topics include elementary thermodynamics, acid-base equilibria, alkalinity, speciation, solubility, mineral stability, redox chemistry, and surface complexation reactions. Illustrative examples are taken from the aquatic chemistry of estuaries, lakes, rivers, wetlands, soils, aquifers, and the atmosphere. A standard software package used to predict chemical equilibria may also be presented. TTH 11:35–12:50
ENAS 641a, Biological Processes in Environmental Engineering

ENAS 642b, Environmental Physicochemical Processes  Menachem Elimelech
Fundamental and applied concepts of physical and chemical ("physicochemical") processes relevant to water quality control. Topics include chemical reaction engineering, overview of water and wastewater treatment plants, colloid chemistry for solid-liquid separation processes, physical and chemical aspects of coagulation, coagulation in natural waters, filtration in engineered and natural systems, adsorption, membrane processes, disinfection and oxidation, disinfection by-products. TTH 2:30–3:45

ENAS 643a, Transport and Fate of Organic Chemicals in the Environment

ENAS 644b, Environmental Chemical Kinetics

ENAS 645b/F&ES 884b, Industrial Ecology  Thomas Graedel
Industrial ecology is an organizing concept that is increasingly applied to define various interactions of today’s technological society with both natural and altered environments. Technology and its potential for modification and change are central to this topic, as are implications for government policy and corporate response. The course discusses how industrial ecology is being applied in corporations to minimize the environmental impacts of products, processes, and services, and shows how industrial ecology serves as a technological framework for science, policy, and management in government and society. MW 1–2:15

ENAS 648a, Environmental Transport Processes  William Mitch
Analysis of transport phenomena governing the fate of chemical and biological contaminants in environmental systems. Emphasis on quantifying contaminant transport rates and distributions in natural and engineered environments. Topics include distribution of chemicals between phases; diffusive and convective transport; interfacial mass transfer; contaminant transport in groundwater, lakes, and rivers; analysis of transport phenomena involving particulate and microbial contaminants. TTH 4–5:15

ENAS 649a/MGT 611a, Policy Modeling  Edward Kaplan
Building on earlier course work in quantitative analysis and statistics, Policy Modeling provides an operational framework for exploring the costs and benefits of public policy decisions. The techniques employed include “back of the envelope” probabilistic models, Markov processes, queuing theory, and linear/integer programming. With an eye toward making better decisions, these techniques are applied to a number of important policy problems. In addition to lectures, assigned articles and text readings, and short problem sets, students are responsible for completing a take-home midterm exam and a number of cases. In some instances, it is possible to take a real problem from formulation to solution, and compare the student’s own analysis to what actually happened. Prerequisites: Decision Analysis and Game Theory, Data Analysis and Statistics, or a demonstrated proficiency in quantitative methods. HTBA

ENAS 655a, Environmental Risk Assessment

ENAS 658a, MEMS Design  Hür Köser
An introduction to the broad field of microelectromechanical systems (MEMS), using examples and design projects drawn from real-world MEMS applications. Topics include
material properties, microfabrication technologies, structural behavior, sensing techniques, actuation schemes, fluid behavior, simple electronic circuits, and feedback systems. Student teams design complete microsystems to meet a set of specifications based on realistic microfabrication processes. Emphasis on modeling and simulation in the design process. MW 10:30–11:20

**ENAS 660b/F&ES 885b, Green Engineering and Sustainability**

Julie Zimmerman

The course focuses on a green engineering design framework, the Twelve Principles of Green Engineering, highlighting the key approaches to advancing sustainability through engineering design. The class begins with discussions on sustainability, metrics, general design processes, and challenges to sustainability. The current approach to design, manufacturing, and disposal is discussed in the context of examples and case studies from various sectors. This provides a basis for what and how to consider when designing products, processes, and systems to contribute to furthering sustainability. The fundamental engineering design topics to be addressed include toxicity and benign alternatives, pollution prevention and source reduction, separations and disassembly, material and energy efficiencies and flows, systems analysis, biomimicry, and life cycle design, management, and analysis.

**ENAS 704a, Theoretical Fluid Dynamics**  
Juan de la Mora

Derivation of the equations of fluid motion from basic principles. Potential theory, viscous flow, flow with vorticity. Topics in hydrodynamics, gas dynamics, stability, and turbulence. TTH 11:35–12:50

[**ENAS 708a, Fundamentals of Combustion**]

**ENAS 711b, Biomedical Microtechnology and Nanotechnology**  
Rong Fan

Principles and applications of micro- and nanotechnologies for biomedicine. Approaches to fabricating micro- and nanostructures. Fluid mechanics, electrokinetics, and molecular transport in microfluidic systems. Integrated biosensors and microTAS for laboratory medicine and point-of-care uses. High-content technologies including DNA, protein microarrays, and cell-based assays for differential diagnosis and disease stratification. Emerging nanobiotechnology for systems medicine. Prerequisites: CHEM 112a, 114a, or 118a, and ENAS 194a or b. TTH 10:30–11:20

[**ENAS 718au, Heterojunction Devices**]

**ENAS 747au, Applied Numerical Methods I**  
Beth Anne Bennett

The derivation, analysis, and implementation of various numerical methods. Topics include root-finding methods, numerical solution of systems of linear and nonlinear equations, eigenvalue/eigenvector approximation, polynomial-based interpolation, and numerical integration. Additional topics such as computational cost, error analysis, and convergence are addressed in a variety of contexts. TTH 11:35–12:50

**ENAS 748bu, Applied Numerical Methods II**  
Beth Anne Bennett

The derivation, analysis, and implementation of numerical methods for the solution of ordinary and partial differential equations, both linear and nonlinear. Additional topics such as computational cost, error estimation, and stability analysis are studied in several contexts throughout the course. ENAS 747a is not a prerequisite. TTH 11:35–12:50
ENAS 761a/G&G 525a, Introduction to Continuum Mechanics
ENAS 777, Introduction to Robot Analysis
ENAS 787a, Intermolecular and Surface Forces
ENAS 802aU, Nano and Microsystem Technology

ENAS 806bU, Photovoltaic Energy  Minjoo Lee
Survey of photovoltaic energy devices, systems, and applications, including review of optical and electrical properties of semiconductors. Topics include solar radiation, solar cell design, performance analysis, solar cell materials, device processing, photovoltaic systems, and economic analysis. MW 1–2:15

ENAS 812b/NSCI 612b, Molecular Transport and Intervention in the Brain  Mark Saltzman, Richard Carson
A graduate-level seminar on mechanisms and rates of movement of molecules in the brain and the design of novel drug delivery systems. Topics include mathematical methods for modeling diffusion and flow processes, diffusion in the brain interstitium, fluid flows in the brain and spinal cord, the blood-brain barrier, microdialysis measurements, controlled release systems, microfluidic approaches for drug delivery. Weekly readings are assigned from neuroscience and engineering texts; current papers from the literature are used to guide discussion each week. HTBA

ENAS 821bu, Physics of Medical Imaging  Todd Constable
The physics of image formation with special emphasis on techniques with medical applications. Concepts that are common to different types of imaging are emphasized, along with an understanding of how information is limited by the basic physical phenomena involved. Mathematical concepts of image analysis, the formation of images by ionizing radiation, ultrasound, NMR, and other energy forms, and methods of evaluating image quality. MW 11:35–12:50

ENAS 825a, Physics of Magnetic Resonance Spectroscopy in Vivo  Graeme Mason, Robin de Graaf
The physics of chemical measurements performed with nuclear magnetic resonance spectroscopy, with special emphasis on applications to measurement studies in living tissue. Concepts that are common to magnetic resonance imaging are introduced. Topics include safety, equipment design, techniques of spectroscopic data analysis, and metabolic modeling of dynamic spectroscopic measurements. WF 2:30–3:45

ENAS 836bU, Biophotonics and Optical Microscopy  Michael Levene
A review of linear and nonlinear optical microscopies and other biophotonics applications. Topics include wide-field techniques, linear and nonlinear laser scanning microscopy, fundamentals of geometrical and physical optics, optical image formation, laser physics, single molecule techniques, fluorescence correlation spectroscopy, and light scattering. Discussion of fluorescence and the underlying physics of light-matter interactions that provide biologically relevant signals. MW 4–5:15

ENAS 848, Soft Condensed Matter Physics
ENAS 850a/b and 851b/a/APHY 548a/b and 549b/a/PHYS 548a/b and 549b/a, Solid State Physics I and II  Paul Fleury, A. Douglas Stone
A two-term sequence covering the principles underlying the electrical, thermal, magnetic, and optical properties of solids, including crystal structures, phonons, energy bands, semiconductors, Fermi surfaces, magnetic resonance, phase transitions, and superconductivity. Fall: TTH 1–2:15; Spring: TTH 2:30–3:45

ENAS 866a, MOS Device Physics and Technology  Tso-Ping Ma
Topics include basic MOS device physics, science and technology of thermal SiO₂, interface properties of MOS structures, experimental techniques to probe MOS parameters, hot-carrier effects, radiation effects, channel mobility and carrier transport in MOS inversion layers, scaling of MOS devices, low-temperature properties of MOS devices, SOI device physics and technology, advanced gate dielectrics, MOS devices with wide-bandgap semiconductors, nonvolatile memory devices, ferroelectric memory devices, single-electron MOS transistors, and other MOS topics of current interest. T 3:30–5:20

ENAS 875au, Introduction to VLSI System Design  Richard Lethin
Chip design. Provides background in integrated devices, circuits, and digital subsystems needed for design and implementation of silicon logic chips. Historical context, scaling, technology projections, physical limits. CMOS fabrication overview, complementary logical circuits, design methodology, computer-aided design techniques, timing, and area estimation. Case studies of recent research and commercial chips. Objectives of the course are (1) to give students the ability to complete the course project (design of a digital CMOS subsystem chip through layout), and (2) to understand the directions that future chip technologies may take. Selected projects are fabricated and packaged for testing by students. Prerequisite: circuits at the level of introductory physics and computer programming. TH 1:30–3:20

ENAS 880a, Imaging Drugs in the Brain  Evan Morris, Kelly Cosgrove
Seminar course to explore the uses of PET, SPECT, and fMRI to study the mechanisms of action and long-term effects of drugs (legal and illegal) on brain function. Basic research is the main focus, augmented by two class periods allotted to uses of imaging in drug development by Pharma. Syllabus is comprised of review articles, book chapters, and journal articles. Some class periods begin with a short lecture to cover methodological concepts, followed by discussion of reading material. Topics include basic understanding of imaging technology (physics, biochemistry, and mathematics) as it relates to imaging of drugs, receptors, neurotransmitters; understanding the primary outcomes of imaging experiments; imaging experiment design; recent findings related to drug abuse; common neurophysiological pathways of addictive drugs (how to image reward); and uses of imaging in drug development (what do drug companies want to measure?). T 3:30–5:20

ENAS 902a, Linear Systems  A. Stephen Morse
Background linear algebra; finite-dimensional, linear-continuous, and discrete dynamical systems; state equations, pulse and impulse response matrices, weighting patterns, transfer matrices. Stability, Lyapunov’s equation, controllability, observability, system reduction, minimal realizations, equivalent systems, McMillan degree, Markov matrices. Recommended for all students interested in robotics, systems, and information sciences. MW 1–2:15
ENAS 912a, Biomedical Image Processing and Analysis James Duncan, Lawrence Staib
A study of the basic computational principles related to processing an analysis of biomedical images (e.g., magnetic resonance, computed X-ray tomography, fluorescence microscopy). Basic concepts and techniques related to discrete image representation, multidimensional frequency transforms, image enhancement/restoration, image segmentation, and image registration. TTH 9–10:15

ENAS 920b, Programming for Image Analysis Xenophon Papademetris
Topics include using scripting languages for visualization, introduction to scripting languages, in particular Tcl, introduction to the Visualization Toolkit (Tcl) and local extensions, designing graphical user interfaces using Tk, introduction to object-oriented programming (using [Incr Tcl]), using compiled languages to implement additional algorithms, introduction to C++ programming, extending VTK by implementing additional image processing algorithms, an overview of the Insight Toolkit (ITK), and advanced software engineering techniques. Prerequisite: ENAS 912a, or permission of the instructor. WF 2:30–3:45

ENAS 921a, Advanced Topics in Computer Engineering Staff
Review of current topics and principles of modern computing systems, including concepts from computer architecture, computer-aided design, reconfigurable computing, VLSI design and testing, as well as hardware security. Reading material is based on recent research papers and other similar sources. Laboratory work consists of the completion of a project using computer-aided design and test tools as well as reconfigurable or custom hardware design platforms. Prerequisite: permission of the instructor. M 2:30–4:20

ENAS 930b, Advanced Semiconductor Fundamentals Jung Han
Topics to include semiconductor physics, optical properties, electrical transport properties, thermal properties, and piezoelectric properties. HTBA

ENAS 936b, Systems and Control Kumpati Narendra
Design of feedback control systems with applications to engineering, biological, and economic systems. Topics include stat-space representation, stability, controllability, and observability of discrete-time systems; system identification; optimal control of systems with multiple outputs. TTH 11:35–12:50

ENAS 944a, Digital Communications Systems Staff
An introduction to the rapidly expanding field of mobile and fixed, voice and data communications systems. A review of analog and digital signals and their time and frequency domain representations. Topics include modulation methods, including amplitude; frequency and time division multiplexing for continuous and discrete/digital signals; an overview of modern voice and data communications networks; and an overview of information theory, including entropy, the quantification of information, data rates, coding, and compression. Examples and demonstrations are drawn from radio, telephone, television, computer, cellular, and satellite communications networks. TTH 1–2:15
ENAS 954b\textsuperscript{u}/STAT 664b\textsuperscript{u}, Information Theory \quad Mokshay Madiman
Foundations of information theory in communications, statistical inference, statistical mechanics, probability, and algorithmic complexity. Quantities of information and their properties: entropy, conditional entropy, divergence, redundancy, mutual information, channel capacity. Basic theorems of data compression, data summarization, and channel coding. Applications in statistics. TTH 4–5:15

ENAS 960a\textsuperscript{u}/CPSC 536a\textsuperscript{u}, Networked Embedded Systems and Sensor Networks
Andreas Savvides and staff
Introduction to the fundamental concepts of networked embedded systems and wireless sensor networks, presenting a cross-disciplinary approach to the design and implementation of smart wireless embedded systems. Topics include embedded systems programming concepts; low-power and power-aware design; radio technologies; communication protocols for ubiquitous computing systems; and mathematical foundations of sensor behavior. Laboratory work includes programming assignments on low-power wireless devices. HTBA

[ENAS 964b, Communication Networks]

ENAS 986b\textsuperscript{u}, Semiconductor Silicon Devices and Technology \quad Tso-Ping Ma
Introduction to integrated circuit technology, theory of solid state devices, and principles of device design and fabrication. Laboratory involves the fabrication and analysis of semiconductor devices, including Ohmic contacts, Schottky diodes, p-n junctions, MOS capacitors, MOSFETS, and integrated circuits. MW 9–10:15

ENAS 990a and b, Special Investigations \quad Faculty
Faculty-supervised individual projects with emphasis on research, laboratory, or theory. Students must define the scope of the proposed project with the faculty member who has agreed to act as supervisor, and submit a brief abstract to the director of graduate studies for approval.

ENAS 991b/MB&B 591b/MCDB 591b/PHYS 991b, Integrated Workshop
Lynne Regan, Eric Dufresne, Thierry Emonet, Paul Forscher, Simon Mochrie
This required course for students in IGPPEB involves hands-on laboratory modules with students working in pairs. A biology student is paired with a physics or engineering student; a computation/theory student is paired with an experimental student. The modules are devised so that a range of skills are acquired, and students learn from each other. HTBA
ENGLISH LANGUAGE AND LITERATURE

Linsly-Chittenden Hall, 203.432.2233
www.yale.edu/english
M.A., M.Phil., Ph.D.

Chair
Michael Warner

Smith

Assistant Professors  GerShun Avilez, Susan Chambers, Ian Cornelius, Paul Grimstad,
Wendy Lee, Justin Neuman, Catherine Nicholson, Shital Pravinchandra, Jessica
Pressman, Anthony Reed, Sam See, Brian Walsh, R. John Williams

Fields of Study

Fields include English language and literature from Old English to the present, American
literature, and Anglophone literature.

Special Admissions Requirements

Application should be accompanied by scores from the GRE and the GRE “Literature in
English” subject test, a personal statement of purpose, and a ten- to fifteen-page writing
sample.

Special Requirements for the Ph.D. Degree

In order to fulfill the basic requirements for the program, a student must:

1. Complete twelve courses—six courses with at least one grade of Honors and a
maximum of one grade of Pass by July 15 following the first year; at least twelve
courses with grades of Honors in at least four of these courses and not more than one
Pass by July 15 following the second year. One of these twelve courses must be The
Teaching of English (ENGL 990). Courses selected must include one medieval, one
early-modern, one eighteenth- and/or nineteenth-century, one twentieth- and/or
twenty-first-century.
2. Satisfy the language requirement in one of three ways by the end of the second year.

- **Two languages, by course and exam:** one language to be completed by passing an advanced literature course at Yale (graduate or upper-level undergraduate course taught in and requiring papers in the language in question) with a grade of Honors or High Pass; the other to be passed by departmental exam (reading knowledge with dictionary).

- **Two languages by exam:** strong reading knowledge of one language, as demonstrated by passing a departmental exam without use of a dictionary; reading knowledge of a second language, demonstrated by passing a departmental exam with dictionary.

- **Three languages by departmental exam or, in the case of an ancient language, by satisfactory completion of two terms of introductory Latin or Greek (GREK 110–111 or LATN 110–111).** Languages to be selected from the following: (a) Latin or Greek; (b) French or German; (c) one of the preceding languages or Biblical Hebrew, Italian, Russian, Spanish, or another language agreed upon by the director of graduate studies (DGS). Students specializing in periods after 1750 may, with the permission of the DGS, substitute a third language for selection (a). Two terms of Old English (or one term of Old English and one of the History of the Language) may be substituted for selection (c).

3. Pass the oral examination before or as early as possible in the fifth term of residence. The exam consists of questions on five topics, developed by the student in consultation with examiners and subject to approval by the director of graduate studies.

4. Submit a dissertation prospectus, normally by January 15 of the third year.

5. Teach a minimum of two terms.

Upon completion of all predissertation requirements, including the prospectus, students are admitted to candidacy for the Ph.D. Admission to candidacy must take place by the end of the third year of study.

**Combined Ph.D. Programs**

**ENGLISH AND AFRICAN AMERICAN STUDIES**

The Department of English Language and Literature also offers, in conjunction with the Department of African American Studies, a combined Ph.D. degree in English Language and Literature and African American Studies. For further details, see African American Studies.

**ENGLISH AND FILM STUDIES**

The Department of English Language and Literature also offers, in conjunction with the Film Studies Program, a combined Ph.D. degree in English Language and Literature and Film Studies. For further details, see Film Studies.

**ENGLISH AND RENAISSANCE STUDIES**

The Department of English Language and Literature also offers, in conjunction with the Renaissance Studies Program, a combined Ph.D. in English Language and Literature and Renaissance Studies. For further details, see Renaissance Studies.
Master’s Degrees

M.Phil. See Degree Requirements under Policies and Regulations. Additionally, students in English are eligible to pursue a supplemental M.Phil. degree in Medieval Studies. For further details, see Medieval Studies.

M.A. (en route to the Ph.D.) Students enrolled in the Ph.D. program may receive the M.A. upon completion of six courses with at least one grade of Honors and a maximum of one grade of Pass, and the passing of two of the languages by departmental examinations.

Terminal Master’s Degree Program Students enrolled in the master’s degree program must complete either seven term courses or six term courses and a special project within the English department (one or two of these courses may be taken in other departments with approval of the DGS). There must be at least one grade of Honors, and there may not be more than one grade of Pass. Students must also pass examinations in two languages, ancient or modern. Full-time students normally complete the program in one year.

Courses

ENGL 500a/LING 500a, Introduction to Old English Language and Literature
Traugott Lawler

ENGL 501b/LING 501b, Beowulf and the Northern Heroic Tradition
Roberta Frank
A close reading of the poem Beowulf, with some attention to shorter heroic poems. TH 1:30–3:20

ENGL 537b, The Gawain Poet
Jessica Brantley
The course offers a contextual study of four of the greatest (and most enigmatic) Middle English poems—Pearl, Patience, Cleanness, and Sir Gawain and the Green Knight. At its center is British Library MS Cotton Nero A.x, the single medieval book that contains them all. In addition to reading the poems closely in their manuscript context, we examine associated artworks, from the twelve illustrations in the Cotton MS that constitute a medieval reading of the poems, to St. Erkenwald, a poem preserved elsewhere that some argue was written by the same author. Finally, we think about the modern reception of the poems through a serious engagement with scholarly debate surrounding them, and also through comparative work with translations. T 1:30–3:20

ENGL 546a, Chaucer
Alastair Minnis
A study of The Book of the Duchess, The House of Fame, and The Legend of Good Women, in addition to a substantial selection of Canterbury Tales. These texts are related to the “discourses of dissent” current in Chaucer’s day, an age of extreme political, social, and intellectual turmoil. M 3:30–5:20
ENGL 589a/HIST 561a, Renaissance Ways with Words  Keith Wrightson, David Scott Kastan
The course explores the great variety of users and uses of early modern English, tracing a set of social, linguistic, and literary developments in English in the period 1500–1700. Each session focuses on a particular “genre,” understanding this in the widest sense: both familiar “literary” genres, such as ballads, plays, and prose fiction, and nonliterary genres, such as letters, court depositions and examinations, wills, and petitions. We look also at dictionaries and rhetorical manuals, all with the aim of understanding how the language was used and how its users understood it. A course that combines social history, literary criticism, and sociolinguistics (thinking, for example, about regional and class variation), the seminar provides an unusual window onto early modern England, giving students opportunities to develop or improve skills in researching the various available archives and a lens through which to understand the origins of the process by which English transformed itself from a literally insular language spoken perhaps by fewer than six million people in 1600 to the world language it is today. W 3:30–5:20

ENGL 608b, Shakespeare and the Early Modern Theatrical Event  Brian Walsh
The course contextualizes the plays of Shakespeare as products of the Elizabethan and Jacobean theater industry. We survey the conditions in which the plays were presented, with attention to playhouses, playing companies, audiences, props, lighting, acting techniques, and the full range of activities—music, dance, and other—that accompanied dramatic shows on a day-to-day basis. We examine how the form of the early modern theatrical event shaped the content that Shakespeare scrutinized in his plays, content such as politics, religion, gender and sexuality, romantic and erotic longing, Englishness, and historical consciousness. Course readings include period documents about the theater as well as a range of current work in theater history and performance theory. W 3:30–5:20

ENGL 672b/CPLT 672b, Milton  David Quint
A study of Milton’s poetry and some of his controversial prose. We investigate the relation of the poetry to Milton’s literary tradition and historical contexts, focusing on issues of genre and on the religious, social, and political forces that shaped Milton’s writing. TH 9:25–11:15

ENGL 735a, Age of Johnson  Jill Campbell
A study of important prose and verse of the second half of the eighteenth century with emphasis on the problematics of “self” and “other” and on the shifting place of the “feminine” in male and female discourse. The course concentrates on Johnson, Boswell, Charlotte Lennox (The Female Quixote), and Mary Wollstonecraft as prose writers, and on Collins, Gray, Smart, and Cowper as poets. Opportunity to explore developments in critical theory and political thought and relations between fiction and nonfiction. M 1:30–3:20

ENGL 802b, Victorian Prose and the Uses of Life Writing  Linda Peterson
A study of seminal nineteenth-century autobiographies and biographies, along with other prose that uses life writing as a form of history, argument, or example. Authors and texts include Thomas Carlyle (Sartor Resartus, On Heroes and Hero-Worship), Charlotte Brontë (Jane Eyre), Harriet Martineau (Autobiography), Elizabeth Gaskell (Life of

ENGL 803a, Dickens and Victorian Visual Culture  Janice Carlisle
Dickens’s fiction in relation to contemporary visual phenomena, including the ubiquity of Hogarth’s engravings, the work of Punch artists, magic-lantern shows, spectacles such as the Great Exhibition of 1851, and the Victorian holdings in the Yale Center for British Art. Fiction from Dickens’s early career (selections from Pickwick Papers; Oliver Twist), his middle years (Bleak House), and the last decade of his life (Great Expectations and The Mystery of Edwin Drood). F 9:25–11:15

ENGL 810b, Victorian Poetry  Leslie Brisman
The major Victorian poets, Tennyson and Browning, in the context of the Romanticism they inherit and transform. Significant attention to Barrett Browning’s Aurora Leigh, and some attention to Swinburne, the Rossettis, and Morris. MW 11:35–12:50

ENGL 845bu/AFAM 743b/AMST 654b, American Artists and the African American Book  Robert Stepto
The visual art, decoration, and illustration of African American books (prose and poetry) since 1900. Topics include book art of the Harlem Renaissance (with special attention to Aaron Douglas and Charles Cullen), art imported to book production (e.g., Archibald Motley’s paintings used as book art), children’s books (e.g., I Saw Your Face by Kwame Dawes with drawings by Tom Feelings; Ntozake Shange’s Ellington Was Not a Street, illus. by Kadir Nelson), photography and literature (e.g., Paul Laurence Dunbar’s Cabin and Field, with Hampton Institute photographs; Richard Wright’s 12 Million Black Voices). The seminar includes sessions at Beinecke Library and encourages research projects in the Beinecke’s holdings, especially the James Weldon Johnson collection. W 1:30–3:20

ENGL 851b/AMST 886b/CPLT 635b, American Literature: Genres, Media, Webs  Wai Chee Dimock
A survey of American literature as a multi-genre and cross-media field. The course addresses some of these issues: the movement from the linguistic medium to image, music, and theater; genealogies between poetry and prose; adaptations and rewritings from the nineteenth century to the twenty-first; the translational dynamics between the local and the global. We read Moby-Dick along with Agha Shahid Ali’s poems, Call Me Ishmael Tonight, and Frank Stella’s mixed-media installations; Whitman’s Leaves of Grass with Michael Cunningham’s Specimen Days and the songs of Kurt Weill, Vaughan Williams, and Ned Rorem; Henry James’s The Golden Bowl with the Merchant Ivory film; and Hawthorne’s The Scarlet Letter, and Faulkner’s Light in August and As I Lay Dying, with Suzan-Lori Parks’s The Red Letter Plays and Getting Mother’s Body. W 1:30–3:20

ENGL 868a/AMST 661a, Antebellum American Literature and Culture  Caleb Smith
The literature and culture of the United States in the antebellum period, roughly 1830–1861. Readings include literary works by Melville, Emerson, Hawthorne, Dickinson, Douglass, Thoreau, Whitman, and Poe, as well as important documents from the political, legal, and intellectual history of the age. A study of a single, transformative period,
the seminar is also designed to introduce students to the modern history of Americanist criticism, from F.O. Matthiessen’s *American Renaissance* (1941), through the various critiques of identity and ideology, to the historicism and renewed transnationalism of contemporary “New Americanists.” Special attention is paid to the problems of judgment and justice that have animated the critical debates. W 9:25–11:15

**ENGL 883a, Modernisms and World Crisis, 1890–1950** Joe Cleary
Drawing on recent scholarship on empire, postcolonial studies, and world literary systems, this seminar explores how some significant modernist texts engage with conceptions of European civilizational crisis, imperial collapse or decline, and a rapidly changing world order. Situating Euro-American modernist literary experiment in the context of a volatile world system in which several major metropolitan centers were jockeying for international power and cultural prestige, the seminar considers modernist responses to matters such as discourses of degeneration and primitivism, anxieties about Americanization and mass culture, cosmopolitanism and expatriatism, and shifting relationships between cultural centers and peripheries. TH 1:30–3:20

**ENGL 905b, Modern Pastoral** Susan Chambers
A study of modern poetry, and modernist culture in general, considered through the lens of the immediate prewar period in England. What elements of the Edwardian pastoral mode, with its emphasis on the bucolic, the traditional, the formal, and the modest, went forward into the modern period, and what was left behind? How do these literary values take their place alongside that other version of modernism that prioritizes the urban, the experimental, the formally free, and the audacious? Units may include Georgian poetry, Edwardian fiction, Frost in England, Yeats and folklore, imagism and its legacy, The poetry of the Great War, postwar escapism, and Hardy to Larkin. M 1:30–3:20

**ENGL 910a/CPLT 908a, James Joyce** Barry McCrea
This seminar is a close examination of the works of James Joyce and the critical debates surrounding them. Most of the seminar is devoted to the close reading of *Ulysses* and portions of *Finnegans Wake*. T 9:25–11:15

**ENGL 924a/AMST 849a, American Literary Production, 1945 to the Present** Amy Hungerford
The course surveys the conditions of cultural production and reception that shape American fiction since the end of World War II. We track both the history itself and the evolving critical approaches used to understand it. Topics include the New York Intellectuals; politics and the cultural turn from the 1960s through 1990s (focusing on the Black Arts Movement, feminist literature, and identity theory); literature and economic theory; reading practices and the rise of critical interest in them; the history of publishing; and globalizing American literature. Readings to include Bellow, Roth, Howe, McCarthy, Penn Warren, Mailer, Pynchon, Didion, Jong, Reed, Kelley, Morrison, DeLillo, Octavia Butler, and others. Critical and theoretical readings to include Trilling, Howe, McLuhan, Ohmann, Bourdieu, Guillory, Jameson, English, Michaels, Glass, McGurl, Farland, Ngai, Casanova, and others. TH 9:25–11:15
ENGL 941b/AFAM 751b, James Baldwin and the Politics of Form
Jacqueline Goldsby
In-depth examination of James Baldwin’s fictional canon, interrogating the reception of his late novels’ supposed “decline” against those works’ experiments in form(lessness).
W 9:25–11:15

ENGL 944a/AFAM 830a/AMST 656a, Canonizing African American Poetry
Elizabeth Alexander
African American poetry is under-studied, under-theorized, and under-archived. In this seminar we turn to the African American verse canon with a hand to edifying its scholarly apparatus. We ask questions about the politics of canon formation and anthologizing, as well as read relevant theory in the field. The first half of the course is devoted to the study and discussion of versions of this canon by examining critical editions that are variously exemplary: Gene Andrew Jarrett’s Paul Laurence Dunbar, Arnold Rampersad’s Langston Hughes, Verner Mitchell’s Helene Johnson, Rita Dove’s Melvin Tolson, various editions of Gwendolyn Brooks, and Kimberly Benston’s Amiri Baraka. We consider the myriad approaches to writing and publishing on Phillis Wheatley and interrogate the idea of “foremother.” We also consider the specific work of anthologizing such as Maureen Honey’s work on African American women poets and Aldon Neilson’s work on black experimentalism. For the latter half of the course we work archivally, at the Beinecke and elsewhere, on poets of their choosing in consultation with the instructor; possibilities include Fenton Johnson, Jean Toomer, Robert Hayden, Jay Wright, and Lucille Clifton. The final project is a complete critical edition of the work of a chosen poet—“lost” or “canonical”—or a blueprint for an anthology on some subset of African American poetry. T 9:25–11:15

ENGL 948bu/AFAM 588bu/AMST 710bu, Autobiography in America
Robert Stepto
At least a dozen North American autobiographies are studied, mostly from the “American Renaissance” to the present. Discussion of various autobiographical forms and strategies as well as of various experiences of American selfhood and citizenship. Slave narratives, spiritual autobiographies, immigrant narratives, autobiographies of childhood or adolescence, relations between autobiography and class, region, or occupation. M 1:30–3:20

ENGL 953b/AMST 682b/DRAM 376b, The American Avant-Garde
Marc Robinson
Topics include the Living Theater, Happenings, Cunningham/Cage, Open Theater, Judson Dance Theater, Grand Union, Bread and Puppet Theater, Ontological-Hysteric Theater, Theater of the Ridiculous, Meredith Monk, Robert Wilson, and the Wooster Group. TH 10–11:50

ENGL 954b, Virginia Woolf
Margaret Homans
A study of the major novels and other writings by Virginia Woolf, with additional readings in twentieth-century culture and politics and in Woolf biography and criticism. Focus on Woolf’s responses and contributions to literary and political movements of her day and on the contemporary and recent reception of her work. TTH 11:35–12:50
ENGL 965a, Modernist Remediations  Dean Irvine
This seminar investigates the digital humanities, its implementation of contemporary editorial theory and practice, and its transformation of the ways in which we read and reproduce the texts of literary modernism from Europe and North America. Readings interrogate a signal example of what Jay David Bolter and Richard Grusin call “remediation,” namely the digital transformation of print media that has radically changed the interpretation and dissemination of textual artifacts from the modernist period and its print cultures. Students receive training with tools created for semantic and structural markup, image annotation, collaborative editing, and information visualization, and employ them in the design and production of digital editions of modernist texts. M 9:25–11:15

ENGL 974a, Defenses of Poetry  Paul Fry

ENGL 990a, The Teaching of English  Langdon Hammer
An introduction to the teaching of literature and writing with attention to the history of the profession and current issues in higher education. Weekly seminars address a series of issues about teaching: guiding classroom discussion; introducing students to various literary genres; formulating aims and assignments; grading and commenting on written work; lecturing and serving as a teaching assistant; preparing syllabuses and lesson plans. W 1:30–3:20

ENGL 995a/b, Directed Reading  Staff
Designed to help fill gaps in students’ programs when there are corresponding gaps in the department’s offerings. By arrangement with faculty and with the approval of the DGS.

Professors  Serap Aksoy, Elizabeth Bradley, Michael Bracken, Kelly Brownell (Psychology), Richard Bucala (Medicine), Michael Cappello (Pediatrics), Elizabeth Claus, Paul Cleary, Erol Fikrig (Medicine), Durland Fish, Robert Heimer, Theodore Holford (on leave), Jeannette Ickovics, Edward Kaplan (School of Management), Harlan Krumholz (Medicine), Brian Leaderer, Robert Makuch, Lawrence Marks, Linda Mayes (Child Study Center), Susan Mayne, Diane McMahon-Pratt, I. George Miller (Pediatrics), A. David Paltiel, Peter Peduzzi, Rafael Pérez-Escamilla, Jeffrey Powell (Ecology & Evolutionary Biology), Harvey Risch, Robert Rosenheck (Psychiatry), Peter Salovey (Psychology), Mark Schlesinger, Jody Sindelar, Mary Tinetti (Medicine), Daniel Zelterman, Heping Zhang, Hongyu Zhao, Tongzhang Zheng

Associate Professors  Michelle Bell (Forestry & Environmental Studies), Susan Busch, Rani Desai (Psychiatry), David Fielin (Medicine), Alison Galvani (on leave), Yongtao Guan (on leave), Josephine Hoh, Melinda Irwin, Amy Justice (Medicine), Trace Kershaw (on leave), Albert Ko, Douglas Leslie (Psychiatry), Becca Levy, Haiqun Lin, Judith Lichtman, Xiaomei Ma (on leave), Melinda Pettigrew, Jennifer Prah Ruger, Nina Stachenfeld (Obstetrics, Gynecology & Reproductive Sciences), Christian Tschudi, Herbert Yu, Yong Zhu

Assistant Professors  Achyuta Adhvaryu, Andrew DeWan, Maria Diuk-Wasser, Adrienne Ettinger, Jason Fletcher, Jhumka Gupta, Tené Lewis, Shuangge Ma, Kathleen McCarty, Joan Monin, Ingrid Nembhard, Anita Wang, Yawei Zhang, Bingqing Zhou

Fields of Study

Programs of study are offered in the areas of Biostatistics, Chronic Disease Epidemiology, Environmental Health Sciences, Health Policy and Administration, and Epidemiology of Microbial Diseases (infectious disease epidemiology, vector-borne diseases, immunology, and parasitology). The Social and Behavioral Program (SBS), within the Chronic Disease Epidemiology division, offers students specialized instruction in the theory and methods of the social and behavioral sciences. All programs are under the faculty of the Department of Epidemiology and Public Health.
Special Admissions Requirements

Applicants should have a strong background in the biological and/or social sciences. Students pursuing a Biostatistics specialty should have a strong background in mathematics. The GRE General Test is required. The TOEFL is required of all applicants whose native language is not English. This requirement is waived only for applicants who will have received a baccalaureate degree, or its foreign equivalent, prior to matriculation at Yale, from a college or university where English is the primary language of instruction. If you do not qualify for a waiver but have taken the TOEFL within the last two years, you will need to have your TOEFL scores released to us (code 3987).

Academic Requirements

The normal requirement for the degree of Doctor of Philosophy can be up to six years of graduate study. The average time to completion for students in Epidemiology and Public Health is five years. Generally the first two years are devoted primarily to course work and rotations for students in some areas. All doctoral students are required to successfully complete a minimum of ten graduate-level courses and must satisfy the individual divisional requirements. Courses such as Dissertation Research, Preparing for Qualifying Exams, Research Ethics and Responsibilities, or Seminar do not count toward the course requirements. However, students must register for these “courses” in order for them to appear on the transcript.

All students must enroll in and complete training in Research Ethics and Responsibilities (EPH 600b). This course will introduce and prepare students for responsible conduct in research, including data acquisition and management, mentor/trainee responsibilities, publication practices and authorship standards, scientific misconduct, and conflict of interest. Research Ethics and Responsibilities will be offered annually and is graded Satisfactory/Unsatisfactory. Students must take this course prior to the end of the first year.

The Graduate School uses grades of Honors, High Pass, Pass, or Fail. Students are required to earn a grade of Honors in at least two full-term courses in the first two years, and are expected to achieve a High Pass average. (This applies to courses taken after matriculation in the Graduate School and during the nine-month academic year.) The Honors requirement must be met in courses other than those concerned exclusively with dissertation research and preparation. See Course and Honors Requirements for more details.

The special course requirements for each division are: Biostatistics, an average of three to four courses per term plus seminars and colloquia; Chronic Disease Epidemiology, an average of three to four courses per term plus seminars and colloquia; Environmental Health Sciences, an average of three to four courses per term plus seminars and colloquia; Epidemiology of Microbial Diseases, two years of course work, lab rotations, and seminars developed with a faculty adviser; Health Policy and Administration, an average of three to four courses per term plus seminars and colloquia.

Teaching is regarded as an integral aspect of the graduate training program. Doctoral students are required to satisfactorily complete four terms as Teaching Fellows (10 hours/week). These teaching experiences are typically completed during the second and third
Graduate School of Arts and Sciences

years of study. First-year students are encouraged to focus their efforts on course work and in most instances are not permitted to serve as Teaching Fellows. First-year students may be allowed to serve as Teaching Fellows if they have been awarded advanced standing. Advanced standing is available only to students who have completed previous graduate study at Yale (e.g., the M.P.H. program); see Transfer Credit and Advanced Standing. If a student has been awarded one year of advanced standing, he/she will be allowed to teach both fall and spring terms of the first year. If a student has been awarded one term of advanced standing, he/she will be allowed to teach only during the spring term of the first year. Students interested in serving as Teaching Fellows during their first year of doctoral study should submit a petition to the director of graduate studies (DGS) well before the start of the term in which they hope to participate in a course.

All doctoral students are required to complete 40 hours (four Level 2 assignments at 10 hours/week or an equivalent combination) as a Teaching Assistant. Graduate research assistantship opportunities may take the place of teaching in the third year of study. Furthermore, a waiver of 10 hours is possible if the student is working as a project assistant (generally no more than 10 hours per week and with prior approval of the DGS). By year four, all students are engaged in full-time research activities.

Special Requirements for the Ph.D. Degree

At the end of years one and two, advisers will be asked to complete a progress report for each student evaluating his/her academic progress and describing his/her readiness for teaching and/or conducting research. This is then discussed with the student and reviewed by the DGS. Students who have not progressed adequately will be asked to meet with the DGS to address the situation. Advisers of students in year three who have not been admitted to candidacy by May of that year will also be asked to complete a progress report. Once a student is admitted to candidacy, he/she is required by the Graduate School to complete an annual Dissertation Progress Report.

To be admitted to candidacy, students must: (1) satisfactorily complete the course requirements for their division as outlined in the most current School of Public Health Bulletin, achieving grades of Honors in at least two full-term courses and achieving an overall HP average; (2) obtain an average grade of High Pass on the qualifying examination; and (3) submit a dissertation prospectus. The qualifying examination must be taken by the end of the second full academic year. With the assistance of the faculty adviser, each student requests appropriate faculty members to join a dissertation advisory committee (DAC). The dissertation prospectus must be approved within a year of passing the qualifying examination.

The DAC reviews and approves the prospectus as developed by the student and recommends to the DGS and the Graduate Studies Executive Committee that the prospectus be approved. Each DAC is expected to meet as a group at least twice each year, and more frequently if necessary. The student schedules meetings of the DAC. The chair/adviser of the DAC produces a summary evaluation of progress and plans for the coming year. This document is to be distributed to each committee member for comments and signature. Each student and the DGS are to receive a copy of the signed document from the DAC chair/adviser.
After approval of the prospectus, the DAC reviews the progress of the dissertation research and decides when the dissertation is ready to be submitted to the readers. At that time the chair/adviser of the DAC submits its recommendation to the DGS and the Graduate Studies Executive Committee, and its recommendation of suitable readers. Doctoral dissertations originating in EPH must be presented in a public seminar. This presentation is scheduled after the submission of the dissertation to the readers and preferably prior to the receipt and consideration of the readers’ reports. At least one member of the DAC supervising the dissertation and at least one member of the Graduate Studies Executive Committee are required to attend the presentation.

Master’s Degrees (in Epidemiology and Public Health)

Terminal M.S. in EPH  The department offers a terminal master’s degree program leading to an M.S. in Epidemiology and Public Health in two specialty areas: Biostatistics (a two-year program) and Chronic Disease Epidemiology (a one-year program). All students must fulfill both the departmental and Graduate School requirements for a terminal M.S. degree.

Students must have an overall grade average of High Pass, including a grade of Honors in at least one full-term graduate course (for students enrolled in the one-year program in Chronic Disease Epidemiology) or in at least two full-term graduate courses (for students enrolled in the two-year program in Biostatistics). In order to maintain the minimum average of High Pass, each grade of Pass must be balanced by one grade of Honors. For more details, please see Course and Honors Requirements under Policies and Regulations.

A Biostatistics or Chronic Disease Epidemiology student who is withdrawing from the Ph.D. program, and has successfully completed all required course work for the terminal M.S. degree (described below), may apply and be recommended for the M.S. in EPH. In other divisions (Environmental Health Sciences, Epidemiology of Microbial Diseases, or Health Policy Administration) students must have successfully completed (prior to withdrawal) at least ten courses in the doctoral program and a capstone experience, achieving a minimum of one Honors grade and an overall HP average.

M.Phil. (en route to the Ph.D.)  Students who have completed all requirements for the Ph.D. except the dissertation may petition the Graduate School for the Master of Philosophy degree.

FIELDS OF STUDY

Terminal M.S. in EPH–Biostatistics

Faculty in the Biostatistics division of the Department of Epidemiology and Public Health offer a two-year terminal Master of Science degree. Fields include clinical trials, epidemiologic methodology, statistical genetics, and mathematical models for infectious diseases.

Requirements for M.S. in EPH–Biostatistics  Applicants should have a strong background in quantitative sciences such as mathematics. In addition, it is recommended that applicants have undergraduate course work in the biological and social sciences. At a minimum, applicants would have taken one year of calculus and a course in linear algebra prior to enrolling in this program.
The GRE General Test is required. The TOEFL is required of all applicants whose native language is not English. This requirement is waived only for applicants who will have received a baccalaureate degree, or its foreign equivalent, prior to matriculation at Yale, from a college or university where English is the primary language of instruction. If you do not qualify for a waiver but have taken the TOEFL within the last two years, you will need to have your TOEFL scores released to us (code 3987).

A minimum of twelve courses must be completed, and a grade of Honors achieved in at least two courses with an overall grade average of High Pass. An acceptable master’s thesis must be submitted.

Terminal M.S. in EPH–Chronic Disease Epidemiology
Faculty in the Chronic Disease Epidemiology division of the Department of Epidemiology and Public Health offer a one-year terminal Master of Science degree. This one-year program is designed for medical and health care professionals who seek the skills necessary to conduct epidemiological research in their professional practice.

Requirements for M.S. in EPH–Chronic Disease Epidemiology Applicants should have a basic understanding of quantitative science and statistics. It is recommended that candidates have strong science backgrounds and demonstrated competency in statistical analysis and logical thinking. Applicants from rigorous programs in the biological or social sciences will be given preference. At a minimum, applicants should have one year of course work in statistics or equivalent prior to enrolling in this program. Part-time enrollment is not encouraged.

Applicants must take the GRE General Test. Students whose native language is not English must take the TOEFL or IELTS examination.

A minimum of ten courses must be completed and a grade of Honors achieved in at least one course. It is expected that this program will be completed during a single academic year. Satisfactory completion of the capstone experience is required. Examples of a capstone experience are completion of an NIH-type grant application that is deemed reasonably competitive by a faculty member; completion of a manuscript that is suitable for submission for publication; completion of a systematic review deemed eligible for publication. Manuscripts and grant applications may be derived from any of the courses taken by the student.

M.D./Ph.D. Program Requirements for Epidemiology and Public Health
All M.D./Ph.D. students must meet with the DGS in Epidemiology and Public Health as soon as they affiliate with EPH. Students in this program are expected to meet the guidelines listed below in the timeframe outlined. The DGS must approve any variations to these requirements.

TEACHING
One term of teaching as a TA 2 (10 hours/week) is required. If a student has served as a teaching assistant elsewhere on campus, this experience may be counted toward the requirement. DGS approval is required to waive the teaching requirement on the basis of previous Yale teaching experience.
ROTATIONS/INTERNSHIPS
Students should do two four-week rotations/internships with potential advisers in EPH. These short-term research projects will be with a specific Principal Investigator and can be either in a lab, or field work, or analysis of an existing dataset. The purpose of these rotations/internships is to learn lab or field technique and to allow the student time to determine if the PI’s research interests are compatible with his/her research interests. These rotations/internships are usually done during the summer between the first and second years of medical school course work. In some cases, a student may need to defer this activity until the summer after the second year after taking certain courses and/or completing readings so that he/she possesses the background necessary for a successful rotation/internship.

REQUIRED COURSE WORK
M.D./Ph.D. students are generally expected to take the same courses as traditional Ph.D. students. Divisional requirements may vary; therefore students should confer with the DGS and their Ph.D. adviser.

TIMELINE FOR QUALIFYING EXAM
Students generally take medical school courses in years one and two, then EPH doctoral course work in years three and four. The qualifying exam is generally completed by the summer following the fourth year.

PROSPECTUS TIMELINE
Students are encouraged to develop their prospectus during their third and fourth years of study, while taking courses in EPH. Upon completion of the qualifying exam, students should focus entirely on completion of the prospectus, which should be submitted no later than six months after the completion of the qualifying exam.

Ph.D. or terminal M.S. degree program materials are available upon request to the Office of the Director of Graduate Studies (c/o M. Elliot), Epidemiology and Public Health, Yale University, PO Box 208034, New Haven CT 06520-8034; 203.785.6383; e-mail, melanie.elliot@yale.edu.

The European Studies Council formulates and implements new curricular and research programs to reflect current developments in Europe. The geographical scope of the council’s activities extends from Ireland to the lands of the former Soviet Union. Its concept of Europe transcends the conventional divisions into Western, Central, and Eastern Europe,
and includes the Balkans and Russia. In 2010 the U.S. Department of Education again designated the council a National Resource Center under its HEA Title VI program. Further information on the council and the Graduate Certificate of Concentration in European Studies is provided under Non-Degree-Granting Programs, Councils, and Research Institutes in this bulletin.

The council administers an M.A. program in European and Russian Studies. This M.A. program is unusual in its embrace of the entire spectrum of European nations and cultures. The requirements permit students to choose a particular national or thematic focus, geared to their individual interests and language skills, while requiring that they acquaint themselves with the traditions and issues associated with the other parts of Europe. Students specializing in Russia and Eastern Europe, for example, will concentrate their efforts in that area, but will also take courses that may concern Europe-wide problems or the countries of Central or Western Europe. In this way, the program translates the political realities and challenges of the post-Cold War era into a flexible and challenging academic opportunity.

**Fields of Study**

European languages and literatures; economics; history; political science; law; music; sociology and other social sciences.

**Special Requirements for the M.A. Degree**

When applying to the program, students will specify as an area of primary concentration either (1) Russia and Eastern Europe, or (2) Central and Western Europe. All students must complete sixteen term courses (or their equivalent) in the various fields related to European and Russian studies. Students are required to take at least one course in at least three of the four fields relevant to the program, specifically, history, literature, social sciences, and law (i.e., three courses altogether). For the purposes of this program, “history” includes history of art, history of science, and history of music. One of the sixteen term courses may be taken for audit. For students focusing on Russia and Eastern Europe, two of the sixteen required courses (excluding language courses) must concern the nations of Central and Western Europe. Conversely, for those focusing on Central and Western Europe, two courses must concern Russia and Eastern Europe. E&RS 900, Proseminar in European and Russian Studies, is required in addition to the sixteen courses and should be taken in the first year of the program. E&RS 900 is taken as Satisfactory/Unsatisfactory and may not be taken for audit.

For the purposes of this program, language courses in European languages count toward the sixteen required courses, even though they have undergraduate course numbers. If students take a course of language study to fulfill degree requirements, the language course may not be taken for audit. Students with previous language preparation may in certain cases receive documentation of their language proficiency on the basis of this work. By the time the degree is completed, all students must demonstrate L4 or better proficiency in two European languages besides English. Those wishing to focus on Russia and Eastern Europe will need to demonstrate knowledge of Russian or an Eastern European language; those focusing on Central and Western Europe will need
to demonstrate knowledge of one of the appropriate languages. In all cases, students are required to demonstrate proficiency in two European languages by the end of the third term at Yale. The only exception to this rule is completion of the appropriate full sequence of Yale language classes, certified by the Yale instructor or the director of graduate studies. Students who wish to take Yale department examinations in French, German, Italian, Spanish, or other West European languages should register for a complete examination (with reading, oral, and grammar portions) with the appropriate Yale department. Students with Russian competence must receive the grade of 1+ or higher on the ACTFL/ETS Rating Scale as administered by the Slavic Languages and Literatures department at Yale, including reading, oral, and grammar portions. Students with competence in an East European language (such as Polish, Czech, Ukrainian, Hungarian, and others by special arrangement) or other European languages must take Yale department-administered examinations.

Through agreements the MacMillan Center has negotiated with the professional schools, CES now offers joint master’s degrees with the School of Forestry & Environmental Studies, the Law School, the School of Management, and the School of Public Health. Application for admission must be made both to the Graduate School and to the appropriate professional school, with notation made on each application that this is to be considered for the joint-degree program. Contact the European Studies director of graduate studies (DGS) for up-to-date information.

The Master’s Thesis

A master’s thesis is required. The master’s thesis is based on research in a topic approved by the DGS and advised by a faculty member with specialized competence in the chosen topic. M.A. students must register for E&RS 950, which may count toward the sixteen required courses. E&RS 950 may not be taken for audit. Students may register for an additional independent study to prepare topics and begin research. The master’s thesis must be prepared according to department guidelines and is due in two copies on an early-April date in the student’s second year as specified by the department.

Program materials are available upon request to the European Studies Council, Yale University, PO Box 208206, New Haven CT 06520-8206.

Courses

E&RS 642a, Topics in European and Russian Studies: Children at War in Twentieth-Century Europe  Laura Downs

Each year this course focuses on the specialty of the visiting professor from the École des Hautes Études en Sciences Sociales (France). Children occupy a particular place in the social imaginaries and social realities of Europe’s “total wars.” Treated variously as the cause for which we are fighting, a population that must be protected and sheltered, but also as a key home-front population that must be mobilized ideologically and spiritually in the national cause, children were also the figures around which novel forms of social protection were constructed in the desire to reconstruct—physically and psychologically—both childhood and family life in the grim aftermath of Europe’s total wars. This course takes as its point of departure some of the recent literature surrounding children
and war in both eastern and western Europe. From there, participants are encouraged to construct research projects of their own based on accessible documents. T 2:30–4:30

[E&RS 652b/INRL 549b, The European Union's Contemporary Challenges]

**E&RS 900a, Proseminar in European and Russian Studies**  Faculty
An interdisciplinary seminar designed to provide broad exposure to key topics in modern European studies. It introduces the various topics, issues, research, and faculty encompassed by the European Studies Council. Special attention is given to Eastern and Western Europe as well as the humanities and social science disciplines. Seminar meetings are combined with the Modern Europe Colloquia and feature speakers from the Yale faculty and other academic institutions. This seminar is required for first-year European and Russian Studies M.A. students but is open to all graduate and professional students. W 1:30–3:20

**E&RS 940a or b, Independent Study**
By arrangement with faculty.

**E&RS 950a or b, Master’s Thesis**
By arrangement with faculty.

Director of Graduate Studies
Gerald Shadel (BML 371, 203.785.2475, gerald.shadel@yale.edu)

Professors  Richard Bucala (Internal Medicine), David Chhieng, Young Choi, José Costa (Internal Medicine/Oncology), S. Evans Downing (Emeritus), Gary Friedlaender (Orthopaedics), Earl Glusac (Dermatology), Robert Homer, S. David Hudnall, Michael Kashgarian (Emeritus, Molecular, Cellular & Developmental Biology), Jung Kim (Emeritus), Diane Krause (Laboratory Medicine), Paul Lizardi, Joseph Madri, Nita Jane Mailhe (Obstetrics, Gynecology & Reproductive Sciences), Vincent Marchesi (Director, Boyer Center for Molecular Medicine; Cell Biology), Jennifer McNiff (Dermatology), Mark Mooseker (Molecular, Cellular & Developmental Biology), Jon Morrow (Molecular, Cellular & Developmental Biology), Jordan Pober (Immunobiology; Dermatology), David Rimm, Marie Robert (Internal Medicine), John Rose, Gerald Shadel, John Sinard (Ophthalmology), Jeffrey Sklar (Laboratory Medicine), David Stern, Fattaneh Tavassoli (Obstetrics, Gynecology & Reproductive Sciences), A. Brian West, Raymond Yesner (Emeritus)

Associate Professors  Marcus Bosenberg (Dermatology), Demetrios Braddock, Janet Brandsma (Comparative Medicine), Shawn Cowper (Dermatology), G. Kenneth Haines III, Liming Hao, Pei Hui, Dhanpat Jain, Yuval Kluger, Christine Ko (Dermatology), Diane Kowalski (Surgery/Otolaryngology), Michael Krauthammer, Gary Kupfer (Pediatrics), Themis Kyriakides, Rossitia Lazova (Dermatology), Robert Means, Wang Min, Gilbert Moeckel, Vinita Parkash, Manju Prasad, Michael Robek, Antonio Subtil-Deoliveira (Dermatology), Alexander Vortmeyer

Assistant Professors  Adebowale Adenrian, Veerle Bossuyt, Natalia Buza, Guoping Cai, Paul Cohen, Akosua Domfeh, Angela Galan, Malini Harigopal, Michael Hurwitz (Yale Cancer Center; Medicine), Anita Huttner, Barton Kenney, Sihem Khelifa, Steven Kleinsein, Angelique Levi, Kisha Mitchell, Don Nguyen, Marguerite Pinto, Katerina Politi (Yale Cancer Center), Ozlen Saglam, Constantine Theoharis, Narendra Wajapeye, Zenta Walther, Qin Yan

Fields of Study

Fields include molecular and cellular basis of diseases, including cancer; biology, biochemistry, genetics, and pathology of molecules, cells, tissues, and organ systems, including plasma membrane dynamics, mitochondrial dysfunction, signal transduction, and response to stimuli of connective tissue; assembly of viruses and their interactions with animal cells; somatic cell genetics and birth defects; biology of endothelial cells; and computational and high-throughput approaches to understanding disease pathology.
Special Admissions Requirements

A strong background in basic sciences is recommended for applicants to the program, including biology, chemistry through organic and physical chemistry, mathematics through calculus, biochemistry, genetics, or immunology. GRE General Test or MCAT is required.

To enter the Ph.D. program, students apply to an interest-based track, usually the Pharmacological Sciences and Molecular Medicine track, within the interdepartmental graduate program in the Biological and Biomedical Sciences (see the entry on Biological and Biomedical Sciences, under Non-Degree-Granting Programs, Councils, and Research Institutes).

Special Requirements for the Ph.D. Degree

Course requirements  Experimental Pathology students must take PATH 650b, Cellular and Molecular Biology of Cancer, and PATH 690a, Molecular Mechanisms of Disease. Three additional courses are required, which can include courses in biochemistry, genetics, immunology, cell biology, and pathology, to be chosen in consultation with the director of graduate studies (DGS), according to the student’s background and interest. All requirements of the Graduate School of Arts and Sciences, including the Honors requirement, must be met. In year one, students must also take a seminar course (one in each term) and do three laboratory rotations. Prior to registering for a second year of study, students must successfully complete MB&B 676b, Responsible Conduct of Research.

Qualifying examination  The qualifying examination of the Experimental Pathology graduate program comprises (1) two literature reading periods, (2) a research proposal broadly based on the proposed thesis research project, and (3) an oral exam in which the student is examined by the qualifying exam committee on the research proposal, the reading periods, and general knowledge of experimental pathology. This exam is usually taken in the second term of the second year and is described below.

1. The qualifying examination committee consisting of three faculty members will be chosen to examine the student. At least one of the committee members must have a primary appointment in the Department of Pathology and the thesis adviser is not on the exam committee. The student will read with two committee members and write the research proposal with initial guidance from the third committee member. At the oral exam itself one member of the committee will be selected as the chairperson responsible for documenting the results of the exam for submission to the DGS. Members of the exam committee should have expertise in areas chosen for reading. The exam committee and topics must be approved by the DGS.

2. Prior to the examination, the student will prepare a research proposal of approximately ten pages in the general area of the thesis project. The proposal will consist of the following sections: Specific Aims, Background and Significance, Experimental Plan, and Literature Cited. The proposal should describe three years of work in the topic area by a single postdoctoral fellow (i.e., similar to an NIH postdoctoral fellowship application).
3. All oral exams will follow the same general format. The oral examination will focus on the student’s ability to present and defend the research proposal. The student should come to the exam with a short (30–40 minute) presentation of the thesis-related proposal with visual aids. The actual presentation will take longer since exam committee faculty will interrupt with questions. The committee can also ask questions on topics covered during the reading period and general topics in experimental pathology that will have been covered in courses. The final evaluation by the exam committee faculty takes into account the student’s performance on the examination and performance in lab (based on the adviser’s evaluation, solicited by the DGS). A written summary of the qualifying examination evaluation will be prepared by the examination committee chairperson and submitted to the DGS. If the student does not pass the exam, the committee has the option of recommending an additional course of reading and/or written work. The DGS has final discretion in approving or modifying the recommendations of the committee.

Prospectus Upon successful completion of the qualifying examination, the student will constitute a dissertation committee including at minimum three members in addition to the dissertation/thesis adviser. At least two of the committee members must be Pathology department faculty. The membership of the committee must be approved by the DGS. The student will prepare a written thesis prospectus, consisting of a summary of background information in the field of interest, the specific questions to be answered, a rationale for choosing those questions, and a research plan for addressing those questions. Upon completing the course requirement with at least two terms of Honors, passing the qualifying examination, and submitting a thesis prospectus, students will be admitted to candidacy. This should take place by the end of the third year, and preferably in the second year. Students must then submit a written thesis describing the research and present a thesis research seminar.

Additional requirements There is no foreign language requirement. In accordance with the BBS program, Ph.D. students are expected to participate in two terms (or the equivalent) of teaching.

M.D./Ph.D. Students

M.D./Ph.D. students must satisfy the requirements listed above for the Ph.D. with the following modifications: Two laboratory rotations are required. Assisting in teaching of one course is required. With the approval of the DGS and associate dean, some courses taken toward the M.D. degree can be counted toward the five courses required for the Ph.D., although PATH 650b, Cellular and Molecular Biology of Cancer, and PATH 690a, Molecular Mechanisms of Disease, are still required.

Master’s Degrees

M.S. Students are not admitted for this degree. On a case-by-case basis and subject to faculty vote, students who are not continuing for the Ph.D. may be considered for this degree if they have successfully completed one year of the doctoral program and received a grade of Honors in at least two core courses (i.e., excluding rotations and seminar courses).
**M.Phil.** See Degree Requirements under Policies and Regulations. Awarded only to students who are continuing for the Ph.D. Students are not admitted for this degree.

Program materials are available upon request to the Director of Graduate Studies, Department of Experimental Pathology, Yale University, PO Box 208023, New Haven CT 06520-8023; Web site, www.yalepath.org/edu/ExPath/index.htm.

**Courses**

Note: Pathology 600, 616, 617, and 618b are primarily geared toward medical students, but may be taken by graduate students with the permission of the director of medical studies.

**PATH 600, Pathological Basis of Human Disease**  David Rimm and staff

Fundamental principles underlying the pathological alterations in function and structure that constitute the reaction of the organism to injury. Pathology of diseases involving special organs and systems. Correlation of the clinical and anatomical manifestations is emphasized. For EPH graduate students and MSTP students who are required to take PATH 100 for graduate credit.

**PATH 616, Autopsy Pathology**  John Sinard and staff

Participation in the autopsy service with members of the house staff in Pathology. Participation in autopsies and the presentation and review of the clinical and anatomical findings of postmortem examinations with senior members of the department. Opportunities exist for correlation studies with previous biopsies, and clinical investigative and cell biologic techniques in relation to necropsy material. Six weeks minimum, full-time. Enrollment limited to two students.

**PATH 617, Anatomic Pathology**  A. Brian West and staff

The department offers an elective to medical students in the third and fourth years that provides a broad experience in general diagnostic techniques. Students have opportunities to participate in surgical pathology, cytology (including fine-needle aspiration), and autopsy. A daily diagnostic conference is scheduled for both residents and students, and an additional two hours of conference are provided each week exclusively for the students. In addition to direct responsibilities in the handling of the cases, the student has the opportunity to apply the special techniques of electron microscopy, immunohistochemistry, and flow cytometry. A minimum of four weeks is suggested for this elective. Five students are accommodated every four to six weeks.

**PATH 618b, Clinical and Pathologic Correlates in Renal Disease**  Michael Kashgarian

A series of clinical pathologic conferences designed to illustrate clinicopathologic correlates in renal disease. At each session, one student acts as clinician and another as pathologist in the evaluation and discussion of case material from autopsies or renal biopsies. Discussions are informal, but require preparation in advance and all participants are expected to contribute in each session. One two-hour session per week for six weeks. Given once in spring term. Limited to twelve students.
PATH 620a and b, LaboratoryRotations in Experimental Pathology Gerald Shadel
Laboratory rotations for first-year graduate students.

PATH 630b/ENAS 535b, Biomaterial-Tissue Interactions Themis Kyriakides
The course addresses the interactions between tissues and biomaterials, with an emphasis on the importance of molecular- and cellular-level events in dictating the performance and longevity of clinically relevant devices. In addition, specific areas such as biomaterials for tissue engineering and the importance of stem/progenitor cells, and biomaterial-mediated gene and drug delivery are addressed. TTH 9–10:15

PATH 650b, Cellular and Molecular Biology of Cancer David Stern, Qin Yan
A comprehensive survey of cancer research from the cellular to the clinical level. The relation of cancer to intracellular and intercellular regulation of cell proliferation is emphasized, as are animal models for cancer research. Background in molecular genetics and cell biology is assumed. Open to advanced undergraduates with permission of the organizers. MWF 1–2

PATH 670b, Biological Mechanisms of Reaction to Injury Joseph Madri, Michael Kashgarian, Jon Morrow, Jeffrey Sklar
An introduction to human biology and disease as a manifestation of reaction to injury. Topics include organ structure and function, cell injury, circulatory and inflammatory responses, disordered physiology, and neoplasia.

PATH 680a, Seminar in Pharmacology and Molecular Medicine
Readings and discussion in topics relevant to cell biology, signal transduction, immunology, and molecular medicine. The overall theme of the papers discussed is pathogenesis of human infectious disease. The class emphasizes analysis of primary research literature and development of presentation skills. M 3–5

PATH 690a, Molecular Mechanisms of Disease Michael Robek
This course covers aspects of the fundamental molecular and cellular mechanisms underlying various human diseases. Many of the disorders discussed represent major forms of infectious, degenerative, vascular, neoplastic, and inflammatory disease. Additionally, certain rarer diseases that illustrate good models for investigation and/or application of basic biologic principles are covered in the course. The objective is to highlight advances in experimental and molecular medicine as they relate to understanding the pathogenesis of disease and the formulation of therapies. TTH 2–3:30

Fields of Study

Film Studies is an interdisciplinary field drawing on the study of the history of art, national cultures and literatures, literary theory, philosophy, anthropology, and other areas. To study film at Yale, every doctoral student must be accepted into a combined program involving another discipline. Film Studies offers a combined Ph.D. with African American Studies, American Studies, Comparative Literature, East Asian Languages and Literatures, English, French, German, History of Art, Italian, and Slavic Languages and Literatures. In addition to acquiring a firm grounding in the methods and core material of both film studies and another discipline, the candidate is advised to coordinate a plan of study involving comprehensive knowledge of one or more areas of specialization. Such areas include:

1. Historiography, including archival history, history of technology, silent film.
3. European film: British-Irish, French, German, Italian, Slavic.
5. World film: global image exchange; cinema in Asia, Latin America, and Africa.
6. Documentary as an aesthetic, cultural, and ideological practice.

Through course work, examinations, and the dissertation, the candidate links a film specialty with material and methods coming from the participating discipline. Directors of graduate studies from both programs monitor the candidate’s plans and progress.
Special Admissions Requirements

Combined-program applicants should familiarize themselves fully not only with the Film Studies entrance requirements but with those of the other graduate program as well. Since combined-program applicants must be admitted by both Film Studies and the other department, candidates should make sure that the material they submit with the application clearly addresses the requirements and mission of both graduate programs.

The application for Film Studies is administered by the Office of Graduate Admissions. All applications are to be completed online and can be accessed by visiting its Web site at www.yale.edu/graduateschool/admissions. In the “Programs of Study” section of the application, the applicant should do the following: choose Film Studies in Step 1 and the combined department in Step 3. All applications including writing samples are read by the admissions committees in both units.

Special Requirements for the Ph.D. Degree

Every student selected for the combined program is subject to the supervision of the Film Studies program and the relevant participating department. A written protocol between each department and Film Studies outlines the requirements and schedule to be borne in mind as a plan of study is worked out in consultation with the director of graduate studies of Film Studies and the director of graduate studies of the participating department. In all cases, students are required to take two core seminars in Film Studies (FILM 601 and FILM 603) as well as at least four additional Film Studies seminars. Course requirements vary for participating departments but comprise a total of sixteen courses (fourteen for American Studies, fifteen for History of Art). A student advances to candidacy by completing a qualifying examination and a dissertation prospectus.

1. Qualifying examinations follow the regulations of the participating department with at least one member of the Film Studies Graduate Committee participating.

2. The dissertation prospectus is presented to a faculty committee involving at least one member of the other department who is not a member of the Film Studies Graduate Committee and may include the entire faculty of that other department. The prospectus is also circulated to the entire Film Studies Graduate Committee for their information and ratification. Once the student and dissertation adviser deem the dissertation finished or near completion, a defense shall be held involving at least one member of the Film Studies Graduate Committee and one member of the participating department who is not on that committee.

The faculty in Film Studies considers participation in the Teaching Fellows Program to be essential to the professional preparation of graduate students. Students normally teach in years three and four. Every student is expected to serve two assignments as a teaching fellow, preferably in film courses such as Introduction to Film; Film Theory; World Cinema.

Master’s Degree

M.Phil.  See Degree Requirements under Policies and Regulations.
Courses

FILM 601a/CPLT 917a, Films and Their Study  Dudley Andrew
The course sets in place some undergirding for graduate students who want to anchor their film interest to something like the “professional discourse” of this field. A coordinated set of topics in film theory is interrupted first by the often discordant voice of history and second by the obtuseness of the films examined each week. As the title of the seminar is meant to convey, films themselves take the lead in our discussions. T 1:30–3:20, screenings SU 7

FILM 682a/HSAR 709a, Theories of the Studio: Arts, Media, Altman  J. D. Connor
Using the work of Robert Altman as a spine, the course explores debates over the nature of the studio in arts (painting, dance, theater, surgery) and media (radio, film, television). While we concentrate on concomitant transformations in American studios and the Hollywood studio system of the 1960s and ’70s, students pursue work in the places and periods of their interest. Readings from Buren, Christensen, Cole & Pardo, Fried, Kolker, Moorefield, Nauman, and Smithson. Films include M*A*S*H, Nashville, 3 Women, Secret Honor, The Player, and The Company. T 9:25–11:15

FILM 725a, World Documentary  Charles Musser
A survey of international documentaries that have emerged since the end of the Cold War. The new political alignments, moving image technologies, and exhibition practices that have made possible a new phase in documentary practice. Filmmakers include Wu Wenguang, Agnès Varda, Michael Apted, Anand Patwardhan, and Jean-Marie Teno. TTH 11:35–12:50, screenings W 7

FILM 733b/AMST 834b, Documentary and the Environment  Charles Musser
The environmental documentary has emerged as one of cinema’s most vital genres of the last ten years (in documentary its only rivals are probably those concerned with the Second Gulf War). As the world’s environment faces a growing crisis, documentary has come to serve as a key means to draw public attention to specific issues. This course combines screenings with readings on documentary such as Bill Nichols’s important book Representing Reality. Often films have book tie-ins, and we consider how they complement each other and work together to maximize the impact of their message. Readings also focus on news items, debates, Web sites, and other media forms that are employed in conjunction with the films. T 1:30–3:20, screenings M 7

FILM 735a and 736b/AMST 832a and 833b, Documentary Film Workshop  Charles Musser
A yearlong workshop designed primarily for Film Studies majors making documentaries, and for graduate students making a documentary to fulfill the methods and final project components of the M.A. in Public Humanities. W 12:30–3:20, screenings T 7

FILM 753a/CHNS 540a/RUSS 677a, Cinemas of Late and Post-Socialist China and Russia  John MacKay
Close, contextualized, comparative analysis and interpretation of major Chinese and Russian films, fiction and nonfiction, from the mid-1980s to the present. We examine the films in terms of their formal structures and their reception, in relation to the
Filmmakers to be studied include Wang Bing, Sergei Dvortsevoy, Aleksei German, Chen Kaige, Alexander Sokurov, and Jia Zhangke. Open to both undergraduate and graduate students; no knowledge of Russian or Chinese required. M 3:30–5:20, screenings W 7

**FILM 765au/GMAN 592au, Fassbinder, Herzog, Haneke**  Brigitte Peucker

Close study of the films of R. W. Fassbinder, Werner Herzog, and Michael Haneke. Topics include questions of authorship (citation as the production of identity; the performance of authenticity; the manipulation of the spectator); cultural politics; cinematic modernism; and intermediality (film’s relation to painting, theater, digital media). Readings in English; conducted in English. T 3:30–5:20, screenings SU 7

**FILM 769b/CPLT 957b, World Cinema and Continental Philosophy**  Thomas Elsaesser

Examining the recent but still expanding interest of major contemporary philosophers in the cinema and the corresponding interest of film scholars in contemporary philosophy, the seminar focuses on the reasons for this turn, the key philosophical questions raised, and what each side can expect to gain from the other. After a flashback to philosophers who in the earlier part of the twentieth century found the cinema a challenge worth their attention (from Henri Bergson via Jean Paul Sartre to Stanley Cavell), the seminar traces the reverberations of Gilles Deleuze’s “Cinema” books across continental philosophy, often setting the terms for the debate even among those who dissent from his thought or choose a quite different path. Philosophers discussed include Jean-François Lyotard, Jacques Rancière, Alain Badiou, and Jean-Luc Nancy, but also others, such as Slavoj Žižek, Martin Seel, Torben Grodal, Lorenz Engell, and Josef Früchtl, who have found cinema/philosophy a fertile reference point for reviving questions of politics, the subject, and aesthetics. W 1:30–3:20

**FILM 807a/HSAR 715a, Film in the Post-Medium Condition**  Francesco Casetti

Is there still room for film in the new media landscape sketched out by the digital revolution? What kind of place should film occupy, if room exists? This seminar retraces the path through which cinema has been assigned a specificity among arts and media, while the boundaries between it and its neighbors have been blurred. From this starting point, the seminar takes into account the effects of media convergence on the current ideas of cinema. We analyze the migration of cinema to new devices, such as home theater, iPhone, computer, but also to new environments, whether urban or domestic spaces. In the same vein, we retrace the new formats of film and the new forms of the spectatorship molded by this “relocation” of cinema. What emerges is a different concept of specificity, which pertains not solely to the apparatus but also to the spectator’s experience, and whose definition is based on social habits, forms of textuality, collective narratives (among them, theories), and technological environments. W 9:25–11:15

**FILM 810b/HSAR 705b, Beyond Repetition: Saturation, Location, and Trajectory in Art and Media**  Francesco Casetti, David Joselit

Repetition is one of the most common and yet misunderstood strategies of modernist art and cinema. As Gilles Deleuze insists in his important book of 1968, *Difference*
and Repetition, the goal of repetition is usually not the multiplication of the same but the marking of difference. This class is devoted to tracking those image strategies—saturation, location, and trajectory—by which the “same” visual content accomplishes different effects through its circulation. The term saturation suggests quantity within circulation; location suggests the question of circulatory spaces; and trajectory indicates the movement, or performance, of individual images. We seek to establish an aesthetic theory of circulation through the careful development of these terms. Each week philosophical and aesthetic readings are assigned, as well as study of works of art and cinema.

W 9:25–11:15

FILM 830b/ITAL 590b/CLPT 916b, Literature into Film  Millicent Marcus
The course undertakes a series of case studies of Italian films adapted from literary works, identifying the challenges that specific texts present to filmmakers in the process of transforming verbal fictions into audiovisual spectacles. Although we consider a variety of critical approaches to comparative study of the two arts (semiotic, psychoanalytic, ideological, feminist, etc.), we do not develop a universal theory of adaptation, but instead analyze each case in *sui generis* terms, making allowances for the specificity of the textual sources, and for the “authorial” freedom that must be granted filmmakers in their cinematic rewriting of them. Among our twelve case studies, reading and screening include the Tavianis’ *Kaos* and Pirandello’s short stories; Moravia’s and De Sica’s *Two Women*; Sophocles’ and Pasolini’s *Oedipus Rex*; Boito’s and Visconti’s *Senso*; Ledda’s and the Tavianis’ *Padre padrone*; Bassani’s and De Sica’s *Garden of the Finzi-Continis*; and Mann’s and Visconti’s *Death in Venice*. W 3:30–5:20, screenings SU 7:30

FILM 870b/U/JAPN 574b/U, The Japanese Period Film  Aaron Gerow
An exploration of Japan’s most popular category of cinema: the period or samurai film. Survey of transformations from the silent era to the present day, focusing on the relationship with Japan’s cultural history and world cinema, as well as with related media such as literature, theater, television, and comic books. Particular focus on the problem of genre in Japanese film. Directors discussed include Kurosawa, Ito, Itami, Yamanaka, Miike, and Yamada. TTH 2:30–3:45

FILM 880a/JAPN 872a, Theories of Subculture and Popular Culture in Japan  Aaron Gerow
Exploration of postwar theories of popular culture and subculture in Japan, particularly focusing on the intellectual debates over television and new media. M 1:30–3:20

FORESTRY & ENVIRONMENTAL STUDIES

Kroon Hall, 203.432.5100
http://environment.yale.edu
M.S., M.Phil., Ph.D.

Dean
Sir Peter Crane

Director of Doctoral Studies
David Skelly (208 Kroon, 203.432.3603, david.skelly@yale.edu)

Professors  Mark Ashton (on leave [F]), Michele Bell, Goubyrie Benoit, Graeme Berlyn, Benjamin Cashore (on leave [F]), Peter Crane, Michael Dove (on leave [Sp]), Daniel Esty (on leave), Thomas Graedel (on leave [F]), Timothy Gregoire (on leave [F]), Xuhui Lee, Robert Mendelsohn, Chadwick Oliver, Peter Raymond, James Saiers, Oswald Schmitz, David Skelly, John Wargo

Associate Professors  Marian Chertow, Matthew Kotchen (on leave), Karen Seto, Julie Zimmerman

Assistant Professors  Robert Bailis, Mark Bradford (on leave), Alexander Felson (on leave [Sp]), Karen Hébert (on leave), Nadine Unger

Non-Ladder Faculty  Paul Anastas, Shimon Anisfeld, Richard Burroughs, Ann Camp, Carol Carpenter, Susan Clark, Amity Doolittle, Paul Draghi, Helmut Ernstberger, Gordon Geballe, Bradford Gentry, John Grim, Arnulf Grubler, Anthony Leiserowitz, Reid Lifset, Florencia Montagnini, Rajendra Pachauri, Jonathan Reuning-Scherer, Mary Evelyn Tucker

Courtesy Joint Appointments  Michelle Addington, Ruth Blake, Kelly Brownell, Adalgisa (Gisela) Caccone, David Cromwell, Michael Donoghue, Menachem Elimelech, Robert Evenson, Durland Fish, Willis Jenkins, Brian Leaderer, William Mitch, William Nordhaus, Jeffrey Powell, Richard Prum, James Scott, Kalyanakrishnan Sivaramakrishnan, Ronald Smith, Ernesto Zedillo

Fields of Study

Fields include agroforestry; biodiversity conservation; biostatistics and biometry; climate science; community ecology; ecosystems ecology; ecosystems management; environmental anthropology; environmental biophysics and meteorology; environmental
chemistry; environmental ethics; environmental governance; environmental health risk assessment; environmental history; environmental law and politics; environmental and resource policy; forest ecology; hydrology; industrial ecology; industrial environmental management; plant physiology and anatomy; pollution management; population ecology; resource economics; energy and the environment, silviculture, social ecology; stand development, tropical ecology and conservation; urban planning; water resource management; environmental management and social ecology in developing countries; urban ecology.

Special Admissions Requirements

Applicants should hold a bachelor’s or master’s degree in a field related to natural resources, such as forestry, or in a relevant discipline of the natural or social sciences, such as biology, chemistry, economics, or mathematics. The GRE General Test is required but Subject Tests are optional.

Special Requirements for the Ph.D. Degree

Students are required to take the Doctoral Student Seminar before the second term of their program. Aside from this requirement, there is no required curriculum of credit courses and no formal language requirement. Courses of study are individually designated through consultation between degree candidates and their advisers and dissertation committees. The amount of course work required will depend on the previous training of the student, but the normal requirement for a student with no previous graduate training is three or four courses per term for four terms. The program of each student will be evaluated at the end of the first year of residence. At least two term grades of Honors are required in the first two years of study; however, it is anticipated that grades of Honors or High Pass will be achieved in two-thirds of all courses taken. A written and oral qualifying examination is required upon completion of the course requirements. Students are expected to take the examination by the end of their second year, although this can be extended to the third year in cases with appropriate extenuating circumstances. At the time of the qualifying examination, the student must present a prospectus of the research work proposed for the dissertation. Successful completion of the qualifying examination and submission of the prospectus will result in admission to candidacy. Upon completion of the dissertation, the candidate must make unbound copies of the dissertation available to the faculty and appear for an oral examination at a time and place designated by the director of doctoral studies. Copies of the approved dissertation must be submitted to the Graduate School. Depending upon the nature of the dissertation topic, completion of the Ph.D. degree normally requires four years.

Teaching and research experiences are regarded as integral parts of the graduate training program in Forestry & Environmental Studies. All students are required to serve as teaching fellows (10 hours per week) for four terms. The nature of the teaching assignment is determined in cooperation with the student’s major adviser and the director of doctoral studies.

In addition to all other requirements, students must successfully complete E&EB 545b, Problems in Bioethics/Ethics Course for Advanced Topics, prior to the end of their first year of study.
Master’s Degrees

M.Phil. (en route to the Ph.D.) Students may petition for this degree after they have passed the qualifying exam and advanced to candidacy. Applications for this master’s degree are not accepted.

M.S. (en route to the Ph.D.) This degree is normally granted only to students who are withdrawing from the Ph.D. program. Applications for this master’s degree are not accepted. Requirements that must be met for award of the M.S. are (1) successful completion of two years of course work in residence with two grades of Honors; (2) a written prospectus; (3) fulfillment of one term of the teaching requirement.

For information on the terminal master’s degrees offered by the Yale School of Forestry & Environmental Studies (the Master of Forestry, Master of Forest Science, Master of Environmental Management, and Master of Environmental Science degrees), visit the School’s Web site, www.yale.edu/environment, or contact Admissions Director, Yale School of Forestry & Environmental Studies, 195 Prospect Street, New Haven CT 06511.

Courses

For course descriptions, see the School of Forestry & Environmental Studies bulletin, available online in both html and pdf versions at www.yale.edu/bulletin.

Foundations

F&ES 500a/E&EB 665a, Landscape Ecology
F&ES 505a, Economics of the Environment
F&ES 510a, Introduction to Statistics in the Environmental Sciences
F&ES 515a, Physical Sciences for Environmental Management
F&ES 520a/ANTH 581a, Society and Environment: Introduction to Theory and Method
[F&ES 525a, The Politics and Practice of Environmental and Resource Policy]
F&ES 530a, Ecosystems and Landscapes

Integrative Frameworks

F&ES 600b, Linkages of Sustainability
F&ES 610a, Science to Solutions: How Should We Manage Water?
[F&ES 620b, Integrative Assessment]
F&ES 630b, Global Resources, International Resource Exchanges, and the Environment

Capstone

F&ES 950a, Life Cycle Assessment Practicum
[F&ES 951b, Managing the Global Carbon Cycle]
F&ES 952b, Property Rights and Natural Resource Management
F&ES 953a,b, Business and the Environment Consulting Clinic
F&ES 954a, Management Plans for Protected Areas
F&ES 955a,b, Seminar in Research Analysis, Writing, and Communication
F&ES 956b, A Clinical View of Land Use Planning and Policy
[F&ES 963b, Emerging Markets for Ecosystem Services]
[F&ES 964b, Large-Scale Conservation: Integrating Science, Management, and Policy]
F&ES 965b/ANTH 598b, Advanced Readings: Social Science of Development and Conservation
F&ES 966b, The Entrepreneurial Approach to Environmental Problem Solving

ECOLOGY

**Ecosystem Ecology**
F&ES 730a, Ecosystem Ecology
[F&ES 731b, Tropical Field Botany]
F&ES 732a, Tropical Forest Ecology: The Basis for Conservation and Management
F&ES 733b, Ecosystem Pattern and Process
F&ES 734a, Biological Oceanography
[F&ES 735a, Biogeography and Conservation]

**Wildlife Ecology and Conservation Biology**
[F&ES 736b, Ecology Seminar]
[F&ES 738a/E&EB 670a, Aquatic Ecology]
F&ES 739b, Species and Ecosystem Conservation: An Interdisciplinary Approach
F&ES 740b, Dynamics of Ecological Systems

**Environmental Education and Communication**
F&ES 745a, Environmental Writing
F&ES 746a, Archetypes and the Environment
F&ES 747a, Global Communication Skills
F&ES 900a, Doctoral Student Seminar

FORESTRY

**Forest Biology**
F&ES 650b, Fire: Science and Policy
[F&ES 651b, Forest Ecosystem Health]
F&ES 652b, Seminar in Ecological Restoration
[F&ES 653b, Agroforestry Systems: Productivity, Environmental Services, and Rural Development]
F&ES 654a/MCDB 660a, Structure, Function, and Development of Trees and Other Vascular Plants
F&ES 655b, Research Methods of the Anatomy and Physiology of Trees
F&ES 656b, Physiology of Trees and Forests
F&ES 671a, Natural History and Taxonomy of Trees

**Forest Management**
F&ES 657a, Managing Resources
F&ES 659b, Principles in Applied Ecology: The Practice of Silviculture
F&ES 660a, Forest Dynamics: Growth and Development of Forest Stands
[F&ES 661b, Analysis of Silvicultural Problems]
F&ES 663b, Invasive Species: Ecology, Policy, and Management
F&ES 667b, Rapid Assessments in Forest Conservation
F&ES 668b, Field Trips in Forest Resource Management and Silviculture
F&ES 669b, Forest Management Operations for Professional Foresters
F&ES 670b, Southern Forest and Forestry Field Trip
F&ES 680a, Forest and Ecosystem Finance

PHYSICAL SCIENCES

Atmospheric Sciences
F&ES 700b, Alpine, Arctic, and Boreal Ecosystems Seminar
[F&ES 702b, Climate Change Seminar]
F&ES 703b, Climate and Life
F&ES 704a, A Biological Perspective of Global Change
[F&ES 705b, Climate and Air Pollution]
F&ES 722b, Boundary Layer Meteorology

Environmental Chemistry
[F&ES 706b, Organic Pollutants in the Environment]
F&ES 707b/ENAS 640b, Aquatic Chemistry
F&ES 708a, Biogeochemistry and Pollution
F&ES 743a, Environmental Chemical Analysis
F&ES 773a, Air Pollution
F&ES 777b, Water Quality Control

Soil Science
[F&ES 709a, Soil Science]
[F&ES 723b, Seminar in Soil Conservation and Management]

Water Resources
F&ES 710b, Coastal Governance
F&ES 712b, Water Resource Management
[F&ES 713a, Coastal Ecosystems: Natural Processes and Anthropogenic Impacts]
[F&ES 714b, Environmental Hydrology]
F&ES 719a, River Processes and Restoration
[F&ES 724b, Watershed Cycles and Processes]
F&ES 729b, Caribbean Coastal Development: Cesium and CZM

QUANTITATIVE AND RESEARCH METHODS
F&ES 550a/760a, Natural Science Research Methods
F&ES 551a, Social Science Qualitative Research Methods
F&ES 552b, Master’s Student Research Colloquium
F&ES 725a, Remote Sensing of Land Cover and Land Use Change
F&ES 726b/ARCG 762b/EMD 548b/G&G 562b, Remote Sensing: Observing the Earth from Space
[F&ES 751a, Sampling Methodology and Practice]
F&ES 753b, Regression Modeling of Ecological and Environmental Data
F&ES 755b, Modeling Geographic Space
F&ES 756a, Modeling Geographic Objects
[F&ES 757b, Statistical Design of Experiments]
F&ES 758b, Multivariate Statistical Analysis in the Environmental Sciences
[F&ES 780a, Seminar in Forest Inventory]
F&ES 781b, Applied Spatial Statistics
F&ES 912a,b, Preparation for Research

SOCIAL SCIENCES

Economics
F&ES 802b, Valuing the Environment
[F&ES 803b, Green Markets: Voluntary and Information Approaches to Environmental Management]
[F&ES 804a, Economics of Natural Resource Management]
F&ES 806b, Economics of Pollution Management
F&ES 890a/MGT 820a, Energy Markets Strategy
[F&ES 905b, Doctoral Seminar in Environmental Economics]

Environmental Policy
F&ES 807a/MGT 688a, Environmental Management and Strategy
F&ES 814a, Energy Systems Analysis
[F&ES 815a, The New Corporate Social Responsibility: Public Problems, Private Solutions, and Strategic Responses]
F&ES 818a, Energy Technology Innovation
F&ES 819b, Strategies for Land Conservation
F&ES 820a, Land Use Law and Environmental Planning
F&ES 821b, Private Investment and the Environment: Legal Foundations and Tools
F&ES 824a/LAW 21033, Environmental Law and Policy
F&ES 825a, International Environmental Law
F&ES 826a, Foundations of Natural Resource Policy and Management
F&ES 828b, Comparative Environmental Law in Global Legal Systems
F&ES 829b, International Environmental Policy and Governance
F&ES 832a/MGT 618a, Entrepreneurial Business Planning
F&ES 834a,b/LAW 20316,21321, Environmental Protection Clinic
F&ES 835a, Seminar on Land Use Planning
F&ES 837b, Seminar on Leadership in Natural Resources and the Environment
F&ES 841a, Green Energy Policy
F&ES 843b/AMST 839b/HIST 743b/HSHM 744b, Readings in Environmental History
F&ES 849b, Natural Resource Policy Practicum
F&ES 850a, International Organizations and Conferences
F&ES 851a,b, Environmental Diplomacy Practicum
[F&ES 853a, Capitalism: Success, Crisis, and Reform]
F&ES 860b, Understanding Environmental Campaigns and Policy Making: Strategies and Tactics
F&ES 866b/LAW 21566, The Law of Climate Change
F&ES 895a/MGT 684a, Management and the Environment: Issues and Topics

Social and Political Ecology
[F&ES 77ob/MCDB 861b], Global Problems of Population Growth]
F&ES 827b, Contemporary Environmental Challenges in Africa
F&ES 831b, Society and Natural Resources
F&ES 836a/ANTH 541a/HIST 965a/PLSC 779a, Agrarian Societies: Culture, Society, History, and Development
[F&ES 838a, Producing and Consuming Nature]
F&ES 839a/ANTH 597a, Social Science of Development and Conservation
F&ES 845b, Energy Issues in Developing Countries
F&ES 846b, Topics in Environmental Justice
F&ES 848a, Climate Change: Impacts, Adaptation, and Mitigation
F&ES 854b, Institutions and the Environment
F&ES 856b, Ethics and Ecology in the Practice of Biodiversity Conservation
[F&ES 857b, Urbanization, Global Change, and Sustainability]
[F&ES 858a/REL 768a, Environmental Theologies]
[F&ES 859b, American Environmental History and Values]
[F&ES 861a, American Indian Religions and Ecology]
[F&ES 862b, Advanced Seminar in Social and Political Dimensions of Climate Change]
[F&ES 869b/ANTH 572b, Disaster, Degradation, Dystopia: Social Science Approaches to Environmental Perturbation and Change]
[F&ES 872a, Seminar on World Religions and Ecology]
F&ES 873a, Global Environmental History
F&ES 875a, Global Ethics and Climate Change
F&ES 876a/REL 915a/RLST 875a, Indigenous Religions and Ecology
F&ES 877a/ANTH 561a, Anthropology of the Global Economy for Development and Conservation
F&ES 879b/REL 917b/RLST 872b, World Religions and Ecology: Asian Religions
F&ES 882b/ANTH 582b, The Black Box of Implementation: Households, Communities, Gender
F&ES 892a/ARCH 4021a, Introduction to Planning and Development

HEALTH AND ENVIRONMENT
F&ES 891a/EMD 572a, Ecoepidemiology
F&ES 893b/EHS 511b, Applied Risk Assessment
F&ES 896a/EHS 503a, Introduction to Toxicology
F&ES 897b/EHS 508b, Assessing Exposures to Environmental Stressors
F&ES 898b/EHS 583b, The Environment and Human Health
F&ES 899b, Sustainable Development in Post-Disaster Context: Haiti

INDUSTRIAL ECOLOGY, ENVIRONMENTAL PLANNING, AND TECHNOLOGY
F&ES 883b, Advanced Industrial Ecology Seminar: The Energy Industry
F&ES 884b/ENAS 645b, Industrial Ecology
F&ES 885b/ENAS 660b, Green Engineering and Sustainability
[F&ES 886a, Greening Business Operations]
F&ES 888a, Ecological Urban Design
FRENCH

82-90 Wall Street, 3d floor, 203.432.4900
www.yale.edu/french
M.A., M.Phil., Ph.D.

Chair
Thomas Kavanagh

Director of Graduate Studies
Maurice Samuels (82-90 Wall St., Rm. 325, 203.432.5046)

Professors  Dudley Andrew (Film Studies), R. Howard Bloch, Edwin Duval,
Marie-Hélène Girard (Visiting), Alice Kaplan, Thomas Kavanagh, John Merriman
(History), Christopher L. Miller, Maurice Samuels

Assistant Professors  Christopher Semk, Edwige Tamalet Talbayev, Charles Walton
(History), Yue Zhuo

Fields of Study
Fields include French literature, criticism, theory, and culture from the early Middle
Ages to the present, and the French-language literatures of Africa, the Caribbean, and
the Maghreb.

Special Admissions Requirements
A thorough command of French is expected, as well as a good preparation in all fields
of French literature. A strong background in at least one other foreign language is also
expected. Applicants should submit a twenty-page writing sample in French. This can
consist of one twenty-page paper or several shorter papers that total twenty pages.

Special Requirements for the Ph.D. Degree
(1) Candidates must demonstrate a reading knowledge of Latin and a second language
by passing department-administered examinations, Yale undergraduate courses, or Yale
Summer Language Institute courses with at least a B or High Pass grade. Students must
fulfill the Latin requirement before the beginning of their third term of study. The other
language requirement must be satisfied before the beginning of the fifth term, and before
the oral qualifying examination. (2) During the first two years of study, students normally
take sixteen term courses. These must include Old French and at least two graduate-level
term courses outside the department. They may include one term of a language course
(Latin or other) taken as a means of fulfilling one of the language requirements, and as
many as four graduate-level term courses outside the department. A grade of Honors
must be obtained in at least four of the sixteen courses, two or more of which must be in
courses offered by the department. (3) A qualifying oral examination takes place during
the sixth term. The examination is designed to demonstrate students’ mastery of the
French language, their knowledge and command of selected topics in literature, and their
capacity to present and discuss texts and issues. (4) After having successfully passed the
qualifying oral examination, students are required to submit a dissertation prospectus for approval, normally no later than the end of the term following the oral examination.

In order to be admitted to candidacy for the Ph.D., students must complete all predisser
tation requirements, including the prospectus. Students must be admitted to candi
dacy by the end of the seventh term.

Teaching is considered an integral part of the preparation for the Ph.D. degree, and all students are required to teach for at least one year. Opportunities to teach undergraduate courses normally become available to candidates in their third year, after consideration of the needs of the department and of the students’ capacity both to teach and to fulfill their final requirements. Prior to teaching, students take a language-teaching methodology course.

**Combined Ph.D. Program**

The French department also offers two combined Ph.D.s: one in French and African American Studies (in conjunction with the Department of African American Studies), and one in French and Film Studies (in conjunction with the Film Studies Program). Students in both of these combined degree programs are subject to all the requirements for a Ph.D. in French. In addition, they must fulfill certain requirements particular to the conjoined program.

The combined Ph.D. in French and African American Studies is most appropriate for students who intend to concentrate in and write a dissertation on the literature of the francophone Caribbean. Students must complete two core courses in African American Studies and a third-year colloquium. For this degree, the French department’s requirement for a language in addition to Latin will normally be filled by demonstrating reading competence in a Creole language of the Caribbean or in Spanish. The students’ oral examinations normally include two topics of African American content. The dissertation prospectus must be approved by the director of graduate studies both in the French department and in African American Studies, and final approval of the dissertation must come from both departments. For further details see African American Studies.

For students in the combined Ph.D. program in French and Film Studies, the oral examination will normally include one topic on film theory and one on French film. Both the dissertation prospectus and the final dissertation must be approved by the French department and the program in Film Studies. In addition, Film Studies requires a dis
tertation defense. For further details see Film Studies.

**Master’s Degrees**

**M.Phil.** See Degree Requirements under Policies and Regulations. Additionally, stu
dents in French are eligible to pursue a supplemental M.Phil. degree in Medieval Studies. For further details, see Medieval Studies.

**M.A. (en route to the Ph.D.)** Students enrolled in the Ph.D. program may petition for the M.A. degree after a minimum of one year of study in residence, upon completion of the Latin requirement, and of eight courses, of which at least six are in French. Two grades of Honors in French graduate courses are required.
Program materials are available upon request to the Administrative Assistant to the Director of Graduate Studies, Department of French, Yale University, PO Box 208251, New Haven CT 06520-8251.

Courses

FREN 610a, Old French  R. Howard Bloch
An introduction to the Old French language, medieval book culture, and the prose romance via study of manuscript Yale Beinecke 229, The Death of King Arthur, along with a book of grammar and an Old French dictionary. Primary and secondary material are available on a DVD. Work consists of a weekly in-class translation and a final exam comprised of a sight translation passage and a familiar passage from Yale 229, and a take-home essay. No previous study of Old French necessary, although a knowledge of French is essential. In English. W 3:30–5:20

FREN 813a, Renaissance of the Middle Ages  R. Howard Bloch
A study of the major literary, intellectual, and visual forms of the High Middle Ages. Works and topics include The Song of Roland and the epic; the troubadours, troubadouresses, and courtly love; the Bayeux Tapestry and the Norman Conquest of 1066; Abbot Suger and the gothic cathedral; Chrétien de Troyes (Erec and Enide), Marie de France (Lais) and chivalric romance; Abelard and the university; Guibert de Nogent and autobiography; Saint Bernard and monasticism; the fabliaux, money, and the rise of towns. The lyrics of William IX, Bernard de Ventadorn, Comtesse de Die, etc.; Suger’s Administration, Abelard’s History of My Misfortunes, Guibert de Nogent’s Life, Bernard’s sermons, assorted fabliaux. In English. TTH 11:35–12:50

FREN 825b, Voix de Femme/Voix d’Homme  Edwin Duval
A study of fifteenth- and sixteenth-century poetry and prose in which speaking voices are strongly gendered feminine (or masculine). Primary emphasis is on “voice” as a rhetorical effect, considered independently of the sex of the author—that is, as a poetic or dramatic persona fashioned to represent a particular type or character, governed by principles of decorum and shaped by various traditions and conventions. But does the sex of the author have anything to do with the gender of the speaker? Works include Christine de Pizan, Cent ballades d’amant et de dame; Alain Chartier, La belle dame sans merci; Hélisenne de Crenne, Les Angoisses douloureuses qui procèdent d’Amours; Jeanne Flore, Contes amoureux; Marguerite de Navarre, Le miroir de l’ame pecheresse and Les prisons; Bertrand de La Borderie, L’Amie de Court; Antoine Héroët, La Parfaicte Amye; Maurice Scève, Délie; Louise Labé, Œuvres; as well as influential models like Ovid’s Amores and Heroïdes, the Song of Songs, and a selection of medieval chansons. In French. F 1:30–3:20

FREN 860b, Spectacles of Violence  Christopher Semk
The course investigates the various manifestations of violence in seventeenth-century literature, focusing primarily, though not exclusively, on visual violence. We ask ourselves how practices of violence (political, religious, criminal, etc.) were represented and ethically and politically evaluated. Topics include judicial violence ("la question," public execution), religious violence (martyrdom, sacrifice, redemptive suffering), licit versus illicit violence, decorum and the aestheticizing of violence. Primary readings include

**FREN 864a, Roman et société au dix-huitième siècle**  Thomas Kavanagh
This seminar focuses on the growing importance and diverse forms of the novel in eighteenth-century France. Placing the novel in its historical, cultural, and literary contexts, our goal is to understand this form as a genre whose development both reflects and consolidates the emerging forms of consciousness and sociability that distinguish the Enlightenment. Works by Prévost, Crébillon, La Morlière, Graffigny, Rousseau, Laclos, Charrière, Diderot, and Duras. In French. M 9:25–11:15

**FREN 898a/CPLT 898a, Fin-de-siècle France**  Maurice Samuels
The course examines major French literary and artistic movements of the last decades of the nineteenth century (Naturalism, Decadence, Symbolism) in their cultural context. Weekly reading assignments pair literary texts with contemporary theoretical/medical/political discourse on such topics as disease, crime, sex, poverty, colonialism, nationalism, and technology. Literary authors include Barbey, Mallarmé, Maupassant, Rachiilde, Villiers, and Zola. Theorists include Bergson, Freud, Krafft-Ebing, Le Bon, Nordau, Renan, and Simmel. Some attention also paid to the visual arts. Prerequisite: reading knowledge of French. TH 9:25–11:15

**FREN 919b, Romans et récits au vingtième siècle**  Yue Zhuo
This seminar explores one of the important traits that characterize twentieth-century fiction, namely, the tension between narration and its internal resistance, often expressed through a formal difficulty or impossibility in telling a story. Reading some of the classical works whose narrative forms directly address this question, we examine in particular the genre distinction between what Maurice Blanchot calls the “novel” and the “récit,” the temporal “navigation” associated with the former and the timeless “original experience” associated with the latter. Primary readings from Proust, Gide, Colette, Sartre, Blanchot, Beckett, Queneau, Duras, and Quignard are accompanied by theoretical perspectives from some of the same, as well as from Lukács, Valéry, Barthes, and Sarraute. Prerequisite: reading knowledge of French. W 1:30–3:20

**FREN 931a, National Identity: Theories, Polemics, Foundational Texts**  Alice Kaplan
The goal of the seminar is to understand the notion of a singular or exceptional French identity: as myth, as narrative, and as a structure of thought. Marcel Detienne’s essay “L’identité nationale, une énigme” gives us comparative working definitions of a number of key terms: nation, nationality, identity, citizenship, “national feeling” (le sentiment national), la patrie, communautarisme, to be explored through school books, fictions, and films, from early Third Republican classics to the recent polemics that have flourished under the Sarkozy presidency. In English. TH 7–8:50

**FREN 943b/AFAM 851b/CPLT 989b, Creole Identities and Fictions**  Christopher L. Miller
Focusing on the French and English Caribbean, the course analyzes the quintessential but ambiguous American condition: that of the “Creole.” Encompassing all non-native
cultures, this term is inseparable from issues of race and slavery. Readings of historical and literary texts: Moreau de Saint-Méry, Bernardin de Saint-Pierre, Madame de Staël, Charlotte Brontë (and reinventions of Wuthering Heights by Jean Rhys and Maryse Condé), the Créolistes of Martinique. Attention to Louisiana and to the Haitian Revolution. Prerequisite: reading knowledge of French. TH 1:30–3:20
GENETICS

Director of Graduate Studies
Charles Radding (TAC S-317, 203.737.2942, charles.radding@yale.edu)

Professors
Allen Bale, Susan Baserga (Molecular Biophysics & Biochemistry), Douglas Brash (Therapeutic Radiology), W. Roy Breg, Jr. (Emeritus), Lynn Cooley, Daniel DiMaio, Patrick Gallagher (Pediatrics), Joel Gelernter (Psychiatry; Neurobiology), Peter Glazer (Therapeutic Radiology), Jeffrey Gruen (Pediatrics), Murat Gunel (Neurosurgery), Arthur Horwich, Kenneth Kidd, Richard Lifton (Internal Medicine/Nephrology; Molecular Biophysics & Biochemistry), Haifan Lin (Cell Biology), Maurice Mahoney, Charles Radding (Emeritus), Shirley Roeder (Molecular, Cellular & Developmental Biology), Margretta Seashore, Carolyn Slayman, Stefan Somlo (Internal Medicine/Nephrology), Joann Sweasy (Therapeutic Radiology), Peter Tattersall (Laboratory Medicine), Sherman Weissman, Tian Xu, Hongyu Zhao (Epidemiology & Public Health; Biostatistics)

Associate Professors
Martina Brueckner (Pediatrics/Cardiology), Kei-Hoi Cheung (Medical Informatics), Judy Cho (Internal Medicine), Michael Nitabach (Cellular & Molecular Physiology), Valerie Reinke, Gerald Shadel (Pathology), Matthew State (Child Study Center), Zhaoxia Sun

Assistant Professors
Antonio Giraldez, Valentina Greco, Mark Hammarlund, Natalia Ivanova, Mustafa Khokha (Pediatrics), Tae Hoon Kim, Peining Li, Janghoo Lim, Jun Lu, James Noonan, In-Hyun Park, Scott Weatherbee, Andrew Xiao, Hui Zhang

Fields of Study

**Special Admissions Requirements**

The department welcomes applicants who have a bachelor’s or master’s degree in biology, chemistry, or a related field, with experience (from course work and/or research) in the field of genetics. GRE General Test scores are required. A pertinent Subject Test in Biochemistry and Molecular Biology, Biology, or Chemistry is recommended.

To enter the Ph.D. program, students apply to the Molecular Cell Biology, Genetics, and Development (MCGD) track within the interdepartmental graduate program in the Biological and Biomedical Sciences (BBS).

**Special Requirements for the Ph.D. Degree**

The Ph.D. program in Genetics is designed to provide the student with a broad background in general genetics and the opportunity to conduct original research in a specific area of genetics. The student is expected to acquire a broad understanding of genetics, spanning knowledge of at least three basic areas of genetics, which include molecular, cellular, organismal, and population genetics. Normally this requirement is accomplished through the satisfactory completion of formal courses, many of which cover more than one of these areas. Students are required to pass at least six graduate-level courses that are taken for a grade. Advanced graduate study becomes increasingly focused on the successful completion of original research and the preparation of a written dissertation under the direct supervision of a faculty adviser along with the guidance of a thesis committee.

A qualifying examination is given during the second year of study. This examination consists of a period of directed reading with the faculty followed by the submission of two written proposals and an oral examination. Following the completion of course work and the qualifying examination, the student submits a dissertation prospectus and is admitted to candidacy for the Ph.D. degree. There is no language requirement. An important aspect of graduate training in genetics is the acquisition of communication and teaching skills. Students participate in presentation seminars and two terms (or the equivalent) of teaching. Teaching activities are drawn from a diverse menu of lecture, laboratory, and seminar courses given at the undergraduate, graduate, and medical school levels. Students are not expected to teach during their first year. In addition to all other requirements, students must successfully complete GENE 901b, First-Year Introduction to Research—Ethics: Scientific Integrity in Biomedical Research, prior to the end of their first year of study.

**Honors Requirement**

Students must meet the Graduate School’s Honors requirement by the end of the fourth term of full-time study.

**M.D./Ph.D. Students**

M.D./Ph.D. students affiliate with the Department of Genetics graduate program via a different route than other incoming graduate students in the department, resulting in some modification of the academic requirements for the Ph.D. portion of the M.D./Ph.D. degree. Typically, one or more research rotations is done during the first two years of medical school (in many cases, the first rotation is done during the summer between
years one and two). No set number of research rotations is required. M.D./Ph.D. students officially affiliate with the Department of Genetics after selecting a thesis adviser and consulting with the DGS. M.D./Ph.D. students interested in Genetics are required to consult with the DGS prior to formal affiliation to determine an appropriate set of courses tailored to the student’s background and interests.

The courses, rotations, and teaching requirements for M.D./Ph.D. students entering the Genetics graduate program (see below) are modified from the normal requirements for Ph.D. students. Besides the modifications in these three requirements, M.D./Ph.D. students in the Department of Genetics are subject to all of the same requirements as the other graduate students in the department.

Courses Four graduate-level courses taken for a grade are required (two Yale graduate-level courses taken for a grade during medical school may be counted toward this requirement at the discretion of the DGS). Course work is aimed at providing a firm basis in genetics and in cellular molecular mechanisms, with graduate-level proficiency in genetics, cell biology, and biochemistry.

Required courses: In addition to the four graduate-level courses, all M.D./Ph.D. students must take: Basic Concepts of Genetic Analysis (GENE 625a); Graduate Student Seminar: Critical Analysis and Presentation of Scientific Literature (2 terms; GENE 675a and b, graded Sat/Unsat); Ethics: Scientific Integrity in Biomedical Research (as part of GENE 901b, graded Sat/Unsat).

Recommended courses: Advanced Eukaryotic Molecular Biology (GENE 743b); Biochemical and Biophysical Approaches in Molecular and Cellular Biology (MCDB 630b); Molecules to Systems (CBIO 502); Molecular and Cellular Basis of Human Disease (CBIO 601).

Electives: Other courses may be taken in a wide variety of fields relevant to the biological and biomedical sciences.

Laboratory rotations One or more rotations are necessary to identify a thesis adviser. No set number of research rotations is required.

Teaching One term of teaching is required. Previous teaching while enrolled at the Yale School of Medicine may count toward this requirement at the discretion of the DGS.

Qualifying exam M.D./Ph.D. students take their qualifying exam in the term following the completion of their course work. The structure of the qualifying exam is identical to that for other Ph.D. students in Genetics. Students read with three faculty members for five weeks, one of whom supervises the reading on the thesis research topic, but who is not the thesis adviser. The following two weeks are devoted to writing two research proposals, one on the student’s thesis research. An oral exam follows in the eighth week.

Prospectus M.D./Ph.D. students submit their prospectus once their qualifying exam has been completed, but no later than the 30th of June following their exam.

Candidacy M.D./Ph.D. students will be admitted to candidacy once they have completed their course work, obtained two Honors grades, passed their qualifying exam, and submitted their dissertation prospectus.
Thesis committee  M.D./Ph.D. students are required to have one thesis committee meeting per year, beginning the term after passing their qualifying exam. However, students are strongly encouraged to consider having additional meetings if they feel their project could benefit from the assistance of members of the thesis committee.

Master’s Degrees

M.Phil.  See Degree Requirements under Policies and Regulations.

M.S.  Students are not admitted for this degree. They may receive this recognition if they leave Yale without completing the qualifying exam but have satisfied the course requirements as described above, as well as the Graduate School’s Honors requirement.

Prospective applicants are encouraged to visit the BBS Web site (info.med.yale.edu/bbs), MCGD Track.

Courses

GENE 500b, Principles of Human Genetics  Allen Bale
A genetics course taught jointly for graduate students and medical students, covering current knowledge in human genetics as applied to the genetic foundations of health and disease. HTBA

GENE 603b/IBIO 603b, Teaching in the Science Education Outreach Program (SEOP)  Paula Kavathas
TAs, along with volunteers, teach three projects in genetics to seventh-graders in two or three New Haven schools. In addition, TAs take a short course on teaching and serve as science judges. Dates and times to be determined. For more details visit www.seop.yale.edu. Contact Professor Kavathas.

GENE 625a/MB&B 625au/MCDB 625au, Basic Concepts of Genetic Analysis
Tian Xu, Michael Koelle, and staff
The universal principles of genetic analysis in eukaryotes are discussed in lectures. Students also read a small selection of primary papers illustrating the very best of genetic analysis and dissect them in detail in the discussion sections. While other Yale graduate molecular genetics courses emphasize molecular biology, this course focuses on the concepts and logic underlying modern genetic analysis. MW 11:35–12:50

[GENE 631a/BIS 631a, Topics in Genetic Epidemiology]

GENE 645a/BIS 645a, Statistical Methods in Human Genetics  Hongyu Zhao, Elizabeth Claus, Kenneth Kidd
Probability modeling and statistical methodology for the analysis of human genetics data are presented. Topics include population genetics, single locus and polygenic inheritance, parametric and nonparametric linkage analysis, population-based association studies, family-based association studies, next-generation sequencing data analysis, genome-wide association studies, genetic risk prediction models, and DNA fingerprinting. Prerequisites: genetics; BIS 505a and b, or equivalent; and permission of the instructor. MW 1–2:20
GENE 675a and b, Graduate Student Seminar: Critical Analysis and Presentation of Scientific Literature  Valentina Greco and staff
Students gain experience in preparing and delivering seminars and in discussing presentations by other students. A variety of topics in molecular, cellular, developmental, and population genetics are covered. Required for all second-year students in Genetics. Graded Satisfactory/Unsatisfactory. W 1:15–2:45

GENE 703b, The Mouse in Biomedical Research
This graduate-level course describes aspects of comparative genomics, construction of genetically altered mice, mouse phenotyping, and study design relevant to the use of mice in the study of human disease. Prerequisites: an introductory-level knowledge of genetics and mammalian anatomy and physiology. WF 2:30–3:45

[GENE 734a/MB&B 734a/MBIO 734a, Molecular Biology of Animal Viruses
Offered every other year]

GENE 743b/MB&B 743b/MCDB 743b, Advanced Eukaryotic Molecular Biology
Mark Hochstrasser, Anthony Koleske, Patrick Sung
Selected topics in transcriptional control, regulation of chromatin structure, mRNA processing, mRNA stability, RNA interference, translation, protein degradation, DNA replication, DNA repair, site-specific DNA recombination, somatic hypermutation. Prerequisite: biochemistry or permission of the instructor. TTH 11:35–12:50

GENE 749a/MB&B 749a/MBIO 749a, Medical Impact of Basic Science  Joan Steitz,
Mark Hochstrasser, I. George Miller, Andrew Miranker, David Schatz, Patrick Sung, and staff
Consideration of examples of recent discoveries in basic science that have elucidated the molecular origins of disease or that have suggested new therapies for disease. Emphasis is placed on the fundamental principles on which these advances rely. Reading is from the primary scientific and medical literature, with emphasis on developing the ability to read this literature critically. Aimed primarily at undergraduates. Prerequisite: biochemistry or permission of the instructor. MW 1–2:15

GENE 760b, Genomic Methods for Genetic Analysis  James Noonan
Introduction to the analysis and interpretation of genomic datasets. The focus is on next-generation sequencing (NGS) applications including RNA-seq, ChIP-seq, and exome and whole genome sequencing. By the end of the course, each student will be able to process and analyze large-scale NGS datasets and interpret the results. This course is intended only for graduate students who are interested in genomic approaches but who have had little prior experience in genomics or bioinformatics. Enrollment limited to twenty. Prerequisite: permission of the instructor.

GENE 777b/MCDB 677b, Mechanisms of Development  Valerie Reinke and staff
An advanced course on mechanisms of animal and plant development focusing on the genetic specification of cell organization and identity during embryogenesis and somatic differentiation. The use of evolutionarily conserved signaling pathways to carry out developmental decisions in a range of animals is highlighted. Course work includes student participation in critical analysis of primary literature and a research proposal term paper. M 9–10:15, F 2:30–3:45
GENE 840a and b, Medical Genetics  Margretta Seashore
Clinical rotation offering medical and graduate students the opportunity to participate in the Genetic Consultation Clinic, genetic rounds, consultation rounds, and genetic analysis of clinical diagnostic problems.

GENE 900a/CBIO 900a/MCDB 900a, First-Year Introduction to Research and Rotations  Frank Slack and faculty
Lab rotations and grant writing for Molecular Cell Biology, Genetics, and Development track students. M 4–5:30

GENE 901b/CBIO 901b/MCDB 901b, First-Year Introduction to Research – Ethics: Scientific Integrity in Biomedical Research  Valerie Horsley
Lab rotations and ethics for Molecular Cell Biology, Genetics, and Development track students. TH 4–5:30

GENE 921a and b, Reading Course in Genetics and Molecular Biology  Charles Radding and staff
Directed reading with faculty. Term paper required. Prerequisite: permission of Genetics DGS.
GEOLGY AND GEOPHYSICS

Kline Geology Laboratory, 203.432.3124
www.geology.yale.edu
M.S., M.Phil., Ph.D.

Chair
David Bercovici

Director of Graduate Studies
Ruth Blake

Professors  Jay Ague, David Bercovici, Ruth Blake, Mark Brandon, Derek Briggs, Leo Buss, Michael Donoghue, David Evans, Jacques Gauthier, Thomas Graedel, Leo Hickey, Shun-ichiro Karato, Jun Korenaga, Mark Pagani, Jeffrey Park, Danny Rye, Brian Skinner, Ronald Smith, Elisabeth Vrba, John Wettlaufer

Associate Professor  Alexey Fedorov

Assistant Professors  Hagit Affek, William Boos, Kanani Lee, Maureen Long, Trude Storelvmo, Mary-Louise Timmermans, Zhengrong Wang

Lecturer  Catherine Skinner

Fields of Study
Fields include geochemistry and petrology, geophysics, ice physics, mineral physics, seismology and geodynamics, structural geology and tectonics, paleontology and paleoecology, oceanography, meteorology, cryospheric dynamics, and climatology.

Special Admissions Requirements
The department welcomes applicants oriented toward the earth sciences who have a bachelor’s or master’s degree in such fields as biology, chemistry, engineering, mathematics, meteorology, or physics, as well as those trained in geological, geophysical, and geochemical sciences. Scores from a pertinent GRE Subject Test are desirable but not required. The TOEFL or IELTS exam is required for all applicants for whom English is a second language.

Special Requirements for the Ph.D. Degree
There is no formal language requirement and no required curriculum. Students plan their course of study in consultation with their adviser to meet individual interests and needs and to lay the foundations for dissertation research. At the end of the first year the faculty reviews the standing of each student. A student recommended for continuation in the Ph.D. program will be so notified. Some students may be encouraged at that time to pursue only the M.S. degree. At the end of the second year the faculty reviews each student’s overall performance to determine whether he or she is qualified to continue for the Ph.D. degree. In order to qualify, a student must have met the Graduate School Honors requirement and maintained a better than passing record in the areas of concentration.
Also, a student must have satisfied the requirements of the Qualifying Exam by having completed two Research Discourses termed (according to their degree of development) the Minor and the Major Discourses. The Major Discourse will be presented at the Qualifying Presentation, followed by an extended question period wherein the student must successfully defend both Discourses. Remaining degree requirements include a dissertation review in the third year; the preparation and defense of the dissertation; and the submission of the dissertation to the Graduate School. The department requires that an additional copy, for which the student will be reimbursed, be deposited with the librarian of the Kline Geology Library.

Teaching experience is regarded as an integral part of the graduate training program in Geology and Geophysics. For that reason all students are required to serve as teaching fellows (5 hours per week) for two terms during the course of their predoctoral training.

In addition to all other requirements, students must successfully complete G&G 710b, Responsible and Ethical Conduct of Research, prior to the end of their first year of study.

**Master’s Degrees**

**M.Phil.** See Degree Requirements under Policies and Regulations.

**M.S.** Awarded only to students who are not continuing for the Ph.D. Students are not admitted for this degree. Minimum requirements include satisfactory performance in a course of study (typically six or more courses) that is approved by the director of graduate studies (DGS), and a research project with the approval of the DGS and the student’s thesis committee.

Program materials are available at www.geology.yale.edu or upon request to the Director of Graduate Studies, Department of Geology and Geophysics, Yale University, PO Box 208109, New Haven CT 06520-8109; e-mail, dgs@geology.yale.edu.

**Courses**

**G&G 500b**, Mineral Deposits  
Brian Skinner  
An introduction to the formation and distribution of mineral deposits.

**[G&G 501au/ASTR 540au, Radiative Processes in Astrophysics/Stellar Atmospheres]**

**G&G 502au**, Introduction to Geochemistry  
Mark Pagani  

**[G&G 504au, Minerals and Human Health]**

**G&G 508b, The Global Carbon Cycle**  
Hagit Affek  
The course discusses the isotopic composition of atmospheric gases. It focuses primarily on carbon dioxide and the use of its isotopes to balance the atmospheric carbon budget, and discusses other gases associated with the global carbon cycle. MW 9–10:15

**G&G 510a, Introduction to Isotope Geochemistry**  
Danny Rye, Zhengrong Wang  
An overview of the fundamental principles of stable and radiogenic isotope geochemistry.
Emphasis is placed on applications to specific geologic problems, including petrogenesis, geochronology, geothermometry, surface processes, hydrology, and biogeochemistry.

**MWF 9:25–10:15**

**G&G 511a, Stratigraphic Principles and Applications**  Leo Hickey
Principles of classification, age determination, and paleoenvironmental interpretation of stratified rocks with application to actual measured sections. The course includes the basic content of G&G 230a, Stratigraphy, plus the completion of a term paper whose topic and content are developed in consultation with the instructor.

**G&G 512au, Structure and Deformation of the Lithosphere**  Mark Brandon
An introduction to structure and deformation of tectonic plates. Topics include structure of the crust and mantle; deformation processes at low and high temperatures; origin of folds, faults, and earthquakes; and formation and evolution of plate boundaries and collisional mountain belts. Laboratory exercises and field trips.

**G&G 513au, Invertebrate Paleontology: Evolving Form and Function**  Derek Briggs
Exploration of the basic constraints and potentials that controlled adaptive radiation in the evolution of the invertebrate skeleton.

**G&G 515bu, Paleobotany**  Leo Hickey
A detailed survey of the evolutionary history of plants through geological time, the origin and diversification of their major lineages and of plant communities, and the interaction of plants and their physical environment. Laboratory exercises involve the study of fossil and modern plants.

**G&G 518au, Trace Fossil Analysis**

**G&G 519au, Introduction to the Physics and Chemistry of Earth Materials**  Shun-ichiro Karato
Basic principles that control the physical and chemical properties of earth materials. Equation of state, phase transformations, chemical reactions, elastic properties, diffusion, kinetics of reaction, and mass/energy transport. TTH 11:35–12:50

**G&G 521bu, Geophysical Fluid Dynamics**  Alexey Fedorov
An examination of the equations governing rotating stratified flows with application to oceanic and atmospheric circulation as well as climate. Mathematical models are used to illustrate the fundamental dynamical principles of geophysical fluid phenomena such as waves, boundary layers, flow stability, turbulence, and large-scale flows. The course aims to provide a general theoretical framework for understanding the thermal structure and circulation of the ocean and the atmosphere. MW 11:35–12:50

**G&G 522au, Physics of Weather and Climate**  William Boos
The climatic system; survey of atmospheric behavior on time scales from days (i.e., weather) to decades (i.e., climate); formulation of mathematical equations describing weather and climate with selected applications to small- and large-scale phenomena. MW 9–10:15

**G&G 523bu, Climate Dynamics**

G&G 524a, Mathematical Methods in Geophysics

G&G 525a/ENAS 761a, Introduction to Continuum Mechanics

G&G 526au, Introduction to Earth and Planetary Physics

G&G 528a, Science of Complex Systems

G&G 529b, Introduction to Geodynamics  David Bercovici
This introductory course starts with the basics of continuum mechanics and covers a range of topics in geodynamics and relevant fields including the structure and dynamics of lithosphere, thermal convection and magmatism, Rayleigh-Taylor instability and plume dynamics, geoid and dynamic topography, and the thermal history of the core and geodynamo.

G&G 533au, Paleogeography

G&G 535au, Physical Oceanography  Alexey Fedorov
An introduction to ocean dynamics and physical processes controlling the large-scale ocean circulation, ocean stratification, the Gulf Stream, wind-driven waves, tides, tsunamis, coastal upwelling, and other oceanic phenomena. Equations of motion. Modern observational, theoretical, and numerous other techniques used to study the ocean. The ocean role in climate and global climate change. MW 11:35–12:50

G&G 536b, Atmospheric Waves, Convection, and Vortices

G&G 538au, Computational Methods in Astrophysics and Geophysics  Paolo Coppi
The analytic and numerical/computational tools necessary for effective research in astronomy, geophysics, and related disciplines. Topics include numerical solutions to differential equations, spectral methods, and Monte Carlo simulations. Applications are made to common astrophysical and geophysical problems including fluids and N-body simulations.

G&G 540au, Methods in Geomicrobiology  Ruth Blake
A laboratory-based course providing interdiscipliary practical training in geomicrobiological methods including microbial enrichment and cultivation techniques; light, epi-fluorescence, and electron microscopy; and molecular methods (DNA extraction, PCR, T-RFLP, FISH). TTH 1–2:15

G&G 545a, Marine Micropaleontology  Ellen Thomas
A survey of the most common marine microfossil groups. Because of their enormous abundance these minuscule organisms are important components of oceanic ecosystems and modulate biogeochemical cycles (e.g., organic and inorganic carbon, calcium, nitrogen, sulfur, phosphorus). Changes in microfossil abundance and species composition provide detailed records of the interaction between Earth's climate and oceanic biota, especially because their skeletons are used to obtain trace element and isotopic proxies for such environmental parameters as temperature, carbonate saturation, pH, primary and export productivity, and deep-sea circulation. Emphasis is on marine and marginally marine eukaryotic unicellular groups during the last 170 million years of Earth history.
G&G 550au, Paleontology and Evolutionary Theory    Elisabeth Vrba
Current concepts in evolutionary and systematic theory with particular reference to how they apply to the fossil record. Emphasis on use of paleontological data to study evolutionary processes. TTH 11:35–12:50

G&G 555bu, Petrogenesis of Mountain Belts    Jay Ague
Examination of the fundamental principles governing the formation of metamorphic and igneous rocks during mountain building. Topics include processes of heat and mass transfer in orogenic belts, generation of igneous rocks in continental and subduction settings, ultra-high pressure and ultra-high temperature metamorphism, spatial and temporal patterns of petrologic processes throughout geologic time, and pressure-temperature-time paths of metamorphic and igneous rocks. MWF 9:25–10:15

G&G 556au, Introduction to Seismology    Jeffrey Park
Earthquakes and seismic waves, P and S waves, surface waves and free oscillations. Remote sensing of Earth’s deep interior and faulting mechanisms. Prerequisites: MATH 120a or b, 222a or b, and PHYS 180a, 181b, or equivalents.

[G&G 557b, Advanced Seismology]

G&G 562bu/ARCG 762bu/EMD 548b/F&ES 726b, Remote Sensing: Observing the Earth from Space    Ronald Smith
A practical introduction to satellite image analysis of Earth’s surface. Topics include the spectrum of electromagnetic radiation, satellite-borne radiometers, data transmission and storage, computer image analysis, the merging of satellite imagery with GIS and applications to weather and climate, oceanography, surficial geology, ecology and epidemiology, forestry, agriculture, archaeology, and watershed management.

[G&G 567bu, Geochemical Approaches to Archaeology]

[G&G 570b, Cloud Physics and Dynamics]

G&G 602bu, Paleoclimates    Mark Pagani
A study of the dynamic evolution of Earth’s climate. Topics include warm (the Cretaceous, the Eocene, the PETM, the Pliocene) and cold (the “snowball Earth”) climates of the past, glacial cycles, abrupt climate changes, the climate of the past thousand years, and the climate of the twentieth century.

G&G 610bu, Advanced Topics in Macroevolution    Elisabeth Vrba
A seminar for graduate students, and selected undergraduates with a suitable prior background, in which we read and discuss publications on various macroevolutionary topics and current debates. The particular subject matter varies from year to year, often being decided by student request for a specific topic, and is announced before the start of the term. Prerequisite: permission of the instructor.

G&G 611a, Advanced Stratigraphy    Leo Hickey
The theory and practice of stratigraphy for those who have a basic grounding in the field. After several lectures, the course is conducted as a series of topical seminars chosen by the instructor and the participants.
[G&G 616a, Advanced Petrology]

[G&G 617b, Leaf Architecture of the Flowering Plants]

G&G 618a, Petrology of Light Stable Isotopes  
Danny Rye
The principles and applications of light stable isotopes to geological materials.

G&G 621b, Geochemistry of Heavy and Radioactive Isotopes in Rock Systems  
Danny Rye
The principles and application of radioactive and radiogenic isotopes to geological materials.

G&G 631a, Vertebrate Paleontology: Phylogeny of Vertebrates  
Jacques Gauthier
The seminar offers a detailed look at current issues in the phylogeny, anatomy, and evolution of fossil and recent vertebrates. Lectures review the broad outline of vertebrate phylogeny and evolution. Lab section is required. HTBA

[G&G 644b, Mantle Dynamics and Geochemistry]

G&G 650b, Deformation of Earth Materials  
Shun-ichiro Karato
Basics of deformation of materials as applied to geological and geophysical problems. Starting from the basic background of stress-strain and thermodynamics, discussion of materials science of deformation including elastic, anelastic, and plastic deformation. Emphasis is on the nature of deformation of materials under extreme conditions (high-pressure, high water fugacity) that is critical in interpreting seismological observations and geological and geophysical processes. TTH 9–10:15

[G&G 655a, Extraordinary Glimpses of Past Life]

[G&G 657a, Marine, Atmospheric, and Surficial Geochemistry]

[G&G 658b, Seismic Data Analysis]

[G&G 659a, Time Series Analysis with Geoscience Applications]

[G&G 660a, Diagenesis, Weathering, and Geochemical Cycles]

G&G 666b/AMTH 666b/ASTR 666b, Statistical Thermodynamics for Astrophysics and Geophysics  
John Wettlaufer
Classical thermodynamics is derived from statistical thermodynamics. Using the multiparticle nature of physical systems, we derive ergodicity, the central limit theorem, and the elemental description of the second law of thermodynamics. We then develop kinetics, transport theory, and reciprocity from the linear thermodynamics of irreversible processes. Topics of focus include Onsager reciprocal relations, the Fokker-Planck equation, stability in the sense of Lyapunov, and time invariance symmetry. We explore phenomena that are of direct relevance to astrophysical and geophysical settings. No quantum mechanics is necessary as a prerequisite. HTBA

G&G 675b, Quantitative Tectonics  
Mark Brandon
Introduction to the use of quantitative methods for the study of tectonic processes. The focus of the course shifts each year, covering topics such as flexural isostasy; coupling
between climate, surface erosion, and deformation; kinematics of plate motion; thermal methods for studying erosion and faulting; processes and products of deformation. The course consists of a combination of lectures and seminar discussions. Students develop and complete a significant research project, either on their own or as a group.

G&G 600a and b, Directed Research in Geology and Geophysics
By arrangement with faculty.

G&G 601a or b, Independent Research
In addition to the seminars noted below, others on special topics like evolution, invertebrate and vertebrate paleontology, statistical mechanics and spectroscopy, structural geology and tectonics, petrology, volcanology, and physics of oceans and atmospheres are offered according to student interest, by arrangement with departmental faculty. Seminars are often organized around the research interests of visiting faculty as well. Prerequisite: approval of DGS and adviser.

G&G 703a, Seminar in Systematics  
Jacques Gauthier
3 HTBA

G&G 710b, Responsible and Ethical Conduct of Research  
Mark Pagani, David Bercovici
A 5-to-6-week lecture course (1 hour) that is required for all graduate students and must be completed within the first year. Course topics include record keeping and data management/retention; plagiarism and fraud; collaboration, coauthorship, and ownership of research materials and intellectual property; laboratory dynamics and sexual harassment. G&G 710b is in addition to the existing online ethics module, “The Yale Guide to Professional Ethics” (https://www.sis.yale.edu/pls/rcr/login_c_pkg.go_to_front_door), that must be completed by all GSAS students within the first term of study, regardless of source of financial support.

G&G 720a, Caves, Chemistry, and Climate  
Hagit Affek
Carbonate cave deposits, speleothems, are becoming an increasingly popular archive for reconstruction of paleoclimatic conditions on land. This is a seminar-style class, based on reading and discussion of classic and recent papers in speleothem science. Topics include the physical and chemical processes of speleothem formation; the climatic parameters and geochemical mechanisms controlling stable isotopes in speleothems; speleothems as a tool for reconstructing paleo-rainfall; dating techniques and the use of speleothems as a stratigraphic tool; and terrestrial paleoclimate reconstruction of distinct climatic systems using cave systems in various regions, during both the Holocene and the glacial/interglacial time scales. The class is based on several background lectures and in particular on student presentation of papers to be discussed.

G&G 735a, Principles in Organic Geochemistry

G&G 740a, Student Research Seminar  
Hagit Affek
A seminar in which students present seminars on topics related to their own research, either by presenting their results or by discussing literature that provides an introduction
to their research topic. The class offers students an opportunity to gain experience in presenting scientific data and arguments in an informal environment and forces them to think about their research in a detailed enough way that would allow them to explain it to a mixed audience. The topics covered in these presentations depend on the diverse interests of the students participating and include all topics associated with research performed within the G&G department and related topics. It therefore exposes the students to the large variety of research fields and provides them basic general Earth science background knowledge.

[G&G 742a, Seminar in Geophysical Fluid Dynamics]

G&G 744a/ASTR 715a, Research Seminar in Solid-Earth Geophysics  Jeffrey Park

[G&G 746a or b, Seminar in Global Change]

[G&G 757b, Studies in Global Geoscience]

G&G 767b, Seminar in Ice Physics  John Wettlaufer
We bring together the basic thermodynamics and statistical mechanics of crystal growth, surface phase transitions, metastability, and instability to explore the many faces of the surface of ice. These processes control the macroscopic growth shapes of ice crystals, underlie the enigma of the snowflake, and have implications in, inter alia, the atmosphere, the oceans, basic materials science, and astrophysics. HTBA

G&G 775a and b, Seminar in Tectonics  Mark Brandon, David Evans
The seminar focuses on advanced topics in the evolution and structure of the lithosphere. The theme for the seminar changes each term, covering topics such as the restoration of continents in deep time, true polar wander, lithospheric instabilities, orogenesis at convergent plate boundaries, interactions between climate and tectonics. Meetings are for 1.5 hours, once a week, and are organized around readings from the primary research literature. HTBA

G&G 800a or b, Tutorial in Paleobiology

G&G 805a or b, Fossil Floras

G&G 810a or b, Tutorial in Structural Geology and Tectonics or Solid Earth Geophysics

G&G 820a or b, Tutorial in Meteorology, Oceanography, or Fluid Dynamics

G&G 830a or b, Tutorial in Geochemistry, Petrology, or Mineralogy

G&G 840a or b, Tutorial in Sedimentology

G&G 860a or b, Tutorial in Remote Sensing
GERMANIC LANG UAGES AND LITERATURES

W. L. Harkness Hall, 203.432.0788
www.yale.edu/german/graduate.html
M.A., M.Phil., Ph.D.

Chair
Rüdiger Campe

Director of Graduate Studies
Rainer Nägele (304 WLH, rainer.nagele@yale.edu)

Professors  Rüdiger Campe, Carol Jacobs, Rainer Nägele, Brigitte Peucker, Henry Sussman (Visiting)

Associate Professor  Kirk Wetters

Assistant Professor  Paul North

Lecturer  William Whobrey

Affiliated Faculty  Jeffrey Alexander (Sociology), Seyla Benhabib (Political Science; Philosophy), Karsten Harries (Philosophy), Paula Hyman (History; Religious Studies), Patrick McCreless (Music), Steven Smith (Political Science), Adam Tooze (History), Katie Trumpener (Comparative Literature; English), Jay Winter (History), Christopher Wood (History of Art)

Fields of Study
German literature and culture from the Reformation to the twenty-first century in Germany, Austria, and Switzerland; medieval literature; literary and cultural theory; literature and philosophy; literature and science; visuality and German cinema.

Special Admissions Requirement
All students must provide evidence of mastery of German upon application.

Requirements for the Ph.D. Degree
Students are required to demonstrate, besides proficiency in German, a reading knowledge of one other foreign language by the beginning of the third term of study. French is recommended, although occasionally, on consultation with the director of graduate studies (DGS), other relevant languages may be substituted. The faculty in German considers teaching to be essential to the professional preparation of graduate students. Students normally teach undergraduate language courses under supervision beginning in the third year of study for at least two years.

In the first two years of study, students take four courses per term. Two of these sixteen courses in the first four terms may be audited.

Oral examinations must be passed in the fifth and sixth terms of study, and a dissertation prospectus should be submitted no later than the end of the sixth term. All students will be asked to defend the prospectus in an informal discussion with the faculty. The
defense will take place before the prospectus is officially approved, usually in May of the sixth term. Students are admitted to candidacy for the Ph.D. upon completion of all predissertation requirements, including the prospectus.

After the submission of the prospectus, the student’s time is devoted to the preparation of the dissertation. A dissertation committee will be set up for each student at work on the dissertation. It is expected that students will periodically pass their work along to members of their committee, so that faculty members in addition to the dissertation adviser can make suggestions well before the dissertation is submitted. Drafts of each chapter must be submitted in a timely fashion to all members of the student’s committee: The first chapter should be submitted to the committee by February 1 of the fourth year of study; the second chapter should be submitted by January 1 of the fifth year. There will be a formal review of the first chapter.

Two concentrations are available to graduate students: Germanic Literature and German Studies. There is a special joint degree with Film Studies; see below.

Special Requirements for the Germanic Literature Concentration
During the first two years of study, students are required to take sixteen term courses, four of which may be taken outside the department. Two courses may be audited.

Special Requirements for the German Studies Concentration
During the first two years of study, students are required to take sixteen term courses, seven of which may be taken outside the department. Two of those courses may be audited. Students are asked to define an area of concentration upon entry, and will meet with appropriate advisers from both within and outside the department.

Joint Ph.D. Program with Film Studies
The Department of Germanic Languages and Literatures also offers, in conjunction with the Film Studies Program, a joint Ph.D. in Germanic Languages and Literatures and Film Studies. For further details, see Film Studies. Applicants to the joint program must indicate on their application that they are applying both to Film Studies and to Germanic Languages and Literatures. All documentation within the application should include this information.

Master’s Degrees
M.Phil. See Degree Requirements under Policies and Regulations.

M.A. (en route to the Ph.D.) Students enrolled in the Ph.D. program may qualify for the M.A. degree upon completion of a minimum of eight graduate term courses and the demonstration of reading knowledge in either Latin or French.

Further information is available upon request to the Registrar, Department of Germanic Languages and Literatures, Yale University, PO Box 208210, New Haven CT 06520-8210; e-mail, german@yale.edu.
Courses

GMAN 564al, W. G. Sebald  Carol Jacobs
Close readings of the major works of W. G. Sebald along with texts of other authors whose writings play a direct or indirect role in these writings (Thomas Browne, Grimmelshausen, Kafka, Celan). We explore the workings of these texts in relation to theory of literature in terms of memory, representation, identity, ethical imperatives, and intertextual and inter-media relations. M 1:30–3:20

GMAN 592au/FILM 765au, Fassbinder, Herzog, Haneke  Brigitte Peucker
Close study of the films of R. W. Fassbinder, Werner Herzog, and Michael Haneke. Topics include questions of authorship (citation as the production of identity; the performance of authenticity; the manipulation of the spectator); cultural politics; cinematic modernism; and inter-mediality (film’s relation to painting, theater, digital media). Readings in English; conducted in English. T 3:30–5:20, screenings SU 7

GMAN 614bl, Kleist’s Here and Now  Rüdiger Campe
The course provides a comprehensive introduction to the work of the German Romantic writer Heinrich von Kleist. We read major instances of his narrative prose, his dramatic work, and his journalism. Particular attention is given to Kleist’s fascination with the immediate presence of “Here and Now”: this fascination occurs as well in what we can call the invention of modern journalism (Berliner Abendblätter) as in his most radical literary experiments. T 3:30–5:20

GMAN 615al/CPLT 964a, Meaning and History: Blumenberg, Derrida, Foucault  Rüdiger Campe
We discuss seminal works by Blumenberg, Derrida, and Foucault from the early 1960s. All three authors developed models of critical hermeneutics from their respective readings of Husserl (and Heidegger) on science and technology (Crisis of the European Sciences). We explore how a general rethinking of interpretation and criticism in the humanities started from the questioning of science and technology, and what this means in today’s humanities. M 3:30–5:20

GMAN 645al/CPLT 592a, Urban Phantasmagoria: Berlin, Vienna, and Paris  Henry Sussman
Grounding itself in Walter Benjamin’s The Arcades project, a print-medium Web site of the rise of modernity, malls, advertising, gambling, amusement parks, and urban-cruising in nineteenth-century Paris, the course pursues these developments as they revolutionize the environment in the major German-speaking cities and as they are documented in literary and cultural criticism. Readings include Aragon, Balzac, Barthes, Baudelaire, Zola, and Rem Koolhas. W 3:30–5:20

GMAN 645bl, Fakes  Kirk Wetters
Starting from Orson Welles’s “F for Fake,” which articulates the main questions of the course, we examine some of Welles’s immediate sources of inspiration: Clifford Irving (including the recent film about his forged biography of Howard Hughes, The Hoax) and the art forger Elmyr de Hory. From there we look back at the literary tradition of the con artist: eighteenth-century German texts (particularly Goethe and Schiller) inspired by
the figure of Cagliostro, Herman Melville’s *The Confidence-Man*, Thomas Mann’s *Confessions of Felix Krull, Confidence Man*, and André Gide’s *The Counterfeitors*. To conclude the seminar, the class collectively chooses an additional contemporary con (perhaps James Frey’s *A Million Little Pieces*) to investigate in detail. The final meetings are devoted to the Grand Inquisitor scene from Dostoevski’s *Brothers Karamazov* and Ben Stiller’s *Tropic Thunder*. m 3:30–5:20

**GMAN 648b/CPLT 648b, Repetition**  
Rainer Nägele  
Repetition emerges in the nineteenth century as a particular preoccupation. We concentrate on some specific philosophical and theoretical texts: Karl Marx (the Eighteenth Brumaire), Kierkegaard, Nietzsche, Freud. But we also discuss some of the ramifications of repetition in poetry, literature, and rhetoric (rhythm, rhyme, refrain, and literary motifs). w 1:30–3:20

**GMAN 662b, Baroque Theater: The Stage and the Text**  
Rüdiger Campe  
Focusing on the German Baroque tragic drama (Gryphius, Lohenstein), we study also Spanish and Italian works of the period (Monteverdi, Calderón). Walter Benjamin’s *Origin of the German Tragic Drama (Trauerspiel)* is discussed with reference to political theory, allegory, and the emblem. The course is designed as a general introduction to the Baroque, including more recent work such as Deleuze, Buci-Glucksmann, and others. Prerequisite: reading knowledge of German; Spanish and Italian desirable. th 1:30–3:20

**GMAN 665a/CPLT 785a, Thinking Poetry: Hölderlin, Heidegger, Blanchot**  
Rainer Nägele  
Poetry, in this seminar, is both the object and subject of thinking. In close readings of Hölderlin’s major poetic work, we investigate the specific mode in which poetry thinks, while, at the same time, the impact of this poetry on philosophical language and its awareness of being (in) language is discussed in the encounter of Heidegger and Blanchot with Hölderlin. t 1:30–3:20

**GMAN 900a,b, Directed Reading**  
By arrangement with the faculty.
HISTORY

240 Hall of Graduate Studies, 203.432.1366
www.yale.edu/history
M.A., M.Phil., Ph.D.

Chair
Laura Engelstein

Director of Graduate Studies
Francesca Trivellato (236 HGS, 203.432.1361)

Associate Professors  Bruno Cabanes, Beverly Gage, Naomi Rogers, Charles Walton

Assistant Professors  Paola Bertucci, Patrick Cohrs, Fabian Drixler, Alejandra Dubcovsky, Daniel Magaziner, Alan Mikhail, Alyssa Mt. Pleasant, William Rankin, Edward Rugemer, Paul Sabin, Marci Shore, Jenifer Van Vleck

Lecturers*  Adel Allouche, Annping Chin (Senior Lecturer), Becky Conekin (Senior Lecturer), Veronika Grimm, William Metcalf, Stuart Semmel (Senior Lecturer)

*For a complete list of lecturers, see the undergraduate bulletin, Yale College Programs of Study.

Fields of Study

Fields include ancient, medieval, early modern, and modern Europe (including Britain, Russia, and Eastern Europe), United States, Latin America, East Asia, Southeast Asia, Middle East, Africa, Jewish history; and diplomatic, environmental, ethnic, intellectual, labor, military, political, religious, social, and women’s history, as well as the history of science and medicine (see the section in this bulletin on the History of Science and Medicine).

Special Admissions Requirements

The deadline for submission of the application for the History graduate program is December 15.

The department requires a short book review (maximum two pages) to accompany the application. It should cover the book that has most shaped the applicant’s understanding of the kind of work he or she would like to do as a historian.
In addition, the department requires submission of an academic writing sample of not more than 25 pages, double spaced. Normally, the writing sample should be based on research in primary source materials.

**Special Requirements for the Ph.D. Degree**

All students must pass examinations in at least two foreign languages, one by the end of the first year. Students are urged to do everything in their power to acquire adequate linguistic training before they enter Yale and should at a minimum be prepared to be examined in at least one language upon arrival. Typical language requirements for major subfields are as follows:

**African** Either (1) French and German or Portuguese or Dutch-Afrikaans; or (2) French or German or Portuguese and Arabic; or (3) French or German or Portuguese or Dutch-Afrikaans and an African language approved by the director of graduate studies (DGS) and the faculty adviser.

**American** Two languages relevant to the student’s research interests, or a high level of proficiency in one language; competence in statistics or other mathematical skill may substitute for a natural language under appropriate circumstances.

**Ancient** French, German, Greek, and Latin.

**Byzantine** Greek, Latin, French, German, and any additional language, e.g., Russian, required for dissertation research.

**Chinese** Chinese and Japanese; additional languages like French, Russian, or German may be necessary for certain dissertation topics.

**East European** The language of the country of the student’s concentration plus two of the following: French, German, Russian, or an approved substitution.

**Japanese** Japanese and French or German; Chinese may be necessary for certain fields of Japanese history.

**Jewish** Modern Hebrew and German, and additional languages such as Latin, Arabic, Yiddish, Russian, or Polish, as required by the student’s areas of specialization.

**Latin American** Spanish, Portuguese, and French.

**Medieval** French, German, and Latin.

**Middle East** Arabic, Persian, or Turkish (or modern Hebrew, depending on area of research) and a major European research language (French, German, Russian, or an approved substitute).

**Modern Western European (including British)** French and German; substitutions are permitted with the approval of the DGS.

**Russian** Russian plus French or German with other languages as required.

**Southeast Asian** Choice of Dutch, French, Spanish, Portuguese, Chinese, Sanskrit, or Arabic, plus one or more Southeast Asian language (e.g., Bahasa Indonesian, Burmese,
Khmer, Lao, Malay, Tagalog, Thai, Tetum, or Vietnamese). In certain cases, Ph.D. dissertation research on Southeast Asia may also require knowledge of a regional or local language, e.g., Balinese or Cham.

Foreign students whose native language is not English may receive permission during their first year to hand in some written work in their own language. Since, however, the dissertation must be in English, they should be advised to bring their writing skills up to the necessary level at the earliest opportunity.

During the first two years of study, students normally take twelve term courses, at least eight of which shall be chosen from those offered by the department, and must achieve Honors in at least two courses in the first year, and Honors in at least four courses by the end of the second year, with a High Pass average overall. If a student does not meet this standard by the end of the first or second year, the relevant members of the department will consult and promptly advise the student whether the student will be allowed to register for the fall of the following academic year. Courses graded in the Satisfactory/Unsatisfactory mode count toward the course work requirement but do not count toward the Honors requirement.

Three of the twelve courses must be research seminars in which the student produces an original research paper from primary sources. All graduate students, regardless of field, will be required to take two seminar courses in a time period other than their period of specialty.

In the second year, there are two special seminar requirements.

1. Prospectus Tutorial
   This course, normally taken in the second year, must result in a draft prospectus for the dissertation. Its purpose is to familiarize the student with debates in the relevant field and to prepare the student for fieldwork. The prospectus tutorial (HIST 995) counts as one of the three research seminars.

2. Orals Tutorial
   Another of the twelve courses, normally taken in the second year, must be a tutorial in any one of the selected orals fields (see below). The orals tutorial (HIST 994) provides an opportunity for students to read for an orals field with one of the future orals committee members and can take the form of one-on-one meetings, small group meetings, or a normally scheduled reading seminar on the topic of the orals field. In some cases, orals tutorial credit will be retroactively granted to students who have taken a course in a reading seminar subject provided that they submit an orals reading list to the DGS for approval. Students seeking retroactive credit for an orals tutorial will still need to complete twelve term courses. The completion of these tutorials is a precondition for enrollment in the third year.

In the third year, students are expected to hold a prospectus colloquium and sit an oral examination.

1. The prospectus colloquium offers the student an opportunity to discuss the dissertation prospectus with the faculty committee in order to gain the committee’s advice on the research and writing of the dissertation and its approval for the project. The dissertation prospectus provides the basis of grant proposals for doing research
away from Yale in the fourth year. The prospectus colloquium and any further language requirements normally will be completed before the student takes his/her oral examination.

2. The oral examination for all graduate students must contain one minor field that deals 50 percent or more with the historiography of a region of the world other than the area of the student’s major field. Students will have a choice of selecting three or four fields of concentration: a major field and either two or three minor fields. If the student selects the four-field option, the major field will be examined for 30 minutes. In that case, the student’s orals tutorial must be in the major field. If the student selects the three-field option, the major field will be examined for 60 minutes and each minor field for 30 minutes. Completion of these requirements will qualify a student for admission to candidacy for the Ph.D., which must take place by the end of the third year of study.

During the third year of study, almost all students serve as teaching fellows in order to acquire crucial professional training. During their first term of teaching, students must attend several training sessions run by the department in conjunction with the Graduate Teaching Center.

Students usually complete the requirements for admission to candidacy in the sixth term, but it is also possible for students who have completed extensive graduate work prior to entering the Ph.D. program to petition for candidacy sooner. Students may petition for credit for previous graduate work only after successful completion of the first year.

In the fourth year, once students have advanced to candidacy, they may continue their studies while serving as teaching fellows or they may decide to pursue their research, either at Yale or elsewhere, using external funding.

In the fifth year, strongly preferably in the fall term, students are required to submit a chapter of the dissertation (not necessarily the first chapter) to the dissertation committee. This chapter will then be discussed with the student by members of the committee, preferably in a colloquium, to give the student additional advice and counsel on the progress of the dissertation. This conference is designed to be an extension of the conversation begun in the prospectus colloquium and is not intended as a defense: its aim is to give students early feedback on the research, argument, and style of the first writing accomplished on the dissertation.

The dissertation is expected to demonstrate ability to use sources in a discriminating and original way.

Students are eligible to receive the University Dissertation Fellowship (UDF) provided that they have advanced to candidacy. Students may take the UDF in the fifth year, but they must take the fellowship no later than the sixth year. They should apply for the fellowship in the term prior to which they wish to receive it. Students may serve as teaching fellows when they are not on the UDF.

The department strongly recommends that the student apply for a UDF only after completing the first chapter conference, and that students on a UDF should have completed at least two dissertation chapters before starting the fellowship. Many students apply for jobs in the year in which they receive the UDF, and the department urges that
students apply for academic positions only when they have two chapters ready to send
out to potential employers.

In short, a student making timely progress should expect to finish at least one chapter
by December of the fifth year, and to complete the dissertation in the sixth year, when
the submission deadline for May graduation is on or about March 15.

Registration in the seventh year is not required for students submitting their dis-
ssertations by the October deadline (which the majority of students do). If students are
unable to make the October deadline, they can petition the Graduate School for extended
registration. The petition, delivered first to the History DGS, will explain the particu-
lar circumstances that have prevented completion of the dissertation within the normal
timetable and offer a specific plan that describes how the dissertation will be completed
in the seventh year. Only students who have completed the first chapter conference will
be considered for extended registration.

Combined Ph.D. Programs

HISTORY AND AFRICAN AMERICAN STUDIES

The Department of History also offers, in conjunction with the Department of African
American Studies, a combined Ph.D. in History and African American Studies. For fur-
ther details, see African American Studies.

HISTORY AND RENAISSANCE STUDIES

The Department of History also offers, in conjunction with the Renaissance Studies
Program, a combined Ph.D. in History and Renaissance Studies. For further details, see
Renaissance Studies.

Master’s Degrees

M.Phil. Students who have completed all requirements for admission to candidacy for
the Ph.D. may receive the M.Phil. degree. Additionally, students in History are eligible
to pursue a supplemental M.Phil. degree in Medieval Studies. For further details, see
Medieval Studies.

M.A. (en route to the Ph.D.) Students enrolled in the Ph.D. program may qualify for
the M.A. degree upon completion of a minimum of six graduate term courses at Yale,
of which two must have earned Honors grades and the other four courses must average
High Pass overall. Students must also pass an examination in one foreign language. A
student in the American Studies program who wishes to obtain an M.A. in History, rather
than an M.A. in American Studies, must include in the courses completed at least two
research seminars in the History department.

Master’s Degree Program For this terminal master’s degree, students must pass six term
courses, four of which must be in History; substantial written work must be submitted
in conjunction with at least two of these courses, and Honors grades are expected in
two courses, with a High Pass average overall. All students in this program must pass
an examination in one foreign language. Financial aid is not available for this program.
Program materials are available upon request from the Director of Graduate Studies, Department of History, Yale University, PO Box 208324, New Haven CT 06520-8324.

Courses

**HIST 500a, Classics and Methods**  Timothy Snyder  
An introduction to historical methods, led by faculty in rotation, exploiting influential works of theory as well as exemplary works of historical scholarship. TH 3:30–5:20

**HIST 503b/JDST 723b/RLST 759b, Jews and Christians in Late Antique Roman Palestine**  Oded Irshai  
An examination of the strategies and mechanisms enabling the appropriation and Christianization of late Roman Palestine from the fourth to the seventh century. Topics include Christian attitudes toward the land of Jesus, sacred space, memory, pilgrimage, and the formation of liturgy, as well as manifestations of Jewish resistance to the transformation of the Holy Land. T 3:30–5:20

**HIST 511b/CLSS 806b/RLST 514b, Hellenistic Civilization and the Jews**  J.G. Manning, John J. Collins  
This seminar examines two incidents in the Hellenistic world that can be construed as persecution of the Jews. The first was in the years 167–164 B.C.E., when the Seleucid Antiochus Epiphanes tried to suppress the traditional Jewish cult in Jerusalem. The second was in Alexandria in 38 C.E., when the Jewish community came under attack from its Gentile neighbors and the Roman authorities. The seminar examines these incidents in the context of Seleucid and Roman policies toward subject peoples. TH 3:30–5:20

**HIST 512b/CLSS 885b, Aristotle’s Athenaios Politeia**  Donald Kagan  
A study of the historical portion of Aristotle’s *Constitution of the Athenians*. TH 1:30–3:20

**HIST 516a, Thucydides and the Peloponnesian War**  Donald Kagan  
A study both of the great war between Athens and Sparta that transformed the world of the Greek city-states and of the brilliant historian and political thinker who described it. Prerequisite: CLCV 205 or equivalent. T 2:30–4:20

**HIST 518b, The Spartan Hegemony**  Donald Kagan  
A history of Greece during the period 404–362 B.C. The focus is on the relationship between domestic constitutions and politics, and between diplomacy and war. T 2:30–4:20

**HIST 531a/NELC 534a/RLST 659a, Seminar: The Making of Monasticism**  Bentley Layton  
The social and intellectual history of Christian monasteries, hermits, ascetics, and monastic institutions and values in late antiquity and the early Middle Ages, as seen in classic texts of monastic literature and in monastic archaeology. Readings are studied in translation. Prerequisite: permission of the instructor. T 3:30–5:20

**HIST 532b/JDST 764b/RLST 777b, Jews in Muslim Lands from the Seventh to the Sixteenth Century**  Ivan Marcus  
Introduction to Jewish culture and society in Muslim lands from the Prophet Muhammad to Suleiman the Magnificent. Topics include Islam and Judaism; Jerusalem as a holy site;
rabbinic leadership and literature in Baghdad; Jewish courtiers, poets, and philosophers in Muslim Spain; and the Jews in the Ottoman Empire. Prerequisite: reading knowledge of modern Hebrew. TTH 11:35–12:50

HIST 535a/JDST 761a/RLST 773a, History of the Jews to Early Modern Times
Ivan Marcus
A broad introduction to the history of the Jews from biblical beginnings until the European Reformation and the Ottoman Empire. Focus on the formative period of classical rabbinic Judaism and on the symbiotic relationships among Jews, Christians, and Muslims. An overview of Jewish society and culture in its biblical, rabbinic, and medieval settings. TTH 11:35–12:50

HIST 541b/JDST 790b/RLST 776b, The Jews in Medieval Societies
Ivan Marcus
Research seminar that focuses on a comparison of the two medieval Jewish subcultures of Ashkenaz (northern Christian Europe) and Sefarad (mainly Muslim and Christian Spain). Issues in historiography and comparative methodology complement discussions about the symbols and reality of literary, political, and economic features of each society. Prerequisite: reading knowledge of modern Hebrew. T 1:30–3:20

HIST 542b, Law in Medieval Europe
Anders Winroth
This seminar explores the creation in the twelfth and thirteenth centuries of a sophisticated system of law, the European Common Law (ius commune). All late medieval and much modern legislation is based on this legal system. The course focuses on its roots in the Roman law of Emperor Justinian and in ecclesiastical legislation. We also study the influence of the ius commune on national and local medieval law. The emphasis is on using law in historical research and in learning the technical skills necessary. T 1:30–3:20

HIST 543a/REL 546a/RLST 809a, Apocalypticism: Ancient and Modern
Abbas Amanat, John J. Collins
This seminar reviews the history of apocalyptic thought and movements in the three great monotheistic religions from their origins in the ancient world to contemporary trends. T 1:30–3:20

HIST 544a, Church and Society in the Middle Ages
Paul Freedman
The history of the church and its social, economic, and cultural interaction with lay society from approximately 800 until the Reformation. Topics include church revenues, jurisdiction, attitudes toward conversion and missions, heresy, charity, economic ideas, and reactions to social change. W 1:30–3:20

HIST 561a/ENGL 589a, Renaissance Ways with Words
Keith Wrightson, David Scott Kastan
The course explores the great variety of users and uses of early modern English, tracing a set of social, linguistic, and literary developments in English in the period 1500–1700. Each session focuses on a particular “genre,” understanding this in the widest sense: both familiar “literary” genres, such as ballads, plays, and prose fiction, and nonliterary genres, such as letters, court depositions and examinations, wills, and petitions. We look also at dictionaries and rhetorical manuals, all with the aim of understanding how the language was used and how its users understood it. A course that combines social history, literary
criticism, and sociolinguistics (thinking, for example, about regional and class variation), the seminar provides an unusual window onto early modern England, giving students opportunities to develop or improve skills in researching the various available archives and a lens through which to understand the origins of the process by which English transformed itself from a literally insular language spoken perhaps by fewer than six million people in 1600 to the world language it is today. W 3:30–5:20

HIST 564a/CPLT 501a/ITAL 600a/RNST 500a, Introduction to Renaissance Studies: Renaissance Italy  Angela Capodivacca, Francesca Trivellato
An introduction to the major texts, issues, and methods in the interdisciplinary study of the Renaissance, with an emphasis on Italy. T 7–8:50

HIST 564b/CPLT 501b/RNST 500b, Introduction to Renaissance Studies: Northern Europe  Bruce Gordon, David Scott Kastan
An introduction to the major texts, issues, and methods in the interdisciplinary study of the Renaissance, with an emphasis on Northern Europe. T 1:30–3:20

HIST 569a/REL 732a/RLST 678a, Readings in Reformation History: Calvin and Calvinism  Bruce Gordon, Carlos Eire
The course begins with the life and thought of John Calvin considered within the historical context of the sixteenth century. Particular emphasis is placed on Calvin’s role in the wider Reformation and his interaction with allies and opponents. The course then shifts to study the phenomenon of Calvinism as it spread through Europe and, later, New England. Prerequisite: some background in Reformation history. T 1:30–3:20

HIST 575a/JDST 776a, The Cultural Revolution of the Jewish Enlightenment  Shmuel Feiner
Examines the origins, history, major texts, and cultural and social impact of the Jewish Enlightenment. Begins with the Enlightenment project of Voltaire, Lessing, and Kant, and considers the cultural revolution among the Jews in Germany and the construction of the modern public sphere; the life and thought of Moses Mendelssohn; the cultural conflicts between the “maskilim” and their orthodox opponents; the issue of gender; and the latest stages of Jewish Enlightenment in nineteenth-century Galicia and Russia. TH 3:30–5:20

HIST 602b, Microhistories  Keith Wrightson
A research seminar. The first weeks are devoted to reading and discussing a number of outstanding microhistorical studies of individuals, families, communities, incidents, and processes, principally (though not exclusively) drawn from the literature on the early modern period. Particular attention is paid to questions of sources and their use. Thereafter members of the class undertake individual microhistorical studies on subjects of their choice and present work-in-progress papers to the seminar. W 9:25–11:15

HIST 606b, Britain: Modernity and Empire  Steven Pincus
Why and in what ways did Britain become the paradigmatic modern nation? This research seminar introduces students to a variety of approaches to the study of modernization and to a range of questions about the coming of modernity in Britain. Topics
may include the emergence of the novel, the origins of the British Empire, England’s economic transformation, the development of representative politics, the emergence of the bourgeois public sphere, and secularization, among others. The course emphasizes methodological as well as substantive questions. It is appropriate for historians of any period or area, as well as for graduate students in related disciplines. W 1:30–3:20

**HIST 616a, The European Enlightenment**  Charles Walton
This reading seminar covers the main themes and topics treated in the historiography of the European Enlightenment. Spanning the seventeenth and eighteenth centuries, it approaches the Enlightenment from several angles: intellectual, social, cultural, political, and theoretical. Print culture is especially emphasized, as we trace how ideas were produced, diffused, and received in both national and transnational contexts. We engage with the recent literature on the global dimensions of the European Enlightenment, which shows how the production of knowledge, the pursuit of empire, and the experience of colonialism were bound up with each other. We begin the course with an examination of post-World War II theoretical debates on the Enlightenment and keep these in mind throughout the term as we reflect on how they have inflected its study. By the end of the term, students have grounding in the intellectual and cultural forces that helped create modernity in Europe and a strong basis for pursuing an orals field in the history of the Enlightenment. W 7–8:50

**HIST 630b, Writing European Intellectual History: Approaches**  Marci Shore
Research seminar designed for doctoral students. The first half of the course is devoted to reading historiography and theoretical essays, the second half to developing independent research projects. Discussions focus on the practice of writing intellectual history. Topics include the relationship between text and context and between ideas and individuals; the continuing influence of the so-called Cambridge School; the role of biography; the legacy of the linguistic turn; theories such as Marxism and psychoanalysis as both topic and method; and the respective virtues of the history of ideas and the history of intellectuals. W 1:30–3:20

**HIST 639b, Max Weber in the Twentieth Century**  Adam Tooze, Julia Adams
Max Weber is the most widely influential social thinker of the twentieth century. This course examines the interpretation of Weber’s life and work across the century, offering insights into the history of the century and the development of social theory. Readings range over intellectual traditions, including Western Marxism, American sociology, and postcolonial theory. TH 1:30–3:20

**HIST 641a, Britain and Iberian Atlantic**  Steven Pincus, Stuart Schwartz
This readings course investigates the burgeoning literature on the emergence of the Atlantic world in the early modern period. The course takes an explicitly comparative approach by examining the British and Iberian Atlantic worlds side by side, with occasional glances at French, Portuguese, and Dutch developments. Themes to be investigated include movements of goods, ideas, peoples, and cultures across the Atlantic. We also consider the independence movements of the late eighteenth and early nineteenth centuries. T 1:30–3:20
HIST 642a, Paris and London: Metropolitan Trajectories, 1850–Present
John Merriman, Jay Winter
Reading and discussion seminar. Topics include the impact of large-scale economic transformation; popular protest; migration and mobility; social geography; city and country; the world of work and leisure; the experience of war; images and representation of the city; and the successes and failures of urban planning. M 7–8:50

HIST 645a, Making History-Ending History: Philosophy of History in Germany and France, 1917–1990  Adam Tooze
The course refracts the turbulent economic and political history of twentieth-century Europe through the lens of social theory and the philosophy of history. It asks how historical agency was conceived on the left and right in the early years of the century and how those notions came to be criticized from the 1960s onward, leading to a critique of the very notions of history and modernity. The course offers students a chance to engage with many of the key thinkers of the twentieth century in Germany and France. T 1:30–3:20

HIST 681b/RLST 657b, Eastern Orthodoxy and Society, 850–1700  Paul Bushkovitch
The development of Eastern Orthodoxy in its interaction with state and society in Byzantium, the Balkans, and Russia to 1700. A basic introduction to Orthodoxy and its different regional variants, including topics such as monasticism and political power, the problem of popular piety, and responses to heresy, paganism, and Islam. W 1:30–3:20

HIST 692b, Empire and Nation in Eastern Europe: The Twentieth Century  Timothy Snyder
A review of international and national politics in eastern Europe, broadly conceived, from 1918 through the present. Topics include the interwar national states and their collapse, the Second World War, German and Soviet colonial plans and practices, communism, and the Cold War. Under discussion are national movements from the Balkans to the Baltics, including the Greek, Serbian, Romanian, Bulgarian, Croatian, Hungarian, Polish, Czech, Slovak, Lithuanian, and Ukrainian. Research seminar. T 3:30–5:20

HIST 700a/AMST 700a, Introduction to the Historiography of the United States  Ned Blackhawk
Readings and discussion of scholarly work on U.S. history from the settlement era to the present. Members of the department faculty visit the class on a rotating basis. T 9:25–11:15

HIST 703a/AMST 803a, Research in Early National America  Joanne Freeman
A research seminar focused on the early national period of American history, broadly defined. Early weeks familiarize students with sources from the period and discuss research and writing strategies. Students produce a publishable article founded on primary materials. T 1:30–3:20

HIST 707a, Introduction to the Literature of American History to the American Revolution  Alejandra Dubcovsky
The course is designed for graduate students as an introduction to major texts, historiography, and methods in early America. The course emphasizes issues of race, slavery, empire, and cross-cultural interactions. TH 9:25–11:15
HIST 713a/AFAM 697a, Research in Slavery and Abolition  Edward Rugemer
A research seminar in the history of slavery and its abolition in the Atlantic world from the emergence of African slavery in the late sixteenth century through the final emancipations of the 1880s. Potential topics include slavery, slave resistance, rebellions, abolitionism, and emancipation. W 9:25–11:15

HIST 715b/AFAM 764b/AMST 715b, Readings in Nineteenth-Century America  David Blight
The course explores recent trends and historiography on several problems through the middle of the nineteenth century: sectionalism; expansion; slavery and the Old South; northern society and reform movements; Civil War causation; the meaning of the Confederacy; why the North won the Civil War; the political, constitutional, and social meanings of emancipation and Reconstruction; violence in Reconstruction society; the relationships between social/cultural and military/political history; problems in historical memory; the tension between narrative and analytical history writing; and the ways in which race and gender have reshaped research and interpretive agendas. W 2:30–4:20

HIST 718a/INRL 622a, Social Movements in Comparative Perspective  Becky Conekin
In this seminar we explore post-WWII social movements and their legacies across Western Europe and the United States. Examining both the actuality and symbolic character of these movements in contemporary history, we analyze the political, social, and cultural meanings of protest and its impact on class, generational, gender, and racial relations in Western Europe and North America. In addition, if students have specific interests in Eastern European and/or Latin American countries, they may bring these into the discussion and write on them in a comparative perspective in their final paper. We discuss different national histories and discourses about identity, while exploring the varied geographies of the Cold War. We then move to a more thematic approach focusing on, for example, civil rights, antiwar and student protests, and countercultural politics. We conclude with a brief look at the social movements that developed out of the 1960s. T 9:25–11:15

HIST 724b/AMST 767b, Research Seminar in U.S. Urban History  Mary Lui
Students conduct archival research to write an original article-length essay on any aspect of U.S. urban history in any century. The first half of the seminar consists of weekly readings and discussions while the latter half consists of article workshop meetings focused on student writing. T 9:25–11:15

HIST 733b, The United States in the Twentieth Century  Beverly Gage
An introduction to the historiography of the United States in the twentieth century. Emphasis on methodology and major interpretive problems. Readings include “classics” as well as exemplary recent works. TH 1:30–3:20

HIST 736b/AFAM 709b/AMST 709b/WGSS 736b, Research in U.S. Political and Social History after 1865  Glenda Gilmore
Projects chosen from the post-Civil War period, with emphasis on twentieth-century social and political history, broadly defined. Research seminar. T 1:30–3:20
HIST 737a/AMST 779a, Research in Twentieth-Century U.S. Political Economy
Jennifer Klein
Research seminar oriented around themes and issues in U.S. political economy, from the late nineteenth century through the end of the twentieth. Readings in the first part of the term look at various approaches to writing about political economy: for example, business history, intellectual history, labor history, biography, local monograph, or transnational history. Research projects explore new possibilities for writing about labor, business, the state, and capitalism. TH 1:30–3:20

HIST 738b/AMST 738b, Readings in Western and Frontier History
John Mack Faragher
An introduction to recent work on the history of North American frontiers and the shifting region of the American West. Critical consideration of readings, participation in discussion, and completion of short weekly writing assignments and a term project. W 9:25–11:15

HIST 743b/AMST 839b/F&ES 843b/HSHM 744b, Readings in Environmental History
Paul Sabin
Reading and discussion of key works in environmental history. The course explores major forces shaping human-environment relationships, such as markets, politics, and ecological dynamics, and compares different approaches to writing about social and environmental change. M 1:30–3:20

HIST 746a/AMST 903a, Introduction to Public Humanities
Matthew Jacobson
What is the relationship between knowledge produced in the university and the circulation of ideas among a broader public, between academic expertise on the one hand and nonprofessionalized ways of knowing and thinking on the other? What is possible? This seminar provides an introduction to various institutional relations and to the modes of inquiry, interpretation, and presentation by which practitioners in the humanities seek to invigorate the flow of information and ideas among a public more broadly conceived than the academy, its classrooms, and its exclusive readership of specialists. Topics include public history, museum studies, oral and community history, public art, documentary film and photography, public writing and educational outreach, the socially conscious performing arts, and fundraising. In addition to core readings and discussions, the seminar includes presentations by several practitioners who are currently engaged in different aspects of the Public Humanities. With the help of Yale faculty and affiliated institutions, participants collaborate in developing and executing a Public Humanities project of their own definition and design. Possibilities might include, but are not limited to, an exhibit or installation, a documentary, a set of walking tours, a Web site, a documents collection for use in public schools. M 3:30–5:20

HIST 753a, Readings in Transnational History
Jenifer Van Vleck
Readings in historiography after the “transnational turn.” Emphasis on methods, especially research strategies, interpretive frameworks, and keywords. Topics of readings and discussions include empire, colonialism, and postcolonialism; nations and nationalisms; borders and borderlands; political economy; technology, mass culture, and globalization; and transnational approaches to the history of race and gender. W 3:30–5:20
HIST 759a/INRL 657a, One World? International History, 1914–1991
Patrick Cohrs
This research seminar pursues both a historical and a theoretical reexamination of the modern international system in the “short” twentieth century, analyzing why it was so profoundly transformed between the era of imperialism preceding World War I and the end of the Cold War. Main themes include the origins of international conflicts from the Great War and the Great Depression to the U.S.-Soviet antagonism; the peace settlements after the world wars (or absence thereof); American postwar policies and their significance for European integration and the reconstruction of Japan; changing regional configurations in East Asia, Latin America, Africa, and the Middle East; and the question why the Cold War ended as it did. Particular attention to the changing premises and constraints of international politics that influence the making and unmaking of legitimate international orders in the twentieth century. T 1:30–3:20

HIST 760b/LAW 21063, American Legal History John Witt
Selected topics in the history of American law, legal thought, legal institutions, and the legal profession. HTBA

HIST 765au/JDST 789au/RLST 764au, America and Its Jews, 1654 to the Present Paula Hyman
The history of Jews in America from the colonial period to the present. Topics include immigration, religious development, politics, and participation in culture. Special attention to how Jews, as a minority, have negotiated their place in American society. MW 2:30–3:45

HIST 770a/AMST 770a/WGSS 750a, Research in Gender and Sexuality George Chauncey, Joanne Meyerowitz
Students conduct research in primary sources and write original monographic essays on the history of gender and sexuality. Readings include key theoretical works as well as journal articles that might serve as models for student research projects. W 1:30–3:20

HIST 780b/AFAM 763b/AMST 731b, Methods and Practices in U.S. Cultural History Matthew Jacobson
This sampling of U.S. cultural history from the early national period to the present is designed to unfold on two distinct planes. The first is a rendering of U.S. culture itself—a survey, however imperfect, of the major currents, themes, and textures of U.S. culture over time, including its contested ideologies of race and gender, its organization of productivity and pleasure, its media and culture industries, its modes of creating and disseminating “information” and “knowledge,” its resilient subcultures, and its reigning nationalist iconographies and narratives. The second is a sampling of scholarly methods and approaches, a meta-history of “the culture concept” as it has informed historical scholarship in the past few decades. The cultural turn in historiography since the 1980s has resulted in a dramatic reordering of “legitimate” scholarly topics, and hence a markedly different scholarly landscape, including some works that seek to narrate the history of the culture in its own right (Kasson’s history of the amusement park, for instance), and others that resort to cultural forms and artifacts to answer questions regarding politics, nationalism, and power relations (Melani McAlister’s Epic Encounters). In addition to
providing a background in U.S. culture, then, this seminar seeks to trace these developments within the discipline, to understand their basis, to sample the means and methods of “the cultural turn,” and to assess the strengths and shortcomings of culture-based historiography as it is now constituted. F 9:25–11:15

**HIST 789b/AMST 801b, U.S. Intellectual Formations in the Twentieth Century**  
Jean-Christophe Agnew  
This seminar aims to do two things: to introduce students to recent work on some of the more important intellectual movements in twentieth-century U.S. history and to explore the widely different contextualist approaches that historians have taken toward them. Our first set of questions focuses on the intellectuals as a social type or formation: How did they mobilize themselves and others differently over the course of the century as the institutional ground shifted beneath their feet, the culture industries multiplied, and the communication revolution unfolded? How should we understand the real and imagined spaces that intellectuals fashioned for themselves and the impact of those geographies upon their identities and ideas? What effects have the changing forms of intellectual collaboration had on the genesis, refinement, and articulation of ideas in this country? Our second set of questions focuses on some of the ideas, ideologies, paradigms, “imaginaries,” and intellectual identities that have taken hold over the course of the century, with a view toward comparing the different visions in relation to one another and against the circumstances of their efflorescence. One short and one long paper. W 9:25–11:15

**HIST 796a/AMST 796a, Approaches to the History of Capitalism and Culture**  
Jean-Christophe Agnew  
A reading- and discussion-intensive seminar that draws on different disciplines (e.g., intellectual history, anthropology, sociology, geography, political science, and literary criticism) to explore the historical intersections between capitalism and culture in the United States and elsewhere. At the broadest level of transactionality, the readings attempt to unravel the knotted relation between market-making and meaning-making—between commerce and culture and between labor and value. More specifically, we consider the impact of commodification upon culture(s), and vice versa, under historically specific regimes of labor discipline, capital accumulation and circulation, from slavery through the so-called financialization, experientialization, and virtualization of the post-Fordist economy. One long and one short paper. W 1:30–3:20

**HIST 798b, Credit, Trust, and Finance through History**  
Francesca Trivellato, Naomi Lamoreaux  
The word credit comes from the Latin verb *credere*, which means to believe or to trust. This course explores the multiple settings—cultural, social, institutional—in which different times and places have affected the ability of individuals and groups to borrow in order to survive, raise capital for ventures, and finance wars or public works. Topics include usury, pawnbrokers, microfinance, loan sharks, banks, securities markets, bankruptcy, financial crises, and the public debt. W 1:30–3:20
HIST 802b/INRL 658b, Classic and New Approaches to International History
Patrick Cohrs
This graduate reading seminar appraises both classic and new approaches to international history. It focuses on a close reading of influential contributions to the methodology and writing of international, diplomatic, comparative, global, and transnational history from Thucydides to recently influential attempts to interpret the evolution of the international system and international society. The underlying aim is to discuss which approaches have advanced our understanding of fundamental questions and problems in a field that in the eyes of some has become increasingly amorphous—and in which trends may have had the opposite effect. On this basis, the seminar seeks to explore what are the new frontiers of scholarship. T 1:30–3:20

HIST 807a/AMST 650a/ANTH 510a, Resistance, Rebellion, and Survival Strategies in Modern Latin America Gilbert Joseph, Patricia Pessar
An interdisciplinary examination of new conceptual and methodological approaches to such phenomena as peasants in revolution, millenarianism, “banditry,” refugee movements, and transnational migration. F 1:30–3:20

HIST 820b, Problems in Modern Mexican History: People, State, and Nation in Historical Motion Gilbert Joseph
Focusing on the relationship between forms of the state and grassroots political culture, the course examines prevailing trends and controversies in historical writing on Mexico, with special attention given to the Mexican Revolution and its legacies. F 1:30–3:20

HIST 829a/NELC 830a, From Medina to Constantinople: The Middle East from 600 to 1517 Adel Allouche
The seminar discusses the religious and political events that shaped the Middle East from the rise of Islam to the Ottoman conquest of Egypt. It encompasses Arab lands, Iran, and Turkey. TH 1:30–3:20

HIST 834b, Narratives of Modern Iran Abbas Amanat
Close reading, content analysis, and contextual study of modern Persian historical narratives, autobiographies, reform literature, memoirs, travel accounts, and selective documents as well as major studies on the themes of power, morality and violence, Islam and politics, modernity, and contested identities. W 3:30–5:20

HIST 842b, Religion and Power in African History Daniel Magaziner
The course considers various themes related to the history of religion in Africa, including the invention of “religion” in the early colonial period; Islam and the state in French West Africa; chiefs, public healing, and the invisible realm in the nineteenth and twentieth centuries; and conversion, politics, and Christianity from the sixteenth century to the present. Students present a historiographical essay, lead a class discussion, and produce a piece of research based on primary sources. W 1:30–3:20

HIST 849a/AFST 849a, Agrarian History of Africa Robert Harms
The course examines changes in African rural life from pre-colonial times to the present. Issues to be examined include land use systems, rural modes of production, gender roles,
markets and trade, the impact of colonialism, cash cropping, rural-urban migration, and development schemes. W 9:25–11:15

HIST 857b/CHNS 835b, Readings in the Mencius, the Xunzi, and the Zhuangzi
Annping Chin
The course focuses on three Chinese texts from the Warring States period (481–221): the Mencius, the Xunzi, and the Zhuangzi. We consider not only the cognitive powers of the authors but also their distinct styles of argumentation and their art as storytellers and analogists. We explore the texts as historical sources and as means to understand the characters and the intellectual and aesthetic proclivities of the early Chinese professional elite (shi). Readings are in Chinese. T 3:30–5:20

HIST 858a, Research in Qing Dynasty Documents Peter C. Perdue
Reading and discussion of primary sources from the Qing dynasty. Research paper is required. W 3:30–5:20

HIST 877b, Readings in Modern Chinese History: Ming and Qing Dynasties Peter C. Perdue
Reading and discussion of major monographs on modern Chinese history from ca. 1500 to 1911. Research paper is required. W 3:30–5:20

HIST 886a, Japan from the Sea: Maritime Perspectives on the Archipelago’s Past Daniel Botsman
As an alternative to the rice (paddy field)-centric understandings of the past that have dominated modern Japanese constructions of national identity, this seminar offers a forum for exploring the significance of waterways and the sea in the archipelago’s history. Particular attention is given to the Inland Sea (Seto naikai) region, with readings from recent scholarship in both English and Japanese. W 1:30–3:20

HIST 890b, Japanese Reference Works and Documents Daniel Botsman
Provides training in the use of references works and an introduction to the specialist skills needed to undertake research in pre-twentieth-century Japanese history. Participants learn to read documents written in the so-called “epistolary style” (sōrōbun) and explore Yale’s rich collection of premodern source materials. TH 1:30–3:20

HIST 901a/HSHM 708a, The Body in Science and Art Paola Bertucci
The course explores the history of the representations of the human body in science and art. It discusses recent literature on the role of the body in experimental practices. W 1:30–3:20

HIST 902a/EAST 525a/HSHM 707a, Impact of Epidemic Disease in Context: Focus on Asia William Summers
The course brings historical, geopolitical, medical, and public health perspectives to bear on the study of specific epidemics, with a focus on Asia. Case studies include major epidemics such as cholera in the Philippines and plague in Manchuria in the early twentieth century, the story of Japan’s biological warfare Unit 731 in World War II, recurrent influenza pandemics, and more recently, Nipah virus outbreaks in Malaysia, SARS in China, and pneumonic plague in Gujarat, India. T 1:30–3:20
HIST 904b/HSHM 709b, Science and Secrecy  Paola Bertucci  
From the medieval “books of secrets” to the Manhattan Project, secrecy has been part of scientific and technological activities. The seminar explores the changing meaning of secrecy in relation to science, technology, and medicine. T 1:30–3:20

HIST 910b/HSHM 745b, History of Health Activism  Naomi Rogers  
This research seminar introduces students to current historical debates around health activism. Topics include progressive and conservative ideologies; debates around welfare and entitlements; gender and reproductive rights; medical professionalism; and health activism as a social movement. Research is focused on holdings in Yale libraries.  W 1:30–3:20

HIST 914au/AMST 879au/HSHM 634au, Media and Medicine in Modern America  
John Harley Warner, Gretchen Berland  
An exploration of the relationships among medicine, health, and the media in the United States from 1880 through the present. Focus on newspapers, magazines, professional journals, advertising, exhibitions, radio, film, television, and the Internet; and on interactions among researchers, health professions, medical and public health institutions, journalists, advocacy organizations, the state, industry, and the public. Topics include the changing role of the media in shaping conceptions of the body; creating new diseases; influencing health and health policy; crafting the image of the medical profession; informing expectations of medicine and constructions of citizenship; and the medicalization of American life.  TTH 10:30–11:20

HIST 930a/HSHM 701a, Problems in the History of Medicine and Public Health  John Harley Warner  
An examination of the variety of approaches to the social, cultural, and intellectual history of medicine and public health. Reading and discussion of the recent scholarly literature in the field, sampling writings on health care, illness experiences, and medical cultures in Europe, the Americas, and Asia from antiquity to the twentieth century. Topics include the role of gender, class, ethnicity, race, religion, and region in the experience of health care and sickness and in the construction of medical knowledge; the interplay between lay and professional understandings of the body; the role of the marketplace in shaping professional identities and patient expectations; citizenship, nationalism, and imperialism; and the visual culture of medicine.  M 1:30–3:20

HIST 931b/HSHM 702b, Problems in the History of Science  William Rankin  
Close study of recent secondary literature in the history of the physical and life sciences. An inclusive overview of the emergence and diversity of scientific ways of knowing, major scientific theories and methods, and the role of science in politics, capitalism, war, and everyday life. Discussions focus on historians’ different analytic and interpretive approaches.  M 1:30–3:20

HIST 933b/HSHM 640b, Molecules, Life, and Disease in the Twentieth Century  William Summers  
The course explores the transformation of the life sciences in the twentieth century. It focuses on the rise of molecular biology and its understanding of life and disease. It shows
how and why the molecular vision on life has achieved such a high level of scientific authority and social legitimacy. It emphasizes the relationship of this transformation to broader intellectual, social, cultural, and political change. TTH 10:30–11:20

**HIST 938b/HSHM 676b/LAW 21441, The Engineering and Ownership of Life**

Daniel Kevles

The seminar explores the historical development of intellectual property protection in living matter. Focusing on the United States in world context, it examines arrangements outside the patent system as well as within it. Topics include agriculture, medicine, biotechnology, and law. May be taken as a reading or research course. W 3:30–5:20

**HIST 950b/JDST 787b/RLST 795b, Women in Modern Jewish History**

Paula Hyman

The roles and representation of Jewish women in the modern period. Special attention to the role of gender in Judaism; the social, cultural, and political activity of women; and the development and impact of feminism. T 1:30–3:20

**HIST 951a/JDST 793a/RLST 799a, Introduction to Modern Jewish Thought**

Eliyahu Stern

An overview of modern Jewish philosophical trends, movements, and thinkers from the seventeenth to the twenty-first century. Subject matter addressed: enlightenment, historicism, socialism, secularism, religious radicalism, and Zionism. TTH 11:35–12:25, 1 HTBa

**HIST 965a/ANTH 541a/F&ES 836a/PLSC 779a, Agrarian Societies: Culture, Society, History, and Development**

James Scott, Michael McGovern, Kalyanakrishnan Sivaramakrishnan

An interdisciplinary examination of agrarian societies, contemporary and historical, Western and non-Western. Major analytical perspectives from anthropology, economics, history, political science, and environmental studies are used to develop a meaning-centered and historically grounded account of the transformations of rural society. Team-taught. M 1:30–5:20

**HIST 977a/JDST 796a/RLST 790a, Anti-Semitism in Modern Times**

Paula Hyman

An exploration of anti-Semitism as a religious, social, and political prejudice in different historical contexts. Examination of premodern religious and secular stereotypes. Focus on the role of anti-Semitism in Europe, the United States, and the Middle East from the late nineteenth century to contemporary times. W 9:25–11:15

**HIST 979b/JDST 788b/RLST 768b, Holocaust in Historical Perspective**

Paula Hyman

A survey of the major historical issues raised by the Holocaust, including the roots of Nazism; different theoretical perspectives and ways of accounting for genocide; the behavior of perpetrators, victims, and bystanders; and problems of representation. TTH 10:30–11:20, 1 HTBa

**HIST 980a/INRL 652a, Genocide in History and Theory**

Benedict Kiernan

Comparative research and analysis of genocidal occurrences from ancient times to the
present; theories and case studies; and inter-regional, interdisciplinary perspective. Readings and discussion, guest speakers, research paper. TH 1:30–3:20

**HIST 985b/MGT 984b/PLSC 715b, Studies in Grand Strategies, Part I**
John Gaddis, Paul Kennedy, Charles Hill
This two-term course begins in January with readings in classical works from Sun Tzu to Clausewitz to Kissinger. Students identify principles of strategy and examine the extent to which these were or were not applied in historical case studies from the Peloponnesian War to the post-Cold War period. During the summer students undertake research projects or internships designed to apply resulting insights to the detailed analysis of a particular strategic problem or aspect of strategy. Written reports are presented and critically examined early in the fall term. Students must take both terms, fulfill the summer research/internship, and attend additional lectures to be scheduled throughout the spring and fall terms. Admission is by competitive application only; deadline is early November. Please visit www.yale.edu/iss/gs for application information. M 3:30–5:20

**HIST 985a/MGT 984a/PLSC 716a, Studies in Grand Strategies, Part II**
John Gaddis, Paul Kennedy, Charles Hill
Part II of the two-term linked seminar offered during the calendar year 2011. Research seminar. M 3:30–5:20

**HIST 994a/b, Oral Exam Tutorial**
Graded Sat/Unsat.

**HIST 995a/b, Prospectus Tutorial**
Graded Sat/Unsat.

**HIST 998a/b, Directed Readings**
Offered by permission of the instructor and DGS to meet special requirements not covered by regular courses. Graded Sat/Unsat.

**HIST 999a/b, Directed Research**
Offered by arrangement with the instructor and permission of DGS to meet special requirements.
HISTORY OF ART

Loria Center, Rm. 252, 203.432.2668
www.yale.edu/arthistory
M.A., M.Phil., Ph.D.

Chair
Alexander Nemerov (Loria 656, 203.432.8442, alexander.nemerov@yale.edu)

Director of Graduate Studies
Tim Barringer (Loria 657, 203.432.2680, timothy.barringer@yale.edu)

Professors  Brian Allen (Adjunct), Carol Armstrong (on leave [Sp]), Tim Barringer, Edward Cooke, Jr., David Joselit, Diana Kleiner, Kobena Mercer, Amy Meyers (Adjunct), Mary Miller, Robert Nelson (on leave [Sp]), Alexander Nemerov, Jock Reynolds (Adjunct), Vincent Scully (Emeritus), Robert Thompson, Christopher Wood, Mimi Hall Yiengpruksawan

Assistant Professors  J. D. Connor, Milette Gaifman, Erica James, Jacqueline Jung, Joost Keizer, Kishwar Rizvi, Tamara Sears, Sebastian Zeidler

Lecturers  Theresa Fairbanks, Karen Foster, Susan Matheson, Ian McClure, Margaret Olin, Andrea Rager, David Sensabaugh

Fields of Study
Fields include Greek and Roman; Medieval and Byzantine; Renaissance; Early Modern; eighteenth-, nineteenth-, and twentieth-century European; Modern Architecture; African; African American; American; American Decorative Arts; British; Pre-Columbian; Islamic; Chinese; Japanese; South Asian; and Film.

Special Requirements for the Ph.D. Degree
Students in the history of Western art must pass examinations in German and one other language pertinent to their field of study. One examination must be passed during the first year of study, the other not later than the beginning of the third term. Students of non-Western art must qualify in two languages selected by agreement with the adviser and the director of graduate studies (DGS). They have an extra year in which to do so. During the first two years of study, students normally take thirteen term courses. Normally by January 20 of the second year, students submit a qualifying paper that should demonstrate the candidate's ability successfully to complete a Ph.D. dissertation in art history. During the fall term of the third year, students are expected to take the qualifying examination. Candidates must demonstrate knowledge of their field and related areas, as well as a good grounding in method and bibliography. By the end of the second term of the third year, students are expected to have established a dissertation topic. A prospectus outlining the topic must be approved by a committee at a colloquium by the end of the third year. Students are admitted to candidacy for the Ph.D. upon completion of all pre-dissertation requirements, including the prospectus and qualifying examination. Admission to candidacy must take place by the end of the third year.
The faculty considers teaching to be an important part of the professional preparation of graduate students. Students are required to do four terms of teaching. This requirement is fulfilled in the second and third years. They receive a total of one course credit as teaching fellows when they lead a discussion section. Students may also serve as a graduate research assistant at either the Yale University Art Gallery or the Yale Center for British Art. This can be accepted in lieu of one or two terms of teaching, but students may accept a graduate research assistant position at any time after the end of their first year. Application for these R.A. positions is competitive.

**Combined Ph.D. Programs**

**HISTORY OF ART AND AFRICAN AMERICAN STUDIES**

The Department of the History of Art offers, in conjunction with the Department of African American Studies, a combined Ph.D. in History of Art and African American Studies. Students in the combined-degree program must take five courses in African American Studies as part of the required twelve courses and are subject to the language requirement for the Ph.D. in History of Art. The dissertation prospectus and the dissertation itself must be approved by both History of Art and African American Studies. For further details, see African American Studies.

**HISTORY OF ART AND FILM STUDIES**

The Department of the History of Art offers, in conjunction with the Film Studies Program, a combined Ph.D. in the History of Art and Film Studies. Students are required to meet all departmental requirements, but many courses may count toward completing both degrees at the discretion of the directors of graduate studies in History of Art and Film Studies. For further details, see Film Studies.

**HISTORY OF ART AND RENAISSANCE STUDIES**

The Department of the History of Art offers, in conjunction with the Renaissance Studies Program, a combined Ph.D. in the History of Art and Renaissance Studies. For further details, see Renaissance Studies.

**The Center for the Study of American Art and Material Culture**

The Center for the Study of American Art and Material Culture provides a programmatic link among the Yale faculty, museum professionals, and graduate students who maintain a scholarly interest in the study, analysis, and interpretation of American art and material culture. It brings together colleagues from a variety of disciplines—from History of Art and American Studies to Anthropology, Archaeological Studies, and Geology and Geophysics—and from some of Yale’s remarkable museum collections, from the Art Gallery and Peabody Museum to Beinecke Library. Center activities will focus upon one particular theme each year and will include hosting one or more visiting American Art and Material Culture Fellows to teach a course each term and interact with Yale colleagues; weekly lunch meetings in which a member makes a short presentation centered on an artifact or group of artifacts followed by lively discussion about methodology, interpretation, and context; and an annual three-day Yale-Smithsonian Seminar on Material Culture.
Master’s Degrees

M.Phil. See Degree Requirements under Policies and Regulations. Additionally, students in the History of Art are eligible to pursue a supplemental M.Phil. degree in Medieval Studies. For further details, see Medieval Studies.

M.A. (en route to the Ph.D.) This degree is awarded after the satisfactory completion of one year of course work (six term courses) and after evidence of proficiency in one required foreign language. The student normally petitions for the degree at the time of registration in the fall of the second year.

Program materials are available upon request to the Director of Graduate Studies, Department of the History of Art, Yale University, PO Box 208272, New Haven CT 06520-8272.

Courses

HSAR 500a, Critical Approaches to the History of Art  Carol Armstrong
An introduction to the foundations of modern art-historical method: formalism, connoisseurship, iconology, social history, visual culture. Readings include Wölflin, Riegl, Friedländer, Warburg, Kubler, Foucault, Crary, among others. M 1:30–3:20

HSAR 506a or b, The Teaching of the History of Art
By arrangement with faculty. History of Art graduate students only.

HSAR 512a or b, Directed Research
By arrangement with faculty.

HSAR 514a or b, Graduate Research Assistantship

HSAR 570a/ARCG 749a/CLSS 846a, Becoming Hadrian: Autobiography and Art in the Second Century A.D.  Diana Kleiner
Marguerite Yourcenar’s famed fictional Memoirs of Hadrian serves as the starting point for an exploration of Hadrian and the art he commissioned in Rome and abroad. Hadrian’s passion for life, quest after peace, romantic wanderlust, veneration of Greek culture, and craving for love, along with his acceptance of death’s inexorableness, led him to commission some of Rome’s greatest monuments. The emperor’s flair for leadership and talent as an amateur architect informs student projects on the sculpture, mosaics, and buildings of the age, among them the portraiture of Hadrian’s lover Antinous, the Pantheon, and Hadrian’s Wall in Britain. Special attention is paid to Hadrian’s Villa at Tivoli, an empire unto itself where Hadrian’s autobiography was fully realized. Qualified undergraduates who have taken Roman Art: Empire, Identity, and Society and/or Roman Architecture may be admitted with permission of the instructor. T 1:30–3:20

HSAR 575b, Vase Painting in Ancient Athens  Susan Matheson
Athenian painted vases provide a window into the world of ancient Athens, revealing much about daily life, religion, politics, and culture of the classical past. The seminar concentrates on seven major vase painters (Exekias; Euphronios; the Berlin, Kleophrades, Niobid, and Achilles Painters; and Meidias) encompassing the Archaic through the Classical periods, focusing on their techniques and their styles; on what the vases show us about Athenian life; and on the relationship between vases and other arts—sculpture,
wall painting, poetry, and drama—in ancient Greece. The class uses the Yale collection extensively, giving students the chance to work directly with the original vases.

**HSAR 593a, The Body as Medium in Medieval Art and Culture**  Jacqueline Jung

Since the publication of pioneering studies by Caroline Walker Bynum in the late 1980s, the European Middle Ages has come to be recognized not as an “age of spirituality” but as an emphatically body-oriented culture. The paradoxical bodies of Christ (at once wholly divine and wholly human) and his Virgin Mother were the subject of extensive speculation, scrutiny, and loving devotion in literature, theology, and art; the fragmented remains of the saints were housed in glittering containers for the faithful to venerate; and the living bodies of charismatic men and women became both the vehicles for their own communion with the divine and objects themselves for the devotional (or skeptical) gazes of others. It is the latter facet of medieval visual culture to which this seminar is dedicated. Although we look closely at works of art in various media (especially manuscript painting and sculpture), in which bodies function as representational signs, our main objective is to understand the variety of ways in which active, living bodies could serve as communicative media in spheres both public and private, religious and secular. Topics include the physical and sensory apparatus of the body in medieval science and medicine; the body as vehicle for the individual’s communication with God; the stigmatic body; the rapturous or possessed body as site of discernment; the tortured body as teaching tool; the self-punished body as mimetic spectacle; the courtly body as aesthetic object; and the dissected body as revelation of both personal virtues and cosmic forces. Reading knowledge of French and German are highly recommended but not required. **TH 1:30–3:20**

**HSAR 595b, Byzantine Manuscript Illumination**  Robert Nelson

An introduction to the history of the decoration and illustration of Greek manuscripts during the Middle Ages with particular attention to problems of religious texts, such as Gospel books, lectionaries, and Psalters. The course treats the major periods from the great and rare codices of late antiquity to the more plentiful examples after Iconoclasm and the apogee of the medium in the eleventh and twelfth centuries, but continues to the fall of Constantinople and Byzance après Byzance and the collecting and copying of Greek manuscripts in Renaissance Italy. Knowledge of Greek is useful. **M 1:30–3:20**

**HSAR 598a, Transnational Modernisms in the Middle East**  Kishwar Rizvi

Using Jahan Ramazani’s *A Transnational Poetics* as a starting point, this graduate seminar aims to interrogate contemporary architecture through the lenses of mobility and hybridity. The starting point is the Middle East; however, the practice and production of such architecture is not limited by region or nation, but is predicated on the intertwined histories of communities defined by economic status, religion, and political ideology. **T 1:30–3:20**

**HSAR 600b, Painting Poetry in Islamic Art**  Kishwar Rizvi

The course explores the intersection between objects and texts in Islamic art, with a focus on the arts of Iran, Turkey, and India. The seminar studies holdings in Yale’s libraries and art galleries, which include ninth-century Qurans, thirteenth-century ceramics, and nineteenth-century lithographs, in order to gain an understanding of the manner in
which poetic texts were deployed as an inspiration for visual art while serving as a critique of its very materiality. T 1:30–3:20

**HSAR 629a, Renaissance Drawing**  Joost Keizer
The seminar focuses on the theory and practice of drawing in Renaissance Italy. The class mainly works with primary material at the Yale Art Gallery, as well as collections in Boston and New York. We place the practice of drawing in the wider context of theories of invention current in Italy in the period 1400–1600. Topics include the materials and function of drawing; the role of memory; the theory of *disegno*; and the development of drawing as a self-sufficient medium. Reading primarily consists of primary sources (in translation). TH 3:30–5:20

**HSAR 681b, Visual Cultures of British India**  Tim Barringer, Gillian Forrester
This seminar, planned in dialogue with the Yale Center for British Art’s exhibitions *Johan Zoffány, RA and Select Views: An Archive of British India*, examines the impact of British colonial activity in India on visual and material culture since ca.1650. Analysis is offered from a range of theoretical positions and historical perspectives. Significant themes include the East India Company and trade; “Company School” painting; the coproduction of knowledge by British and Indian artists and scholars; Johan Zoffány and his circles in Calcutta and Lucknow; representations of the Indian landscape; art and ethnography; photography; mapping; the 1857 Uprising; gender and visual propaganda; the Raj and ceremonial; representations of India in museums and exhibitions; art education in India; the Swadeshi movement; and art and independence. The course concludes with attention to representations of India on film and to contemporary art in South Asia and artists of the Indian diaspora in Britain. Special emphasis is placed on the rich holdings of works related to India in Yale collections. The seminar includes a field trip to India during spring recess, with special reference to architecture and the British Empire, relevant museum collections, and sites represented by late Mughal, “Company School,” and British and topographical painters. Prerequisite: because of the complexity of travel arrangements, students require the permission of the instructors by September 30, 2011, to take this class. Students are expected to audit, if possible, HSAR 306a, Art and the British Empire, and HSAR 383a, Arts of India, in fall 2011 in preparation. W 1:30–3:20

**HSAR 682b, Artist and Work**  Joost Keizer
The seminar deals with the relationship between artist and work in the Renaissance. We tacitly believe that relationship to have been uncomplicated. Style is what binds the work to an author, a place, and a moment. Now that we attach less value to overarching period and regional styles and more to personal style—defining style as a set of individual choices—it is time to reevaluate the concept of style in fourteenth- to sixteenth-century art. This seminar explores the possibility that the Renaissance produced an entirely different model for the relationship between artist and work than our modern concept of style can account for. Topics include self-inscription and self-fashioning; mimes and mimicry; and the concept of *auctoritas* (authority). In addition to contemporary sources (in translation), readings include Damisch, Summers, Greenblatt, Minnis, Foucault, and Barthes. TH 3:30–5:20
HSAR 684b, Painting, Photography, Film: Theories of Medium  Carol Armstrong
This seminar, which takes its title from László Moholy-Nagy’s 1925 book of the same name, treats the concept of medium-specificity as it applies to painting, photography, film, and related media. It centers on photography and its historically vexed relationship to painting and the modernist discourses of medium purity, autonomy, and self-reflexivity, but it also takes up the history of those discourses as they relate to other media, and as they are troubled by the hybridity of the photograph. Beginning with the philosophical origins of the distinction between literature and the visual arts, the seminar considers Clement Greenberg’s polemics on painting, sculpture, and collage, and his occasional forays into photographic criticism. It addresses attempts at developing an antology of the photograph (Roland Barthes’s *Camera Lucida* most particularly), as well as criticisms of those attempts. It also addresses revisions of the definition of photography, as well as multimedia, inter-media, post-medium, and new media discourses. Finally, it looks at declarations and predictions of the death of painting, the end of photography, and the mutation of film into a digital medium, respectively. This is done by setting readings in key theoretical and critical texts in relation to particular practices in painting, drawing, and photography, as well as through discussions, oral presentations, and final papers. M 1:30–3:20

HSAR 694b, Formalism and Politics  Sebastian Zeidler
For various reasons, ranging from the fall of the Berlin Wall to sheer fatigue, the political projects that used to frame writing on modern art in the 1980s and 1990s have lost steam. Time to survey the territory, consider what’s left and what a new beginning might look like. Readings include some classic positions of the formalist tradition and its postwar reception (Shklovskij through *October*), as well as recent thinkers on political formalism broadly conceived whose work may open up new avenues (Deleuze, Kwinter, Rancière, Ross). M 3:30–5:20

HSAR 696a/AFAM 769a, Violence, Race, and Modernity  Erica James
The course engages the art and material culture of transatlantic slavery, slave societies, Emancipation, Reconstruction, Jim Crow, and contemporary times in the United States and the Caribbean through the indices of violence, trauma, and memory. It posits that violence (cultural, epistemic, ideological, systemic, physical, etc.) is a fundamental part of modernity within the African diaspora, but has thus far been under examined within art history and visual culture. M 3:30–5:20

HSAR 697b/AFAM 737b, Caribbean Art History  Erica James
The Caribbean is a hyper-diaspora, both a site of dispersal and a point of departure for people of African, Indian, Chinese, European, and native heritages. Though it is often reduced to signs of sun, sand, sea, and sex, a closer engagement of the lived realities of the Caribbean complicates singular or essential readings of race, culture, identity, and aesthetics and poses a fundamental challenge to the writing of art histories of the region. This course offers a close examination of the written record of the art history and visual and performance cultures of the Caribbean. In process it attempts to critically engage fundamental aspects of art-historical scholarship, theory, methodology, historiography, aesthetics, exhibition practices, and the uses and limits of the term “Caribbean” in an effort
to consider methods of art-historical scholarship beyond the moorings of postcolonial, postrevolutionary, postindependence, and post-national discourses. M 3:30–5:20

HSAR 700a, Women Make Modern  David Joselit

The course is designed to mine extensively the archives of Gertrude Stein, Katherine Dreier, the Stettheimer sisters, and Mabel Dodge held by the Beinecke Library, as well as other relevant sources beyond Yale. The thesis of the seminar is that, while few women were affirmed as artists in the early part of the twentieth century, it was women who invented and managed the institutional structure of modern art in this country. This institutional creativity is considered to be as significant a contribution as the creation of art. W 9:25–11:15

HSAR 705b/FILM 810b, Beyond Repetition: Saturation, Location, and Trajectory in Art and Media  Francesco Casetti, David Joselit

Repetition is one of the most common and yet misunderstood strategies of modernist art and cinema. As Gilles Deleuze insists in his important book of 1968, *Difference and Repetition*, the goal of repetition is usually not the multiplication of the same but the marking of difference. This class is devoted to tracking those image strategies—saturation, location, and trajectory—by which the “same” visual content accomplishes different effects through its circulation. The term saturation suggests quantity within circulation; location suggests the question of circulatory spaces; and trajectory indicates the movement, or performance, of individual images. We seek to establish an aesthetic theory of circulation through the careful development of these terms. Each week philosophical and aesthetic readings are assigned, as well as study of works of art and cinema. W 9:25–11:15

HSAR 715a/FILM 807a, Film in the Post-Medium Condition  Francesco Casetti

Is there still room for film in the new media landscape sketched out by the digital revolution? What kind of place should film occupy, if room exists? This seminar retraces the path through which cinema has been assigned a specificity among arts and media, while the boundaries between it and its neighbors have been blurred. From this starting point, the seminar takes into account the effects of media convergence on the current ideas of cinema. We analyze the migration of cinema to new devices, such as home theater, iPhone, computer, but also to new environments, whether urban or domestic spaces. In the same vein, we retrace the new formats of film and the new forms of the spectatorship molded by this “relocation” of cinema. What emerges is a different concept of specificity, which pertains not solely to the apparatus but also to the spectator’s experience, and whose definition is based on social habits, forms of textuality, collective narratives (among them, theories), and technological environments. W 9:25–11:15

HSAR 709a/FILM 682a, Theories of the Studio: Arts, Media, Altman  J. D. Connor

Using the work of Robert Altman as a spine, the course explores debates over the nature of the studio in arts (painting, dance, theater, surgery) and media (radio, film, television). While we concentrate on concomitant transformations in American studios and the Hollywood studio system of the 1960s and ’70s, students pursue work in the places and periods of their interest. Readings from Buren, Christensen, Cole & Pardo, Fried, Kolker, Moorefield, Nauman, and Smithson. Films include *M*A*S*H, Nashville, 3 Women, Secret Honor, The Player,* and *The Company.* T 9:25–11:15
HSAR 720a/AMST 693a/WGSS 693a, Material Sensations: Sense and Contention in Material Religious Practice  Sally Promey
This interdisciplinary graduate seminar explores the sensory and material histories of religious images, objects, buildings, and performances. With a focus on American things and religions, the course also considers broader geographical and categorical parameters so as to invite intellectual engagement with the most challenging and decisive developments in relevant fields. The goal is to study not only the visual cultures of religions but also to investigate possibilities for scholarly examination of a more robust human sensorium of sound, taste, touch, scent, and sight—and even “sixth senses”—the points where the senses meet material things (and vice versa) in religious life and practice. Topics for consideration include the cultural construction of the senses and sensory hierarchies; investigation of the sensory capacities of (religious) things; and episodes of sensory contestation in and among various religious traditions. In addition, the course invites thinking beyond the “Western” five senses to other locations and historical possibilities for identifying the dynamics of sensing human bodies in (trans)national religious practices, experience, and ideas. Prerequisite: permission of the instructor. T 1:30–3:20

HSAR 728a/AMST 695a, Craft in Colonial and Independent India  Edward Cooke, Jr.
This seminar focuses upon South Asian craftsmen and their products from the eighteenth century to the present. Looking closely at materials, techniques, forms, and decoration and paying attention to the training of craftsmen and the function and circulation of their work, the course probes the full complexity of textiles, metalwork, ceramics, and woodworking in regard to issues of colonialism, hybridity, and control of work. W 1:30–3:20

HSAR 729a, Theories of Perception  Margaret Olin
This seminar focuses on theories of visual perception that pertain to Western artistic practice since the Renaissance. Close readings of significant primary sources take into account relevant contexts pertaining to mathematics, physical science, philosophy, and cognitive psychology as well as political and ethical issues. Readings range from Alberti’s treatise on perspective to the perceptual theories of Locke and Berkeley, scientific theories of Hermann Helmholtz, Gestalt psychologists, philosophers Merleau-Ponty and Ludwig Wittgenstein, and contemporary perceptual theorists. Writings that apply these ideas to art are read, and some readings are discussed in front of works of art in campus museums. Students are encouraged to question the ethical ramifications of their own assumptions about perception. Requirements: active participation and completion of all readings; and a seminar report and paper, 15–20 pages, on a topic of the student’s choice approved by the instructor. W 2:30–5

HSAR 731b/JDST 692b/REL 936b/RLST 798b, Witnessing, Remembrance, Commemoration  Margaret Olin
Memory and its expressions structure and inform many aspects of contemporary visual culture. This seminar pursues readings about memory and witnessing chosen from among the works of such writers as Sigmund Freud, Albert Camus, Frances Yates, Maurice Halbwachs, Michel de Certeau, and the authors of the Book of Genesis, as well as writings about commemoration by James Young and Pierre Nora, among others.
Discussions apply these readings to the study of witnessing and memorializing as artistic practices, and examine visual realizations of such works, including some monuments and memorials near campus and videos in the Fortunoff archive. Student projects center on theory or on special cases of witnessing or commemoration, ritual, memorial practice, and monuments, whether built, written, aural, electronic, or played out on the streets. Qualified undergraduates welcome. Prerequisite: permission of the instructor.

**HSAR 735a/AMST 697a, 1930s America: Photography, Literature, Painting, Film**
Alexander Nemerov

The course explores the 1930s in America, year by year and place by place, by the light and darkness of a phenomenological conception of history. That is, it is a study in which the historian's states of knowing and not knowing are conceived as an intermixed chiaroscuro affording depth, shade, and softness to what can be seen or maybe only imagined about the past. The focus of our imperceptions is a recovery, by glimpses and conjurings, of day-to-day life as it might have been then: namely, the routines and habits cresting now and then to moments of philosophical power, envisioned as such by the historian's art of casting a shadow on what he or she sees. Neither then nor now, the photography, fiction, paintings, and films we study can be seen as glimmers or half-articulations of something that is not our mirror image but, as Robert Frost put it, “For once, then, something.” Among the many figures we consider: William Faulkner, Dorothea Lange, Margaret Bourke-White, Walker Evans, Nathanael West, Aaron Douglas, William Edmondson, Frank Capra, and Judy Garland. W 3:30–5:20

**HSAR 736b/AMST 696b, Modern Craft in America**
Edward Cooke, Jr.

This seminar explores the development and rise of modern craft in America, focusing upon the ideology, pedagogy, and commercialization of the Arts and Crafts Movement as well as the overlap of craft, design, and folk art in the interwar years. Students consider such topics as regional modes of production, the connection between craft and identity, the interdependence of rural production and urban consumption, the necessity of craft, and the choice of craft. W 3:30–5:20

**HSAR 777b/AFAM 741b, Mambo in the Media, 1949–2011**
Robert Thompson

The impact of a midcentury dance on novels, films, aesthetic criticism, photography, and painting from 1949 to 2011. Discussion includes the novels of Jack Kerouac, Carlos Fuentes, and Gonzalo Martré; the films of Almodóvar and Fellini; and the history of mambo dance in Havana, Mexico City, New York, Tokyo, and London. TH 3:30–5:20

**HSAR 778b/AFAM 728b/AFST 778b, From West Africa to the Black Americas: The Black Atlantic Visual Tradition**
Robert Thompson

Art, music, and dance in the history of key classical civilizations south of the Sahara—Mali, Asante, Dahomey, Yorùbá, Ejagham, Kongon—and their impact on the rise of New World art and music. TTH 11:35–12:50

**HSAR 779a/AFAM 729a, New York Mambo: Microcosm of Black Creativity**
Robert Thompson

Art, music, and dance in the history of key classical civilizations of the world of New York mambo and salsa. Emphasis on Palmieri, Cortijo, Roena, Harlow, and Colón.
Examination of panel traditions such as New York Haitian art, Dominican merengue and rastas of Jamaican Brooklyn, and the New York school of Brazilian capoeira. TH 11:35–12:50

**HSAR 780a/AFAM 727a, Running Backs and Wide Receivers: The Influence of African Dance on American Sport** Robert Thompson

Starting with an intensive study of the main organizing principles in African dance and their variations among four key civilizations, Mandé, Yorùbá, Igbo, and Kongo, the seminar systematically compares these traits and gestures first with key black American dancing and then with action styles in black American sport. Emphasis is given to the transformation of soccer by the black superstar Pelé, and black influence in the reshaping of NFL football. TH 3:30–5:20

**HSAR 783a/AFAM 826a, Theorizing Diaspora** Kobena Mercer

This seminar reviews different methods in the study of diasporas and demonstrates their application in research on visual culture and art history. Models addressed to African American, Caribbean, and black British contexts by Stuart Hall, Paul Gilroy, James Clifford, Brent Hayes Edwards, *inter alia*, are examined in relation to art, film, and photography that articulates cross-cultural aesthetics. Debates on hybridization that led to such cognate concepts as syncretism, creolization, and translation are tested in comparative case studies. Texts include Homi Bhabha, Sarat Maharaj, Jean Fisher, Eduoard Glissant, Jan Nederveen Pieterse, and book-length introductions by Robin Cohen, *Global Diasporas* (1997), and Sudesh Mishra, *Diaspora Criticism* (2007). W 1:30–3:20

**HSAR 785b/AFAM 839b, Cross-Cultural Issues in Contemporary Art** Kobena Mercer

To what extent does the study of cross-cultural dynamics in art provide criteria for making critical distinctions within the bewildering variety of contemporary practices? This seminar reviews trends among art institutions since 1990 whereby the biennale exhibition model is now central to the way audiences experience contemporary art. Considering curatorial frameworks and the public reception of landmark exhibitions, the seminar tests the evaluative perspectives put forward by various cities. Artists include Yinka Shonibare, Kara Walker, Wangechi Mutu, Walid Raad; exhibitions include 1993 Whitney Biennale, *Century City*, *Documenta XI*, *Afro-Modern*; and critics include Thomas McEvilley, Okwui Enwezor, Terry Smith, and Geeta Kapur. W 1:30–3:20

**HSAR 796b, Chinese Painting of the Ming Dynasty** David Sensabaugh

Chinese painters of the Ming Dynasty (1368–1644) turned away from the direct observation of the visible world, basing their pictures instead on the art of earlier periods. They inherited two distinct traditions of painting: a tradition of realistic painting from the Song dynasty (960–1279) and a tradition of calligraphically expressive painting from the Yuan dynasty (1279–1368). These competing traditions are embodied in two schools: the Wu School of scholar painters based on the Yuan; and the Zhe School, loosely the painters of the imperial court and the professional painters, based on the earlier Song. The seminar explores this issue of what happens to painting when art is based on art, beginning with the rise of scholar painting in the late Yuan period and with the establishment of the imperial court as a center for painting in the early Ming. The seminar
concludes around 1600 before the directions of scholar and professional painting appear to change during the final decades of the Ming dynasty. The Yale Art Gallery’s holdings of Ming paintings serve as focal points for relevant sessions. W 2:30–4:20

HSAR 797a, Art, Literature, and Courtly Culture  Tamara Sears
This seminar looks at the relationships among art, literature, and courtly culture largely between ca. 400 and 1200 A.D. In recent years, scholars working with textual sources have characterized this period as one that witnessed the rise of a “Sanskrit cosmopolis” through which political, economic, and religious centers throughout South and Southeast Asia were interconnected through shared courtly practices. Sanskrit, formerly a language primarily of ritual, became also a widespread elite language (not unlike Latin in medieval Europe) used by court poets and royal patrons to create new ways of expressing cultural authority and power. This course looks at visual imagery in conjunction with literary texts to examine how new cultural practices traceable through text may have informed (or been informed by) artistic production. The many issues to be considered include the importance of dance, theater, and performance; the emergence of shared gestural “languages”; the significance of comportment and bodily practices; forms and functions of narratives in different media; theories of aesthetics (rasa) and emotional responses (bhavas); modes of audience reception and circulation. Weekly readings include both secondary scholarly works drawn from multiple disciplines (including by social theorists and philosophers) and primary texts consisting of dramatic plays, poetry, excerpts from religious texts, and epigraphic records (all in translation, primarily in English; optional excerpts may sometimes be given in Sanskrit, German, and/or French). W 2:30–4:20
HISTORY OF SCIENCE AND MEDICINE

The Graduate Program in the History of Science and Medicine is a semi-autonomous graduate track within the Department of History. The program's students are awarded degrees in History, with a concentration in the History of Science and Medicine.

207 Hall of Graduate Studies, 203.432.1365
http://hshm.yale.edu
M.A., M.Phil., Ph.D.

Chair
Frank Snowden

Director of Graduate Studies
William Summers

Faculty  Paola Bertucci (History), Mariola Espinosa (History of Medicine), Daniel Kevles (History), William Rankin (History), Naomi Rogers (History of Medicine; Women's, Gender & Sexuality Studies), Frank Snowden (History; History of Medicine), William Summers (Molecular Biophysics & Biochemistry), John Harley Warner (History of Medicine; History)

Affiliated Faculty  Toby Appel (Librarian for Medical History), Bruno Cabanes (History), Robert Gordon (Geology & Geophysics; Applied Mechanics), Veronika Grimm (Classics), Dimitri Gutas (Near Eastern Languages & Civilizations), Ann Hanson (Classics), Bettyann Kevles (History), Jennifer Klein (History), Michael McBride (Chemistry), Joanne Meyerowitz (History), Alan Mikhail (History), Jill North (Philosophy), Sherwin Nuland (Surgery), Kevin Repp (Curator, Modern European Books & Manuscripts, Beinecke Library), Cynthia Russett (History), Paul Sabin (History), Gordon Shepherd (Neuroscience), Rebecca Tannenbaum (History)

Fields of Study
All subjects and periods in the history of science and history of medicine, especially the modern era. Special fields represented include American and European science and medicine; disease, therapeutics, psychiatry, drug abuse, and public health; physics; science and national security; science and law, science and religion, life sciences, human genetics, eugenics, molecular biology, biotechnology, microbiology, intellectual property, gender, race, and science/medicine; bioethics and medical research.

Special Admissions Requirements
Applicants should have a strong undergraduate background in history and in a science relevant to the direction of their graduate interests. These requirements will be applied with flexibility, and outstanding performance in any field pertinent to the program will be taken into consideration.

Special Requirements for the Ph.D. Degree
Either French and German or two languages relevant to the student's research interests and approved by the director of graduate studies (DGS) of the program. Students may
fulfill the requirement either by passing an approved language course for credit or by passing a language test administered by the program faculty.

Students will ordinarily take twelve term courses during the first two years. All students will normally take the two-term core seminar sequence HSHM 701a/702b or equivalents, HSHM 710a, four additional graduate seminars in history of science or medicine, and at least one graduate course in a field of history outside of science or medicine. The remaining courses can be taken in history of medicine or science, history, science, or any other field of demonstrated special relevance to the student’s scholarly objectives. Two of the twelve courses must be graduate research seminars in the History of Science and Medicine.

During the first two years of study, students must achieve Honors in at least two courses in the first year and Honors in at least four courses by the end of the second year, with a High Pass average overall. If a student does not meet this standard by the end of the first or second year, the relevant members of the department will consult and promptly advise the student whether the student will be allowed to register for the fall of the following academic year.

Students who enter having previously completed graduate work may obtain some credit toward the completion of the total course requirement, the amount being contingent on the extent and nature of the previous work and its fit with their intended course of study at Yale.

All students are expected, prior to entering on their dissertation work, to develop a broad general knowledge of the discipline. This knowledge may be acquired through a combination of course work taken at Yale or elsewhere, regular participation in the program colloquia and workshops, and preparation for the qualifying oral examination.

Students will normally spend the summer following their second year preparing for the oral qualifying examination, which will be taken in the third year, preferably during the first half.

The qualifying examination will cover four areas of chosen concentration:
1 & 2. two fields in the history of science and/or history of medicine;
3. a field in an area of history outside of medicine and/or science;
4. a field of special interest, the content and boundaries to be established with the adviser for the field. The student may elect to do a second field in history outside of history of science or medicine; or a field in one of the sciences; or a field in a subject such as bioethics, health policy, public health, medical anthropology, medical sociology, science and law, science and national security, science and religion, science and culture, biotechnology, gender, science and medicine; race, science and medicine, or cultural studies.

During their first term in the program, all students will be advised by the DGS. During the second term and thereafter, each student will be advised by a faculty member of his or her choosing. The adviser will provide guidance in selecting courses and preparing for the qualifying examination. The adviser may also offer help with the development of ideas for the dissertation, but students are free to choose someone else as the dissertation supervisor when the time comes to do so. Students are encouraged to discuss their interests and program of study with other members of the faculty.
Students are encouraged to begin thinking about their dissertation topics during the second year. They are required to prepare a dissertation prospectus as soon as possible following the qualifying examination and to defend the prospectus orally before being admitted to full candidacy for the doctoral degree. Ordinarily the prospectus defense is held in the second term of the third year, with advancement to candidacy before the start of the fourth year.

Teaching is an important part of the professional preparation of graduate students in History of Science and Medicine. Students will teach, usually in the third and fourth years of study. They may, however, teach in the second term of the second year, deferring the completion of their required course work to the first term of the third year. Students are also encouraged to participate in the programs to develop teaching skills offered by the Graduate School. At least two terms of teaching are required of all students; four terms are required of students on Yale-supported fellowships.

In the fourth or fifth year, and preferably no later than the fall term of the fifth year, students are required to submit a chapter of the dissertation (not necessarily the first chapter) to the dissertation committee. This chapter will then be discussed with the student by members of the committee, preferably in a colloquium, to give the student additional advice and counsel on the progress of the dissertation. This conference is designed to be an extension of the conversation begun in the prospectus defense and is not intended as another defense; its aim is to give students early feedback on the research, argument, and style of the first writing accomplished on the dissertation.

M.D./Ph.D. and J.D./Ph.D. Joint-Degree Programs

Students may pursue a doctorate in History of Science and Medicine jointly with a degree in Medicine or Law. Standard graduate financial support is provided for the doctoral phase of work toward such a joint degree. Candidates for the joint degree in Law must apply for admission to both the Law School and the Graduate School. Information about the joint-degree program with Medicine can be obtained from the Web site of the Yale School of Medicine (http://medicine.yale.edu/mdphd) and from the Web site of the Section of the History of Medicine (http://medicine.yale.edu/histmed).

Master’s Degrees

M.Phil. and M.A. (en route to the Ph.D.) See Degree Requirements under Policies and Regulations.

Master’s Degree Program The terminal M.A. program is designed particularly for those who plan to combine teaching or scholarship in these fields with a professional career in medicine or science. Students who enroll in the terminal master’s degree program leading to the M.A. are expected to complete six term courses during two terms of study, to fulfill one foreign language requirement, and to submit an acceptable master’s paper. Course work must include the graduate seminar HSHM 701a/702b and one additional graduate seminar in history of science or medicine. The remaining courses are to be chosen in consultation with the DGS or a faculty adviser.

For more information about the History of Science and Medicine program and admission to the Graduate School, see http://hshm.yale.edu and www.yale.edu/graduateschool/admissions; or contact Barbara McKay (barbara.mckay@yale.edu).
Courses

**HSHM 634au/AMST 879au/HIST 914au, Media and Medicine in Modern America**

John Harley Warner, Gretchen Berland

An exploration of the relationships among medicine, health, and the media in the United States from 1870 through the present. Focus on newspapers, magazines, professional journals, advertising, exhibitions, radio, film, television, and the Internet; and on interactions among researchers, health professions, medical and public health institutions, journalists, advocacy organizations, the state, industry, and the public. Topics include the changing role of the media in shaping conceptions of the body; creating new diseases; influencing health and health policy; crafting the image of the medical profession; informing expectations of medicine and constructions of citizenship; and the medicalization of American life. TTH 10:30–11:20

**HSHM 640bu/HIST 933bu, Molecules, Life, and Disease in the Twentieth Century**

William Summers

The course explores the transformation of the life sciences in the twentieth century. It focuses on the rise of molecular biology and its understanding of life and disease. It shows how and why the molecular vision on life has achieved such a high level of scientific authority and social legitimacy. It emphasizes the relationship of this transformation to broader intellectual, social, cultural, and political change. TTH 10:30–11:20

**HSHM 676b/HIST 938b/LAW 21441, The Engineering and Ownership of Life**

Daniel Kevles

The seminar explores the historical development of intellectual property protection in living matter. Focusing on the United States in world context, it examines arrangements outside the patent system as well as within it. Topics include agriculture, medicine, biotechnology, and law. May be taken as a reading or research course. W 3:30–5:20

[HSHM 677bu, Genetics, Reproduction, and Society]

**HSHM 701a/HIST 930a, Problems in the History of Medicine and Public Health**

John Harley Warner

An examination of the variety of approaches to the social, cultural, and intellectual history of medicine and public health. Reading and discussion of the recent scholarly literature in the field, sampling writings on health care, illness experiences, and medical cultures in Europe, the Americas, and Asia from antiquity to the twentieth century. Topics include the role of gender, class, ethnicity, race, religion, and region in the experience of health care and sickness and in the construction of medical knowledge; the interplay between lay and professional understandings of the body: the role of the marketplace in shaping professional identities and patient expectations; citizenship, nationalism, and imperialism; and the visual culture of medicine. M 1:30–3:20

**HSHM 702b/HIST 931b, Problems in the History of Science**

William Rankin

Close study of recent secondary literature in the history of the physical and life sciences. An inclusive overview of the emergence and diversity of scientific ways of knowing, major scientific theories and methods, and the role of science in politics, capitalism, war, and everyday life. Discussions focus on historians’ different analytic and interpretive approaches. M 1:30–3:20
HSHM 707a/EAST 525a/HIST 902a, Impact of Epidemic Disease in Context: Focus on Asia  William Summers
The course brings historical, geopolitical, medical, and public health perspectives to bear on the study of specific epidemics, with a focus on Asia. Case studies include major epidemics such as cholera in the Philippines and plague in Manchuria in the early twentieth century, the story of Japan’s biological warfare Unit 731 in World War II, recurrent influenza pandemics, and more recently, Nipah virus outbreaks in Malaysia, SARS in China, and pneumonic plague in Gujarat, India. T 1:30–3:20

HSHM 708a/HIST 901a, The Body in Science and Art  Paola Bertucci
The course explores the history of the representations of the human body in science and art. It discusses recent literature on the role of the body in experimental practices. W 1:30–3:20

HSHM 709b/HIST 904b, Science and Secrecy  Paola Bertucci
From the medieval “books of secrets” to the Manhattan Project, secrecy has been part of scientific and technological activities. The seminar explores the changing meaning of secrecy in relation to science, technology, and medicine. T 1:30–3:20

HSHM 744b/AMST 839b/F&ES 843b/HIST 743b, Readings in Environmental History  Paul Sabin
Reading and discussion of key works in environmental history. The course explores major forces shaping human-environment relationships, such as markets, politics, and ecological dynamics, and compares different approaches to writing about social and environmental change. M 1:30–3:20

HSHM 745b/HIST 910b, History of Health Activism  Naomi Rogers
This research seminar introduces students to current historical debates around health activism. Topics include progressive and conservative ideologies; debates around welfare and entitlements; gender and reproductive rights; medical professionalism; and health activism as a social movement. Research is focused on holdings in Yale libraries. W 1:30–3:20

HSHM 914a or b, Research Tutorial I
By arrangement with faculty.

HSHM 915a or b, Research Tutorial II
By arrangement with faculty.

HSHM 920a or b, Independent Reading
By arrangement with faculty.

HSHM 930a or b, Independent Research
By arrangement with faculty.
IMMUNOBIOLOGY

Anlyan Center (TAC) S555, 203.785.3857
http://info.med.yale.edu/immuno
Ph.D. (M.S., M.Phil. en route)

Chair
Richard Flavell

Acting Director of Graduate Studies
Bing Su (Amistad 414C, 203.737.2463, bing.su@yale.edu)

Director of Graduate Admissions
Susan Kaech (TAC 641B, 203.737.2423, susan.kaech@yale.edu)

Student Services Officer
Barbara Giamattei (TAC S555, 203.785.3857, barbara.giamattei@yale.edu)

Professors  Jeffrey Bender (Internal Medicine), Alfred Bothwell (on leave), Lieping Chen, Joseph Craft (Internal Medicine), Peter Cresswell, Madhav Dhodapkar (Internal Medicine), Jack Elias (Internal Medicine), Richard Flavell, David Hafler (Neurology), Kevan Herold, Akiko Iwasaki, Paula Kavathas (Laboratory Medicine), Ruslan Medzhitov, Jordan Pober, Nancy Ruddle (Epidemiology & Public Health), David Schatz, Mark Shlomchik (Laboratory Medicine), Robert Tigelaar (Dermatology)

Associate Professors Tian Chi, Daniel Goldstein, Susan Kaech, Eric Meffre, Warren Shlomchik (Internal Medicine), Bing Su

Assistant Professors João Pereira, Carla Rothlin

Fields of Study

The Immunobiology graduate program is designed to prepare students for independent careers in research and teaching in immunology or related disciplines. The educational program emphasizes interdisciplinary training and collaborative and interactive research, an approach based on the idea that solving difficult problems requires the integration of individuals with common goals but differing expertise. Graduate students are diverse in their interests and ethnic backgrounds, and more than 50 percent are women.

Research Areas

Research focuses on the molecular, cellular, and genetic underpinnings of immune system function and development, on host-pathogen interactions, and on a variety of autoimmune disorders. These research interests break down into six major themes, spanning almost all aspects of the immune system and its role in disease prevention.

Lymphocyte development A central focus of research is to understand the molecular events underlying the development of B and T lymphocytes. Areas of major interest include the receptors and signals that control lymphocyte lineage commitment, cell maturation, cell proliferation, and cell death; the establishment of the proper environments for lymphocyte development; mechanisms that regulate the state of chromatin during
lymphocyte development; and the mechanisms by which antibody and T cell receptor genes are assembled and diversified.

**Mounting an immune response** An effective immune response requires the coordinated action of numerous cell types. A critical first step is the activation of cells of the innate immune system, including monocytes, macrophages, dendritic cells, and neutrophils; and the receptors and signaling molecules that control this process are under intensive study. The mechanism by which cells take up, process, and present antigen is a major interest, as is the recognition of this antigen by T cell receptors on T lymphocytes. Cytoplasmic signal transduction molecules, nuclear transcription factors, and mechanisms controlling gene expression are all under study.

**Regulating the immune response** The immune response is tightly regulated through the interaction of cell surface receptors with secreted cytokines and with one another, and the mechanisms by which these interactions exert their regulatory influences are studied in several laboratories. Another major interest is in learning how specialized cells or anatomic locations, such as vascular endothelial cells or the epidermis, regulate and direct the immune response.

**Consequences of an immune response** Apart from the obvious consequence of the elimination of an invading organism, an appropriate immune response results in immunological memory and large numbers of activated lymphocytes, which must be eliminated. The mechanisms controlling immunological memory, tolerance, and apoptosis, as well as those leading to autoimmunity, are a major interest of many faculty. Diabetes, multiple sclerosis, lupus, and rheumatoid arthritis are just some of the autoimmune diseases under study. Much of this work takes place in the context of the new Section of Human and Translational Immunology.

**Infectious disease and the host-pathogen interaction** A major interest is the study of infectious organisms—bacterial, viral, and parasitic—and the immune response to them. A great deal of effort is directed toward understanding the strategies used by infectious agents to avoid the immune system. HIV, HBV (hepatitis B virus), herpes simplex virus, parvoviruses, *Candida albicans*, *Borrelia burgdorferi* (the causative agent of Lyme disease), *Leishmania*, *Streptococcus pneumoniae*, and *Legionella pneumophila* are all under study.

**Structural analysis of immune system receptors and effectors** There is a growing interest in using structural approaches to understand the function of key molecules of the immune response. For example, a major effort is devoted toward understanding how the Toll-like receptors, despite their similarity in extracellular-ligand recognition regions, are able to specifically recognize such a wide variety of pathogen-associated molecular patterns (PAMPS). Another effort is aimed at understanding the mechanism of APOBEC enzymes in controlling viruses such as HIV.

**Facilities**

More than thirty laboratories are actively involved in research in immunology. Many share immediately adjoining or nearby laboratory space on the top three floors of the Anlyan Center (TAC), and four faculty are funded by the Howard Hughes Medical Institute. The
Department of Immunobiology provides one of the largest, highest-ranked integrated training programs in immunology in the country, led by a faculty with a reputation for excellence in research. The Department of Immunobiology maintains a wide variety of major equipment, and Dr. Richard Flavell, chair of the department, oversees a very active transgenic mouse/ES cell/knockout facility to which members of the department have access.

**Program Entry**

Most students enter the Immunobiology graduate program through the Immunology track of the Program in Biological and Biomedical Sciences (BBS). Other types of students enter from the M.D./Ph.D. program (see below), the MRSP (see below), or another BBS track, with approval of the Immunobiology director of graduate studies (DGS) and the faculty adviser.

The faculty and students of the BBS program are organized into interest-based tracks. Immunobiology, being one of eight tracks, encourages individualized attention to maximize scientific interactions. There is complete freedom to work with any of the 290 faculty members affiliated within any of the tracks and to take courses offered by any of the BBS departments or programs. Students are encouraged to supplement core courses in molecular and cellular immunology with additional courses selected from the wide range available in cell biology, molecular biology, developmental biology, biochemistry, genetics, pharmacology, molecular medicine, neurobiology, and bioinformatics. Research seminars and informal interactions with other graduate students, postdoctoral fellows, and faculty also form an important part of graduate education.

The section of Human Translational Immunology (HTI) is a new program administered by the Immunobiology department and located at 10 Amistad Street and 300 George Street. Its mission is to accelerate the application of new developments in the field of immunology to the treatment of human diseases. HTI faculty study the immunologic aspects of a very broad range of human diseases, encompassing investigations in the fields of cancer; transplantation of solid organs and stem cells; autoimmune diseases; and neurologic disease.

The Medical Research Scholars Program (MRSP) is open to students who have already been accepted into the BBS program. A separate application is also required, and is to be submitted to the BBS. A total of eight students each year (four first-years and four second-years) will be enrolled as Medical Research Scholars. They remain in their BBS tracks or departments but participate in the additional MRSP curriculum. The program bridges barriers between traditional predoctoral and medical training by providing Yale Ph.D. students with both medically oriented course work and a mentored clinical experience. This combination of medical knowledge and face-to-face interaction with patients and their doctors provides a new perspective to Ph.D. students and enhances the rigorous training in basic science already provided.

**Admission requirements** In addition to meeting general BBS requirements, applicants are expected to have a firm foundation in the biological and physical sciences. It is preferred that students have taken courses in biology, organic chemistry, biochemistry, genetics, cell biology, physics, and mathematics. Actual course requirements, however, are not fixed, and students with outstanding records in any area of the biological sciences
may qualify for admission. There are no specific grade requirements for prior course work, but a strong performance in basic science courses is of great importance for admission. In special cases, the Medical College Admission Test (MCAT) may be substituted.

Special Requirements for the Ph.D. Degree

Students are required to take seven courses for a grade in the Yale Graduate School.

Required graded courses for first- and second-year students are:

IBIO 530a, Biology of the Immune System (Students have the option of passing out of 530 by taking the final exam from the previous year.)

IBIO 531b, Advanced Immunology

Two Immunobiology seminar courses are also required for second-year students and beyond. They are listed under the following numbers: IBIO 536, IBIO 537, IBIO 538, IBIO 539. Immunobiology seminars can be audited if a student has grades in seven other science courses and has taken an IBIO seminar course for a grade. To accommodate the growth of the graduate program, we have expanded the number of Immunology seminar courses offered from one course per year to three courses every two years.

All first-year BBS Immunology students must take IBIO 600a, Introduction to Research (taught every fall as a credit-only course).

Additional courses are determined based on the individual needs of the student, and include courses in biochemistry, cell biology, genetics, molecular biology of prokaryotes, molecular biology of eukaryotes, animal viruses, the structure of nucleic acids and proteins, microbiology, and disease mechanisms. Students choose courses after consulting the DGS and the thesis adviser.

Honors The Graduate School uses grades of Honors, High Pass, Pass, or Fail. Students are required to earn a grade of Honors in at least two courses in the first two years, and are expected to maintain a High Pass average. There is no foreign language requirement.

Responsible Conduct of Research Training In addition to all other requirements, students must successfully complete IBIO 601b, Fundamentals of Research, by the end of their first year of study.

Teaching Students are required to serve as TA (teaching assistant) for two terms before the end of their sixth term. Teaching protocol and rules are as follows: (1) two term-long courses are required as a fulfillment of the Ph.D.; (2) first-year students do not teach; (3) IBIO 603b, Teaching in the Science Education Outreach Program (SEOP), is an approved teaching credit only when taught as the second teaching experience; (4) teaching opportunities are first given to students who need the credit; (5) teaching for additional income is available when openings exist after those selected for credit are hired; and (6) the maximum teaching allowable is one course per term corresponding to a TF4 position. All courses taught outside of the lab for extra income must be approved by both the thesis adviser and the DGS.

A Yale McDougal Center one-day seminar entitled “Teaching at Yale” is offered each year. Attending this seminar is recommended prior to teaching.
Early in their fourth term, students make a thirty-minute presentation to the section of their proposed research and initial results. Thereafter, they meet with their prospectus committee, which assigns four or five broad areas of biology and immunology that are of particular relevance to the proposed research and on which the student will be examined in the prospectus exam. During the next several months, students prepare a formal research proposal (in NIH grant format) concerning the proposed thesis research and study for the exam. The exam is oral, and covers all aspects of immunology generally, with a focus on the assigned areas mentioned above. The student is also questioned on aspects of the thesis proposal.

Requirements for admission to candidacy, which usually takes place after six terms of residence, are (1) completion of course requirements and teaching requirements; (2) completion of the prospectus examination; and (3) certification of the student’s research abilities by vote of the faculty upon recommendation from the student’s thesis committee.

Progress in thesis research in the third and later years is monitored carefully by the student’s thesis committee (composed of the adviser and three or four other faculty). All students are required to have two meetings with their thesis committee annually, to provide an update on progress and an opportunity for the committee to provide feedback and suggestions.

M.D./Ph.D. Students Majoring in Immunobiology

**Required** Seven courses for a grade. Out of the seven courses the following are mandatory:

1. IBIO 530a, Biology of the Immune System (Students have the option of passing out of 530 by taking the final exam from the previous year.)
2. IBIO 531b, Advanced Immunology
3. Two Immunobiology seminar courses: IBIO 536a, 537a, 538a, 539a (the second seminar course can be audited if a student has grades in seven other courses and has taken one seminar course already).

**Also required** *Two grades of Honors:* Yale University graduate courses taken for a grade at the School of Medicine may be counted toward the Honors fulfillment and the seven total required courses. Verification must be provided to the DGS. *One semester of teaching:* Previously taught courses in the School of Medicine may count toward this requirement. To request credit for previous teaching experience, a note from the course director describing the teaching experience (duration of the teaching experience, frequency of class meetings, number of students taught, materials covered, dates, and for whom) should be provided to the Immunobiology DGS.

M.D./Ph.D. students are not required to take IBIO 600a, Introduction to Research, but may if they wish.

IBIO 601b, Fundamentals of Research, or MB&B 676b, Responsible Conduct of Research. A note from the DGS of the M.D./Ph.D. program must be forwarded to the Immunobiology DGS stating that the student has taken a course in Research Conduct and Ethics, or its equivalent in the School of Medicine. *Include dates, titles, and faculty.* If the student has not taken this course, then registration in this class is required.
Annual committee meetings Each student is required by the Immunobiology section to have a committee meeting every year. Departmental Research in Progress talks can count if there is a follow-up committee meeting. The committee supervisor will then submit the form to the DGS summarizing the student’s progress.

Master’s Degrees

M.S. (en route to the Ph.D.) Students who complete at least one year of resident graduate study at Yale with the quality of work judged satisfactory by the Section of Immunobiology faculty may petition for the award of the M.S. degree. At the present time “satisfactory” is defined as having completed five graduate courses with an average grade of High Pass. Students must petition through the Registrar’s Office of the Graduate School.

M.Phil. (en route to the Ph.D.) Following successful completion of the prospectus examination, the student will be entitled to the M.Phil. degree. Once all course work and departmental requirements have been met, the student will advance to candidacy and be A.B.D. (“all but dissertation”). At that point the student will normally focus on research and the writing of the dissertation.

The Web site at http://info.med.yale.edu/bbs offers complete information on the Biological and Biomedical Sciences Program (BBS) and the more than 200 participating faculty.

Courses

For a complete listing of immunology-related courses, see http://info.med.yale.edu/bbs.

IBIO 530a/MCDB 530au, Biology of the Immune System Akiko Iwasaki, Peter Cresswell, Kevan Herold, Susan Kaech, Ruslan Medzhitov, Eric Meffre, João Pereira, Carla Rothlin, David Schatz, Mark Shlomchik

IBIO 531b, Advanced Immunology Tian Chi and staff
The historical development and central paradigms of key areas in immunology. The course attempts to develop a clear understanding of how these paradigms were established experimentally. Landmark studies are discussed to determine how the conclusions were obtained and why they were important at the time they were done. Lecture and discussion format; readings of primary research papers and review articles. Prerequisite: IBIO 530a or equivalent. Enrollment limited to fifteen. MW 4–6

IBIO 537b, Advanced Immunobiology Seminar: T Cell Differentiation
Susan Kaech, Richard Flavell, Joseph Craft, Tian Chi
This seminar course tracks the development of T cells from the thymus to the periphery and their ability to differentiate into effector and memory T cells. The course studies pivotal discoveries in the field and emphasizes the regulation of T cell differentiation
via changes in epigenetic and transcriptional programs and how these changes are controlled by signals of the innate immune system. Discussion format, readings of primary research papers and review articles. Enrollment limited to fifteen. Prerequisite: IBIO 530a or equivalent. T 2–4

**IBIO 600a, Introduction to Research**  Bing Su and staff
Introduction to the research interests of the faculty. Required for all first-year Immunology/BBS students. Pass/Fail. TH 5

**IBIO 601b, Fundamentals of Research**  Bing Su and staff
Seminar discussing proper conduct of research. Required for first-year Immunobiology students and training grant-funded postdocs; students may take MB&B 676b, Responsible Conduct of Research, instead of IBIO 601b. TH 4:30

**IBIO 603b/GENE 603b, Teaching in the Science Education Outreach Program**  (SEOP)  Paula Kavathas
TAs, along with volunteers, teach three projects in genetics to seventh-graders in two or three New Haven schools. In addition, TAs take a short course on teaching and serve as science judges. Dates and times to be determined. For more details visit www.seop.yale.edu. For teaching credit. In Immunobiology, this TA position must follow a TA position in a regular course. Contact Paula Kavathas.
The Department of Economics offers a one-year program of study in International and Development Economics, leading to the Master of Arts degree. IDE students are diverse in terms of their nationalities and their career paths. Many of our students now come directly from their undergraduate school or a few years of work experience, although we do not exclude any candidate on the basis of work experience or country of origin. After completion of the program, IDE students have gone into various paths, including working in research for academic and nonacademic agencies such as the World Bank, the United Nations, and the Poverty Action Lab. A few have gone on to further academic work such as law school and to Ph.D. programs in economics, environmental sciences, and political science. Many students have returned to their home countries to work for their government or for funding agencies there.

Some students entering the program are required to complete the summer program in English and Mathematics for Economists offered by Yale University. This requirement may be waived for applicants demonstrating exceptional training in economic analysis and a good command of English. The Graduate Record Examination (GRE) and the Test of English as a Foreign Language (TOEFL) examinations are also required. The TOEFL requirement is waived only for applicants who will have received a degree, prior to matriculation at Yale, from a college or university where English is the primary language of instruction.

Yale fellowship funds are not available for the IDE program, and students are required to produce certification of the necessary funding prior to enrollment.

The course program requires the completion of eight term courses, five of which make up the core elements of the IDE program and are required; the remaining three are graduate electives. The required courses are Microeconomics; Macroeconomics; Econometrics; International Economics; and Development Economics. These required courses are designed to provide a rigorous understanding of the economic theory necessary for economic policy analysis.

An option of a second year of nondegree elective study is available to qualified students. The Development Studies Certificate offered through the MacMillan Center, for example, could be completed during this time.

Joint-program options for study with the School of Forestry & Environmental Studies (F&ES) and the School of Public Health (YSPH) are also available. Application to F&ES or YSPH must be made simultaneously with the application to the IDE program. Admission to these joint programs is determined by the participating professional school and must be obtained prior to beginning the program. Joint-degree students earn the
Master of Arts degree in IDE and the Master of Environmental Studies (F&ES) or Master of Public Health (YSFH) degree.

Prospective applicants are encouraged to visit the IDE program Web site at www.yale.edu/ide. Program materials are available upon request to Louise Danishevsky, Senior Administrative Assistant, International and Development Economics Program, Yale University, PO Box 208269, New Haven CT 06520-8269; e-mail, ide@yale.edu.

N. Srinivasan (Economics), Peter Swenson (Political Science), Ivan Szelényi (Sociology), Adam Tooze (History), Christopher Udry (Economics), John Wargo (Forestry & Environmental Studies), Jay Winter (History)

Associate Professors Marian Chertow (Forestry & Environmental Studies), Thad Dunning (Political Science), Beverly Gage (History), Ellen Lust (Political Science), Jennifer Ruger (Epidemiology & Public Health)
Assistant Professors  Christopher Blattman (Political Science), Patrick Cohrs (History), Susan Hyde (Political Science), Kaveh Khoshnood (Epidemiology & Public Health), Nikolay Marinov (Political Science), Michael McGovern (Anthropology), Nuno Monteiro (Political Science), Vivek Sharma (Political Science)

Senior Lecturers  Cheryl Doss (Global Affairs; Economics), Charles Hill (International Security Studies), Stephen Latham (Political Science; Management), John Negroponte (International Security Studies; Global Affairs)

Lecturers  Michael Boozer (Economics), Pia Rebello Britto (Global Affairs; Child Study Center), Becky Conekin (History; Global Affairs), Leslie Curry (Epidemiology & Public Health), Stuart Gottlieb (Global Affairs), Lloyd Grieger (Global Affairs), Debbie Humphries (Epidemiology & Public Health), Matthew Kocher (Political Science), Jean Krasno (Political Science), Emily McKee (Anthropology; Middle East Studies), Beth Daponte Osborne (Management), Jonathan Schell (Global Affairs), Michael Skonieczny (Epidemiology & Public Health), Kristina Talbert-Slagle (Global Affairs; Global Health), Wietse Tol (Global Affairs; Global Health)

Visiting Professors  Lucas Coffman (Economics), Jolyon Howorth (Political Science; Global Affairs), Nicoli Nattrass (Global Affairs), Jeremy Seekings (Global Affairs)

Senior Fellows  Alexander Evans (Global Affairs), Richard Goldstone (Global Affairs), Thomas Graham (Global Affairs), Michele Malvesti (Global Affairs), Stanley McChrystal (Global Affairs), Rakesh Mohan (Global Affairs; Management), Ana Palacio (Global Affairs), Stephen Roach (Global Affairs)

The Jackson Institute for Global Affairs nurtures degree programs and scholarship with a strong interdisciplinary and policy-oriented international focus. The programmatic interests of the institute focus on development and security.

The Jackson Institute for Global Affairs administers the Master’s Degree in International Relations. The fifty to sixty students in this program combine fundamental training in core disciplines of international relations with an individualized concentration that has relevance to current international issues.

Fields of Study

The two-year program is designed to combine breadth of knowledge of the basic disciplines of international relations with depth of specialization in a particular academic discipline, geographic area, specialized functional issue, and/or professional field. It is designed primarily for students seeking an M.A. degree before beginning a career in global affairs. Joint degrees are offered with the School of Forestry & Environmental Studies, the Law School, the School of Management, and the School of Public Health.

Special Admissions Requirements

Applicants must take the GRE General Test; students whose native language is not English and who did not earn their undergraduate degree at an English-language university must take the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS). The minimum score on the TOEFL is
610 on the paper-based test, 253 on the computer-based test, or 102 on the Internet-based test. Entering students must have taken introductory courses in microeconomics and macroeconomics prior to matriculation.

**Special Requirements for the Master’s Degree**

The M.A. in International Relations requires two years of graduate study at Yale. To complete the degree, students must take sixteen courses that fulfill the core and concentration requirements, demonstrate proficiency in a modern language, satisfy a research requirement, complete a summer internship or project, and maintain the grade average specified below.

**CORE**

The substantive core consists of seven graduate-level courses: two history courses (one regional and one comparative international); two in political science (one in comparative politics and one in international relations theory); two in economics (one economic analysis and one international economic analysis); and the foundations course in international relations (see course description below for INRL 700a, required in the first term). Each term, a list of courses meeting these requirements is available from the International Relations registrar.

**CONCENTRATION**

Beyond the core courses, each student must identify and demonstrate the academic integrity of a coherent set of courses as a proposed concentration for approval by the director of graduate studies (DGS). The concentrations require a minimum of eight courses in the fields selected. Some of the courses may be cross-listed in two or more departments. Students are able to develop concentrations based on a topical, regional, or disciplinary focus, or a combination of a topical and regional focus. Sample concentrations are available from the International Relations Web site.

**LANGUAGE REQUIREMENT**

Three years of college-level language study or its equivalent in language mastery is required to graduate. This competence must be demonstrated through successful completion of course work or by passing a proficiency examination. International students who completed secondary school or a university degree in a language other than English will be considered to have met the language requirement. Students may study language as part of their Yale program; a maximum of two of the sixteen course credits for the two-year program may be in languages. Students pursuing joint-degree programs are encouraged to fulfill all language requirements before beginning the program; they cannot count language courses toward their degree requirements.

**SUMMER INTERNSHIP REQUIREMENT**

All students enrolled in the International Relations program are required to use the summer between the first and second years of the program to further their professional or academic education. It is expected that this requirement be fulfilled by obtaining experience through employment or an internship. The requirement may also be fulfilled by completing language study, other relevant course work, or independent research on an approved topic.
Each first-year student must file a form with the DGS before June 1 stating the nature of his or her summer internship or approved alternative.

RESEARCH REQUIREMENT
Students are required to demonstrate that they have completed a major research paper, either through their course work or an independent study project. Students must submit the paper to the DGS for final approval.

EXPECTATION OF ACADEMIC PERFORMANCE
M.A. candidates are required to achieve at least two grades of Honors, and their remaining grades must average to at least High Pass. (To have a High Pass average, any grade of Pass must be offset with an additional grade of Honors beyond the required two.) Students are expected to complete eight graduate term courses in their first year, earning at least one Honors, with a High Pass average in the remaining courses. At the end of the first year, students who do not have at least a High Pass average in eight graduate term courses will not be allowed to continue in the program.

Special Requirements for the Joint-Degree Programs
Joint-degree candidates must fulfill all of the requirements of both programs in which they are enrolled before receiving either degree. Joint-degree candidates are required to fulfill the core and concentration requirements of the International Relations program. An overlap of two courses is allowed between the core and concentration, with a maximum of two additional courses credited toward both degrees. Joint-degree students must take at least twelve graduate-level courses in Arts and Sciences departments or in professional schools other than the one granting the joint degree. Under no circumstances will students be allowed an International Relations concentration in the functional area in which they will be receiving a joint degree.

Applicants to the joint-degree programs must apply separately, by the appropriate deadline, to the Graduate School for the International Relations program and to the professional school involved. Decisions on admissions and fellowship support are made independently by each school. Students are encouraged to apply to both programs simultaneously. They may also apply during their first year at Yale to the second program for a joint degree. If accepted into the new program, they must receive approval for credit allocation upon registration from both degree programs.

Graduate Certificates of Concentration
For information on the Certificate of Concentration in Development Studies, the Certificate of Concentration in International Security Studies, or the Certificate of Concentration in Global Health, see the section on the Jackson Institute for Global Affairs under Non-Degree-Granting Programs, Councils, and Research Institutes in this bulletin.

For more information, visit http://jackson.yale.edu/ma-degree, e-mail international.relations@yale.edu, write to International Relations, Yale University, PO Box 208206, New Haven CT 06520–8206, or call 203.432.3418.
Courses

INRL 514a\textsuperscript{u}/ARCH 4216a\textsuperscript{u}, Globalization Space: Global Infrastructure and Extrastatecraft  Keller Easterling
Infrastructural space as a primary medium of changes in global polity. Considers networks of trade, energy, communication, transportation, spatial products, finance, and management and labor, as well as new strains of political opportunity that reside within their spatial disposition. Case studies include free zones and automated ports around the world, satellite urbanism in South Asia, high-speed rail in Japan and the Middle East, agri- poles in Southern Spain, fiberoptic submarine cable in East Africa, spatial products of tourism in the DPRK, and management platforms of ISO. MW 10:30–11:20, 1 HTBa

INRL 522b\textsuperscript{u}/HPA 595b, Social, Economic, and Political Dimensions of Development  Jennifer Ruger
Aspects of development explored with a focus on the health and well-being of disadvantaged and at-risk populations. The philosophical foundations underlying the field of development; how to distinguish different paradigms of development. HTBa

INRL 524b/HPA 599b/LAW 21595/PHIL 707b/PLSC 594b, Global Health Ethics, Politics, and Economics  Thomas Pogge, Jennifer Ruger
Billions lack access to basic medical care, and global health inequalities are wide and growing. Such radical disparities cast doubt on the justice of supranational institutional arrangements (such as the TRIPS Agreement) and also pose ethical challenges for the global health community, especially international and domestic health and development institutions. Seeking to illuminate the normative issues involved, the course features a series of distinguished visitors, including academics as well as a few important representatives of international organizations, politics, foundations, NGOs, and relevant industries. Follows Law School academic calendar. T 10:10–12

INRL 525au, Methods and Ethics in Global Health Research  Kaveh Khoshnood
Introduction to research methods in global health that recognize the influence of political, economic, social, and cultural factors. Quantitative, qualitative, and mixed-method approaches; ethical aspects of conducting research in resource-constrained settings; the process of obtaining human subjects’ approval. Students develop proposals for short-term global health research projects conducted in resource-constrained settings. F 9:25–11:15

INRL 527au, Comparative and International Bioethics  Stephen Latham
Approaches in different countries, both developed and developing, to a number of core issues in biomedical ethics: organ transplants, end-of-life care, human-subject research, and access to health care. Readings in primary and secondary sources, including international treaties and standards. TTH 11:35–12:50, 1 HTBA

INRL 528bu/HPA 592b, Strategic Thinking in Global Health  Elizabeth Bradley, Leslie Curry, Michael Skonieczny
The course defines and applies a set of core principles regarding development and implementation of grand strategy and problem solving in global health. Students understand and apply principles of grand strategy and strategic problem solving, which are taught at
both a conceptual and a practical level as applied to common problems in global health. Students develop expertise in political and policy analysis as well as organizational theory and leadership skills that are central to addressing global health issues in low- and middle-income countries. M 3:30–5:30, 2 HTBA

INRL 520a³/EMD 591a, Water, Infectious Disease, and Global Health
Kristina Talbert-Slagle
Water is fundamental to life. We cannot survive without it, and yet unsafe water threatens the health of people throughout the world. This course focuses on the role of water in global health, with emphasis on the myriad ways that water affects the spread of disease, how poor sanitation contributes to unsafe water, and the different interventions that may improve water quality — and therefore, health — of people around the world. T 1:30–3:20

INRL 550a³/MGT 640a, Evolution of Central Banking and Responses to Crises
Rakesh Mohan
Changes in the contours of policy making by central banks since the turn of the twentieth century. Theoretical and policy perspectives as well as empirical debates in central banking. The recurrence of financial crises in market economies. Monetary policies that led to economic stability in the period prior to the collapse of 2007–2008. Prerequisite: intermediate macroeconomics. TH 1:30–3:20

INRL 560a/ECON 544a, Economic Analysis
Cheryl Doss
Introduces International Relations students to more advanced concepts in economics. Course emphasizes reading and evaluating the economic content of articles on a wide range of topics, including consumer behavior, firm behavior, comparisons of welfare, labor markets, capital markets, and public goods. These articles represent research from both developed and developing economies. Prerequisite: microeconomics. MW 9–10:15

INRL 561b/ECON 708b, International Economic Analysis
Cheryl Doss
A continuation of INRL 560a. Extends the use of economic analysis to international economic issues with a focus on international trade and growth and development. In addition, emphasis is placed on quantitative tools and analysis of data to address international economic issues and evaluate policies. The second half of the course focuses on readings of current issues and debates on international economic issues, including relationships among trade liberalization, poverty and inequality, economic growth, and globalization. W 1:30–3:20

INRL 566au/AFST 766a, Comparative Welfare Policy in Developing Countries
Jeremy Seekings
Examination of public and private welfare systems in the developing world. Analysis of the evolving relationships between kin or community and states and market. Particular attention is paid to the politics of contemporary reforms. W 2:30–4:20

INRL 574a³/MGT 911a, The Next China
Stephen Roach
Born out of necessity in the post-Cultural Revolution chaos of the late 1970s, modern China is about reforms, opening up, and transition. The Next China will be driven by the
transition from an export- and investment-led development model to a pro-consumption model. China’s new model could unmask a dual identity crisis—underscored by China’s need to embrace political reform and the West’s long-standing misperceptions about China. Prerequisite: basic undergraduate macroeconomics. MW 10:30–11:20, 1 HTBA

[INRL 585a/NELC 507a, Modern Arab Thought]

INRL 592a/PLSC 662a/MGT 586a, Strategy, Technology, and War  Paul Bracken
The interrelationship of strategy, foreign policy, and technology has shaped international relations from Napoleon to the global information grid. Transformations arise from political change and technological advance. Topics include the role of “big” military organizations in the United States, Europe, and Asia; organizing for defense and intelligence; arms control; and the challenge of a second nuclear age. TTH 11:35–12:50

INRL 610b, Topics in Modern Middle East Studies  Emily McKee
The course is intended for students who plan to obtain the Graduate Certificate of Concentration in Modern Middle East Studies. A major requirement of the course is attendance at weekly brown bag seminars hosted by the Council on Middle East Studies, which include speakers from a variety of academic disciplines and other backgrounds addressing political, economic, social, cultural, and historical issues across the Middle East/North Africa region. Students attend the presentations and separate discussion sections, and fulfill writing assignments. W 12–1:20, 1 HTBA

INRL 622a/HIST 718a, Social Movements in Comparative Perspective  Becky Conekin
In this seminar we explore post-WWII social movements and their legacies across Western Europe and the United States. Examining both the actuality and symbolic character of these movements in contemporary history, we analyze the political, social, and cultural meanings of protest and its impact on class, generational, gender, and racial relations in Western Europe and North America. In addition, if students have specific interests in Eastern European and/or Latin American countries, they may bring these into the discussion and write on them in a comparative perspective in their final paper. We discuss different national histories and discourses about identity, while exploring the varied geographies of the Cold War. We then move to a more thematic approach focusing on, for example, civil rights, antiwar and student protests, and countercultural politics. We conclude with a brief look at the social movements that developed out of the 1960s. T 9:25–11:15

INRL 624a/ANTH 640a, Global Health: Ethnographic Perspectives  Marcia Inhorn
This interdisciplinary seminar, designed for graduate students in Anthropology and Global Health, explores in an in-depth fashion anthropological ethnographies on many of the serious health problems facing populations in resource-poor societies around the globe. The course focuses on three major issues: (1) poverty, structural violence, and health as a human right; (2) struggles with infectious disease; and (3) the health of women and children (and men, too). Within these three themes, many major issues of global health concern are addressed, including the health-demoting effects of poverty, racism, patriarchy, and inhumane conditions of life and labor in many countries; men’s
and women’s sexuality in the era of HIV/AIDS; the politics of epidemic disease control and other disasters, and the role of communities, nation-states, and international organizations in responding to such crises; issues of coercion in population control and the quest for reproductive rights; and how child health is ultimately dependent on the health and well-being of mothers. The underlying purpose of the course is to develop students’ awareness of the political, socioeconomic, ecological, and cultural complexity of most health problems in so-called developing nations and the consequent need for anthropological sensitivity, contextualization, and activist involvement in the field of global health. The course is also designed to expose students to salient health issues in many parts of the world from the United States to China. However, the primary focus is on global health issues facing sub-Saharan Africa and Latin America.

**INRL 626b/CDE 524b, Mental Health and Psychosocial Support in Humanitarian Settings**  
Wietse Tol

Mental health contributes 14 percent to the global burden of disease. In settings affected by natural or industrial disasters, armed conflicts or war, it constitutes a crucial public health concern. Combining multidisciplinary theoretical approaches with empirical research and interventions, this course is aimed at students who are interested in working in humanitarian settings on issues of mental health and psychosocial support, both from a research and practice point of view. Particularly relevant for students in international and area studies, public health, mental health, (clinical) psychology, (medical) anthropology, (medical) sociology, and related disciplines and anyone interested in bridging the gap between academics and practitioners in this field. **TH 1:30–3:20**

**INRL 650a, Non-State Actors in World Politics**  
Susan Hyde

Within global governance, the role of non-state actors such as international organizations, transnational advocacy networks, multinational corporations, and terrorist networks has become important yet understudied. After reviewing how non-state actors fit into dominant theories of international relations, the course focuses on how to evaluate the relevance of non-state actors in specific areas of international politics and how non-state actors may help or hinder specific international problems. Issue areas that are covered include human rights, money, terrorism, globalization, and international environmental politics. **T 9:25–11:15**

**INRL 651a, International Relations: Concepts and Theories**  
Nuno Monteiro

The course introduces students to the main concepts and theories used in the study of international relations. We cover, among others, the concepts of power, anarchy, competition and cooperation, the causes of war, international regime, international society, and international system. We do so by debating the strengths and limitations of multiple IR theoretical traditions, including realism, liberalism, constructivism, and rationalism. Discussions focus on the practical uses of these concepts and theories for IR practitioners, not academics. **T 3:30–5:20**

**INRL 652a/HIST 980a, Genocide in History and Theory**  
Benedict Kiernan

Comparative research and analysis of genocidal occurrences from ancient times to the present; theories and case studies; and inter-regional, interdisciplinary perspective. Readings and discussion, guest speakers, research paper. **TH 1:30–3:20**
INRL 657a/HIST 759a, One World? International History, 1914–1991
Patrick Cohrs
This research seminar pursues both a historical and a theoretical reexamination of the modern international system in the “short” twentieth century, analyzing why it was so profoundly transformed between the era of imperialism preceding World War I and the end of the Cold War. Main themes include the origins of international conflicts from the Great War and the Great Depression to the U.S.-Soviet antagonism; the peace settlements after the world wars (or absence thereof); American postwar policies and their significance for European integration and the reconstruction of Japan; changing regional configurations in East Asia, Latin America, Africa, and the Middle East; and the question why the Cold War ended as it did. Particular attention to the changing premises and constraints of international politics that influenced the making and unmaking of legitimate international orders in the twentieth century. T 1:30–3:20

INRL 658b/HIST 802b, Classic and New Approaches to International History
Patrick Cohrs
This graduate reading seminar appraises both classic and new approaches to international history. It focuses on a close reading of influential contributions to the methodology and writing of international, diplomatic, comparative, global, and transnational history from Thucydides to recently influential attempts to interpret the evolution of the international system and international society. The underlying aim is to discuss which approaches have advanced our understanding of fundamental questions and problems in a field that in the eyes of some has become increasingly amorphous—and in which trends may have had the opposite effect. On this basis, the seminar seeks to explore what are the new frontiers of scholarship. T 1:30–3:20

INRL 695b, Strategies of World Order  Charles Hill
Tracking and evaluating major intellectual conceptions on which today’s international politics, wars, revolutions, diplomacy, and structures for peace and security are grounded. The continuing influence of ideas from the works of Thucydides, Plato, Aristotle, Tacitus, Augustine, Aquinas, Machiavelli, Hobbes, Locke, Rousseau, Kant, Burke, Marx, Tocqueville, and contemporary thinkers is examined in the context of how strategic thought has developed in response to big societal transformations. Weekly sessions combine presentations, mini-lectures, and seminar discussions. A substantial paper and a final examination. F 1:30–3:20

INRL 696a, Elements of Global Governance: Values and Interests at Crossroads  Ana Palacio
The existing multilateral legal and institutional framework is ill-equipped to address inherent challenges of global governance: weak and failed states, porous borders, non-state actors, poverty, pandemics, or climate change. This course analyzes, from a practical and normative perspective, key elements of global governance based on the case studies drawn from the instructor’s professional experience in politics and international organizations. Part I of the course examines global governance actors, questioning the adequacy of the UN–Bretton Woods system; the role of new, powerful, noninstitutional actors, such as G20; the changing role of the state; or the concept of failed state. Part II deals
with modern challenges to traditional forms of international governance and focuses in particular on the shortage of natural resources and food staples, proliferation of nuclear weapons, poverty, and genocide. Part III studies global governance processes: transition from authoritarianism to democracy, consequences of decolonization, and the European Union institutions as a blueprint for global governance. The course includes a trip to the UN headquarters in New York on a selected date and a crisis simulation exercise during the last class. M 9:25–11:15

INRL 700a, The Foundations and Evolution of the International System
Jolyon Howorth
Study of core issues in the international system including: international institutions, multilateralism and multipolarity; security and the changing nature of conflict; humanitarian intervention, post-conflict reconstruction, and nation-building; international law, criminal courts, and human rights; environment, climate change, and energy security; globalization, international political economy, and development; key threats: terrorism, rogue regimes, nuclear proliferation, pandemics; a topical focus on contemporary challenges. For first-year International Relations M.A. candidates only. W 1:30–3:20, 1 HTBA

INRL 711b/MGT 585b, Washington and Wall Street: Markets, Policy, and Politics
Stephen Roach, Jeffrey Garten
The purpose of the course is to give students a sense of how the financial center of the United States relates to the political center, and vice versa. It focuses on the intersection of markets, policy, and politics in the United States, with considerable attention as well to the global implications. There is a historical dimension to the class, looking at other periods of history when the balance between private and public power was in great transition, and examining some of the individuals who were at the center of these shifts. As the United States digs its way out of the current financial crisis, the course evaluates what the future of financial institutions, financial innovation, and financial regulation might look like, and what the implications are for both economics and politics in the years ahead. Prerequisite: permission of the instructors. T 6–9

INRL 713b, Critical Issues in Development Policy
Pia Rebello Britto
The focus of the course is on national policy development. Students are exposed to the relationship among international agencies, international development frameworks, human rights instruments, and national governments in formulating national social and public policies with respect to economic and social development. The course uses early childhood, an epoch of human development, as an example to study national policy making. A policy laboratory methodology is employed to demonstrate application of policy development knowledge learned in class to a real-world setting. Selected students are offered the opportunity to travel, during spring break, to a developing country to observe and participate in policy development meetings with high-level policy makers and international development partners. TH 3:30–5:20

INRL 720a, Central Issues in American Foreign Policy
Stuart Gottlieb
Examination of the sources, substance, and enduring themes of American foreign policy. Overview of America’s rise to global power in the nineteenth and twentieth centuries, and American foreign policy decision making during the Cold War and the post-Cold
War era. Special focus on the most current challenges in American foreign policy, including the war on terrorism, the proliferation of weapons of mass destruction, the conflict in Iraq, and America’s role in global institutions and the world economy. Attendance at INTS 376a lectures required. W 3:30–5:20

INRL 725b, Terrorism and Counterterrorism  
Stuart Gottlieb  
Examination of the origins and evolution of modern terrorism, and strategies employed to confront and combat terrorism. Assessment of a wide variety of terrorist organizations and the multidimensional causes of terrorist violence past and present. Analysis of the strengths and weaknesses of various counterterrorism strategies from the point of view of efficacy as well as ethics, with a particular focus on ways in which the threat of global terrorism might impact the healthy functioning of democratic states. Attendance at INTS 373b lectures required. W 3:30–5:20

INRL 730ay, The United Nations and the Maintenance of International Security  
Jean Krasno  
Consideration of the role of the UN in preventive diplomacy, using force for peacekeeping, peace enforcement, and peace building, with consideration of the evolution of the UN and its role in a post-Cold War international system. For International Relations students and IS/PLSC undergraduates only. W 1:30–3:20

INRL 765b, Contemporary Issues in American Diplomacy and National Security  
John Negroponte  
The seminar addresses key issues in U.S. foreign policy and how they are being addressed by the current administration. Readings and discussion deal with selected regional and functional topics, with emphasis on those with the most pressing national security implications. The course is taught from the perspective of a diplomatic practitioner with additional experience in other aspects of national security. M 9:25–11:15

INRL 771a, Applied Methods of Analysis  
Lloyd Grieger  
The course focuses on useful analytical approaches in public policy and the social sciences. The first part of the course focuses on mathematical skills. The second part focuses on methods for analyzing empirical data and builds on the mathematical skills from the first part of the course. Special focus is devoted to developing the skills necessary to synthesize and evaluate empirical evidence from the social sciences. Students leave the class with an applied understanding of how quantitative methods are used as tools for analysis in public affairs. MW 4–5:15, 1 HTBA

INRL 900a or b, Directed Reading  
By arrangement with faculty.

INRL 910a or b, Independent Project  
By arrangement with Jackson Institute Senior Fellows.
INVESTIGATIVE MEDICINE

Office of Financial Operations
100 Church Street South, Suite 100, 203.785.6842
http://medicine.yale.edu/investigativemedicine
Ph.D.

Director of Graduate Studies
Joseph Craft (invmed@info.med.yale.edu)

Deputy Director
Eugene Shapiro

Professors  Karen Anderson (Pharmacology), Henry Binder (Internal Medicine), Joseph Craft (Internal Medicine; Immunobiology), David Fiellin (Internal Medicine; Epidemiology; Investigative Medicine), Thomas Gill (Internal Medicine; Epidemiology; Investigative Medicine), Fred Gorelick (Internal Medicine; Cell Biology), Jeffrey Gruen (Pediatrics; Genetics; Investigative Medicine), Harlan Krumholz (Internal Medicine; Epidemiology; Investigative Medicine), Eugene Shapiro (Pediatrics; Epidemiology; Investigative Medicine), George Tellides (Surgery; Investigative Medicine), Mary Tinetti (Internal Medicine; Epidemiology; Investigative Medicine)

Fields of Study

The Investigative Medicine program offers a special training pathway for highly select physicians in clinical departments who are interested in careers in clinical research. The program is designed to develop a broad knowledge base, analytical skills, creative thinking, and the hands-on experience demanded of clinical researchers devoted to disease-oriented and patient-oriented investigation. The program provides the student with individualized experience encompassing formal course work and practical experience, under the supervision and mentorship of a senior faculty member.

Students will enter the program with a broad range of experience and interests. Students can undertake thesis work in a variety of disciplines. These include:
1. Evaluating risk factors and interventions for disease using modern concepts in quantitative methods and clinical study design.
2. Investigating the biochemical, physiologic, and genetic basis of disease in the setting of a Clinical Research Center.
3. Exploring the molecular basis of a disease from the laboratory standpoint.

Special Admissions Requirements

The Investigative Medicine program is designed for students with an M.D. or D.O. degree. To be eligible for admission, applicants must have completed two or more years of postgraduate clinical training and be eligible to practice in the United States. Prospective students who are already in a residency or subspecialty clinical fellowship program at Yale may apply to the Investigative Medicine program anytime during the first two years of that training (approximate). Application to the program may be made concurrently with application for residency or fellowship training in a clinical department at the Yale School of Medicine. Special arrangements will be made for a deferred acceptance by the Graduate School.
The most important criteria for selection into the program are commitment to rigorous training in clinical investigation and evidence of high academic achievement in undergraduate and medical school courses, and on scores from the USMLE.

**Special Requirements for the Ph.D. Degree**

The minimum overall course requirements for the doctorate program are nine (9) courses. Full-time course work will extend for twelve months, starting in July. The majority of the course requirements are to be completed by the end of the first year of study. Prior to registering for a second year of study, students must successfully complete IMED 630a, Ethical and Practical Issues in Clinical Investigation. Electives are often taken in the second year, with the expectation that they be completed by the end of the second year. To be eligible to take the comprehensive qualifying examination, students must achieve the grade of Honors in two courses (one course if a full-year course), have a minimum grade average of High Pass, and have completed a minimum of six courses. When requirements are met (typically by December 31 of the second year), students submit their thesis proposal and undertake the comprehensive qualifying examination. In order to be admitted to candidacy, students must pass both the written and oral comprehensive qualifying examinations and submit a thesis prospectus that has been approved by their qualifying committee. The remaining degree requirements include completion of the dissertation project, writing of the dissertation, and its oral defense. It is expected that most students will complete the program in three to five years. There is no foreign language requirement. The required curriculum for each program of study is as follows:

**Course Requirements for Laboratory-Based Patient-Oriented Research**

- IMED 625, Principles of Clinical Research
- IMED 630, Ethical and Practical Issues in Clinical Investigation
- IMED 635, Directed Reading in Investigative Medicine
- IMED 645, Introduction to Biostatistics in Clinical Investigation
- IMED 655, Writing Your First Grant Proposal
- IMED 680, Topics in Human Investigation
- CBIO 601, Molecular and Cellular Basis of Human Disease (spring and fall)
- CB&B 740, Clinical and Translational Informatics
- Elective (1)

**Course Requirements for Clinically Based Patient-Oriented Research**

- IMED 630, Ethical and Practical Issues in Clinical Investigation
- IMED 635, Directed Reading in Investigative Medicine
- IMED 655, Writing Your First Grant
- IMED 660, Methods in Clinical Research (summer)
- IMED 661, Methods in Clinical Research (fall)
- IMED 662, Methods in Clinical Research (spring)
- IMED 680, Topics in Human Investigation
- Electives (2)
Courses

**IMED 625a, Principles of Clinical Research**  Eugene Shapiro
The purpose of this intensive two-week course is to provide an overview of the objectives, research strategies, and methods of conducting patient-oriented research. Topics include competing objectives of clinical research, principles of observational studies, principles of clinical trials, principles of meta-analysis, interpretation of diagnostic tests, prognostic studies, causal inference, qualitative research methods, and decision analysis. Sessions generally combine a lecture on the topic with discussion of articles that are distributed in advance of the sessions. Consent of instructor required. Two weeks, July 25–August 5, 2011. MTWTF 2–4

**IMED 630a, Ethical and Practical Issues in Clinical Investigation**  Henry Binder
This term-long course addresses topics that are central to the conduct of clinical investigation, including ethics of clinical investigation, scientific fraud, technology transfer, and interfacing with the pharmaceutical industry. Practical sessions include scientific presentations and teaching, NIH peer review process, journal peer review process, and career development models of academia. The course provides guidelines and a framework for the clinical investigator to obtain funding for, conduct, and present a clinical study. Format consists of didactic presentation followed by discussion. Consent of instructor required. T 3:30–5

**IMED 635a or b, Directed Reading in Investigative Medicine**  Joseph Craft
An independent study course for first-year students in the Investigative Medicine program. Topics are chosen by the student, and reading lists are provided by faculty for weekly meetings to discuss articles. Six sessions are required; dates/times by arrangement. Consent of instructor required.

**IMED 645a, Introduction to Biostatistics in Clinical Investigation**  Henry Binder
The course provides an introduction to statistical concepts and techniques commonly encountered in medical research. Previous course work in statistics or experience with statistical packages is not a requirement. Topics to be discussed include study design, probability, comparing sample means and proportions, survival analysis, and sample size/power calculations. The computer lab incorporates lecture content into practical application by introducing the statistical software package SPSS to describe and analyze data. Consent of instructor required. Two weeks, July 11–22, 2011. MTWTF 8:30–11:15

**IMED 650a, Seminars in Clinical Investigation**  Eugene Shapiro
In this term-long course a range of topics is covered in the format of an interactive seminar. Topics include detailed evaluation of study designs (cohort studies, case-control studies, and clinical trials), development and validation of indices, review of approaches to methodology and issues related to implementation of the methodology (assuring quality of the data, qualitative research methods, estimation of sample size and statistical power), and introduction to finding sources to fund grant proposals. The format for most of the seminars consists of a didactic presentation followed by intensive discussion of research articles and research protocols. Students lead the discussion in the critical analysis and evaluation of the articles. Attendance and active participation are required. Consent of instructor required. W 2–4
IMED 655b, Writing Your First Grant Proposal  Eugene Shapiro
In this term-long course, students gain intensive, practical experience in evaluating and preparing grant proposals, including introduction to NIH study section format. The course gives new clinical investigators the essential tools to design and to initiate their own proposals for obtaining grants to do research and to develop their own careers. The course is limited to students who plan to submit grant proposals (usually for either a K-23 or a K-08 grant). Attendance and active participation are required. Consent of instructor required.

IMED 660c, Methods in Clinical Research, Part I  Eugene Shapiro
IMED 661a, Methods in Clinical Research, Part II  Eugene Shapiro
IMED 662b, Methods in Clinical Research, Part III  Eugene Shapiro
This yearlong course, presented by the Robert Wood Johnson Clinical Scholars Program, presents in depth the methodologies used in patient-oriented research, including methods in biostatistics, clinical epidemiology, health services research, community-based research, and health policy. Consent of instructor required.

IMED 680b, Topics in Human Investigation  Joseph Craft, Karen Anderson
The course teaches students about the process through which novel therapeutics are designed, clinically tested, and approved for human use. It is divided into two main components, with the first devoted to moving a chemical agent from the bench to the clinic, and the second to outlining the objectives and methods of conducting clinical trials according to the FDA approval process. The first component describes aspects of structure-based drug design and offers insight into how the drug discovery process is conducted in the pharmaceutical industry. The format includes background lectures with discussions, labs, and computer tutorials. The background lectures include a historical perspective on drug discovery, the current paradigm, and important considerations for future success. The second component of the course provides students with knowledge of the basic tools of clinical investigation and how new drugs are tested in humans. A series of lectures and discussions provide an overview of the objectives, research strategies, and methods of conducting patient-oriented research, with a focus on design of trials to test therapeutics. Each student is required to participate (as an observer) in an HIC review, in addition to active participation in class. Consent of instructor required. TH 3–4:30
ITALIAN LANGUAGE AND LITERATURE

82-90 Wall Street, 203.432.0595
www.yale.edu/italian
M.A., M.Phil., Ph.D.

Chair
Giuseppe Mazzotta

Director of Graduate Studies
Millicent Marcus (82-90 Wall St., Rm. 426, 203.432.0599)

Professors  Millicent Marcus, Giuseppe Mazzotta

Assistant Professors  Angela Capodivacca, David Lummus

Senior Lector II and Language Program Director  Risa Sodi

Visiting faculty from other universities are regularly invited to teach courses in the department.

Fields of Study

The Italian department brings together several disciplines for the study of the Italian language and its literature. Although the primary emphasis is on a knowledge of the subject throughout the major historical periods, the department welcomes applicants who seek to integrate their interests in Italian with wider methodological concerns and discourses, such as history, rhetoric and critical theories, comparison with other literatures, the figurative arts, religious and philosophical studies, medieval, Renaissance, and modern studies, and the contemporary state of Italian writing. Interdepartmental work is therefore encouraged and students are accordingly given considerable freedom in planning their individual curriculum, once they have acquired a broad general knowledge of the field through course work and supplementary independent study.

Special Admissions Requirements

The department recognizes that good preparation in Italian literature is unusual at the college level and so suggests that applicants begin as soon as possible to acquire a broad general knowledge of the field through outside reading. At the end of the first and second years, students’ progress is analyzed in an evaluative colloquium. Applicants who have had little or no experience in Italy are generally urged to do some work abroad during the course of their graduate program. For all students of Italian, a reading knowledge of Latin is essential. This may be acquired during the course of the first year, but applicants are reminded that it is difficult to schedule beginning language courses in addition to a normal graduate program. Students are advised to acquire proficiency in the languages required for the doctoral program before matriculation.
Special Requirements for the Ph.D. Degree

Candidates must demonstrate a reading knowledge of a second Romance language, Latin, and a non-Romance language (German recommended). The Latin examination must be passed, usually before the beginning of the third term of study, and all language requirements must be fulfilled before the Ph.D. qualifying examination. Students are required to take two years of course work (as a rule sixteen courses), including two graduate-level term courses outside the Italian department. After consultation with the director of graduate studies (DGS), students who join the graduate program with an M.A. in hand may have up to four courses waived. The comprehensive qualifying examination must take place during the third year of residence. It is designed to demonstrate the student’s mastery of the language and acquaintance with the literature. The examination, which is both written and oral, will be devised in consultation with members of the department. In the term following the qualifying examination, the student will discuss, in a session with the departmental faculty, a prospectus describing the subject and aims of the dissertation. Students are admitted to candidacy for the Ph.D. upon completion of all predissertation requirements, including the prospectus. Admission to candidacy normally occurs by the end of the sixth term.

Teaching is considered to be an important component of the doctoral program in Italian. Students will be appointed as teaching fellows in the third and fourth years of study. Guidance in teaching is provided by the faculty of the department and specifically by the director of language instruction.

Combined Ph.D. Programs

ITALIAN AND FILM STUDIES

The Department of Italian also offers, in conjunction with the Film Studies Program, a joint Ph.D. in Italian and Film Studies. For further details, see Film Studies. Applicants to the joint program must indicate on their application that they are applying both to Film Studies and to Italian. All documentation within the application should include this information.

ITALIAN AND RENAISSANCE STUDIES

The Department of Italian also offers, in conjunction with the Renaissance Studies Program, a combined Ph.D. in Italian and Renaissance Studies.

Master’s Degrees

Only candidates for the Ph.D. degree will be admitted to the program, but the department will, upon request, offer the M.A. and the M.Phil. degrees to students who have completed the general Graduate School requirements for those degrees (see Degree Requirements under Policies and Regulations). Additionally, students in Italian are eligible to pursue a supplemental M.Phil. degree in Medieval Studies. For further details, see Medieval Studies.

Program materials are available upon request to the Director of Graduate Studies, Italian Language and Literature, Yale University, PO Box 208311, New Haven CT 06520–8311.
Courses

ITAL 590b/CLPT 916b/FILM 830b, Literature into Film  Millicent Marcus
The course undertakes a series of case studies of Italian films adapted from literary works, identifying the challenges that specific texts present to filmmakers in the process of transforming verbal fictions into audiovisual spectacles. Although we consider a variety of critical approaches to comparative study of the two arts (semiotic, psychoanalytic, ideological, feminist, etc.), we do not develop a universal theory of adaptation, but instead analyze each case in *sui generis* terms, making allowances for the specificity of the textual sources, and for the “authorial” freedom that must be granted filmmakers in their cinematic rewriting of them. Among our twelve case studies, reading and screening include the Tavianis’ *Kaos* and Pirandello’s short stories; Moravia’s and De Sica’s *Two Women*; Sophocles’ and Pasolini’s *Oedipus Rex*; Boito’s and Visconti’s *Senso*; Ledda’s and the Tavianis’ *Padre padrone*; Bassani’s and De Sica’s *Garden of the Finzi-Continis*; and Mann’s and Visconti’s *Death in Venice*. W 3:30–5:20, screenings SU 7:30

ITAL 600a/CPLT 501a/HIST 564a/RNST 500a, Introduction to Renaissance Studies: Renaissance Italy  Angela Capodivacca, Francesca Trivellato
An introduction to the major texts, issues, and methods in the interdisciplinary study of the Renaissance, with an emphasis on Italy. T 7–8:50

ITAL 653a, Baroque Epics  Giuseppe Mazzotta
A study in some detail of two outstanding epics of the Italian Baroque period (Tasso’s *Gerusalemme Liberata* and Marino’s *Adone*). The course stresses such issues as the clash between Christians and Muslims, the continuity of the epic tradition, the retrieval of the language of the lyric, the rethinking of baroque arts and sciences, such as perspectivism, new geographical and astronomical theories, encyclopedism, and contemporary aesthetics of music and art. Guiding idea is the examination of the specific ways in which the two poets represent history, theology, and politics in their texts and, along the way, articulate a theory of modernity. T 3.30–5.20

ITAL 656a, Poetry and Politics in Fourteenth-Century Italy  David Lummus
Readings in medieval literary theory, political theology, and civic history from the Italian peninsula between roughly 1264 and 1406. In-depth consideration of the political and theological contexts within which poetry was asserted and defended as a valid medium for the preservation and transfer of knowledge and ethical values. Authors treated include Brunetto Latini, Dante Alighieri, Giovanni del Virgilio, Albertino Mussato, Francesco Petrarca, Giovanni Boccaccio, and Coluccio Salutati. TH 2:30–4:20

ITAL 667b, Art, Philosophy, and Literature in the Renaissance  Angela Capodivacca
Self-representations of radical novelty in Renaissance texts of literary, philosophical, and visual culture. Outlines of the path to modernity in works by Petrarch, Alberti, Leonardo, Machiavelli, Castiglione, Ariosto, Michelangelo, Aretino, Veronica Franco, Tasso, Cellini, Artemisia Gentileschi, Moderata Fonte, Bruno, Campanella, Galileo, and Vico. M 7–8:50

ITAL 691a/b, Directed Reading  Millicent Marcus
ITAL 703b/CPLT 711b, Vico and European Thought  Giuseppe Mazzotta
Examination of Vico’s thought globally and in the historical context of the late Renaissance and the Baroque. Starting with Vico’s *Autobiography*, working to his University Inaugural Orations and *On the Study of Methods of Our Time*, the seminar delves into his juridical-political texts and submits the second *New Science* (1744) to a detailed analysis. Some attention is given to Vico’s poetic production; the encomia he wrote; and the polemics with Machiavelli, Bacon, Descartes, and the classics. The overarching idea of the seminar is the definition of Vico’s new discourse for the modern age and his vision of a modern Europe in the widening space of the globe. To this end, discussion deals prominently with issues such as Baroque encyclopedic representations, the heroic imagination, the senses of “discovery” of the new world, the redefinition of “science,” the reversal of neo-Aristotelian and neo-Platonic poetics, the crisis of the Renaissance, and the role of the myth and education. T 3:30–5:20

ITAL 780a, Il romanzo del Novecento  Millicent Marcus
No literary form is better suited to gauging the convulsive changes wrought by Italy’s entrance into modernity than the novel. Infinitely permeable to the forces of historical circumstance, the novel counters these external forces with its own version of the evolving Italian subject in all its personal richness and complexity. We study the evolution of this literary genre throughout the course of the twentieth century and, in the process, adopt a variety of approaches, including, but not limited to, semiotics, psychoanalysis, narratology, gender, ideological criticism, and “la questione della lingua.” In Italian. W 3:30–5:20
LINGUISTICS

370 Temple Street, Rm. 204, 203.432.2450
www.ling.yale.edu
M.A., M.Phil., Ph.D.

Chair
Robert Frank

Director of Graduate Studies
Maria Piñango [F] (370 Temple, 203.432.4145, maria.pinango@yale.edu)
Stephen Anderson [Sp] (370 Temple, 203.432.2456)

Professors  Stephen Anderson, Robert Frank, Roberta Frank (English), Laurence Horn, Frank Keil (Psychology), Zoltán Szabó (Philosophy), Raffaella Zanuttini

Associate Professors  Ann Biersteker (African Language Program), Claire Bowern, Maria Piñango, Kenneth Pugh (Haskins Laboratory)

Assistant Professors  Ashwini Deo, Gaja Jarosz, Jelena Krivokapić

Lecturers  Timothy Hunter, Einar Mencl, Tamina Stephenson, Dennis Storoshenko, Matthew Wolf

Supporting faculty in other departments  J. Joseph Errington (Anthropology)

Fields of Study
Fields include phonetics, phonology, morphology, syntax, semantics, pragmatics, neuro- and psycholinguistics, computational linguistics, historical linguistics, and descriptive study in a variety of languages.

Special Requirements for the Ph.D. Degree

PROGRAM VISION

Linguistics at Yale has a long and storied history in traditional approaches to the study of language. Today the department takes a distinctively integrative and interdisciplinary approach in investigating the systems of knowledge that make up our linguistic competence. We are convinced that an understanding of the human language faculty will arise only through the mutually informing relationship between formally explicit theories and insights from wide-ranging descriptive and experimental work. Thus at Yale theoretical inquiry grounded in introspection proceeds in partnership with historical and comparative studies, fieldwork, experimental investigations of normal and impaired language processing, cognitive neuroscience, laboratory phonetic analysis, and computational and mathematical modeling. Students in the Ph.D. program are exposed to these methodological approaches, while receiving firm grounding in the traditional domains of linguistics. Ph.D. students participate in research in phonetics, phonology, morphology, syntax, semantics, pragmatics, and historical linguistics, and explore data from a wide variety of languages, both well studied and less well documented, with particular faculty expertise in the Slavic, Romance, Australian, and Indo-Aryan languages.
Course work requirements  The conception of linguistics embraced by the Yale Ph.D. program requires that students receive training that is both deep in its coverage of areas of linguistic inquiry and broad in the range of methodological approaches to which students are exposed. The course work requirements are designed to accomplish these dual goals.

Years one and two. During their first four terms, students must complete a minimum of fourteen term courses at the graduate level. These courses must include an eight-course core, together with a set of three courses exposing students to a range of methodologies in linguistic research.

The core consists of the following courses:

- LING 512, Historical Linguistics
- LING 520, Phonetics
- LING 532, Phonology 1
- LING 535, Phonology 2
- LING 553, Syntax 1
- LING 580, Morphology
- LING 654, Syntax 2
- LING 663, Semantics

For the methodology requirement, students must take at least three of the following set of courses:

- LING 541, Language and Computation
- LING 601, Experimental Linguistics
- LING 624, Formal Foundations for Linguistic Theory
- LING 641, Field Methods

Students will typically enroll in these courses even if they have had similar course work elsewhere. During these initial two years of course work, students must receive at least three grades of H (Honors). Three or more grades of P or F (Pass or Fail) during this period are grounds for dismissal from the Ph.D. program.

Years three and four. During the third and fourth years, students are expected to enroll in one seminar course for credit each term. Students should use such seminars as opportunities both for exploring new research areas and, especially, for pushing current research interests in novel directions.

Program Requirements

In addition to course work, students will also focus on the creative side of academic life by undertaking independent research. This work serves the multiple functions of promoting students’ intellectual growth, strengthening their working relationships with faculty members, and providing a yardstick by which progress toward the degree can be measured.

1. Portfolio and special field exam. During the first two years of the graduate program, students must complete a portfolio of three research papers, one each in the areas of syntax, phonology, and either semantics or historical linguistics. These papers, which should demonstrate a student’s ability to conduct independent research in linguistics, will typically consist of revised versions of term papers students have written. The first two of these must be submitted by September 15 of the student’s second year. It is the expectation of the faculty that students will make any necessary revisions of papers written during the first year during the summer between the first and second years in the program, so as to prepare two of these for submission by this deadline.
The third paper must be submitted no later than the end of the first week of May in the second year. The entire departmental faculty will evaluate these papers soon after they are submitted. They may be approved or rejected, or the student may be asked to carry out further revisions prior to resubmission.

During the second year, students will, in consultation with their advisers, choose a subfield of linguistics of particular interest to them and prepare an annotated bibliography approximately twenty pages in length. After completing that bibliography, the student will complete an essay exam composed by his or her adviser and returned by the student two days later. The deadline for completion of this special field exam is the end of the first week of May in the second year. The special field exam, like the portfolio papers, will be read and evaluated by the entire departmental faculty.

At the conclusion of the second year, the director of graduate studies (DGS) will transmit an assessment of each student's progress as determined by the faculty on the basis of performance in class work, the portfolio papers, and the special field exam.

2. **Qualifying papers.** By the end of the third year of graduate study, students will present two substantial research papers of publishable quality in different areas of linguistics. Satisfaction of this requirement includes the submission of a written version of the paper to be followed by an oral presentation to the department (typically at a Friday Linguist Lunch). Alternatively, one of the two papers can be presented at a professional conference, provided at least one member of the department faculty is in attendance.

3. **Prospectus.** By the end of the seventh term, students will present a dissertation prospectus to the faculty. The prospectus should lay out clearly the student’s proposed dissertation topic. It should stress the importance of the topic, present the core idea of the proposed work together with its promise and viability, and demonstrate how this work fits into past research in the area. The document should be ten to twenty pages (single spaced) in length. After the document is submitted, the prospectus must be defended orally in front of the faculty. Upon successful completion of the prospectus defense, students advance to Ph.D. candidacy.

4. **Dissertation.** By the end of the eighth term, students must complete and have approved by their committee a chapter of the dissertation, together with a detailed outline of the dissertation and a comprehensive bibliography. Once this requirement is completed, students are eligible for a University Dissertation Fellowship, which will support them in their fifth year of graduate study. Students are expected to complete their dissertations by the end of the fifth year. At least one month prior to the dissertation filing date, the completed dissertation must be orally defended in front of the dissertation committee consisting of at least three faculty members, two of whom must be members of the Linguistics department. Committee members must be given the completed dissertation no less than two weeks prior to the date of the defense.

**LANGUAGE REQUIREMENT**

Students who do not take LING 641, Field Methods must pursue the study of at least one language as approved by the DGS outside of the Germanic, Romance, Balto-Slavic, and Greek branches of the Indo-European family, either through a course on the structure of the language or through three terms of language study at Yale or elsewhere.
TEACHING FELLOW/RESEARCH ASSISTANT REQUIREMENTS

The faculty regard teaching experience as an integral part of the graduate training program in Linguistics. All students are required to serve as Teaching Fellows for a minimum of two terms, usually beginning in the first term of the third year. In addition, students must complete two additional terms of assistantship. These may be either as a Teaching Fellow, or through participation in externally supported, supervised research as a Research Fellow. Research assistantships may be provided by the Linguistics faculty and by various Yale and Yale-affiliated units. Before accepting a research assistantship in fulfillment of this requirement, students must receive approval from the DGS. To be approved, a research assistantship must meet the following criteria:

1. It must be supervised by a Linguistics department faculty member or a faculty member from an affiliated unit, such as Haskins Laboratories or the Yale School of Medicine.
2. It must provide research experience that complements the student’s academic plan of study.
3. It must provide at least ten hours of experience per week.

If an approved research assistantship is accepted that does not provide a stipend equal to the standard departmental stipend, a University Fellowship will be provided to augment the stipend so as to bring it up to the departmental standard.

Master’s Degrees

M.Phil. See Degree Requirements under Policies and Regulations.

M.A. (en route to the Ph.D.) Students in the doctoral program who successfully complete the course work, examinations, and work samples required by the end of the second year of graduate study (see above) may petition for the M.A. degree.

Program materials are available upon request to the Department of Linguistics, Yale University, PO Box 208366, New Haven CT 06520-8366.

Courses

LING 500a/ENGL 500a, Introduction to Old English Language and Literature

Traugott Lawler

LING 501b/ENGL 501b, Beowulf and the Northern Heroic Tradition

Roberta Frank

A close reading of the poem Beowulf, with some attention to shorter heroic poems. TH 1:30–3:20

[LING 502a, Advanced Old English]

LING 510b, Introduction to Linguistics

Ashwini Deo

The goals and methods of linguistics. Basic concepts in phonology, morphology, syntax, and semantics. Techniques of linguistic analysis and construction of linguistic models.
Trends in modern linguistics. The relations of linguistics to psychology, logic, and other disciplines. MW 2:30–3:45

**LING 512a**, **Historical Linguistics** Claire Bowern
Types of change that a language undergoes in the course of time: sound change, analogy, syntactic and semantic change, borrowing. Techniques for recovering earlier linguistic stages: philology, internal reconstruction, the comparative method. Language change and linguistic theory. The role of language contact in language change. TTH 9–10:15

**LING 515a**/**SKRT 510a**, **Introductory Sanskrit I** David Brick
An introduction to Sanskrit language and grammar. Focus on learning to read and translate basic Sanskrit sentences in the Indian Devanagari script. No prior background in Sanskrit assumed. Credit only on completion of LING 525b/SKRT 520b. MTWTHF 9:25–10:15

**LING 517a**, **Language and Mind** Maria Piñango
Knowledge of language as a component of the mind: mental grammars, the nature and subdivisions of linguistic knowledge in connection to the brain. The logical problem of language acquisition. The “universal grammar hypothesis,” according to which all humans have an innate ability to acquire language. The connection between language acquisition and general cognitive abilities. TTH 11:35–12:50

**LING 520a**, **General Phonetics** Jelena Krivokapić
Investigation of possible ways of describing the speech sounds of human languages. Tools to be developed: acoustics and physiology of speech; computer synthesis of speech; practical exercises in producing and transcribing sounds. MW 1–2:15

**LING 525b**/**SKRT 520b**, **Introductory Sanskrit II** David Brick
Continuation of LING 515a/SKRT 510a. Focus on the basics of Sanskrit grammar; readings from classical Sanskrit texts written in the Indian Devanagari script. Prerequisite: LING 515a/SKRT 510a. MTWTHF 9:25–10:15

**LING 530b**, **Evolution of Language** Stephen Anderson
The origin and evolution of human language from an interdisciplinary perspective. Topics include the design features of language, the structure of evolutionary theory, elementary molecular genetics and genetic evidence for language evolution, cognitive continuity and discontinuity with other species, hominid evolutionary history, domain specificity and generality of the language faculty, and evidence for evolutionary shaping of physical and cognitive structures. TTH 2:30–3:45

**LING 532a**, **Introduction to Phonological Analysis** Gaja Jarosz
The structure of sound systems in particular languages. Phonemic and morphophonemic analysis, distinctive-feature theory, formulation of rules, and problems of rule interpretation. Emphasis on problem solving. Prerequisite: LING 510b or 520a. MW 11:35–12:50

**LING 533b**, **Phonological Theory** Gaja Jarosz
Topics in the architecture of a theory of sound structure. Levels of representation; classical phonological rules and their interaction. Ordering paradoxes; cyclicity and Lexical Phonology. Motivations for replacing a system of rules with a system of constraints.
Optimality theory: constraint types and their interactions. Correspondence theory. Opacity and stratal OT. Prerequisite: LING 532a or permission of the instructor. MW 11:35–12:50

LING 538a, Intermediate Sanskrit I  David Brick
The first half of a two-term sequence aimed at helping students develop the skills necessary to read texts written in Sanskrit. Readings include selections from the Hitopadesa, Kathasaritsagara, Mahabharata, and Bhagavadgita. Prerequisite: LING 525b or equivalent. MTWTHF 10:30–11:20

[LING 540b/PSYC 506b, Computational Models in Cognitive Science]

LING 541a, Language and Computation  Gaja Jarosz
Design and analysis of computational models of language. Topics include finite state tools, computational morphology and phonology, grammar and parsing, lexical semantics, and the use of linguistic models in applied problems. MW 2:30–3:45

LING 546b, Language, Sex, and Gender  Laurence Horn
Sex-based asymmetries in language structure and language use. Role of language in encoding, reflecting, or reinforcing social attitudes and behavior. The “he-man” lexicon: sex-marking, reform, and resistance. Gender and sexual diversity as linguistic variables. Genderlects: differences (real and perceived) between male and female speech, conversational styles, and linguistic communities. MW 1–2:15

[LING 547b, The Indigenous Languages of Australia]

LING 548b, Intermediate Sanskrit II  David Brick
Continuation of LING 538a, focusing on Sanskrit literature from the kavya genre. Readings include selections from the Jatakamala of Aryasura and the opening verses of Kalidasa’s Kumarasambhava. Prerequisite: LING 538a or equivalent. MTWTHF 10:30–11:20

LING 553a, Syntax I  Raffaella Zanuttini
An introduction to the syntax (sentence structure) of natural language. Introduction to generative syntactic theory and key theoretical concepts. Syntactic description and argumentation. Topics include phrase structure, transformations, and the role of the lexicon. TTH 1–2:15

[LING 569a, Meaning]

LING 580b, Morphology  Stephen Anderson
The theory of word structure within a formal grammar. Relation to other areas of grammar (syntax, phonology); basic units of word structure; types of morphology (inflection, derivation, compounding). Prerequisites: LING 532a and 553a, or permission of the instructor. MW 2:30–3:45

[LING 600b, Experimentation in Linguistics]

LING 601a, Neurological Basis of Prosody and Meaning  Maria Piñango
Whereas the role of syntactic structure in sentence comprehension has been widely explored, less attention has been given to how prosodic structure and meaning structure—central to linguistic composition and comprehension—interact with syntactic
structure as comprehension progresses. This seminar focuses on this interaction from a brain perspective. It asks what the interface mechanisms among these three structural levels are such that they can be mapped onto the cortical and subcortical connectivity paths proposed to support sentence-level comprehension. Prerequisite: LING 631b or permission of the instructor. W 9:25–11:15

LING 612b, Linguistic Change  Ashwini Deo
Principles governing linguistic change in phonology and morphology. Status and independence of proposed mechanisms of change. Relations between the principles of historical change and universals of language. Systematic change as the basis of linguistic comparison; assessment of other attempts at establishing linguistic relatedness. Prerequisites: LING 512a, 532a, and 553a. TTH 1–2:15

[LING 621b, Topics in Phonetics: Intonation]

LING 622b, Speech Timing  Jelena Krivokapić
Linguistic structure as it influences the temporal realization of speech; how linguistic theory accounts for the observed temporal patterns. In-class lab exercises. Prerequisite: LING 520a or permission of the instructor. TTH 1–2:15

LING 624a, Formal Foundations of Linguistic Theories I  Robert Frank
Mathematical methods in linguistics. Topics include set theory, logic and formal systems, model theory, lambda calculus, formal language theory, elementary statistics, and probability. No prerequisites. TTH 2:30–3:45

LING 625b, Computing Meanings  Timothy Hunter, Robert Frank
Introduction to mathematical and computational tools for assigning meanings to natural language sentences. Foundational skills for the development of formal models of human language syntax and semantics, and for practical applications of language technology such as text understanding and question answering. Topics include syntactic structure and displacement, quantification and inference, and the dynamics of discourse. Prerequisite: LING 553a or permission of the instructor. W 9:25–11:15

[LING 626b, Formal Foundations of Linguistic Theories II]

LING 630b, Techniques in Neurolinguistics  Einar Mencl
The first section of this course is focused on obtaining a basic understanding of neuroimaging data acquisition and analysis techniques, primarily MRI, with application to the study of language. Technique subareas include MRI acquisition; preprocessing; single- and multi-subject data analysis; visualization; and network analysis. Classes pair lecture presentation and in-class interactive demonstrations with relevant datasets. The second section focuses on selected readings in the study of language using these techniques. Topic areas include speech production and perception, reading, and dyslexia. Readings are primarily drawn from journal articles in the field in general, but also from within Haskins Laboratories, allowing access and hands-on analysis and exploration of existing datasets. Prerequisite: LING 510b. T 9:25–11:15

[LING 631b, Neurolinguistics]
LING 632au, Universals of Language

LING 636bu, Articulatory Phonology  Jelena Krivokapić
Introduction to phonology as a system for combining units of speech (constriction gestures of the vocal organs) into larger structures. Analysis of articulatory movement data; modeling using techniques of dynamical systems. Emphasis on universal vs. language-particular aspects of gestural combination and coordination. Prerequisite: LING 520a or permission of the instructor.

LING 640au, Topics in Phonology: Rule Ordering and Interaction  Matthew Wolf
The ordering relations and functional interactions that may hold between phonological processes. Sequential vs. simultaneous application, extrinsic vs. intrinsic ordering, local ordering, derived environment effects and reference to derivational history, and Duke-of-York derivations. Consideration of these issues in light of various versions of Optimality Theory. Prerequisites: LING 532a and 535b, or permission of the instructor.

LING 641au, Field Methods  Claire Bowern
Principles of phonetics, phonology, morphology, syntax, and semantics applied to the collection and interpretation of novel linguistic data. Data are collected and analyzed by the class as a group, working directly with a speaker of a relatively undocumented language.

LING 642bu, Topics in Phonology: Probability  Gaja Jarosz
Theories that seek to capture categorical aspects of phonological knowledge as well as gradience and variability. Possible topics include variation and optionality, gradient phonotactics, and relationship between phonotactic knowledge and phonological alternations. The explanatory role of probability in formal models of phonological knowledge and in phonological acquisition and learnability. Prerequisite: LING 532a.

LING 651bu, Learnability and Development  

LING 652bu, Pronouns across Languages  Dennis Storoshenko
Cross-linguistic examination of pronouns and pronominal systems, building on the concepts of binding theory introduced in LING 153. Alternate theoretical approaches to binding and pronouns are applied to data from East Asian, North American, and African languages. A course project analyzes data from a non-English language of each student’s choice. Prerequisite: LING 153.

LING 654bu, Syntax II  Robert Frank
Recent developments in syntactic theory: government and binding, principles and parameters, and minimalist frameworks. In-depth examination of the basic modules of grammar (lexicon, X-bar theory, theta-theory, case theory, movement theory). Comparison and critical evaluation of specific syntactic analyses.

LING 655bu, Subjects  

LING 656au, Grammatical Relations  

LING 657au, Classic Readings in Syntax  

[LING 660a\textsuperscript{u}/PSYC 650a\textsuperscript{u}, Topics in Syntax: The Mental Lexicon]

LING 661a\textsuperscript{u}, Current Trends in Syntax  Raffaella Zanuttini
Introduction to Chomsky’s minimalist program, with comparison to earlier frameworks; close study of selected minimalist analyses that use the notion of phase and the agree operation. Discussion of Cinque and Rizzi’s “cartographic approach”; the distribution of adjectives. Prerequisites: LING 553a and 654b, or permission of the instructor. TTH 9–10:15

LING 663a\textsuperscript{u}, Semantics  Ashwini Deo
Focus as the expression of information structural prominence in natural language discourse. Semantic and pragmatic properties of focus and its phonological, lexical, and word-order correlates. Treatment of focus-sensitive and scalar particles (“only,” “even,” “too,” “almost,” et al.) in dynamic models of meaning. Parallels with the semantics of questions. Prerequisite: a course in semantics or permission of the instructor. MW 2:30–3:20

[LING 664b\textsuperscript{u}, Semantic Theory]

LING 665a\textsuperscript{u}, Semantic Change  Ashwini Deo
Investigation of systematic change in the domain of semantics and pragmatics. Empirical phenomena include grammaticalization in the domain of tense, aspect, and modality markers, markers of location and possession, and negation, as well as intensifiers. Focus on reconciling grammaticalization and typological research with formal semantic studies. Prerequisite: LING 663a or permission of the instructor. F 9:25–11:15

LING 670a\textsuperscript{u}, Topics in Semantics: Pragmatic Models  Tamina Stephenson
Formal pragmatic models of conversation, including the representation of common ground, speech acts, speaker commitments, and information structure. Prerequisite: an advanced course in semantics, pragmatics, or philosophy of language. T 3:30–5:20

LING 671a, Philosophy of Language  Zoltán Szabó
An introduction to contemporary philosophy of language, organized around four broad topics: meaning, reference, context, and communication. Introduction to the use of logical notation. TTH 11:35–12:50

LING 675b\textsuperscript{u}, Pragmatics  Laurence Horn, Tamina Stephenson
Context-dependent aspects of meaning and inference. Speech act theory, presupposition, implicature. Role of pragmatics in the lexicon and in meaning change. The semantics-pragmatics distinction from different perspectives; the position of pragmatics in linguistic theory. TTH 2:30–3:45

[LING 676b\textsuperscript{u}, Implicature and Pragmatic Theory]

[LING 690a\textsuperscript{u}, Negation and Polarity]

[LING 710b, Predication]

LING 830a or b, Directed Research in Linguistics
By arrangement with faculty.
LING 831a or b, Directed Research in Phonetics
By arrangement with faculty.

LING 840a or b, Directed Research in Phonology
By arrangement with faculty.

LING 850a or b, Directed Research in Grammar
By arrangement with faculty.

LING 860a or b, Directed Research in Semantics
By arrangement with faculty.
 MANAGEMENT

135 Prospect Street, 203.432.5957
http://phd.som.yale.edu
M.A., M.Phil., Ph.D.

Dean
Edward Snyder

Director of Graduate Studies
Subrata Sen (52 Hillhouse, Rm. 221, 203.432.6028, subrata.sen@yale.edu)

Associate Professors Keith Chen, James Choi, Martijn Cremers, Shane Frederick, Dina Mayzlin, Jiwoong Shin, Heather Tookes, Amy Wrzesniewski, Hongjun Yan, X. Frank Zhang

Fields of Study
Current fields include accounting, financial economics, marketing, and organizations and management. Other applied management fields may be added in subsequent years.

Special Admissions Requirements
The GRE General Test or the GMAT Test is required by the Graduate School. Applicants whose native language is not English must take the Test of English as a Foreign Language (TOEFL).

Special Requirements for the Ph.D. Degree
Admission to candidacy will be based on the requirements of the Graduate School, which include the submission of a prospectus, duly approved by the faculty. Students must maintain a satisfactory grade record in the first year to remain in the program. Students shall, in addition, fulfill the requirements stated below. The process of admission to candidacy will include a faculty review of the student’s entire academic record once all
requirements have been successfully completed, and must be concluded by the end of the third year.

**CORE REQUIREMENTS**

Two core courses are required of each student, General Economic Theory: Microeconomics, and Policy Modeling. During the first two years in the program, each student is required to complete a two-course sequence in empirical methods and a two-course sequence in one of the social sciences. Both of these sequences are usually taken during the first year. In addition, each student must prepare an original paper during his or her first summer and submit it to the faculty at the beginning of the third term in residence. Further, a second-year research paper must be submitted to the faculty by November 1 of the fifth term in residence.

**IN-DEPTH REQUIREMENT**

The in-depth requirement consists of five courses selected by the student with the consent of the area faculty and the director of graduate studies (DGS). This in-depth study is designed to focus on a particular research paradigm and to prepare the student for the dissertation. In addition, a qualifying examination prepared by the area faculty must be passed. Currently offered in-depth areas are accounting, financial economics, marketing, and organizations and management.

**BREADTH REQUIREMENT**

The breadth requirement consists of one course that is outside of the student’s depth area. The breadth course is selected by the student with the consent of the area faculty and the DGS.

**COURSE REQUIREMENT**

Each student must complete a total of fourteen courses, achieving a grade of Honors in at least two courses and a High Pass average in the other twelve courses.

**TEACHING**

Teaching is considered to be an important part of the doctoral program in Management. The program expects students to serve as teaching fellows, beginning in the spring term of the first year and continuing through the fourth year of study.

**Master’s Degrees**

**M.Phil.** A student who is admitted to candidacy will be eligible to receive the M.Phil. upon the recommendation of the program's faculty and the approval of the Graduate School.

**M.A. (en route to the Ph.D.)** A student who completes the fourteen required courses with a High Pass average and the first-year paper will be eligible for the M.A. degree upon the recommendation of the program's faculty and the approval of the Graduate School.

Program materials are available upon request to the Director of Graduate Studies, Management, Yale University, PO Box 208200, New Haven CT 06520-8200. For information on the M.B.A. degree, please contact the admissions office at the School of Management.
Courses

MGMT 701a, Seminar in Accounting Research II  Rick Antle, Shyam Sunder
Study of analytical modeling techniques in accounting research that covers topics such as performance measurement for incentives, the consequences of asymmetric information in economic relationships and the role of accounting therein, and information sharing within and across firms.

MGMT 704b, Seminar in Accounting Research IV  Jacob Thomas
Study of empirical accounting research that covers topics such as relation between accounting information and stock prices, analyst forecasts, taxes, and incentives to manage accounting information.

MGMT 740a/ECON 670a, Financial Economics I  Zhiwu Chen
Current issues in theoretical financial economics are addressed through the study of current papers. Focuses on the development of the problem-solving skills essential for research in this area. T 2:30–5:20

MGMT 741b/ECON 671b, Financial Economics II  Jonathan Ingersoll
Continuation of MGMT 740a/ECON 670a.

MGMT 742a, Corporate Finance and Market Microstructure  Matthew Spiegel
The course covers recent journal articles in the area of corporate finance, market microstructure, and asset pricing. Topics from corporate finance include optimal debt levels, bankruptcy, security design, initial public offerings, and mergers and acquisitions. The half of the course on market microstructure and asset pricing covers inventory models, trading with asymmetric information in the presence of strategic and competitive traders, the social welfare impact of informed trading, bid-ask spreads, and issues relating to delegated portfolio management.

MGMT 746b/ECON 674b, Financial Crises  Gary Gorton, Andrew Metric
An elective doctoral course covering theoretical and empirical research on financial crises. The first half of the course focuses on general models of financial crises and historical episodes from the nineteenth and twentieth centuries. The second half of the course focuses on the recent financial crisis. Prerequisites: MGMT 740a and 741b and permission of the instructor.

MGMT 751b, Seminar in Marketing II  Dina Mayzlin
Current issues in marketing related to product planning, pricing, advertising, promotion, sales force management, channels of distribution, and marketing strategy are addressed through the study of state-of-the-art papers.

MGMT 752a and b, Marketing Workshop  Jiwoong Shin
A series of presentations of their latest research by top marketing scholars from the United States and abroad.

MGMT 753a/PSYC 553a Behavioral Decision Making I  Nathan Novemsky, Ravi Dhar, Joseph Simmons
The seminar examines research on the psychology of decision making, focusing on choice. Although the normative issue of how choice should be made is relevant, the descriptive
issue of how choices are made is the main focus of the course. Topics of discussion include choice framing and mental accounting, prospect theory and loss aversion, context effects, task effects, goal-directed choice, preference reversals, intertemporal choice, and behavioral economics, among others. The goal of the seminar is threefold: to foster a critical appreciation of existing research in behavioral decision theory as applied to consumer choice, to develop the students’ skills in identifying and testing interesting research ideas, and to explore research opportunities for adding to that knowledge. Students generally enroll from a variety of disciplines including cognitive and social psychology, behavioral economics, finance, marketing, political science, medicine, and public health.

**MGMT 758b, Foundations of Behavioral Economics**  Shane Frederick
The course explores foundational topics in behavioral economics and discusses the dominant prescriptive models (which propose what decision makers should do) and descriptive models (which aim to describe what decision makers actually do). The course incorporates perspectives from economics, psychology, philosophy, decision theory, and finance, and engages long-standing debates about rational choice.

**MGMT 780a and b, Ph.D. Student Research Workshop**  Subrata Sen

**MGMT 781a and b, Accounting/Finance Workshop**  Hongjun Yan

**MGMT 782-01a and b, Accounting Doctoral Student Pre-Workshop Seminar**  Subrata Sen

**MGMT 782-02a and b, Financial Economics Doctoral Student Pre-Workshop Seminar**  Subrata Sen

**MGMT 782-03a and b, Marketing Doctoral Student Pre-Workshop Seminar**  Subrata Sen

**MGMT 791a or b, Independent Reading and Research**
By arrangement with individual faculty.

**MGMT 792a or b, Predissertation Research**
By arrangement with individual faculty.
MATHMATICS
10 Hillhouse Avenue, 203.432.4172
www.math.yale.edu
M.S., M.Phil., Ph.D.

Chair
Yair Minsky

Director of Graduate Studies
Alexander Goncharov

Professors  Donald Brown (Economics), Andrew Casson, Ronald Coifman, Michael Frame (Adjunct), Igor Frenkel, Howard Garland, Alexander Goncharov, Roger Howe, Peter Jones, Ravindran Kannan (Computer Science), Mikhail Kapranov, Alexander Lubotzky (Adjunct), Gregory Margulis, Yair Minsky, Vincent Moncrief (Physics), David Pollard (Statistics), Vladimir Rokhlin (Computer Science), Gregg Zuckerman

Assistant Professors  Amanda Folsom, Alex Kontorovich, Sam Payne

Gibbs Assistant Professors  Yael Algom Kfir, Ian Biringer, Nicoleta Corina Calinescu, Swarnendu Datta, Yen Quang Do, Asaf Hadari, Marketa Havlicкова, Anna Lachowska, Garving Kevin Luli, Zhenqi Wang, Zhiren Wang

Fields of Study
Fields include real analysis, complex analysis, functional analysis, classical and modern harmonic analysis; linear and nonlinear partial differential equations; dynamical systems and ergodic theory; geometric analysis; kleinian groups, low dimensional topology and geometry; differential geometry; finite and infinite groups; geometric group theory; finite and infinite dimensional Lie algebras, Lie groups, and discrete subgroups; representation theory; automorphic forms, L-functions; algebraic number theory and algebraic geometry; mathematical physics, relativity; numerical analysis; combinatorics and discrete mathematics.

Special Requirements for the Ph.D. Degree
All students are required to: (1) complete eight term courses at the graduate level, at least two with Honors grades; (2) demonstrate a reading knowledge of two of the following languages: French, German, or Russian; (3) pass qualifying examinations on their general mathematical knowledge; (4) submit a dissertation prospectus; (5) participate in the instruction of undergraduates; (6) be in residence for at least three years; and (7) complete a dissertation that clearly advances understanding of the subject it considers. The normal time for completion of the Ph.D. program is four years. Requirement (1) normally includes basic courses in algebra, analysis, and topology; these should be taken during the first year. The first language examination must be completed by the beginning of the third year of study, the second no later than the end of that year. A sequence of three qualifying examinations (algebra and number theory, real and complex analysis, topology) is offered each term, at intervals of about one month. All qualifying
examinations must be taken by the end of the third term. The thesis is expected to be independent work, done under the guidance of an adviser. This adviser should be contacted not long after the student passes the qualifying examinations. A student is admitted to candidacy after completing requirements (1)–(6) and obtaining an adviser.

In addition to all other requirements, students must successfully complete MATH 991a, Ethical Conduct of Research, prior to the end of their first year of study. This requirement must be met prior to registering for a second year of study.

**Honors Requirement**
Students must meet the Graduate School’s Honors requirement by the end of the fourth term of full-time study.

**Master’s Degrees**

**M.Phil.** In addition to the Graduate School's Degree Requirements (see under Policies and Regulations), a student must undertake a reading program of at least two terms’ duration in a specific significant area of mathematics under the supervision of a faculty adviser and demonstrate a command of the material studied during the reading period at a level sufficient for teaching and research.

**M.S.** A student must complete six term courses with at least one Honors grade, pass one language examination, perform adequately on the general qualifying examination, and be in residence at least one year.

Note that the M.Phil. and M.S. degrees are conferred only on route to the Ph.D.; there is no separate master’s program in Mathematics.

Program materials are available upon request to the Director of Graduate Studies, Mathematics Department, Yale University, PO Box 208283, New Haven CT 06520-8283.

Director of Graduate Studies
Udo Schwarz (udo.schwarz@yale.edu)

Associate Professors  Eric Dufresne, Corey O’Hern, Ainissa Ramirez, Jan Schroers

Assistant Professors  Aaron Dollar, John Morrell, Nicholas Ouellette, Hong Tang

Lecturers  Beth Anne Bennett, Kailasnath Purushothaman

Fields of Study

Fluids and thermal sciences  Dynamics and stability of drops and bubbles; dynamics of thin liquid films; macroscopic and particle-scale dynamics of emulsions, foams, and colloidal suspensions; electrospay theory and characterization; electrical propulsion applications; combustion and flames; computational methods for fluid dynamics and reacting flows; turbulence; particle tracking in fluid mechanics; laser diagnostics of reacting and nonreacting flows.

Soft matter/complex fluids  Jamming and slow dynamics in gels, glasses, and granular materials; mechanical properties of soft and biological materials; dynamics of macromolecules. Several faculty in Mechanical Engineering are also affiliated with the Integrated Graduate Program in Physical and Engineering Biology (www.peb.yale.edu).

Materials science  Characterization of crystallization and other phase transformations; studies of thin films; MEMS; smart materials such as shape memory alloys, amorphous metals, and nanomaterials including nanocomposites; NEMS; nano-imprinting; classical and quantum optomechanics; atomic-scale investigations of surface interactions and properties; classical and quantum nanomechanics; nanotribology.

Robotics/mechatronics  Machine and mechanism design; dynamics and control; robotic grasping and manipulation; human-machine interface; rehabilitation robotics; haptics; electromechanical energy conversion; biomechanics of human movement; human-powered vehicles.

For admissions and degree requirements, and for course listings, see Engineering & Applied Science.
MEDIEVAL STUDIES

53 Wall Street, Rm. 310, 203.432.0672
www.yale.edu/medieval
M.A., M.Phil., Ph.D.

Chair and Director of Graduate Studies
Robert Nelson (robert.nelson@yale.edu)

Executive Committee  R. Howard Bloch, Jessica Brantley, Roberta Frank, Paul Freedman, Dimitri Gutas, Ivan Marcus, Giuseppe Mazzotta, María Rosa Menocal, Alastair Minnis, Robert Nelson, Denys Turner, Anders Winroth

Faculty associated with the program  R. Howard Bloch, Gerhard Böwering, Jessica Brantley, Walter Cahn (Emeritus), Ian Cornelius, Stephen Davis, Roberta Frank, Paul Freedman, Creighton Gilbert (Emeritus), Harvey Goldblatt, Frank Griffel, Beatrice Gruendler, Dimitri Gutas, Valerie Hansen, Jacqueline Jung, Traugott Lawler (Emeritus), Bentley Layton, David Lummus, Ivan Marcus, John Matthews, Giuseppe Mazzotta, María Rosa Menocal, Mary Miller, Alastair Minnis, Robert Nelson, Lee Patterson (Emeritus), Kevin Poole, Fred Robinson (Emeritus), Denys Turner, Anders Winroth, Mimi Yiengpruksawan

Lecturers  Adel Allouche, Marcia Colish, Walter Goffart, Susanne Roberts, Barbara Shailor, William Whobrey

Fields of Study
Fields in this interdisciplinary program include history, history of art, history of music, religious studies, languages and literatures, linguistics, and philosophy.

Special Admissions Requirements
The General Test of the GRE is required. A writing sample of ten to twenty pages should be included with the application.

Special Requirements for the Ph.D. Degree
Languages required are Latin, French, and German. Latin may be replaced with Arabic or Hebrew when appropriate. Proficiency in Latin, Arabic, and Hebrew is tested with an examination administered and evaluated by the department during the first term. Proficiency in French and German is demonstrated by passing the departmental examinations and should be achieved by the third term. Students will design their programs in close contact with the director of graduate studies (DGS). During the first two years students take fourteen term courses, and must receive an Honors grade in at least four term courses the first year. Students take an oral examination, usually in the fifth term, on a set of three topics worked out in consultation with the DGS. Then, having nurtured a topic of particular interest, the student submits a dissertation prospectus that must be approved by the end of the third year. Upon completion of all predissertation requirements, including the prospectus, students are admitted to candidacy for the Ph.D. degree.
What remains, then, is the writing, submission, and approval of the dissertation during the final two years. Students in Medieval Studies participate in the Teaching Fellows Program in the third and fourth years.

Master’s Degrees

M.Phil. See Degree Requirements under Policies and Regulations. In addition, the program offers an M.Phil. in Medieval Studies for students enrolled in the Ph.D. programs of relevant humanities departments. Requirements for this degree are (1) six courses in the medieval area from departments other than that in which the student is enrolled (two of these will normally be the Medieval Studies interdisciplinary seminar and either a course in research methodology [HIST 540 or NELC 850] or in Latin or Arabic Paleography); (2) proficiency in Latin, Arabic, or Hebrew as tested by an examination administered and evaluated by the department; and (3) an oral examination. These requirements are in addition to those in force in the student’s home department. The M.Phil. in Medieval Studies thus requires a year of study in addition to the five years required by the student’s home department. Fellowships that provide support for this extra year are available from the Graduate School; application forms may be obtained from the program in Medieval Studies.

M.A. (en route to the Ph.D.) Students enrolled in the Ph.D. program may qualify for the M.A. degree upon satisfactory completion of the first year. Minimum requirements include a High Pass average in courses and passing the Latin examination.

Terminal Master’s Degree Program For the terminal master’s degree, students must take at least seven term courses with a general average of High Pass and with at least one term course of Honors. Two languages are required: Latin and either French or German. No thesis is required.

Courses

MDVL 550a or b, Directed Reading
By arrangement with faculty.

MDVL 552b/CLSS 601b, Introduction to Latin Paleography Barbara Shailor
Latin paleography from the fourth century C.E. to ca. 1500. Topics include the history and development of national hands; the introduction and evolution of Caroline minuscule, pre-gothic, gothic, and humanistic scripts (both cursive and bookhands); the production, circulation, and transmission of texts (primarily Latin, with reference to Greek and Middle English); advances in the technical analysis and digital manipulation of manuscripts. Seminars are based on the examination of codices and fragments in the Beinecke Library; students select a manuscript for class presentation and final paper. Prerequisites: proficiency in Latin; reading knowledge of French, German, Italian, or classical Greek.

MDVL 559a/CPLT 577a/SPAN 519a, Framed Narratives of Medieval Europe María Rosa Menocal
A study of the vernacular storytelling traditions central to the cultural transformation of medieval Europe that begins in the twelfth century. The framed tale collections include
intertwined texts, and stories many times retold, in a half dozen different linguistic and cultural traditions, beginning with the *Disciplina Clericalis* and the *Kalila wa Dimna* and their many versions, and culminating in the fourteenth-century masterpieces considered foundational to the national language traditions: the *Decameron*, the *Conde Lucanor*, and the *Canterbury Tales*. Topics of special interest include: translation, variations, and originality; the transition from oral storytelling to written texts; and the flourishing of the tradition in postmedieval literature, often with a distinct self-consciousness of the “medievalness” of the form. TH 1:30–3:20

Associate Professors  Hervé Agaisse (Microbial Pathogenesis), Choukri Ben Mamoun (Internal Medicine), Akiko Iwasaki (Epidemiology & Public Health), Susan Kaech (Immunobiology), Barbara Kazmierczak (Internal Medicine), John MacMicking (Microbial Pathogenesis), Robert Means (Pathology), Yorgo Modis (Molecular Biophysics & Biochemistry), Walther Mothes (Microbial Pathogenesis), Melinda Pettigrew (Epidemiology & Public Health), Michael Robek (Pathology), Richard Sutton (Internal Medicine), Christian Tschudi (Epidemiology & Public Health; Internal Medicine), Paul Turner (Ecology & Evolutionary Biology)

Assistant Professors  Andrew Goodman (Microbial Pathogenesis), Priti Kumar (Internal Medicine), Brett Lindenbach (Microbial Pathogenesis), Jeffrey Townsend (Ecology & Evolutionary Biology)

Fields of Study
The Graduate Program in Microbiology is a multidepartmental, interdisciplinary Ph.D. program in training and research in the study of microorganisms and their effects on their hosts. The faculty of the program share the view that understanding the biology of microorganisms requires a multidisciplinary approach; therefore, the Microbiology graduate program emphasizes the need for strong multidisciplinary training. The program is designed to provide individualized education in modern microbiology and to
prepare students for independent careers in research and teaching. Students can specialize in various areas, including bacteriology, virology, microbe-host interactions, microbial pathogenesis, cell biology and immunobiology of microbial infections, microbial genetics and physiology, parasitology, and microbial ecology and evolution.

**Special Admissions Requirements**

To enter the Ph.D. program, students apply to the Microbiology track within the interdepartmental graduate program in the Biological and Biomedical Sciences. An undergraduate major in biology, biophysics, biochemistry, microbiology, or molecular biology is recommended; the GRE General Test or MCAT is required.

**Special Requirements for the Ph.D. Degree**

Course work generally occupies the first two years of study. Each student, together with a faculty committee, outlines a course of study tailored to the individual’s background and career goals. A program of course work may include general microbiology, virology, parasitology, and/or microbial genetics, as well as complementary courses in such areas as epidemiology, cell biology, immunology, biochemistry, genetics, ecology, vector biology, and statistics. The program also sponsors journal clubs and seminars in microbiology and related areas. All students participate in three laboratory rotations (MBIO 670a and b), with different faculty members, in their area of interest. Laboratory rotations ensure that students quickly become familiar with the variety of research opportunities available in the program. An individualized qualifying exam on topics selected by each student, in consultation with the faculty, is given before the end of the second year. Students then undertake an original research project under the direct supervision of a faculty member. In the third year, students organize their thesis committee and prepare a dissertation prospectus, which is submitted to the Graduate School after approval by their committee. The student is then admitted to candidacy. Upon completion of the student’s research project, the Ph.D. requirements conclude with the writing of a dissertation and its oral defense.

An important aspect of graduate training in microbiology is the acquisition of teaching skills through participation in courses appropriate for the student's scientific interests. These opportunities can be drawn from a diverse menu of lecture, laboratory, and seminar courses given at the undergraduate, graduate, and medical school levels. Ph.D. students are expected to participate in two terms (or the equivalent) of teaching. Students are not permitted to teach during their first year.

In addition to all other requirements, students must successfully complete MB&B 676b, Responsible Conduct of Research, prior to the end of their first year of study. This requirement must be met prior to registering for a second year of study.

**Master’s Degree**

**M.Phil.** See Degree Requirements under Policies and Regulations. Although the program does not formally offer a master’s degree, students who have been admitted to candidacy qualify for an M.Phil.
Program materials are available upon request from Karen Kavanaugh in the Microbiology Graduate Program, Section of Microbial Pathogenesis, BCMM 336E, Yale University, New Haven CT 06536.

Courses

[MBIO 547b/EMD 547b, Vaccines: Concepts in Biology]

MBIO 670a,b, Laboratory Rotation  Craig Roy
Rotation in three laboratories. Required for all first-year graduate students.

MBIO 680a/EMD 680a, Molecular and Cellular Processes of Parasitic Eukaryotes  
Diane McMahon-Pratt, Christian Tschudi
An introductory topic-based course in modern parasitology. For each topic there is an introductory lecture followed by a journal club-like discussion session of relevant papers selected from the literature. The course provides an introduction to basic biological concepts of parasitic eukaryotes causing diseases in humans. Topics include strategies used by parasitic eukaryotes to establish infections in the host and approaches to disease control, through either chemotherapy, vaccines, or genomics. In addition, emphasis is placed on evaluating the quality and limitation of scientific publications and developing skills in scientific communication. Prerequisite: permission of the instructor.

MBIO 685b, Molecular Mechanisms of Microbial Pathogenesis  Hervé Agaisse, Jorge Galán, Barbara Kazmierczak, Priti Kumar, Brett Lindenbach, John MacMicking, Walther Mothes, Craig Roy
This interdisciplinary course focuses on current topics related to host-pathogen interactions. Each week a lecture is given on the topic, followed by student presentations of seminal papers in the field. All participants are required to present a paper. TTH 10–11:30

MBIO 686a, Bacterial Determinants of Pathogenesis  Hervé Agaisse
The course provides an introduction to basic principles in bacterial pathogenesis. Topics focus on the bacterial determinants mediating infection and pathogenesis, as well as strategies to prevent and treat diseases. Each week a lecture is given on the topic, followed by student presentations of seminal papers in the field. All participants are required to present a paper. TTH 10–11:30

[MBIO 700a, Seminal Papers on the Foundations of Modern Microbiology  Offered every other year]

MBIO 701a,b, Research in Progress  Craig Roy
All students, beginning in their third year, are required to present their research once a year at the Graduate Student Research in Progress. These presentations are intended to give each student practice in presenting his or her own work before a sympathetic but critical audience and to familiarize the faculty with the research. M 2

MBIO 702a,b, Microbiology Seminar Series  Craig Roy
All students are required to attend all Microbiology seminars scheduled throughout the academic year. Microbiologists from around the world are invited to describe their research. TH 4
MBIO 703a, Evasion of Host Defenses by Viruses, Bacteria, and Eukaryotic Parasites
Peter Tattersall
A required course for Microbiology first- and second-year students; not for credit. The course is offered every other year, alternating with MBIO 700a, so that it can be taken once during each student's tenure in the program. Students present and discuss papers on the strategies employed by microbial organisms to evade either cell-intrinsic defenses, such as the induction of programmed cell death, or response operating at the level of the organism, such as adaptive immunity. W 5–6:30

[MBIO 734a/MB&B 734a/GENE 734a, Molecular Biology of Animal Viruses
Offered every other year]

Director of Graduate Studies
Mark Solomon (301 JWG, 203.432.5662, nessie.stewart@yale.edu)

Professors  Susan Baserga, Ronald Breaker (Molecular, Cellular & Developmental Biology), Gary Brudvig (Chemistry), Donald Crothers (Emeritus, Chemistry), Daniel DiMaio (Genetics; Therapeutic Radiology), Donald Engelman, Alan Garen, Mark Gerstein, Nigel Grindley, Mark Hochstrasser, Anthony Koleske, William Konigsberg, Peter Lengyel (Emeritus), J. Patrick Loria (Chemistry), I. George Miller (Pediatric Infectious Diseases; Epidemiology & Public Health), Peter Moore (Emeritus, Chemistry), Thomas Pollard (Molecular, Cellular & Developmental Biology), Lynne Regan, David Schatz (Immunobiology), Robert Shulman (Emeritus, Chemistry), Dieter Söll, Mark Solomon, Joan Steitz, Thomas Steitz, Scott Strobel, William Summers (Therapeutic Radiology), Patrick Sung, Kenneth Williams (Adjunct; Research), Sandra Wolin (Cell Biology)

Associate Professors  Thomas Biederer, Enrique De La Cruz, Michael Koelle, Andrew Miranker, Yorgo Modis, Elizabeth Rhoades, Yong Xiong

Assistant Professors  Christian Schlieker, Charles Sindelar, Hongwei Wang

Fields of Study

The principal objective of members of the department is to understand living systems at the molecular level. Laboratories in MB&B focus on a diverse collection of problems in biology. Some specialize in the study of DNA dynamics, including replication, recombination, transposition, and/or functional genomics. Others focus on transcriptional regulation, from individual transcription factors to the control of lymphocyte activation, the interferon response, and organismal development. Other groups study RNA catalysis, RNA-protein interactions, and ribonucleoproteins including spliceosomes and the ribosome. Additionally there are those that emphasize protein folding and design, transmembrane signaling, and control of the cell cycle. Structural and computational biology is a strong component of many of these research efforts.

Special Admissions Requirements

Courses in introductory biology, general chemistry, organic chemistry, physical chemistry, mathematics through differential equations, and one year of physics with calculus are required for admission. Biochemistry is strongly recommended. Applicants must take the GRE General Test, which is preferred, or the MCAT.

To enter the Ph.D. program, students apply to an interest-based track within the interdepartmental graduate program in the Biological and Biomedical Sciences.
Special Requirements for the Ph.D. Degree

All first-year students (except M.D./Ph.D.) perform three laboratory rotations (MB&B 650, Lab Rotation for First-Year Students). All students are required to take, for credit, seven one-term science courses. To obtain the desired breadth and depth of education, students are required to take the core graduate courses offered by the department in biochemistry, molecular genetics, and structural biology (MB&B 720a, 721b, 730a, 743b). Students entering in the fall of 2011 should take at least two approved module courses in place of MB&B 721b. Additional courses, chosen from within MB&B or from related graduate programs, should form a coherent background for the general area in which the student expects to do dissertation research. All students also attend MB&B 676b, Responsible Conduct of Research. Students with an extensive background in biochemistry or biophysics are permitted to substitute advanced courses for the introductory courses. There is no foreign language requirement. The student’s research committee (see below) makes the final decision concerning the number and selection of courses required of each student. All students are required to assist in teaching two terms as a TF-2 during their graduate careers, usually during the second and third years. The student selects a research adviser by the end of the second term of residence. At that time two additional faculty members are chosen to form a research committee, with the total committee including at least two members of MB&B. Students are required to meet with this committee in the spring of years two and three, and in both the fall and spring of subsequent years. The qualifying examination, usually taken in the fall of the second year, is an oral defense of two short written research proposals, one in the same area as the student’s thesis research and one in a different area; the three-member oral examination committee usually includes at least one of the two members of the research committee excluding the thesis adviser. Requirements for admission to candidacy, which usually takes place after four terms of residence, include (1) completion of course requirements; (2) completion of the qualifying examination; (3) certification of the student’s research abilities by vote of the faculty upon recommendation from the student’s research committee; and (4) submission of a brief prospectus of the proposed thesis research. Completion of the teaching requirement is not required for admission to candidacy. Once final drafts of the thesis chapters have been approved by the research committee, the student presents a dissertation seminar to the entire department, and only afterward may the thesis be submitted. Students must have written at least one first-author paper that is submitted, in press, or published by the time of the thesis seminar.

Honors Requirement

Students must meet the Graduate School’s Honors requirement by the end of the fourth term of full-time study; see Degree Requirements under Policies and Regulations. Students must also maintain an overall High Pass average. Student progress toward these goals is reviewed at the ends of the first and second terms.

M.D./Ph.D. Students

M.D./Ph.D. students must satisfy the requirements listed above for the Ph.D. with the following modifications: Laboratory rotations are not required but are available.
Assisting in teaching of one lecture course is required. With approval of the director of graduate studies (DGS), some courses taken toward the M.D. degree can be counted toward the seven courses required for the Ph.D. provided that the course carries a graduate course number, and that the student has registered for it as a graduate course. M.D./Ph.D. students should still take MB&B 720a, 721b, 730a, and 743b. Students entering in the fall of 2011 should take at least two approved module courses in place of MB&B 721b.

**Master’s Degree**

**M.Phil.** See Degree Requirements under Policies and Regulations. Awarded only to students admitted to candidacy who are continuing for the Ph.D. Students need not have completed their teaching requirement to receive the M.Phil. Students are not admitted for this degree.

**M.S.** May be awarded to a student in the Ph.D. program who is in good standing upon completion of at least two terms of graduate study and who will not continue in the Ph.D. program. A student must receive grades of Pass or higher in at least five courses approved by the DGS as counting toward a graduate degree, exclusive of seminars or research. A student must also meet the Graduate School’s Honors requirement for the Ph.D. program and maintain a High Pass average.

More detailed program materials are available upon request to the Director of Graduate Admissions, Department of Molecular Biophysics and Biochemistry, Yale University, PO Box 208114, New Haven CT 06520-8114.

**Courses**

**MB&B 500a*/MCDB 500a*, Biochemistry**  Ronald Breaker, Donald Engelman

An introduction to the biochemistry of animals, plants, and microorganisms, emphasizing the relations of chemical principles and structure to the evolution and regulation of living systems.

**MB&B 517b3/ENAS 517b3/MCDB 517b3/PHYS 517b3, Methods and Logic in Interdisciplinary Research**  Lynne Regan, Enrique De La Cruz, Eric Dufresne, Thierry Emonet, Paul Forscher, Megan King, Michael Levene, Simon Mochrie, Corey O’Hern, Thomas Pollard, Elizabeth Rhoades, Corey Wilson, and staff

This half-term IGPPEB class is intended to introduce students to integrated approaches to research. Each session is led by faculty with complementary expertise and discusses papers that use different approaches to the same topic (for example, physical and biological or experiment and theory). Counts as 0.5 credit toward MB&B graduate course requirements. Required for students in IGPPEB. MW 5–7

**MB&B 520a1, Boot Camp Biology**  Lynne Regan, Mark Hochstrasser, Valerie Horsley, Anthony Koleske, Christian Schlieker, and staff

An intensive introduction to biological nomenclature, systems, processes, and techniques for graduate students with previous backgrounds in non-biological fields including physics, engineering, and computer science who wish to perform graduate research in the biological sciences. Counts as 0.5 credit toward MB&B graduate course requirements. Required for students in IGPPEB. HTBA
MB&B 523a/ENAS 541a/PHYS 523a, Biological Physics  Eric Dufresne
An introduction to the physics of several important biological phenomena, including molecular motors, protein folding, bacterial locomotion, and allostery. The material and approach are positioned at the interface of the physical and biological sciences. TTH 2:30–3:45

MB&B 545bU, Methods and Logic in Molecular Biology  Anthony Koleske, Nigel Grindley, Mark Hochstrasser, Dieter Söll
An examination of fundamental concepts in molecular biology through analysis of landmark papers. Development of skills in reading the primary scientific literature and in critical thinking. Open only to MB&B students pursuing the B.S./M.S. degree. TH 7–8:50

MB&B 591b/ENAS 991b/MCDB 591b/PHYS 991b, Integrated Workshop  Lynne Regan, Eric Dufresne, Thierry Emonet, Paul Forscher, Simon Mochrie
This required course for students in IGPPEB involves hands-on laboratory modules with students working in pairs. A biology student is paired with a physics or engineering student; a computation/theory student is paired with an experimental student. The modules are devised so that a range of skills are acquired, and students learn from each other. HTBA

MB&B 600aU, Principles of Biochemistry I  Thomas Biederer, Michael Koelle
Discussion of the physical, structural, and functional properties of proteins, lipids, and carbohydrates, three major classes of molecules in living organisms. Energy metabolism, hormone signaling, and muscle contraction as examples of complex biological processes whose underlying mechanisms can be understood by identifying and analyzing the molecules responsible for these phenomena. TTH 11:35–12:50

MB&B 601bU, Principles of Biochemistry II  Joan Steitz, Christian Schlicker, Patrick Sung
A continuation of MB&B 600a that considers the chemistry and metabolism of nucleic acids, the mechanism and regulation of protein and nucleic acid synthesis, and selected topics in macromolecular biochemistry. TTH 11:35–12:50

MB&B 602a/CBIO 602a/MCDB 602a, Molecular Cell Biology  Sandra Wolin, Michael Caplan, Craig Crews, Pietro De Camilli, Megan King, Joseph Madri, Thomas Melia, Mark Mooseker, Thomas Pollard, James Rothman
A comprehensive introduction to the molecular and mechanistic aspects of cell biology for graduate students in all programs. Emphasizes fundamental issues of cellular organization, regulation, biogenesis, and function at the molecular level. MW 1:45–3

MB&B 625aU/GENE 625a/MCDB 625aU, Basic Concepts of Genetic Analysis  Tian Xu, Michael Koelle, and staff
The universal principles of genetic analysis in eukaryotes are discussed in lectures. Students also read a small selection of primary papers illustrating the very best of genetic analysis and dissect them in detail in the discussion sections. While other Yale graduate molecular genetics courses emphasize molecular biology, this course focuses on the concepts and logic underlying modern genetic analysis. MW 11:35–12:50
MB&B 630b/MCDB 630b, Biochemical and Biophysical Approaches in Molecular and Cellular Biology  Anna Pyle, Enrique De La Cruz, Thomas Pollard
This graduate course introduces the theory and application of biochemical and biophysical methods to study the structure and function of biological macromolecules. The course considers the basic physical chemistry required in cellular and molecular biology but does not require a previous course in physical chemistry. One class per week is a lecture introducing a topic. The second class is a discussion of one or two research papers utilizing those methods. Does not count for graduate course credit for MB&B graduate students. TTH 2:30–3:45

MB&B 635a/ENAS 518a, Mathematical Methods in Biophysics  Elizabeth Rhoades, Corey O’Hern, Yong Xiong
Applied mathematical methods relevant to analysis and interpretation of biophysical and biochemical data, including statistics and error analysis, differential equations, linear algebra, and Fourier transforms. The class covers both analytical and numerical implementations of these topics. Prerequisites: MATH 120a or b and MB&B 600a or equivalents, or permission of the instructors. MWF 10:30–11:20

MB&B 650, Lab Rotation for First-Year Students  Mark Solomon
Required for all first-year MB&B graduate students. Credit for full year only.

MB&B 676b, Responsible Conduct of Research  Thomas Biederer and staff
Designed for students who are beginning to do scientific research. The course seeks to describe some of the basic features of life in contemporary research and some of the personal and professional issues that researchers encounter in their work. Approximately six sessions, run in a seminar/discussion format. Required for all first-year MB&B graduate students. F 3

MB&B 710b4/C&MP 710b, Electron Cryo-Microscopy for Protein Structure Determination  Fred Sigworth, Charles Sindelar
Understanding cellular function requires structural and biochemical studies at an ever-increasing level of complexity. The course is an introduction to the concepts and applications of high-resolution electron cryo-microscopy. This rapidly emerging new technique is the only method that allows biological macromolecules to be studied at all levels of resolution from cellular organization to near atomic detail. Counts as 0.5 credit toward MB&B graduate course requirements. TTH 9–10:15

MB&B 720a4, Macromolecular Structure and Biophysical Analysis  Donald Engelman, Andrew Miranker, Thomas Steitz, Yong Xiong
An in-depth analysis of macromolecular structure and its elucidation using modern methods of structural biology and biochemistry. Topics include architectural arrangements of proteins, RNA, and DNA; practical methods in structural analysis; and an introduction to diffraction and NMR. Prerequisites: physical chemistry (may be taken concurrently) and biochemistry. TTH 11:35–12:50

[MB&B 721b4, Macromolecular Interactions and Dynamic Properties]
MB&B 722b3, Optical Spectroscopy of Biomolecules  Elizabeth Rhoades
The course covers optical spectroscopy and microscopy ranging from basic UV, visible, and IR approaches, as well as cutting-edge single molecule and high-resolution imaging techniques. Prerequisites: introductory biochemistry, biophysics, and physical chemistry. MW 11:35–12:50

MB&B 723b4, Macromolecular Interactions: Atoms to Networks  Lynne Regan
The course examines the nature of the intricate networks of macromolecular interactions that underlie the functioning of every cell and the modern biophysical methods available for their study across multiple length, time, and energy scales. Counts as 0.5 credit toward MB&B graduate course requirements. MW 11:35–12:50

MB&B 730a, Methods and Logic in Molecular Biology  Mark Solomon,
Enrique De La Cruz, Anthony Koleske, Christian Schlieker
The course examines fundamental concepts in molecular biology through intense critical analysis of the primary literature. The objective is to develop primary literature reading and critical thinking skills. Required of and open only to first-year graduate students in MB&B. TTH 5–8

[MB&B 734a/MBIO 734a/GENE 734a, Molecular Biology of Animal Viruses]

MB&B 743b/U/GENE 743b/MCDB 743b, Advanced Eukaryotic Molecular Biology
Mark Hochstrasser, Anthony Koleske, Patrick Sung
Selected topics in transcriptional control, regulation of chromatin structure, mRNA processing, mRNA stability, RNA interference, translation, protein degradation, DNA replication, DNA repair, site-specific DNA recombination, somatic hypermutation. Prerequisite: biochemistry or permission of the instructor. TTH 11:35–12:50

MB&B 749a/U/GENE 749a, Medical Impact of Basic Science  Joan Steitz,
Mark Hochstrasser, I. George Miller, Andrew Miranker, David Schatz, Patrick Sung, and staff
Consideration of examples of recent discoveries in basic science that have elucidated the molecular origins of disease or that have suggested new therapies for disease. Emphasis is placed on the fundamental principles on which these advances rely. Reading is from the primary scientific and medical literature, with emphasis on developing the ability to read this literature critically. Aimed primarily at undergraduates. Prerequisite: biochemistry or permission of the instructor. May not be taken by MB&B B.S./MS. students for graduate course credit. MW 1–2:15

[MB&B 750a2, Biological Membranes]

MB&B 752b/U/CB&B 752b/CPSC 752b/U/MCDB 752b/U, Bioinformatics: Practical Application of Simulation and Data Mining  Mark Gerstein
Bioinformatics encompasses the analysis of gene sequences, macromolecular structures, and functional genomics data on a large scale. It represents a major practical application for modern techniques in data mining and simulation. Specific topics to be covered include sequence alignment, large-scale processing, next-generation sequencing data, comparative genomics, phylogenetics, biological database design, geometric analysis
of protein structure, molecular-dynamics simulation, biological networks, normalization of microarray data, mining of functional genomics data sets, and machine learning approaches for data integration. Prerequisites: MB&B 301b and MATH 115a or b, or permission of the instructor. MW 1–2:15

MB&B 753b3, Bioinformatics: Practical Application of Data Mining  Mark Gerstein
Bioinformatics encompasses the analysis of gene sequences, macromolecular structures, and functional genomics data on a large scale. It represents a major practical application for modern techniques in data mining and simulation. This module focuses on the first of these techniques, data mining. Specific topics to be covered include sequence alignment, comparative genomics and phylogenetics, biological databases, microarray normalization, and machine-learning approaches to data integration. Counts as 0.5 credit toward MB&B graduate course requirements. Prerequisites: MB&B 301b and MATH 115a or b, or permission of the instructor. MW 1–2:15

MB&B 754b4, Bioinformatics: Practical Application of Simulation  Mark Gerstein
Bioinformatics encompasses the analysis of gene sequences, macromolecular structures, and functional genomics data on a large scale. It represents a major practical application for modern techniques in data mining and simulation. This module focuses on the second of these techniques, simulation. Specific topics to be covered include geometric analysis of protein structure, molecular-dynamics simulation, and biological networks. Counts as 0.5 credit toward MB&B graduate course requirements. Prerequisites: MB&B 301b and MATH 115a or b, or permission of the instructor. MW 1–2:15

MB&B 760b3, Principles of Macromolecular Crystallography  Thomas Steitz
Rigorous introduction to the principles of macromolecular crystallography, aimed at students who are planning to carry out structural studies involving X-ray crystallography or who want to obtain in-depth knowledge for critical analysis of published crystal structures. Counts as 0.5 credit toward MB&B graduate course requirements. Prerequisites: physical chemistry and biochemistry. TTH 9–10:15

MB&B 761b4, X-ray Crystallography Workshop  Yong Xiong and staff
This laboratory course provides hands-on training in the practical aspects of macromolecular structure determination by X-ray crystallography. Topics include data collection, data reduction, phasing by multi-wavelength anomalous diffraction and molecular replacement, solvent flattening, noncrystallographic symmetry averaging, electron density interpretation, model building, structure refinement, and structure validation. The course includes training in the use of computer programs used to perform these calculations. Counts as 0.5 credit toward MB&B graduate course requirements. Prerequisites: MB&B 760b3 and a working exposure to the Unix operating system. HTBA

MB&B 800a, Advanced Topics in Molecular Medicine  Susan Baserga, William Konigsberg, and staff
The seminar, which covers topics in the molecular mechanisms of disease, illustrates timely issues in areas such as protein chemistry and enzymology, intermediary metabolism, nucleic acid biochemistry, gene expression, and virology. M.D. and M.D./Ph.D. students only. Prerequisite: biochemistry (may be taken concurrently). M 11–1
MB&B 900a or 901b, Reading Course in Biophysics  Mark Solomon
Directed reading course in biophysics. Term paper required. By arrangement with faculty. Open only to graduate students in MB&B. Please see syllabus for additional requirements.

MB&B 902a or 903b, Reading Course in Molecular Genetics  Mark Solomon
Directed reading course in molecular genetics. Term paper required. By arrangement with faculty. Open only to graduate students in MB&B. Please see syllabus for additional requirements.

MB&B 904a or 905b, Reading Course in Biochemistry  Mark Solomon
Directed reading course in biochemistry. Term paper required. By arrangement with faculty. Open only to graduate students in MB&B. Please see syllabus for additional requirements.

The following course is for students in the joint B.S./M.S. program with Yale College:

MB&B 570a or MB&B 571b, Intensive Research for B.S./M.S. Candidates  
Michael Koelle, Mark Solomon
MOLECULAR, CELLULAR, AND DEVELOPMENTAL BIOLOGY

Kline Biology Tower, 203.432.3538
www.biology.yale.edu
M.S., Ph.D.

Chair
Ronald Breaker

Director of Graduate Studies
Frank Slack (936 KBT, 203.432.3492, frank.slack@yale.edu)

Professors  Sidney Altman, Ronald Breaker, John Carlson, Lynn Cooley (Genetics), Craig Crews, Stephen Dellaporta, Xing-Wang Deng, Paul Forscher, Jo Handelsman, Mark Hochstrasser (Molecular Biophysics & Biochemistry), Vivian Irish, Christine Jacobs-Wagner, Douglas Kankel, Michael Kashgarian (Pathology), Paula Kavathas (Immunobiology), Haig Keshishian, Perry Miller (Anesthesiology), Mark Mooseker, Jon Morrow (Pathology), Timothy Nelson, Thomas Pollard, Anna Pyle, Shirleen Roeder, Joel Rosenbaum, Alanna Schepartz (Chemistry), Frank Slack, Hugh Taylor (Obstetrics/Gynecology), Robert Wyman

Associate Professors  Martin Garcia-Castro, Scott Holley, Akiko Iwasaki (Immunobiology), Elke Stein, Weimin Zhong

Assistant Professors  Sreeganga Chandra (Neurology/CNNR), Thierry Emonet, Valerie Horsley, Matthew Rodeheffer (Comparative Medicine)

Fields of Study

Research in genetics and molecular biology encompasses studies of catalytic RNAs, cell cycle regulation, chromosome segregation, genetic recombination, mutation, transposons, and oncogenes. Research topics in cellular and developmental biology include structure of the cell cytoskeleton, molecular motors, chemical biology, cell surface receptors, protein transport, hormone action, mammalian transcription factors, microRNAs, and the regulation of cell proliferation and differentiation. Research in neurobiology focuses on sensory signal transduction, animal color vision, growth cone motility, neural differentiation, synaptogenesis, and the formation of topographic maps. A Special Program in Plant Sciences provides research and training in the molecular genetics of flowering, the developmental biology of leaves, the physiology of hormone action, sex determination, and the cellular and molecular biology of photomorphogenesis. Because of the breadth of the department, students are provided with unique opportunities for interdisciplinary studies.

To enter the Ph.D. program, students apply to the Molecular Cell Biology, Genetics, and Development (MCGD) track within the interdepartmental graduate program in the Biological and Biomedical Sciences (BBS).
Special Admissions Requirements
Applicants should have obtained training in the structure, development, and physiology of organisms; the structure, biochemistry, and physiology of cells; genetics; elementary calculus; elementary physics; inorganic and organic chemistry; statistics or advanced mathematics. Lack of some prerequisites can be made up in the first year of graduate study. Students having different science training, such as degrees in chemistry, physics, or engineering, are encouraged to apply. In addition to the GRE General test, a Subject Test is recommended, preferably in Biology, or in Biochemistry, Cell and Molecular Biology.

Special Requirements for the Ph.D. Degree
Each student is expected to take at least three courses, in addition to MCDB 900/901, First-Year Introduction to Research. With the help of a faculty committee, each student will plan a specific program that includes appropriate courses, seminars, laboratory rotations, and independent reading fitted to individual needs and career goals. There is no foreign language requirement. Late in the third term of study, the student meets with a faculty committee to decide on a preliminary topic for dissertation work and to define the research areas in which he or she is expected to demonstrate competence. By the end of the second year, each student prepares a dissertation prospectus outlining the research proposed for the Ph.D. The student is admitted to candidacy for the Ph.D. when (1) the prospectus is accepted by a dissertation committee of faculty members, (2) the committee is satisfied that the student has demonstrated competence in the areas necessary to conduct the proposed work, and (3) the other requirements indicated above are fulfilled. The student should complete the requirements for admission to candidacy no later than the end of the second year of study. Following admission to candidacy, each student is required to meet with his/her thesis advisory committee at least once a year. The remaining requirements include completion of the dissertation research, presentation and defense of the dissertation, and submission of acceptable copies of the dissertation to the Graduate School and to the Kline Science Library. All students are required to teach in two one-term courses during their Ph.D. study, but not during the first year of graduate study. Requirements for M.D./Ph.D. students are the same as for Ph.D. students, except that a single term of teaching is required. During their first year of study, students must successfully complete MCDB 901b, First-Year Introduction to Research—Ethics: Scientific Integrity in Biomedical Research, to fulfill the responsible conduct and ethics in research requirement. This requirement must be met prior to registering for a second year of study.

Honors Requirement
Students must meet the Graduate School’s Honors requirement by the end of the fourth term of full-time study (see Course and Honors Requirements under Policies and Regulations).

Master’s Degree
M.S. (en route to the Ph.D.) The minimum requirements for award of the Master of Science degree are (1) two academic years registered and in residence full-time in the
graduate program; (2) satisfactory completion of the first two years of study and research leading to the Ph.D.; this requirement may be met either (a) by completing a minimum of five courses with an average grade of High Pass and at least one Honors grade, in addition to satisfactory performance in MCDB 900/901, or (b) by (i) successfully completing at least three courses with an average grade of High Pass and at least one Honors grade, (ii) satisfactory performance in MCDB 900/901, and (iii) passing the prospectus examination; (3) recommendation by the department for award of the degree, subject to final review and approval by the appropriate degree committee. No courses that were taken prior to matriculation in the graduate program, or in Yale College, or in summer programs may be applied toward these requirements.

Prospective applicants are encouraged to visit the BBS Web site (info.med.yale.edu/bbs), MCGD Track.

**Courses**

**MCDB 500au/MB&B 500au, Biochemistry**  
Ronald Breaker, Donald Engelman  
An introduction to the biochemistry of animals, plants, and microorganisms, emphasizing the relations of chemical principles and structure to the evolution and regulation of living systems.

**MCDB 517b3/ENAS 517b/MB&B 517b3/PHYS 517b3, Methods and Logic in Interdisciplinary Research**  
Lynne Regan, Enrique De La Cruz, Eric Dufresne, Thierry Emonet, Paul Forscher, Megan King, Michael Levene, Simon Mochrie, Corey O’Hern, Thomas Pollard, Elizabeth Rhoades, Corey Wilson, and staff  
This half-term IGPPEB class is intended to introduce students to integrated approaches to research. Each session is led by faculty with complementary expertise and discusses papers that use different approaches to the same topic (for example, physical and biological or experiment and theory). Counts as 0.5 credit toward graduate course requirements. Required for students in IGPPEB. MW 5–7

**MCDB 530au/IBIO 530a, Biology of the Immune System**  
Akiko Iwasaki, Peter Cresswell, Kevan Herold, Susan Kaech, Ruslan Medzhitov, Eric Meffre, João Pereira, Carla Rothlin, David Schatz, Mark Shlomchik  

**MCDB 550au/C&MP 550au/ENAS 550au/PHAR 550a, Physiological Systems**  
Emile Boulpaep, W. Mark Saltzman  
The course develops an understanding of human physiology by examining the homeostasis of vital parameters within the body, and the biophysical properties of cells, tissues, and organs. Basic concepts in cell and membrane physiology are synthesized through exploring the function of skeletal, smooth, and cardiac muscle. The physical basis of blood flow, mechanisms of vascular exchange, cardiac performance, and regulation of overall circulatory function are discussed. Respiratory physiology examines the mechanics of ventilation, gas diffusion, and acid-base balance. Renal physiology examines the
formation and composition of urine and the regulation of electrolyte, fluid, and acid-base balance. Organs of the digestive system are discussed from the perspective of substrate metabolism and energy balance. Hormonal regulation is applied to metabolic control and to calcium, water, and electrolyte balance. The biology of nerve cells is addressed with emphasis on synaptic transmission and simple neuronal circuits within the central nervous system. The special senses are considered in the framework of sensory transduction. Weekly discussion sections provide a forum for in-depth exploration of topics. Graduate students evaluate research findings through literature review and weekly meetings with the instructor. MWF 9:25–10:15

[MCDB 551a, Experimental Strategies in Molecular Cell Biology]

[MCDB 555a, Molecular Basis of Development]

MCDB 560b/C&MP 560b/ENAS 570b/PHAR 560b, Cellular and Molecular Physiology: Molecular Machines in Human Disease Emile Boulpaep, Fred Sigworth

The course focuses on understanding the processes that transfer molecules across membranes at the cellular, molecular, biophysical, and physiological levels. Students learn about the different classes of molecular machines that mediate membrane transport, generate electrical currents, or perform mechanical displacement. Emphasis is placed on the relationship between the molecular structures of membrane proteins and their individual functions. The interactions among transport proteins in determining the physiological behaviors of cells and tissues are also stressed. Molecular motors are introduced and their mechanical relationship to cell function is explored. Students read papers from the scientific literature that establish the connections between mutations in genes encoding membrane proteins and a wide variety of human genetic diseases. MWF 9:25–10:15

MCDB 561b/AMTH 665b/PHYS 529b, Systems Modeling in Biology Thierry Emonet, Steven Kleinstein, Kathryn Miller-Jensen, Xiao-Jing Wang, Steven Zucker

An introduction to the techniques of integrating knowledge from mathematics, physics, and engineering into the analysis of complex living systems. Use of these techniques to address key questions about the design principles of biological systems. Discussion of experiments and corresponding mathematical models. Reading of research papers from the literature. Students build their own models using MATLAB. TTH 2:30–3:45

MCDB 570b, Biotechnology Xing-Wang Deng, Farren Isaacs, Kenneth Nelson, Joseph Wolenski

The principles and applications of cellular, molecular, and chemical techniques that advance biotechnology. Topics include the most recent tools and strategies used by government agencies, industrial labs, and academic research to adapt biological and chemical compounds as medical treatments, as industrial agents, or for the further study of biological systems. MW 11:35–12:50

MCDB 591b/ENAS 991b/MB&B 591b/PHYS 991b, Integrated Workshop Lynne Regan, Eric Dufresne, Thierry Emonet, Paul Forscher, Simon Mochrie

This required course for students in IGPPEB involves hands-on laboratory modules with students working in pairs. A biology student is paired with a physics or engineering
student; a computation/theory student is paired with an experimental student. The modules are devised so that a range of skills are acquired, and students learn from each other.

MCDB 602a/MB&B 602a, Molecular Cell Biology  
Sandra Wolin, Michael Caplan, Craig Crews, Pietro De Camilli, Megan King, Joseph Madri, Thomas Melia, Mark Mooseker, Thomas Pollard, James Rothman  
A comprehensive introduction to the molecular and mechanistic aspects of cell biology for graduate students in all programs. Emphasizes fundamental issues of cellular organization, regulation, biogenesis, and function at the molecular level. MW 1:45–3

MCDB 603a/MB&B 603a, Seminar in Molecular Cell Biology  
Sandra Wolin, Michael Caplan, Craig Crews, Pietro De Camilli, Megan King, Joseph Madri, Thomas Melia, Mark Mooseker, Thomas Pollard, James Rothman  
A graduate-level seminar course in modern cell biology. The class is devoted to the reading and critical evaluation of classical and current papers. The topics are coordinated with the MCDB 602a lecture schedule. Thus, concurrent or previous enrollment in MCDB 602a is required. TH 9–11

MCDB 625a*/GENE 625a/MB&B 625a*, Basic Concepts of Genetic Analysis  
Tian Xu, Michael Koelle, and staff  
The universal principles of genetic analysis in eukaryotes are discussed in lectures. Students also read a small selection of primary papers illustrating the very best of genetic analysis and dissect them in detail in the discussion sections. While other Yale graduate molecular genetics courses emphasize molecular biology, this course focuses on the concepts and logic underlying modern genetic analysis. MW 11:35–12:50

MCDB 630b/MB&B 630b, Biochemical and Biophysical Approaches in Molecular and Cellular Biology  
Anna Pyle, Enrique De La Cruz, Thomas Pollard  
This graduate course introduces the theory and application of biochemical and biophysical methods to study the structure and function of biological macromolecules. The course considers the basic physical chemistry required in cellular and molecular biology but does not require a previous course in physical chemistry. One class per week is a lecture introducing a topic. The second class is a discussion of one or two research papers utilizing those methods. TTH 2:30–3:45

MCDB 660a/F&ES 654a, Structure, Function, and Development of Trees and Other Vascular Plants  
Graeme Berlyn  
Morphogenesis and adaptation of vascular plants considered from seed formation and germination to maturity. Physiological and developmental processes associated with structural changes in response to environment discussed from both a phylogenetic and an adaptive point of view. MW 4–5:20

MCDB 670b, Advanced Seminar in Biochemistry and Genetics  
Sidney Altman, Ronald Breaker, Frank Slack  
New aspects of the molecular biology of RNA, ribonucleoproteins, and prions. Topics include the localization and function of RNA and ribonucleoproteins; the role of RNA in dosage compensation, chromosome silencing, and gene regulation; novel ribozymes
and RNA technology; prions. Discussion; involvement and attendance are required. W 1:30–3:30

**MCDB 677b/GENE 777b, Mechanisms of Development**  Valerie Reinke and staff
An advanced course on mechanisms of animal and plant development focusing on the genetic specification of cell organization and identity during embryogenesis and somatic differentiation. The use of evolutionarily conserved signaling pathways to carry out developmental decisions in a range of animals is highlighted. Course work includes student participation in critical analysis of primary literature, and a research proposal term paper. M 9–10:15, F 2:30–3:45

**MCDB 720a/ NBIO 720a/NSCI 720a, Neurobiology**  Haig Keshishian, Paul Forscher
Examination of the excitability of the nerve cell membrane as a starting point for the study of molecular, cellular, and intercellular mechanisms underlying the generation and control of behavior. MWF 11:35–12:25

**MCDB 721La, Laboratory for Neurobiology**  Haig Keshishian, Robert Wyman
Optional laboratory. Introduction to the neurosciences. Projects include the study of neuronal excitability, sensory transduction, CNS function, synaptic physiology, and neuroanatomy. T or W 1:30–5:30

**MCDB 730b/ NSCI 502b, Cell Biology of the Neuron**  Elke Stein
A comprehensive course on neuronal cell biology. Basic principles of cell biology reviewed in the context of the developing and injured nervous system. Areas to be discussed include membrane trafficking, receptor signaling mechanisms, neurotrophin signaling, neuronal cytoskeleton, axon guidance, and synapse formation and maintenance. Prerequisite: one course in cell biology. TTH 4–5:15

**MCDB 733b/ NSCI 504b, Seminar in Brain Development and Plasticity**  Weimin Zhong, Elke Stein
Weekly seminars and discussion sessions to explore recent advances in our understanding of brain development and plasticity, including neuronal determination, axon guidance, synaptogenesis, and developmental plasticity. MW 2:30–3:45

**MCDB 743b/GENE 743b/MB&B 743bu, Advanced Eukaryotic Molecular Biology**  Mark Hochstrasser, Anthony Koleske, Patrick Sung
Selected topics in transcriptional control, regulation of chromatin structure, mRNA processing, mRNA stability, RNA interference, translation, protein degradation, DNA replication, DNA repair, site-specific DNA recombination, somatic hypermutation. Prerequisite: biochemistry or permission of the instructor. TTH 11:35–12:50

**MCDB 750b/ CB&B 750b, Core Topics in Biomedical Informatics**  Perry Miller and staff
Introduction to common unifying themes that serve as the foundation for different areas of biomedical informatics, including clinical, neuro-, and genome informatics. The course is designed for students with significant computer experience and course work who plan to build computational tools for use in bioscience research. Emphasis is on understanding basic principles underlying informatics approaches to biomedical data
modeling, interoperation among biomedical databases and software tools, standardized biomedical vocabularies and ontologies, modeling of biological systems, and other topics of interest. The course involves lectures, class discussions, student presentations, and computer programming assignments. Prerequisites: previous computer programming experience and permission of the instructor. HTBA

MCDB 752b\textsuperscript{c}/CB&B 752b/CPSC 752b\textsuperscript{u}/MB&B 752b\textsuperscript{b}, Bioinformatics: Practical Application of Simulation and Data Mining  Mark Gerstein
Bioinformatics encompasses the analysis of gene sequences, macromolecular structures, and functional genomics data on a large scale. It represents a major practical application for modern techniques in data mining and simulation. Specific topics to be covered include sequence alignment, large-scale processing, next-generation sequencing data, comparative genomics, phylogenetics, biological database design, geometric analysis of protein structure, molecular-dynamics simulation, biological networks, normalization of microarray data, mining of functional genomics data sets, and machine learning approaches for data integration. Prerequisites: MB&B 301b and MATH 115a or b, or permission of the instructor. MW 1–2:15

[MCDB 861b\textsuperscript{b}/F&ES 770b, Global Problems of Population Growth]

MCDB 900a/CBIO 900a/GENE 900a, First-Year Introduction to Research and Rotations  Frank Slack and faculty
Lab rotations and grant writing for Molecular Cell Biology, Genetics, and Development track students. M 4–5:30

MCDB 901b/CBIO 901b/GENE 901b, First-Year Introduction to Research – Ethics: Scientific Integrity in Biomedical Research  Valerie Horsley
Lab rotations and ethics for Molecular Cell Biology, Genetics, and Development track students. TH 4–5:30

MCDB 902a and 903b, Advanced Graduate Seminar  Valerie Horsley, Jo Handelsman
The course allows students to hone their presentation skills through yearly presentation of their dissertation work. Two students each give thirty-minute presentations in each class session. Students are required to present every year beginning in their third year in the MCDB program. Each MCDB graduate student is required to attend at least 80 percent of the class sessions. Two faculty members co-direct the course, attend the seminars, and provide feedback to the students.

MCDB 950a and 951b, Second-Year Research
By arrangement with faculty.

The following courses are required for students in the joint B.S./M.S. program with Yale College:

MCDB 585b, Research in MCDB for B.S./M.S. Candidates
A two-credit course taken in the third-to-last term (typically the second term of the junior year). At the start of this course, each student forms a committee composed of his
or her adviser and two faculty members that meets to discuss the research project. At the end of this course, students complete a detailed prospectus describing their thesis project and the work completed thus far. The committee evaluates an oral and written presentation of this prospectus; the evaluation determines whether the student may continue in the combined program.

**MCDB 595, Intensive Research in MCDB for B.S./M.S. Candidates**
A four-credit, yearlong course (two credits each term) that is similar to MCDB 495 and is taken during the senior year. During this course, students give an oral presentation describing their work. At the end of the course, a student is expected to present his or her work to the department in the form of a poster presentation. In addition, the student is expected to give an oral thesis defense, followed by a comprehensive examination of the thesis conducted by the thesis committee. Upon successful completion of this examination, as well as other requirements, the student is awarded the combined B.S./M.S. degree.
MUSIC
Stoeckel Hall, 203.432.2985
www.yale.edu/yalemus
M.A., M.Phil., Ph.D.

Chair
Daniel Harrison

Director of Graduate Studies
Sarah Weiss (Stoeckel, 203.432.2985, dgs.music@yale.edu)

Professors Kathryn Alexander (Adjunct), Richard Cohn, Michael Friedmann (Adjunct), Daniel Harrison, Paul Hawkshaw (Adjunct), James Hepokoski, Richard Lalli (Adjunct), Robert Mealy (Adjunct), Patrick McCreless, Ellen Rosand, Gary Tomlinson, Michael Veal, Craig Wright

Associate Professors Robert Holzer (Adjunct), Gundula Kreuzer (on leave), Ian Quinn, Markus Rathey (Adjunct), Sarah Weiss

Assistant Professors Brian Kane, Michael Klingbeil (Adjunct), Ève Poudrier (on leave)

Postdoctoral Fellow Emily Green

Fields of Study
Fields include music history, music theory, and ethnomusicology. (Students interested in performance or composition should apply to the Yale School of Music.)

Special Admissions Requirements
Previous training in music theory or music history is required. Samples of the applicant’s previous work such as extended papers, advanced exercises, and analyses must be submitted. The GRE General Test is required by the Graduate School. Applicants whose native language is not English must take the Test of English as a Foreign Language (TOEFL).

Special Requirements for the Ph.D. Degree
Two years of course work, comprising a minimum of fourteen courses. Eleven are graduate seminars within the Department of Music; one is Readings for Qualifying Examination, normally taken during the final term of course work. With DGS approval, the remaining two may be graduate seminars, or non-introductory undergraduate courses, in other departments or schools within the University. A student must receive four Honors grades in departmental seminars in order to proceed to the qualifying examination, administered in August following the second year. Reading proficiency in two languages—for historians and theorists, German and usually either French or Italian; for ethnomusicologists, two languages relevant to their research, one of which must be a European language—is demonstrated by examinations (with dictionary access) offered at the beginning of the fall term and the end of the spring term. Third-year students attend a weekly prospectus/dissertation seminar. Approval of the dissertation prospectus admits
a student to candidacy, provided that all other requirements are met. Only students admitted to candidacy can continue into the fourth year of study.

The faculty considers teaching to be essential to the professional preparation of graduate students in Music. Students in Music participate in the Teaching Fellows Program in their third and fourth years.

**Combined Ph.D. Program: Music and Renaissance Studies**

The Department of Music offers, in conjunction with the Renaissance Studies Program, a combined Ph.D. in Music and Renaissance Studies. For further details, see Renaissance Studies.

**Master’s Degrees**

**M.Phil.** See Degree Requirements under Policies and Regulations.

**M.A. (en route to the Ph.D.)** Students enrolled in the Ph.D. program qualify for the M.A. degree upon the successful completion of eight courses, at least six of which are seminars given in the department, along with the passing of an examination in one foreign language. Of the six departmental seminars, at least two grades must be Honors; the remaining six grades must average High Pass.

**Terminal Master’s Degree Program** The department offers admission to a small number of students in a terminal M.A. program. Candidates must pass eight term courses achieving an average of High Pass and at least one Honors, complete a special project, and pass an examination in one foreign language.

**Courses**

**MUSI 515b, Schenkerian Analysis** Daniel Harrison
Advanced work in harmony, counterpoint, thoroughbass, structure, and form; Schenkerian analysis of selected compositions from the tonal repertory. F 9:25–11:15

**MUSI 521b, Historical Performance in Theory and Practice** Emily Green
Exploration of the interpretive framework of historical performance practice. Case studies consider both keyboard and orchestral repertoires (1750–1950), as well as various twentieth-century improvisatory traditions. Goals include understanding the role of orality in these idioms, the effects of technological developments on musical traditions, and the origins of the impulse for authenticity. In-class performance demonstrations encouraged.

**MUSI 525a, Sonata Theory** James Hepokoski
Introduction to the concepts, terminology, and hermeneutic methods in Hepokoski and Darcy, *Elements of Sonata Theory* (2006). Close readings of instrumental sonata form movements—from sonatas, chamber works, symphonies, and concertos—from the decades around 1800. The repertory studied centers around individual works by Mozart with added examples from Haydn and Beethoven. This is a proseminar in practical score analysis. M 1:30–3:20
MUSI 549a, The Oratorio in the Seventeenth and Eighteenth Centuries
Markus Rathey
The course traces the history of the oratorio from its beginnings to the time of Johann Sebastian Bach and Georg Friedrich Handel. It explores the social and religious functions of the oratorio over a time span of some 150 years and analyzes the compositional techniques employed by the composers to create musical drama without being able to stage it. TH 9:25–11:15

MUSI 586b, Corpus Methods in Music Research  Ian Quinn
The course covers computer-assisted methods for formulating and investigating empirical research questions at what Meyer called the “interopus” level: i.e., corpora rather than individual works. We also consider the role of empirical research of this type in the field of musicology generally and its relationship to the specific questions of music theory in particular. Students learn to use the music21 software package under development at MIT. A special focus this year is tonal harmony. TH 1:30–3:20

MUSI 711a, Musical and Cultural Hybridity  Sarah Weiss
What is musical hybridity? What are the musical implications of cultural interaction, the cultural implications of musical interaction? These questions are addressed while reading hybridity theorists including Appiah, Bhabha, García Canclini, Kraidy, Stross, Vasconcelos, and Young. Cultural areas and musics covered are drawn from around the world. Topics may include: touristic performance cultures; nexus between local popular musics, postcoloniality, and global world beat; and the exploration/incorporation/exclusion of the world by composers. TH 1:30–3:20

MUSI 716b, The Recording Studio in Perspective  Michael Veal
An introduction to the historical evolution of the recording studio as a technological site; an examination of the effects of sound recording on the aesthetic evolution of various musical traditions; a comparative examination of the recording studio as it has evolved in different cultural contexts; and a phenomenological approach to the practice of sound recording that seeks to understand how this practice has influenced our perceptions regarding the nature of music itself. W 11:35–1:20

MUSI 721a, Theory and Aesthetics Pre-1600  Craig Wright
A broad survey of music theory beginning with the writers of ancient Greece, continuing with those of the European Middle Ages, and concluding with Glarean and Zarlino at the end of the Italian Renaissance. Canonical texts are assigned from the Norton Source Readings in Music History, for example, and weekly quizzes are given on the designated material. The aim is to provide the student with a solid understanding of how the framework of Western music theory, as well as the symbolic language of musical notation, came to be. W 9:25–11:15

MUSI 722b, Theory and Aesthetics 1600–1800  Robert Holzer
A survey of major writings on music from the seventeenth and eighteenth centuries and the scholarly literature about them. Special emphasis is placed on the relationship between musical thought and practice of the period. T 2:30–4:20
MUSI 814a, Directed Studies in the History of Music  
By arrangement with faculty.

MUSI 814b, Directed Studies in the History of Music  
By arrangement with faculty.

MUSI 818a, Information, Symbol, and Music  
Gary Tomlinson
What is at stake in the distinction between musical symbols and musical information? This seminar uses this question to focus on a fresh reading of several classic texts on signification and musical meaning, expression, and form. Readings start with Edmund Gurney’s *The Power of Sound* (1880) and include writings by C. S. Peirce, Suzanne Langer, Leonard Meyer, and others. T 2:30–4:20

MUSI 825b, The Operas of Vivaldi  
Ellen Rosand
Vivaldi was celebrated in his own day as much for his operas (some fifty-odd) as his concertos (more than 500). Yet musicological scholarship has only recently begun to do justice to the theatrical works. Editions and recordings have accumulated over the past decade to the point where many of the operas are now readily available for critical scrutiny. The seminar considers several individual works within the context of eighteenth-century opera seria. It investigates issues of borrowing, pasticcio, recycling, and revision that characterize Vivaldi’s operatic output and the implications of such creative expedients for interpretation. W 3:30–5:20

MUSI 855b, Program Music and Structure  
James Hepokoski
Analytical problems in the relationship of images, extramusical and musical narrative, and generic/structural deformation. Historical and recent understandings of “program music” and extramusical allusion in nineteenth-century orchestral music: opera/concert overture, symphony, symphonic poem; Beethoven, Mendelssohn, Berlioz, Wagner, Strauss, Mahler. M 1:30–3:20

MUSI 904a, The Pedagogy of Music Theory  
Daniel Harrison
This seminar examines various “systems of presentation” (Schoenberg) for material typical of music-theory courses at the college level. In addition to covering practical pedagogical issues through model classes, it treats metatheory, methodology, and music-theoretical systematics. M 9:25–11:15

MUSI 914a, Directed Studies in the Theory of Music  
By arrangement with faculty.

MUSI 914b, Directed Studies in the Theory of Music  
By arrangement with faculty.

MUSI 939a, Philosophy of Music  
Brian Kane
Introduction to the philosophy of music. The focus is on current topics and debates, in both analytic and continental philosophical traditions. Historical readings are included as needed. Topics may include: the work concept, musical ontology, Adorno and new music, intentionality, transcription, musical meaning, expression and emotion, listening, auditory subjectivity. W 3:30–5:20
MUSI 945a, Recent Approaches to Nineteenth-Century Chromaticism
Richard Cohn
The course focuses on four books due to be published in 2011, by Suzannah Clark, Steven Rings, Dmitri Tymoczko, and Richard Cohn. Topics include historical approaches to chromaticism; current textbook and musicological approaches to Romantic syntax; conceiving and modeling nonclassical triadic and seventh-chord progressions; and interaction/integration of Romantic and classical chromatic syntaxes, using transformational and geometric models. Music of Schubert, Brahms, Liszt, Chopin, Wagner, perhaps others. T 9:25–11:15

MUSI 950b, The Music of Shostakovich  Patrick McCreless
The course aims to develop a rich understanding of Shostakovich’s musical oeuvre, focusing on a number of central works. We try to achieve a balance between critical and analytical approaches, between consideration of the composer’s whole output and detailed consideration of individual pieces, and between a study of the music’s Russian and Soviet context and a study of the music itself. M 9:25–11:15

MUSI 997b, Readings for Qualifying Examination  Sarah Weiss
T 9:25–11:15

MUSI 998a, Prospectus Workshop  Sarah Weiss
T 2:30–4:20

MUSI 999b, Dissertation Colloquium  Sarah Weiss
T 2:30–4:20
NEAR EASTERN LANGUAGES AND CIVILIZATIONS

314 Hall of Graduate Studies, 203.432.2944
www.yale.edu/nelec
M.A., M.Phil., Ph.D.

Chair
John Darnell

Director of Graduate Studies
Eckart Frahm

Professors  John Darnell, Benjamin Foster (on leave [Sp]), Eckart Frahm, Beatrice Gruendler, Dimitri Gutas, Bentley Layton (on leave [Sp]), Harvey Weiss

Associate Professor  Colleen Manassa (on leave)

Lecturers  Adel Allouche, Karen Foster, Marsha Hill, David Klotz, Kathryn Slanski, Kevin Wilkinson

Senior Lectors  Ayala Dvoretzky

Senior Lectors  Fereshteh Kowssar

Lectors  Dina Roginsky

Fields of Study
Fields include Arabic and Islamic studies (also with interdisciplinary minor), Greco-Arabic studies, Assyriology, and Egyptology.

Special Admissions Requirements
Applicants should state their specific field of study and intended specialization. Evidence of a reading knowledge of both French and German is required of all students. Proficiency in one of these languages is normally prerequisite for admission and deficiency in the second language must be rectified before admission to a second year of study. Proficiency will be certified by passing a departmental examination upon registration at Yale. Students admitted with only one of the two required languages or who fail the departmental examination are expected to enroll in an appropriate full-year course given by the French or German department at Yale. Completion of such a course with a grade of A or B will be accepted as fulfilling the proficiency requirement in either language; exceptions, for instance, for native speakers of French or German, may be made by the department upon recommendation of the director of graduate studies (DGS).

Special Requirements for the Ph.D. Degree

COURSE WORK
The department normally requires three full years of course work, four year courses or eight term courses per year being considered a full load. This may be reduced to two years
in cases of exceptional background in Near Eastern languages. Normal progress in course work is considered to be consistent achievement of grades of High Pass or better, and at least four term courses or two year courses with Honors per year.

**SPECIAL LANGUAGE AND COURSE REQUIREMENTS**

Course work should be planned to meet two departmental general standards: core languages for the primary fields of study, and minimum competence in a secondary field. The core languages in each of the major fields of study are as follows: Arabic and Islamic Studies: Arabic, Persian (Farsi) or Syriac or Greek; Assyriology: Sumerian and Akkadian; Egyptology: Egyptian and at least four terms of Demotic or Coptic. Minimum competence in a secondary field of study is defined as follows: at least two terms of a Near Eastern language to be evaluated either by examination or with a course grade of High Pass or better, or at least two terms of nonlanguage courses outside the area of specialization. A minimum grade of High Pass in these courses will be considered successful fulfillment of this requirement.

In Arabic and Islamic Studies, the minimum competence can be extended to an interdisciplinary course of study in a minor field. Minors may include six to eight term courses in the following departments and programs: Anthropology, Comparative Literature, French, German Studies, Greek and Classics, History, History of Science and Medicine, Italian, Judaic Studies, Linguistics, Medieval Studies, Philosophy, Political Science and Sociology, Religious Studies, Spanish and Portuguese, or others, by permission of the DGS. Students in all programs of the department will be expected to declare their choice of a secondary language or area, or a minor field, by their third term of study.

**TRAINING IN TEACHING**

NELC students normally acquire four terms of teaching experience, between their second and fourth years in residence.

**EXAMINATIONS AND THE DISSERTATION**

The comprehensive examination is normally taken at the end of the third year of study or, where advanced standing has been granted, at the end of the second year, but in no case later than September of the academic year following the last year of the student’s required course work. The scope of the examination will be determined by the DGS in consultation with the student and department member(s) in whose area the student’s studies are concentrated. The examination will consist of written and oral portions and will cover no fewer than five and no more than six areas. In the case of the program in Arabic and Islamic Studies with an interdisciplinary minor, the written portion will consist of two language examinations and one subject in the minor field, and the oral of two subjects in Arabic studies and one in the minor field. The written examinations will be set by the individual faculty members responsible for particular areas of study, but the oral portion will be conducted by the full staff of the department. The dissertation proposal is normally submitted one month following the completion of the qualifying examination. Successful completion of the comprehensive examination and submission of an acceptable prospectus will qualify the student for admission to candidacy for the Ph.D. degree. After completion of the dissertation, the candidate may receive a final examination concerned primarily with the defense of the thesis.
Master’s Degrees

**M.Phil.** See Degree Requirements under Policies and Regulations. Additionally, students in Near Eastern Languages and Civilizations are eligible to pursue a supplemental M.Phil. degree in Medieval Studies. For further details, see Medieval Studies. In addition to the Graduate School requirements, the dissertation prospectus must have been accepted.

**Terminal M.A.** Applicants who do not enroll in the Ph.D. program may pursue a Master of Arts degree. Students enrolled in the M.A. program should complete a minimum of twelve term courses with at least two term grades of Honors and an average of High Pass in the remaining courses, and will be required to submit a master’s thesis no later than April 1 of the fourth term of study. No financial aid is available. Students enrolled in the Ph.D. program are also eligible for this degree by meeting the same requirements. Because of the thesis requirement, the Graduate School procedure of automatic petitions for the M.A. degree is not available to students in Near Eastern Languages and Civilizations.

Courses

**AKKD 501u, Elementary Akkadian**  
Introduction to the language of ancient Babylonia, and its cuneiform writing system, with exercises in reading, translation, and composition. TTH 9–10:15

**AKKD 502au, Intermediate Akkadian**  
Benjamin Foster

**AKKD 503b, Advanced Akkadian**  
Eckart Frahm

**AKKD 504b, Second-Millennium Legal and Archival Texts**

**AKKD 505b, Historical and Archival Texts from First-Millennium Assyria**

**AKKD 506b, Selected Mesopotamian Texts: Bilingual**  
Study and interpretation of Sumero-Akkadian royal inscriptions and religious texts. Pre-requisite: knowledge of Akkadian and Sumerian. 2 HTBA

**AKKD 545a, Neo-Babylonian Texts: Administrative and Archival Records**

**ARBC 501u, Elementary Modern Standard Arabic**  
Sarab al-Ani, Muhammad Aziz, Shady Nasser

Develops a basic knowledge of modern standard Arabic. Emphasis on grammatical analysis, vocabulary acquisition, and the development of reading and writing skills. MTWTHF 9:25–10:15, 1 HTBA (2 sections)  
MTWTHF 10:30–11:20, 1 HTBA (3 sections)  
MTWTHF 11:35–12:25, 1 HTBA (3 sections)
ARBC 502u, Intermediate Modern Standard Arabic  
Sarab al-Ani, Muhammad Aziz, 
Ghassan Husseinali, Shady Nasser
Intensive review of grammar; readings from contemporary Arab authors with emphasis on serial reading of unwoveled Arabic texts, prose composition, and formal conversation. Prerequisite: ARBC 501.
MTWTHF 9:25–10:15 (2 sections)
MTWTHF 10:30–11:20 (2 sections)
MTWTHF 11:35–12:25 (2 sections)

ARBC 503u, Advanced Modern Standard Arabic  
Sarab al-Ani, Muhammad Aziz
Focus on improving the listening, writing, and speaking skills of students who already have a substantial background in the study of modern standard Arabic. Prerequisite: ARBC 502 or permission of the instructor. MWF 9–10:15, 1 HTBA (2 sections)

ARBC 505a, Arabic Seminar  
Dimitri Gutas
Study and interpretation of classical Arabic texts for advanced students. Prerequisite: ARBC 503 or ARBC 510, or permission of the instructor. T 3:30–5:20

ARBC 505b, Arabic Seminar  
Beatrice Gruendler
Study and interpretation of classical Arabic texts for advanced students. Prerequisite: ARBC 503 or ARBC 510, or permission of the instructor. W 2:30–4:20

ARBC 510u, Intermediate Classical Arabic  
Matteo Di Giovanni
Introduction to classical Arabic, with emphasis on analytical reading skills, grammar, and prose composition. Readings from the Qur’an, Islamic theology, and literature and history of the Middle East, as well as Jewish and Christian religious texts in Arabic. MW 11:35–12:50

ARBC 511u, Advanced Classical Arabic  
Shady Nasser
An advanced course on Arabic grammar and morphology through a close reading of the grammar manual of Ibn Malik (The Alfiyyah), in addition to advanced training in sentence structure through i’nab. MW 1–2:15

ARBC 832a/CPLT 544a, Introduction to Classical Arabic Literary Criticism  
Beatrice Gruendler
Practical and theoretical criticism of Arabic poetry considered in the light of its communicative and cultural roles in a multi-ethnic medieval society. Themes include the classification of poetry, composition, form and content, influence vs. originality, talent vs. craft, lie and truth, theory of imagery, rhetorics, the literary challenge of the Koran, and the dynamics of poetry and prose. TH 2:30–4:20

EGYP 501u, Introduction to Classical Hieroglyphic Egyptian  
Niv Allon
An introduction to the language of ancient pharaonic Egypt (Middle Egyptian) and its hieroglyphic writing system, with short historical, literary, and religious texts. Grammatical analysis with exercises in reading, translation, and composition. TTH 9–10:15

EGYP 510u, Biblical Coptic: Elementary Course  
Kevin Wilkinson
TTH 9–10:15
EGYP 512a*, Egyptian Monastic Literature in Coptic

EGYP 513a, Research Seminar on the Monastic Federation of Shenoute

EGYP 514b*, Introduction to Gnostic Texts in Coptic

EGYP 531a*, Intermediate Egyptian I: Texts Relating to Egypt and Nubia

EGYP 533a*, Intermediate Egyptian I: Literary Texts

EGYP 535b*, Intermediate Egyptian II: Late Egyptian Stories

EGYP 538a, Intermediate Egyptian: Temple Construction Texts  David Klotz
Close reading of Egyptian texts commemorating temple constructions, from the Old Kingdom through the Roman Period, comparing material evidence from extant structures (e.g., building materials and techniques, foundation deposits), studying the theological significance and cultic use of various chapels, and surveying the architectural history of major temples, particularly in Thebes. Texts include royal inscriptions; private autobiographies; hieratic records; bandeau texts from Karnak, Edfu, and Dendera; and the various rituals associated with temple construction. HTBA

EGYP 539b, Intermediate Egyptian: Cosmogonic Texts  David Klotz
Close reading of Egyptian creation accounts, from the First Intermediate Period through the Roman Period, with an emphasis on the diachronic development of religious concepts, the variety of coexisting local traditions, the Amarna Period, possible influences on Hermetic and Gnostic writings or borrowings from Graeco-Roman and Near Eastern religions. Texts cover a range of formats, including Coffin Texts, magical and ritual papyri, and hieroglyphic temple inscriptions. HTBA

EGYP 540a, Ancient Egyptian Epistolography

EGYP 550a*, Introduction to Demotic  John Darnell
Introduction to the script and grammar of demotic, including readings of the Instruction of Onkhsheshonqy and excerpts from the bilingual decrees. T 2:30–4:20

EGYP 566a, Late Period Historical Texts: Napatan Historical Inscriptions

EGYP 568b, Texts from the Amarna Period

EGYP 577a*, Egyptian Rock Inscriptions

EGYP 578b, The Egyptian Netherworld Books  John Darnell
Study of the Underworld texts from the royal tombs of the New Kingdom. Readings from the Amduat, the Book of Gates, the Book of Caverns, the Book of the Creation of the Solar Disk, the Book of the Day and the Night, the cryptographic Books of the Solar–Osirian Unity, the Book of the Heavenly Cow, and the Book of Nut. Discussions of the significance of these texts for understanding Egyptian religion, and the possible contributions of these compositions to the Hermetica and Christian Gnosticism. HTBA

EGYP 590b, Coffin Texts

EGYP 591a*, Ancient Egyptian Love Poetry
HEBR 501u, Elementary Modern Hebrew  Ayala Dvoretzky, Dina Roginsky
Introduction to the language of contemporary Israel, both spoken and written. Fundamentals of grammar; extensive practice in speaking, reading, and writing under the guidance of a native speaker. No previous knowledge required.
MTWHF 9:25–10:15
MTWHF 10:30–11:20

HEBR 502au and bu, Intermediate Modern Hebrew  Ayala Dvoretzky
Review and continuation of grammatical study leading to a deeper comprehension of style and usage. Focus on selected readings, writing, comprehension, and speaking skills. Prerequisite: HEBR 501 or equivalent. Fall and spring. MW 1–2:15

[HEBR 503au, Advanced Modern Hebrew]

HEBR 503b, Advanced Modern Hebrew: Israeli Society  Shiri Goren
An examination of themes in Israeli society. Materials include newspaper articles, online resources, films, and commercials. Advanced grammatical structures are introduced and practiced. Prerequisite: HEBR 502 or permission of the instructor. TTH 2:30–3:45

HEBR 504bu, Introduction to Modern Israeli Literature  Ayala Dvoretzky
Reading, discussion, and analysis of short stories, poetry, and magazine articles representative of contemporary Israeli culture, with attention to different styles. Conducted in Hebrew. Prerequisite: HEBR 502 or equivalent. MW 11:35–12:50

HEBR 505a, Contemporary Israeli Society in Film  Shiri Goren
Examination of major themes in Israeli society through film, with emphasis on language study. Topics include migration, gender and sexuality, Jewish/Israeli identity, and private and collective memory. Readings in Hebrew and English provide a sociohistorical background and basis for class discussion. Conducted in Hebrew. Prerequisite: HEBR 502 or permission of the instructor. TTH 2:30–3:45

[HEBR 506au, Dynamics of Israeli Culture]

[HEBR 507b, Medieval Commentaries on the Pentateuch]

[HEBR 508a, Reading Medieval Hebrew Texts]

[HEBR 509b, Reading Academic Texts in Modern Hebrew]

HEBR 510bu, Conversational Hebrew: Israeli Media  Shiri Goren
An advanced Hebrew course for students interested in practicing and enhancing conversational skills. The course aims to improve the four language skills while stressing listening comprehension and various forms of discussions including practical situations, online interactions, and content analysis. Prerequisite: HEBR 502 or permission of the instructor. TTH 11:35–12:50

[HEBR 514b, Commentaries on the Song of Songs]

[HEBR 515b, Medieval Hebrew Texts]
HEBR 516b*, Israeli Popular Music  Dina Roginsky
Changes in the development of popular music in Israel explored as representations of changing Israeli society and culture. The interaction of music and cultural identity; the role of modern popular music in representing, shaping, challenging, and criticizing social conventions; songs of commemoration and heroism; popular representation of the Holocaust; Mizrahi and Arab music; feminism, sexuality, and gender; class and musical consumption; criticism, protest, and globalization. Prerequisite: HEBR 502 or equivalent. TTH 1–2:15

HEBR 517a*, Sociological Aspects of Hebrew  Dina Roginsky
Sociological aspects of Modern Hebrew as the language is used in Israel for constructing norms, expectations, and daily experiences. Readings and class discussions address changes in Israeli society and culture at large. Prerequisite: HEBR 502 or permission of the instructor. TTH 11:35–12:50

[MESO 531, Beginning Sumerian]

MESO 532a, Intermediate Sumerian  Benjamin Foster
W 2:30–4:20

MESO 533b, Advanced Sumerian  Staff
HTBA

[MESO 543a, Neo-Assyrian History]

[MESO 544b, Mesopotamian Scholarly Texts]

MESO 559a or b, Directed Readings: Assyriology

[MESO 560a, Historical Horizons in Ancient Mesopotamia]

MESO 572a, Prophecy in Mesopotamia  Eckart Frahm
Study and interpretation of Akkadian texts related to prophecy. Prerequisite: knowledge of Akkadian. 2 HTBA

[NELC 501b, Mesopotamian History of the Late Period]

NELC 502b*, World of Homer  Karen Foster
MW 2:30–3:45

NELC 503a*, Art of Ancient Palaces  Karen Foster
MW 2:30–3:45

[NELC 504b*, Art of the Ancient Near East and Aegean]

[NELC 506, History of Assyria]

[NELC 507a*/INRL 585a, Modern Arab Thought]

[NELC 508a, Ancient Painting and Mosaics]

[NELC 509b*/ARCG 744b*, The Age of Akhenaton]
NELC 512b, *Egyptian Religion through the Ages*  John Darnell  
Diachronic approach to topics in Egyptian religion. Religious architecture, evidence for protodynastic cults, foreigners in Egyptian religious celebrations, music and vocal expression in Egyptian religion, Re and Osiris, the Amarna interlude and the Ramesside solar religion, and the goddess of the eye of the sun. Readings in translation. MW 1–2:15

[NELC 513a, *Readings in Egyptian History*]  
[NELC 514a, *Buried Cities: Thera, Pompeii, and Herculaneum*]  
[NELC 515b, *The Bible in Its Ancient Near Eastern Setting*]  
[NELC 516b, *Mythology of the Ancient Near East*]  
[NELC 517b, *Ancient Polytheisms*]  

NELC 518a, *Assyria: The First Near Eastern Empire*  Eckart Frahm  
Survey of the history and culture of ancient Assyria, with a focus on its imperial phase in the first millennium B.C.E. Topics include Assyria’s aggressive foreign policy, the role of the military, Assyrian royal ideology, religion, literature, art, court life, Assyria’s impact on the Bible, and Assyria’s image in classical sources. F 2:30–4:20  

[NELC 519a, *Religion and Politics in the Ancient Near East*]  

NELC 520a, *Mesopotamian History of the Third Millennium*  Benjamin Foster  

2 HTBA  

[NELC 524b, *Egyptian Literature through the Ages*]  

NELC 525a, *Toward an Art History for Ancient Egypt: Issues, Approaches, and Object Study*  Marsha Hill  
F 1:30–3:20  

NELC 534a*/HIST 531a*/RLST 659a, *Seminar: The Making of Monasticism*  Bentley Layton  
The social and intellectual history of Christian monasteries, hermits, ascetics, and monastic institutions and values in late antiquity and the early Middle Ages, as seen in classic texts of monastic literature and in monastic archaeology. Readings are studied in translation. Prerequisite: permission of the instructor. T 3:30–5:20

[NELC 551b, *East Meets West: Drama and Theater in the Arab World*]  

[NELC 552a, *Gender and Nationalism in Arab Women’s Writing*]  

[NELC 553b, *Introducing Palestine: Literary Survey*]  

NELC 554a, *Israeli Identity and Culture: 1948 to the Present*  Shiri Goren  
Introduction to contemporary culture and representations of Israeli society. Themes of national and personal identity formation, gender, Zionism and post-Zionism, Israeli-Palestinian relations, Russian immigrants, and Jews of North African origin. Conducted in English. Prerequisite: permission of the instructor. TTH 11:35–12:50

[NELC 555a, *Classical Arabic Literature in Translation*]
NELC 556a, Classics: The Arabic-Islamic World  Beatrice Gruendler
Survey of the literary tradition of the Arabic-Islamic world (West Asia, North Africa, and Muslim Spain). Prose and poetry from the Qur’an to the Arabian Nights; attention to the interdependence of the works and their cultural setting, the agendas authors pursued, and the characters they portrayed. TTH 1–2:15

NELC 557bU, Israeli Narratives (Seminar)  Shiri Goren
Close reading of major Israeli novels in translation with attention to how their themes and forms relate to the Israeli condition. Focus on topics and theories of war and peace, migration, nationalism, and gender. Authors include Oz, Yehoshua, Grossmann, Matalon, Castel-Bloom, Shalev, and Kashua. W 2:30–4:20

NELC 563b/CPLT 634b, From Pictograph to Pixel: Changing Ways of Human Communication  John Darnell, Michael Fischer, Beatrice Gruendler
An exploration of the five pivotal stages in the development of human communication throughout world history: pictographic and syllabic ways of writing, the consonantal or phonetic alphabet, the invention of paper, movable type, and acoustic/electronic/digital media and the Internet. These technologies are considered for their innovative features, new capabilities, social and ideological implications, and the instrumental roles they play in contemporary periods of change. TTH 1–2:15

[NELC 566b, Prehistory of Nubia]

[NELC 580a, Settlement Archaeology in Egypt]

[NELC 587bU, Environmental History of the Near East]

NELC 588bU/ANTH 773bU/ARCG 773bU, Civilizations and Collapse  Harvey Weiss
Collapse documented in the archaeological and early historical records of the Old and New Worlds, including Mesopotamia, Mesoamerica, the Andes, and Europe. Analysis of politico-economic vulnerabilities, resiliencies, and adaptations in the face of abrupt climate change, anthropogenic environmental degradation, resource depletion, “barbarian” incursions, or class conflict. TH 2:30–4:20

NELC 589aU/ANTH 763aU/ARCG 763aU, Archaeologies of Empire  Harvey Weiss
Comparative study of origins, structures, efficiencies, and limitations of imperialism, ancient and modern, in the Old and New World, from Akkad to “Indochine,” and from Wari to Aztec. The contrast between ancient and modern imperialisms examined from the perspectives of nineteenth- and twentieth-century archaeology and political economy. TH 2:30–4:20

[NELC 590bU, Identity in Modern Turkey]

[NELC 735aU, Gnostic Religion and Literature]

[NELC 736b, The Manichaean World Religion]

[NELC 829a, History of the Arabic Language]
NELC 830a/HIST 829a, From Medina to Constantinople: The Middle East from 600 to 1517  Adel Allouche
The seminar discusses the religious and political events that shaped the Middle East from the rise of Islam to the Ottoman conquest of Egypt. It encompasses Arab lands, Iran, and Turkey. TH 1:30–3:20

[NELC 831b, Greco-Arabic Seminar]

NELC 844b, Arabic Textual Criticism and Editorial Technique  Dimitri Gutas
Theory and practice of preparing critical editions of classical Arabic texts. Analysis of manuscripts and preparation of stemmatic representation of their relation; establishment of the text; preparation of a critical apparatus. Prerequisites: ARBC 503 and 510, or permission of the instructor. T 3:30–5:20

NELC 845b, Seminar in Arabic Philosophy: Plato’s Laws in Arabic  Dimitri Gutas
M 3:30–5:20

[NELC 846b, Seminar in the Philosophy of Avicenna]

NELC 849a or b, Directed Readings: Arabic  Dimitri Gutas

NELC 850a, Introduction to Arabic and Islamic Studies  Dimitri Gutas
Comprehensive survey of the various subjects treated in Arabic and Islamic studies, with representative readings from each. Detailed investigation into the methods and techniques of scholarship in the field, with emphasis on acquiring familiarity with the bibliographical and other research tools. W 2:30–4:20

PERS 501u, Elementary Persian (Farsi)  Fereshteh Kowssar
An introduction to modern Persian, with emphasis on grammar and syntax as well as writing and reading simple prose. Both literary and classical Persian are taught in the second term. MTWTHF 9:25–10:15

PERS 502u, Intermediate Persian (Farsi)  Staff
Detailed analysis of Persian usage and syntax through the study of modern and classical texts in prose and poetry. Readings from newspapers, textbooks, historical writings, travelogues, classical and modern literature. MTWTHF 10:30–11:20

[PERS 503b, Persian Seminar: Identity and Change]

PERS 504b, Thematic Survey of Modern Persian Literature  Fereshteh Kowssar
MW 11:35–12:50

PERS 589a or b, Directed Readings: Persian  Fereshteh Kowssar

[SMTC 501a, Introduction to Comparative Semitics]

[SMTC 502a, Linguistic Topics in Akkadian]

SMTC 520, Introduction to Ugaritic  Aaron Butts
A two-term introduction to the Ugaritic language. Prerequisite: knowledge of Hebrew or another Semitic language. TTH 11:35–12:50
[SMTC 521, Elementary Syriac]

SMTC 522, Intermediate Syriac  Aaron Butts
Reading and analysis of Syriac texts from various genres and time periods. Prerequisite: SMTC 521 or knowledge of Syriac. TTH 9–10:15

[SMTC 523a, Intermediate Syriac: Prose Texts]

[SMTC 524b, Intermediate Syriac: Poetic Texts]

[SMTC 531a, Aramaic I]

[SMTC 532b, Aramaic II]

SMTC 542b, Introduction to Classical Ethiopic  Aaron Butts
An introduction to the Classical Ethiopic language, focusing on acquiring the essentials of grammar and vocabulary. Prerequisite: knowledge of a Semitic language or permission of the instructor. MW 9–10:15

TKSH 501u, Elementary Turkish  Etem Erol
Development of a basic knowledge of modern Turkish, with emphasis on grammatical analysis, vocabulary acquisition, and the training of reading and writing skills. MTWTHF 10:30–11:20

TKSH 502u, Intermediate Turkish  Etem Erol
Continued study of modern Turkish, with emphasis on advanced syntax, vocabulary acquisition, and the beginnings of free oral and written expression. Prerequisite: TKSH 501 or permission of the instructor. TTHF 11:35–12:50

[TKSH 505au, Structure of Modern Turkish]

TKSH 550au, Advanced Turkish  Etem Erol
Emphasis on advanced oral and written expression. Prerequisite: TKSH 502 or permission of the instructor. HTBA

TKSH 551bu, Advanced Turkish  Etem Erol
Emphasis on Turkish media and selected literary works. Prerequisite: permission of the instructor. HTBA

TKSH 560au, Beginning Ottoman Turkish  Etem Erol
Emphasis on printed texts and review of relevant Arabic and Persian grammar. Prerequisite: knowledge of the Arabic alphabet and four terms of Turkish. HTBA
NEUROBIOLOGY

C303 Sterling Hall of Medicine, 203.785.4323
http://medicine.yale.edu/neurobiology
M.S., M.Phil., Ph.D.

Chair
Pasko Rakic

Director of Graduate Studies
Michael Crair (SHM B301, 203.785.5768, michael.crair@yale.edu)

Director of Medical Studies
Michael Schwartz (SHM C327B, 203.785.4324, michael.schwartz@yale.edu)

Professors  Amy Arnsten, Hal Blumenfeld, Marvin Chun, Pietro De Camilli, Nihal de Lanerolle, Ronald Duman, Joel Gelernter, Charles Greer, Murat Gunel, Tamas Horvath, Jeffery Kocsis, Anthony Koleske, Robert LaMotte, Csaba Leranth, Paul Lombroso, David McCormick, Godfrey Pearlson, Marina Picciotto, Marc Potenza, Pasko Rakic, Joseph Santos-Sacchi, Gordon Shepherd, Stephen Strittmatter, Flora Vaccarino, Christopher van Dyck, Xiao-Jing Wang, Stephen Waxman

Associate Professors  Meenakshi Alreja, Charles Bruce, Michael Crair, Sabrina Diano, Ralph DiLeone, Elizabeth Jonas, Mark Laubach, Daeyeol Lee, Chiang-shan Ray Li, James Mazer, Vincent Pieribone, Michael Schwartz, Nenad Sestan, Mark Yeckel

Assistant Professors  Jessica Cardin, Bo Chen, Michael Higley, In-Jun Kim, Ifat Levy, Angeliki Louvi, Justus Verhagen

Fields of Study
Fields include the development, neuronal organization, and function of the mammalian central nervous system. The range of methods includes molecular-genetic and cellular neurobiology, neuroanatomy, biochemistry, neuropharmacology, computational modeling, neurophysiology, neuroimaging and behavior. An integrative, multidisciplinary approach is encouraged.

Special Requirements for the Ph.D. Degree

COURSE REQUIREMENTS
Six courses are required, and students must obtain a grade of Honors in two of these courses and maintain an HP average. Required courses are Principles of Neuroscience (NBIO 501a), Neurobiology (NBIO 720a), and Structural and Functional Organization of the Human Nervous System (NBIO 500b). Three more elective graduate-level courses are required. In addition to all other requirements, students must successfully complete NSCI 580b, Bioethics in Neuroscience, prior to the end of their first year of study. This requirement must be met prior to registering for a second year of study.
LABORATORY ROTATIONS
Two rotations are required; they are typically completed in the first year. Rotations outside the Neuroscience track will count toward this requirement upon approval of the Neuroscience track directors.

TEACHING REQUIREMENTS
An important aspect of graduate training in Neurobiology is the acquisition of teaching skills through participation in courses appropriate for the student’s scientific interests. These opportunities can be drawn from a diverse menu of lecture, laboratory, and seminar courses at the undergraduate, graduate, and medical school levels. Ph.D. students are required to serve as Teaching Fellows (TF) for two terms. First-year students may not serve as a TF without written permission from the Neuroscience track directors. It is recommended that one term of teaching should be completed by the end of the third year, and both requirements be completed by the end of the fourth year.

Specifically, it is recommended that the first requirement be met by teaching in either Principles of Neuroscience (NBIO 501a), Neurobiology (NBIO 720a), Brain and Thought (CGSC 201a), or Structural and Functional Organization of the Human Nervous System (NBIO 500b). The second course may be chosen from the list of neuroscience-related courses in the Graduate School of Arts and Sciences bulletin, or from the INP Bioethics course. A course not directly related to neuroscience must have the approval of the director of graduate studies (DGS).

QUALIFYING EXAM
Ph.D. students must complete their qualifying exam before the end of their second year as a graduate student. The student must choose four faculty members to read with in consultation with the DGS and the student’s Ph.D. adviser; it is strongly encouraged that these faculty represent interests spanning from molecular to systems/cognitive neuroscience and not include the Ph.D. adviser. The student and faculty should devise a reading list of about fifteen papers on a defined topic. They should meet regularly (at least three or four meetings) to discuss the papers in depth. For the written exam, the student is given two questions from each faculty member. The student has three hours to write an answer to one of the two questions for each faculty member, i.e., a twelve-hour written exam spread over two days. The exam is performed on a laptop observing the honor system and is proctored by the DGS. The student may refer to the papers and his/her notes but not to the Internet. The answers are distributed to the faculty, and several days later an oral exam is held to further evaluate the student’s knowledge. A fifth faculty member (a reader) chosen by the student may also be present at the oral exam, along with the DGS. If the student fails the qualifying exam, he/she may have one more attempt at passage; this must be completed within one term of taking the original exam.

PROSPECTUS
Ph.D. students must complete and submit their dissertation prospectus (also called thesis proposal) by the end of the third year as a graduate student. The guidelines are as follows:
1. The student should discuss with his/her mentor an appropriate topic and research plan for the thesis proposal, as well as discuss likely names of faculty to serve on the thesis committee.
2. The student should write a proposal of approximately ten pages (similar to an NRSA application). This should include (a) the hypothesis to be addressed, (b) a few pages of background and significance, (c) preliminary data to demonstrate feasibility, and (d) a research plan including strategies in case proposed experiments fail. It is highly recommended that the thesis include a core of conservative experiments, i.e., very feasible, well-controlled studies. High-risk/high-payoff studies should only be included as “halo” research; i.e., if these fail, the student should still be able to graduate.

3. The mentor should approve the thesis proposal.

4. The student should distribute the proposal to his/her thesis committee members at least several days before the thesis committee meeting, and optimally discuss the proposal with each member individually prior to the meeting to ensure that there are no major problems. The thesis committee is required to have four members: the mentor and three other faculty, with at least one of those three faculty with a primary appointment outside the Neurobiology department. Faculty outside of Yale can be included if they can attend on a regular basis. Non-Yale faculty are often best included as a fifth member, so that a meeting can officially be held in their absence if needed. One member of the thesis committee (not the mentor) is appointed chair.

5. The student meets with the thesis committee to approve the thesis proposal. It is at this time that the proposal is often modified, for instance by the suggestion of an additional control experiment. Goals should be realistic and in the interest of the student completing his/her degree in a timely manner. The finalized approved protocol is then provided to the Neurobiology business office, where the registrar will complete the paperwork for advancement to candidacy and send it to the Graduate School. As this must be completed before September 1, students should convene the thesis committee meetings prior to August 1.

The student is required to meet with his/her thesis committee on a yearly basis to update progress and problems. A one-page summary of this meeting, written by the mentor and signed by the student, the chair of the thesis committee, and the DGS, should also be given to the business office to reside in the student’s file.

ADMISSION TO CANDIDACY

Ph.D. students are required to have been admitted to candidacy by the end of the third year as a graduate student. Generally, the submission of the thesis prospectus is the final requirement for admission to candidacy, and paperwork for both is submitted to the Graduate School at the same time.

OTHER REQUIREMENTS

All graduate students who are admitted to candidacy are required to have an annual thesis committee meeting. All graduate students are required to give a student research presentation annually (a brief INP rotation talk early in the graduate career, followed by a longer Neurobiology Student Research Talk as the student’s research advances). All students are expected to attend rotation/student research talks.

THESIS DEFENSE

There are several parts to the thesis defense: (1) The student gives the thesis document to the thesis committee with sufficient time for them to read this large document. (2) The
student defends the thesis in front of the thesis committee. It is expected that small changes will be made before submitting the final document to the Graduate School. If substantial changes are needed, the public defense must be delayed. (3) The student gives the public defense, a one-hour seminar summarizing the research and open to the community. The seminar follows successful defense before the committee. These can be several days apart, but should not be more than a week apart without permission of the DGS.

Special Requirements for the M.D./Ph.D.

COURSE REQUIREMENTS

Five courses are required; students must obtain a grade of Honors in two of these courses, and this must be achieved in the first two years of the combined program. Required courses are Principles of Neuroscience (NBIO 501a) and Structural and Functional Organization of the Human Nervous System (NBIO 500b). Three more elective graduate-level courses are required. The following courses taken during the first two years of medical school will count toward the student’s elective requirements in the Neurobiology program, provided the student has registered to receive a graduate grade in the course: CBIO 502, CBIO 601, GENE 500b, MB&B 800a, Physiology 500. In the case of students accepted into the M.D./Ph.D. program during their first year of medical school, a letter from the faculty member in charge of the first-year course indicating the grade achieved in the course is required, and an official transcript from the School of Medicine must be submitted to the Graduate School.

LABORATORY ROTATIONS

Two rotations are required; rotations in another department/program will count toward this requirement upon approval of the Neuroscience track directors.

TEACHING REQUIREMENTS

M.D./Ph.D. students are required to serve as Teaching Fellows (TF) for one term; two terms are preferred. Previous teaching (as TF) in the histology labs or courses in MCDB does count toward this requirement as long as the student has taught while enrolled at Yale as an M.D./Ph.D. student.

QUALIFYING EXAM

M.D./Ph.D. students must complete their qualifying exam before the end of their first year as an affiliated graduate student. Thus, if the student affiliates at the customary 2½-year point (beginning of the spring term of the third year of matriculation at Yale), he/she must complete the examination before registering for the spring term of the fourth year at Yale.

PROSPECTUS

M.D./Ph.D. students must complete and submit their dissertation prospectus (i.e., thesis proposal) by the end of the second year as an affiliated graduate student. Thus, if the student affiliates at the customary 2½-year point, he/she must submit the approved prospectus before registering for the spring term of the fifth year (at the beginning of year three as an affiliated graduate student).
Please note that every dissertation prospectus must be approved by the thesis committee.

**ADMISSION TO CANDIDACY**

M.D./Ph.D. students are required to have been admitted to candidacy by the end of the second year as an affiliated graduate student. Generally, the submission of the dissertation prospectus is the final requirement for admission to candidacy, and paperwork for both is submitted to the Graduate School at the same time.

**OTHER REQUIREMENTS**

All graduate students who are admitted to candidacy are required to have an annual thesis committee meeting. All graduate students are required to give a student research presentation annually (a brief INP rotation talk early in the graduate career, followed by a longer Neurobiology Student Research Talk as the student’s research advances). All students are expected to attend rotation/student research talks.

**Affiliation requirement** A copy of the student’s application to the M.D./Ph.D. program, a copy of the student’s current transcript, and notation of rotations completed must be submitted to the Neurobiology program business office. The DGS must have this information in hand before the official M.D./Ph.D. student affiliation form can be approved. The Neurobiology program business office requests that copies of transcripts for all affiliated M.D./Ph.D. students be forwarded when they are received by the M.D./Ph.D. office.

**TIMELINE**

**Year one** M.D./Ph.D. students complete courses in the School of Medicine and register for selected courses in the Graduate School. Most who identify Neuroscience as their probable Ph.D. field will take the required course, Principles of Neuroscience, in the fall term. This is the recommended timing. M.D./Ph.D. students should take NBIO 500b in the spring for graduate school credit/grade. Other electives as listed above may be taken for graduate school credit to fulfill our requirements, and indeed, it is recommended that this be done. Two laboratory rotations should be completed in the summer. The DGSs of both the Neurobiology program and the INP may be of assistance in identifying appropriate laboratories based on the student’s interests.

**Year two** Courses in the School of Medicine are typically taken. Part 1 of the Boards is taken.

**Year three** By January of the third year, a thesis lab should be identified and all paperwork should be completed (affiliation form completed and copy of student’s academic record including application transferred to the Neurobiology business office). Student’s stipend is supplemented by PI/PI’s primary department at time of affiliation.

**Year four** The Qualifying Examination must be completed within one year of laboratory/program affiliation. Registration for the following term will be denied if this requirement is not fulfilled in a timely manner. Typically this will be fulfilled before the spring term of the fourth year.
Year five  The dissertation prospectus must be approved and submitted to the Graduate School by the end of the second year of laboratory/PI affiliation. Typically, this is by the end of the fall term of year five. Registration for the following term will be denied if this requirement is not fulfilled in a timely manner. The Thesis Committee approves the prospectus, and required paperwork is then delivered to the Neurobiology program business office by the student. The Neurobiology program business office will then complete the Admission to Candidacy paperwork and submit it to the Graduate School. The prospectus must be submitted to the Graduate School at least six months before the dissertation is submitted.

Year six  Typically an M.D./Ph.D. student will complete and defend his/her dissertation at the end of the fall term or the beginning of the spring term. We require that M.D./Ph.D. students defend their dissertations before returning to fulfill the remaining School of Medicine requirements.

Year seven  Student completes all remaining requirements and graduates in May.

While this is considered a guideline for a typical M.D./Ph.D. student, we recognize that not every student will follow this path. Any digression from this timeline must be discussed and approved by the DGS, with appropriate notes to the student's file and copies to the M.D./Ph.D. office. Continued participation in the Neurobiology program is subject to the satisfactory completion of requirements in a timely fashion. If any question arises about the satisfactory progress of a student, and the qualifying examination committee or the thesis committee cannot agree on an appropriate resolution, then the Neurobiology faculty will meet to determine a course of action.

Master’s Degrees

M.Phil.  See Degree Requirements under Policies and Regulations. Awarded only to students who are continuing for the Ph.D. degree. Students are not admitted for this degree.

Terminal M.S.  Awarded only to students who are not continuing for the Ph.D. degree but who have successfully completed one year of the doctoral program (i.e., passing of at least four courses, including two Honors grades, and two successful laboratory rotations). Students are not admitted for this degree.

Program materials are available upon request to the Director of Graduate Studies, Department of Neurobiology, Yale University, PO Box 208001, New Haven CT 06520-8001.

Courses

NBIO 500b/NSCI 510b, Structural and Functional Organization of the Human Nervous System  Michael Schwartz, Pasko Rakic, and staff
An integrative overview of the structure and function of the human brain as it pertains to major neurological and psychiatric disorders. Neuroanatomy, neurophysiology, and clinical correlations are interrelated to provide essential background in the neurosciences. Lectures in neurocytology and neuroanatomy survey neuronal organization in the human brain, with emphasis on long fiber tracts related to clinical neurology. Weekly three-hour laboratory sessions devoted to neuroanatomy in which students dissect the human brain
and examine histological sections in close collaboration with faculty members. Lectures in neurophysiology cover various aspects of neural function at the cellular level, with a strong emphasis on the mammalian nervous system. Clinical correlations consist of five sessions given by one or two faculty members representing both basic and clinical sciences. These sessions relate neurological symptoms to cellular processes in various diseases of the brain. Variable class schedule; contact course instructors. This course is offered to graduate and M.D./Ph.D. students only and cannot be audited.

**NBIO 501a/NSCI 501a, Principles of Neuroscience**  
Mark Yeckel  
General neuroscience seminar: lectures, readings, and discussion of selected topics in neuroscience. Emphasis is on how approaches at the molecular, cellular, physiological, and organismal levels can lead to understanding of neuronal and brain function.  
WF 3:15–4:45

**NBIO 502a, Structure and Function of Neocortex**  
Faculty  
The course covers anatomical, biochemical, and physiological organization of selected sensory, motor, and association regions of cortex. Sample topics discussed include development, evolution of multiple representations, columnar organization, and plasticity of neocortex. Hours arranged with individual instructors.

**NBIO 507b/NSCI 507b, Cellular and Molecular Mechanisms of Neurological Disease**  
Dhasakumar Navaratnam, Stephen Strittmatter, Stephen Waxman  
The course focuses on those diseases (Alzheimer’s, Parkinson’s, ALS, and other neurodegenerative diseases, triplet repeat induced diseases, multiple sclerosis, epilepsy, etc.) in which modern neuroscience has advanced mechanistic explanations for clinical conditions. It highlights recent molecular, electrophysiological, and imaging experiments in parsing disease mechanisms. The application of pathophysiologic understanding to therapeutics is considered. Contact instructor for first class date and time.

**NBIO 509b/NSCI 539b, Synaptic Organization of the Nervous System**  
Gordon Shepherd, Anne Williamson, Michael Hines  
An integrative introduction to the principles underlying the organization of neural systems. The focus is on the best-understood systems, including spinal cord, olfactory bulb, retina, cerebellum, thalamus, basal ganglia, and cerebral cortex. Students integrate experimental findings from anatomy, electrophysiology, and neuropharmacology with computational models at the cellular and circuit level to understand the neural basis of behavior.

**NBIO 510a, Introduction to Methods in Cellular and Molecular Neurobiology**  
Faculty  
Firsthand insight into various techniques and approaches used in neuroscience. Light microscopic techniques include various metallic impregnation methods, autoradiography, anterograde and retrograde axonal transport methods, hybridoma and recombinant DNA technology, deoxyglucose metabolic method, fluorescent and immunocytochemical methods. Electron microscopy encompasses transmission, electronmicroscopic autoradiography, and immuno-peroxidase methodology. Choice of techniques and hours to be arranged with individual faculty or staff members of the Department of Neurobiology.
NBIO 511, Introduction to Techniques Used in Electrophysiological Analysis at the Cellular Level  Faculty
Includes practical training in in vivo and in vitro nervous system preparations, extracellular and intracellular recordings, sensory stimulation, dye injections, and selected neuropharmacological procedures. Choice of techniques and hours to be arranged with individual faculty of the Department of Neurobiology.

NBIO 524a/NSCI 514a, Neurodevelopment and Neuropsychiatric Disorders  
Flora Vaccarino, Michael Crair
The course discusses basic concepts concerning the development of the central nervous system. We focus on the mechanisms that regulate progenitor cell proliferation, the acquisition of regional and cellular identity, neuronal migration, axon guidance, cell death, and activity-dependent mechanisms of neural circuit formation. Information drawn from these basic developmental mechanisms is used to discuss the newest emerging ideas about the pathogenesis of neuropsychiatric disorders such as autism, Tourette’s syndrome, depression, and other affective disorders.

[NBIO 535b/NSCI 535b, History of Modern Neuroscience]

[NBIO 550b/CB&B 550b/NSCI 550b, Introduction to Neuroinformatics]

[NBIO 570a, Cellular and Network Dynamics of Sensory and Motor Functions]

NBIO 582b/NSCI 582b/PHYS 582b/PSYC 582b, Introduction to Computational Neuroscience  Xiao-Jing Wang
The course is designed both for students in neuroscience and for those in other fields (physics, mathematics, and engineering) interested in understanding how the brain works from a systems/computational perspective. The lectures introduce basic concepts and models in the field. Topics covered include neural coding and decoding, biophysics of single neurons, kinetics and dynamics of synaptic transmission, balanced excitation and inhibition, feed-forward and feedback neural networks, central pattern generators, brain rhythms, orientation selectivity in visual cortex, selective attention, working memory, decision making and executive functions, memory and synaptic plasticity, and reinforcement learning and reward-based choice behavior. MATLAB/Python-based homework and projects provide practical training in important computational methods. Open to undergraduates with permission of the instructor and the director of undergraduate studies. W 3–5:30

[NBIO 590a, Sensory Neuroethology: Bats and Owls, Electric Fish, and Beyond]

[NBIO 595a/NSCI 595a, Seminar in Visuomotor Neurophysiology]

NBIO 596a/NSCI 596a, Seminar in Neurophysiology of Decision Making  Daeyeol Lee, James Mazer
The course involves the critical reading and discussion of both historical and contemporary papers on the neurobiology of decision making. Although it covers some key papers in behavioral economics, reinforcement learning, and neuroeconomics, the major emphasis is on the studies directed at understanding the mechanisms of decision making using neurobiological methods, including single-neuron recording and functional neuroimaging.
NBIO 602, Topics in Cortical Development and Evolution  Pasko Rakic
This advanced tutorial course involves extensive reading, discussion, and pilot experiments on the topic.

NBIO 610b/C&MP 620b, Fundamentals in Neurophysiology  Vincent Pieribone, Fred Sigworth
The course is designed for students who wish to gain a theoretical and practical knowledge of modern neurophysiology. Graduate students specializing in neurophysiology and non-neurophysiology are encouraged to attend, as the course begins at a very basic level and progresses to more complicated topics. Topics include properties of ion channels, firing properties of neurons, synaptic transmission, and neurophysiology methodology. HTBA

NBIO 720a/MCDB 720a/NSCI 720a, Neurobiology  Haig Keshishian, Paul Forscher
Examination of the excitability of the nerve cell membrane as a starting point for the study of molecular, cellular, and intracellular mechanisms underlying the generation and control of behavior. MWF 11:35–12:25

The Interdepartmental Neuroscience Program offers flexible but structured interdisciplinary training for independent research and teaching in neuroscience. The goal of the program is to ensure that degree candidates obtain a solid understanding of cellular and molecular neurobiology, physiology and biophysics, neural development, systems and behavior, and neural computation. In addition to course work, graduate students participate in a regular journal club, organize the Interdepartmental Neuroscience Program Seminar Series, and attend other seminar programs, named lectureships, symposia, and an annual research retreat.

Special Admissions Requirements

Applicants to the Neuroscience Program should have a B.S. or B.A. Most applicants have had course work in neuroscience, psychobiology, physiological psychology, mathematics through calculus, general physics, general biology, general chemistry, organic chemistry, biochemistry, computer science, or engineering. Deficiencies in these areas can be corrected through appropriate course work in the first year of residence. Laboratory research experience is desirable but is not a formal requirement. Scores for the GRE (General Test required; Subject Test recommended) or MCAT, three letters of recommendation, transcripts of undergraduate grades, and a statement of interest must accompany the application.
To enter the Ph.D. program, students apply to an interest-based track within the interdepartmental graduate Program in the Biological and Biomedical Sciences (BBS).

**Special Requirements for the Ph.D. Degree**

Each entering student is assigned a faculty advisory committee to provide guidance. This committee is responsible for establishing the student’s course of study and for monitoring his or her progress. This committee will be subsequently modified to include faculty with expertise in the student’s emerging area of interest. Although each student’s precise course requirements are set individually to take account of background and educational goals, the course of study is based on a model curriculum beginning with four core courses (Principles of Neuroscience, Neurobiology, Bioethics in Neuroscience, and Structural and Functional Organization of the Human Nervous System) designed to ensure broad competence in modern neuroscience. Students must successfully complete NSCI 580b, Bioethics in Neuroscience, prior to the end of their first year of study. Students are also required to complete at least three additional courses from a broad set of neuroscience-related courses. The Graduate School uses grades of Honors, High Pass, Pass, and Fail and requires two term grades of Honors during the first two years of study. Students are expected to maintain at least a High Pass average. A series of at least two laboratory rotations during the first year of the program also ensures that degree candidates obtain a solid background in systems, cellular, and molecular approaches to neuroscience. Admission to candidacy requires passing a qualifying examination normally given during the second year, and submission of a dissertation prospectus (NIH grant format) before the end of the third year. In accordance with the expectations of the BBS program, Ph.D. students are expected to participate in two terms (or the equivalent) of teaching. Thesis committee meetings are required annually. Also required is the completion and satisfactory defense of the thesis.

Requirements for M.D./Ph.D. students are the same as for Ph.D. students with the following differences: five courses are required (Principles of Neuroscience and Structural and Functional Organization of the Human Nervous System, and three elective graduate-level courses). M.D./Ph.D. students are required to serve for one term as teaching assistants; however, two terms of teaching are preferred.

**Master’s Degrees**

**M.Phil.** See Degree Requirements under Policies and Regulations.

**Terminal M.S.** Awarded only to students who are not continuing for the Ph.D. degree but who have successfully completed one year of the doctoral program. The minimum requirement for this is a passing grade in at least four courses, including two Honors grades, and two successful laboratory rotations. Students are not admitted for this degree.

Program materials are available upon request to the Director of Graduate Studies, Neuroscience, Yale University, PO Box 208074, New Haven CT 06520-8074.
Courses

**NSCI 501a/NBIO 501a, Principles of Neuroscience**  Mark Yeckel
General neuroscience seminar: lectures, readings, and discussion of selected topics in neuroscience. Emphasis is on how approaches at the molecular, cellular, physiological, and organismal levels can lead to understanding of neuronal and brain function. **WF 3:15–4:45**

**NSCI 502b/MCDB 730b, Cell Biology of the Neuron**  Elke Stein
A comprehensive course on neuronal cell biology. Basic principles of cell biology reviewed in the context of the developing and injured nervous system. Areas to be discussed include membrane trafficking, receptor signaling mechanisms, neurotrophin signaling, neuronal cytoskeleton, axon guidance, and synapse formation and maintenance. Prerequisite: one course in cell biology. **TTH 4–5:15**

**NSCI 504b/MCDB 735b, Seminar in Brain Development and Plasticity**  Weimin Zhong, Elke Stein
Weekly seminars and discussion sessions to explore recent advances in our understanding of brain development and plasticity, including neuronal determination, axon guidance, synaptogenesis, and developmental plasticity. **MW 2:30–3:45**

**NSCI 507b/NBIO 507b, Cellular and Molecular Mechanisms of Neurological Disease**  Dhasakumar Navaratnam, Stephen Strittmatter, Stephen Waxman
The course focuses on those diseases (Alzheimer’s, Parkinson’s, ALS, and other neurodegenerative diseases, triplet repeat induced diseases, multiple sclerosis, epilepsy, etc.) in which modern neuroscience has advanced mechanistic explanations for clinical conditions. It highlights recent molecular, electrophysiological, and imaging experiments in parsing disease mechanisms. The application of pathophysiologic understanding to therapeutics is considered. Contact instructor for first class date and time.

**NSCI 510b/NBIO 500b, Structural and Functional Organization of the Human Nervous System**  Michael Schwartz, Pasko Rakic, and staff
An integrative overview of the structure and function of the human brain as it pertains to major neurological and psychiatric disorders. Neuroanatomy, neurophysiology, and clinical correlations are interrelated to provide essential background in the neurosciences. Lectures in neurocytology and neuroanatomy survey neuronal organization in the human brain, with emphasis on long fiber tracts related to clinical neurology. Weekly three-hour laboratory sessions devoted to neuroanatomy in which students dissect the human brain and examine histological sections in close collaboration with faculty members. Lectures in neurophysiology cover various aspects of neural function at the cellular level, with a strong emphasis on the mammalian nervous system. Clinical correlations consist of five sessions given by one or two faculty members representing both basic and clinical sciences. These sessions relate neurological symptoms to cellular processes in various diseases of the brain. Variable class schedule; contact course instructors. This course is offered to graduate and M.D./Ph.D. students only and cannot be audited.
Graduate School of Arts and Sciences

NSCI 514a/NBIO 524a, Neurodevelopment and Neuropsychiatric Disorders
Flora Vaccarino, Michael Crair
The course discusses basic concepts concerning the development of the central nervous system. We focus on the mechanisms that regulate progenitor cell proliferation, the acquisition of regional and cellular identity, neuronal migration, axon guidance, cell death, and activity-dependent mechanisms of neural circuit formation. Information drawn from these basic developmental mechanisms is used to discuss the newest emerging ideas about the pathogenesis of neuropsychiatric disorders such as autism, Tourette's syndrome, depression, and other affective disorders.

NSCI 519a/b, Tutorial
By arrangement with faculty and approval of DGS.

NSCI 521a/PHAR 521a, Neuroimaging in Neuropsychiatry I: Imaging Methods
Julie Staley, Kelly Cosgrove
Neuroimaging methodologies including Positron Emission Tomography (PET), Single Photon Emission Computed Tomography (SPECT), Magnetic Resonance Imaging (MRI), functional Magnetic Resonance Imaging (fMRI), Magnetic Resonance Spectroscopy (MRS), and gene array imaging (GAI) are rapidly evolving tools used to study the living human brain. Neuroimaging has unprecedented implications for routine clinical diagnosis, for assessment of drug efficacy, for determination of psychotropic drug occupancy, and for the study of pathophysiological mechanisms underlying neurologic and psychiatric disorders. The course is designed to provide an overview of the theory and current state of development of the different neuroimaging modalities. A second course, offered in the spring, focuses on applications. W 9–10:30

NSCI 521b/PHAR 521b, Neuroimaging in Neuropsychiatry II: Clinical Applications
Hilary Blumberg, Kelly Cosgrove, Julie Staley
Neuroimaging methodologies including Positron Emission Tomography (PET), Single Photon Emission Computed Tomography (SPECT), structural Magnetic Resonance Imaging (sMRI), functional Magnetic Resonance Imaging (fMRI), Diffusion Tensor Imaging (DTI), and Magnetic Resonance Spectroscopy (MRS) are rapidly evolving tools used to study the living human brain. Neuroimaging has unprecedented implications for assessment of drug efficacy, for determination of psychotropic drug occupancy, and for the study of pathophysiological mechanisms underlying neuropsychiatric disorders. The course is designed to provide an overview of the application of state-of-the-art neuroimaging methods to research in neuropsychiatric disorders. It is recommended for PGY I-VI, Child Psychiatry Fellows, Interdepartmental Neuroscience students, and trainees in pharmacology, neurology, neurosurgery, psychiatry, psychology, and radiology.

[NSCI 535b/NBIO 535b, History of Modern Neuroscience]

NSCI 539b/NBIO 509b, Synaptic Organization of the Nervous System
Gordon Shepherd, Anne Williamson, Michael Hines
An integrative introduction to the principles underlying the organization of neural systems. The focus is on the best-understood systems, including spinal cord, olfactory bulb, retina, cerebellum, thalamus, basal ganglia, and cerebral cortex. Students integrate experimental findings from anatomy, electrophysiology, and neuropsychopharmacology with
computational models at the cellular and circuit level to understand the neural basis of behavior.

[NSCI 550b/CB&B 550b/NBIO 550b, Introduction to Neuroinformatics]

NSCI 580b, Bioethics in Neuroscience  Charles Greer
This course is an introduction to ethics and ethical decision making in the neurosciences. Format for the course is an informal discussion. Each week we are joined by members of the Yale faculty and community who can share their experiences and expertise as it relates to the topic of the week. This course is mandatory for first-year graduate students in the Interdepartmental Neuroscience Program (INP). Grading is Satisfactory/Unsatisfactory and is based on attendance/participation, weekly reaction papers, and a final term paper. TH 4–5:30

NSCI 582b/NBIO 582b/PHYS 582b/PSYC 582b, Introduction to Computational Neuroscience  Xiao-Jing Wang
The course is designed both for students in neuroscience and for those in other fields (physics, mathematics, and engineering) interested in understanding how the brain works from a systems/computational perspective. The lectures introduce basic concepts and models in the field. Topics covered include neural coding and decoding, biophysics of single neurons, kinetics and dynamics of synaptic transmission, balanced excitation and inhibition, feed-forward and feedback neural networks, central pattern generators, brain rhythms, orientation selectivity in visual cortex, selective attention, working memory, decision making and executive functions, memory and synaptic plasticity, and reinforcement learning and reward-based choice behavior. MATLAB/Python-based homework and projects provide practical training in important computational methods. Open to undergraduates with permission of the instructor and the director of undergraduate studies. W 3–5:30

[NSCI 595a/NBIO 595a, Seminar in Visuomotor Neurophysiology]

NSCI 596a/NBIO 596a, Seminar in Neurophysiology of Decision Making  Daeyeol Lee, James Mazer
The course involves the critical reading and discussion of both historical and contemporary papers on the neurobiology of decision making. Although it covers some key papers in behavioral economics, reinforcement learning, and neuroeconomics, the major emphasis is on the studies directed at understanding the mechanisms of decision making using neurobiological methods, including single-neuron recording and functional neuroimaging.

NSCI 612b/ENAS 812b, Molecular Transport and Intervention in the Brain  Mark Saltzman, Richard Carson
A graduate-level seminar on mechanisms and rates of movement of molecules in the brain and the design of novel drug delivery systems. Topics include mathematical methods for modeling diffusion and flow processes, diffusion in the brain interstitium, fluid flows in the brain and spinal cord, the blood-brain barrier, microdialysis measurements, controlled release systems, microfluidic approaches for drug delivery. Weekly readings are assigned from neuroscience and engineering texts; current papers from the literature are used to guide discussion each week. HTBA
NSCI 648b/PSYC 648bu, Cellular Analysis of Learning and Memory: Vertebrate Model Systems  Glenn Schafe
We focus on the brain circuitries and cellular/molecular mechanisms involved in learning and memory, with particular emphasis on vertebrate model systems. Review of work on habituation, sensitization, Pavlovian and instrumental conditioning, and declarative memory formation. TH 1:30–3:20

NSCI 720a/MCDB 720au/NBIO 720a, Neurobiology  Haig Keshishian, Paul Forscher
Examination of the excitability of the nerve cell membrane as a starting point for the study of molecular, cellular, and intracellular mechanisms underlying the generation and control of behavior. MWF 11:35–12:25

The following course is also of particular value to students in Neuroscience:

MCDB 721La, Laboratory for Neurobiology  Haig Keshishian, Robert Wyman

Director of Graduate Studies
Nancy Reynolds (203.737.2313, nancy.reynolds@yale.edu)

Associate Professors  Sally Cohen, Barbara Guthrie, Lois Sadler, Allison Shorten, Sandra Talley, Robin Whittemore

Assistant Professors  Angelina Chambers, Wei-Ti Chen, Joanne Iennaco, Sheila Molony, Margaret Moss, Linda Pellico, Jacquelyn Taylor, Julie Womack

Fields of Study
Fields include chronic illness (diabetes, cardiovascular disease, cancer, HIV/AIDS); self- and family management; maternal and child health; policy and politics of health care; health equity and care of vulnerable populations; acute and critical care; children with mental health disorders; end-of-life and palliative care; genetic and environmental influences on health; gerontology and long-term care; and school- and community-based interventions.

Special Admissions Requirements
Applicants should have a master’s degree in nursing, or the equivalent, including previous course work in statistics and graduate-level course work in research methods. The Graduate Record Examination (GRE) General Test is required. The Test of English as a Foreign Language (TOEFL) is required of all applicants for whom English is a second language. Samples of written work (e.g., published article, thesis, literature review) and a curriculum vitae are required. Qualified applicants will be invited for an interview with a member of the doctoral faculty.

Special Requirements for the Ph.D. Degree
COURSE WORK
Completion of twelve core courses and six cognates in the student’s area of specialization (including one advanced analysis course) is required.

The grading system includes Honors, High Pass, Pass, and Fail. Students must maintain a High Pass average and achieve a grade of Honors in at least two core courses to remain in good standing. High Pass is required in all core courses in the first year for a student to be eligible to take the Preliminary Examination. After the first year, no more
than one grade of Pass in a core course will be permitted. A grade of Pass or better is required for all cognates, including the required advanced analysis course.

In addition to all other requirements, students must successfully complete NURS 929b, Ethical Conduct of Clinical Research, prior to the end of their first year of study. This requirement must be met prior to registering for a second year of study.

**GRADUATE RESEARCH ASSISTANT AND TEACHING FELLOW EXPERIENCE**

During the first two years of the program, students are Graduate Research Assistants with faculty mentors and participate in the mentor’s ongoing research.

Two terms of a Teaching Fellowship Program are required. Teaching Fellows assist with the teaching of larger master's-level courses, typically during their third year of doctoral study.

**EXAMINATIONS**

Successful completion of three examinations is required.

1. The Preliminary Examination is taken in June after the first year of course work has been completed. A grade of High Pass or better in each core course is required. The Preliminary Examination is intended to allow the student to demonstrate mastery of doctoral course work. This written examination is taken over two consecutive days. Passing the Preliminary Examination is a prerequisite for continuing in the second year of doctoral study.

2. The Qualifying Examination typically takes place during the third year of study, and preferably by the end of the fifth term, when required course work is completed. The student prepares a comprehensive dissertation proposal containing a statement of the problem to be studied, conceptual framework, critical review of relevant literature, design, methods, and plan for analysis. The oral Qualifying Examination typically lasts 1 to 1.5 hours. The student gives a 15-minute formal presentation of the proposed study and answers questions regarding the research and related topics. Successful completion of the Qualifying Examination is required for candidacy for the doctoral degree.

3. The Final Oral Examination is based on the dissertation. The dissertation is intended to demonstrate that the student is competent in the chosen area of study and has conducted independent research. The Final Oral Examination typically lasts 1.5 to 2 hours. The student gives a 15- to 20-minute formal presentation of the dissertation and answers questions. Successful completion of the Final Oral Examination is required before the Ph.D. can be awarded.

**Master’s Degrees**

**M.Phil. (en route to the Ph.D.)** This degree will be granted to Ph.D. students who successfully complete two years of course work, but do not progress to the dissertation stage. To be awarded the M.Phil. degree, students need to complete all core courses, six cognates (may include independent study with faculty), and two years of Graduate Research Assistant experience, and must pass the Preliminary Examination. This degree is normally granted only to students who are withdrawing from the Ph.D. program.
Terminal Master’s Degree  For information on the terminal master’s degree offered by the Yale School of Nursing (Master of Science in Nursing), visit the School’s Web site, http://nursing.yale.edu, or contact Frank A. Grosso, Assistant Dean for Student Affairs and Registrar, Yale School of Nursing, at frank.grosso@yale.edu.

Courses

**NURS 901a, Quantitative Methods for Nursing Research**  Jane Dixon
This advanced course in quantitative research methods provides an opportunity to evaluate various research designs used to investigate problems of importance to nursing and health. Emphasis is placed on the interrelationships of the clinical problem, study aims, and study design—with the goal of understanding methods decisions that are made by researchers, and how these decisions influence study validity. Required for all Ph.D. students in nursing. Open to master's students with permission of the instructor. Three hours per week.

**NURS 903a, Measurement of Health Variables**  Jane Dixon
The course focuses on theory of measurement and on reliability and validity of research instruments—with emphasis on interaction of conceptual, methodological, and pragmatic considerations. An integration of seminar and lecture modalities is employed. This course is required for all second-year Ph.D. students in nursing and is also open to advanced graduate students in other schools of the University. Three hours per week.

**NURS 904a/b, Doctoral Independent Study**  Faculty
This elective is initiated by the student and negotiated with faculty. The purpose is to allow in-depth pursuit of individual areas of interest and/or practice. A written proposal must be submitted and signed by the student, the faculty member(s), and the program chairperson.

[**NURS 905b, Creating Method: Issues in Nursing Research**]

**NURS 907, Dissertation Seminar**  Nancy Redeker
The course provides the student with advanced study and direction in research leading to development of the dissertation proposal and completion of the dissertation. Students are guided in the application of fundamentals of scientific writing and criticism. Required for all Ph.D. students in nursing. 2.5 hours every other week for academic year.

**NURS 909a, Philosophical Foundations of Inquiry**  Barbara Guthrie
The purpose of this course is to provide doctoral students with an overview and critical analysis of historical and contemporary views of knowledge development and of science, with particular emphasis on the ways these views influence approaches to nursing inquiry. Emphasis is on a critical examination of the underlying epistemological and ontological assumptions and their respective implications for diverse approaches to knowledge generation within the discipline. Required for all Ph.D. students in nursing. Three hours per week.

**NURS 911, Doctoral Research Practicum**  Nancy Reynolds
The overall purpose of this seminar is to guide the student in acquiring an understanding of the role and responsibilities of the nurse researcher. Topics include scientific writing,
peer review, components and development of a research plan, program of research and research career, funding and grantsmanship, presentation, publication, ethical considerations, collaboration, and interdisciplinary research. Required of all students for the first two years of doctoral study to coincide with their Graduate Research Assistant experience. One hour every other week.

**NURS 913b, Theoretical Basis of Nursing Science**  Robin Whittemore

The course examines the nature of scientific knowledge and the development of the conceptual and theoretical underpinnings of nursing science. The contribution to nursing science of various approaches to knowledge synthesis and theory development is emphasized. Specific approaches to concept/theory development and analysis are examined. Students are expected to complete a formal analysis of a concept or theory of interest to them. Required for all Ph.D. students in nursing. Three hours per week.

**NURS 917, Advanced Statistics for Nursing Research**  Kristopher Fennie, Marjorie Funk

This yearlong course starts with a review of basic descriptive and inferential statistics and advances to multivariate analyses most commonly used in nursing studies. The emphasis is on attaining a conceptual understanding of these statistical techniques, selecting appropriate techniques for a given clinical research problem, conducting computer-assisted data analyses, and correctly expressing the results of such analyses. The laboratory part of the course covers fundamentals of data management and statistical analysis, and proceeds to the conduct of advanced analyses. The course emphasizes using programming language in SAS; however, the menu-driven user interfaces in SAS, SPSS, n-Query, MS Excel, and MS Access also are briefly covered. This course is required for all Ph.D. students in nursing and may be elected by M.S.N. students with permission of the instructors. Three hours per week for academic year.

**NURS 921b, Seminar on Research in Care of Patients with Diabetes**  Robin Whittemore

This seminar focuses on the current state of the science in research on care of patients with diabetes mellitus and builds on knowledge gained in clinical courses in diabetes management. Specific attention is paid to issues related to interventions with high-risk cultural and ethnic groups. Research from nursing, medicine, and the social sciences is discussed by leaders in the field. Prerequisites: NURS 769a and 901a, or the equivalent. Two hours per week. Offered every other year.

[NURS 923a, Current Issues in Cardiovascular Nursing Research]

**NURS 925b, Qualitative Research in Nursing**  Holly Kennedy

The course introduces the student to major approaches to qualitative research. Selected topics related to the design, conduct, and reporting of qualitative research are addressed. Emphasis is placed on the appropriate use of qualitative methods and differences across qualitative approaches. The course includes firsthand experience with data collection and analysis. Required for all Ph.D. students in nursing. Three hours per week.
Nursing 375

[NURS 927b, Seminar on Research in Care of People with Cancer or at Risk for Cancer and Their Families]

NURS 929b, Ethical Conduct of Clinical Research  Lois Sadler
The course introduces major concepts in the ethical conduct of clinical research from the perspective of the advanced practice nurse and the nurse-researcher. National and international ethical codes for research and regulatory requirements are reviewed. Emphasis is placed on the protection of vulnerable populations and community-based research, including international research. Required for all Ph.D. students in nursing. Open to others with permission of the instructor. One hour per week.

NURS 941a, Health Policy, Leadership, and Systems  Margaret Moss
The course addresses salient issues in health policy and the challenges to linking research and clinical care with public and private policy agendas. The course covers the following topics: health care delivery systems; policy and political factors that affect access to care and its financing, delivery, and quality; challenges to evidence-based policy and the dissemination of research findings to policy and community-based leaders. It also includes theories of leadership and policy change relevant to students’ research topics. Critical thinking, problem-solving skills, and research-based analysis are integrated throughout the course. A major written assignment suitable for submission to a peer-reviewed journal (or that can be easily modified for same) is a course requirement. Prerequisite: students must pass a test based on the online Yale University School of Nursing Health Policy Module. Required for all Ph.D. students in nursing. Three hours per week.

NURS 943a, Self- and Family Management of Vulnerable Populations  Nancy Reynolds
The course examines major conceptualizations of health and illness, vulnerability, and self- and family management in the context of health disparities, and the research supporting these conceptualizations. Emphasis is placed on the link among illness self-management, vulnerability, and related concepts such as self-efficacy and coping and the contributions of risk and protective factors to self-management. These links and associations with self-management are considered from an individual, family, and health system perspective, and sociocultural influences on self-management are explored. Required for all Ph.D. students in nursing. Three hours per week.

NURS 943b, Methods of Intervention Development and Testing  Margaret Grey
The seminar focuses on the research methods necessary for the understanding, development, and testing of interventions in the management of health and illness by self- and family management. Content includes the use of qualitative, family, and survey approaches to understand the factors associated with management of health and illness and the application of these approaches to both the individual and the family as a unit of study. Prerequisite: NURS 943a. Required for all Ph.D. students in nursing. Open to others by consent of the instructor. Three hours per week.

Lax, Benjamin Turk

Assistant Professor  Titus Boggon

Fields of Study
Major emphases in the department are in the areas of molecular pharmacology, mecha-
nisms of drug action, signal transduction, structural biology, neuropharmacology, and
chemotherapy.

Special Admissions Requirements
A bachelor’s degree in biology, chemistry, or another science is required. Undergraduate
courses should include biology, organic chemistry, physics, and calculus. GRE scores
are required; a GRE Subject Test, preferably in Biology or Chemistry, is recommended.

To enter the Ph.D. program, students should apply to an interest-based track within
the interdepartmental graduate program in the Biological and Biomedical Sciences.

Special Requirements for the Ph.D. Degree
Because the field of pharmacology encompasses many disciplines, the department’s flex-
ible program of study toward the Ph.D. degree permits students to concentrate in areas
of their particular interest. Students must take the core graduate pharmacology course
(PHAR 504a), Physiological Systems (PHAR 550a), and the two terms of the graduate
seminar course (PHAR 502a/b). The other courses will be selected based on each stu-
dent’s interest and must include at least two other courses offered by the Pharmacology
department (among PHAR 528a, PHAR 529b, and PHAR 560). The Graduate School
requires a grade of Honors for a minimum of two courses. (Honors for seminar courses
cannot be used toward this requirement). In addition, students are required to do three
research rotations and to pass the qualifying examination.
A thesis prospectus must be submitted and accepted by the end of the third year. Admission to candidacy is usually achieved by the end of the third year. A doctoral dissertation based upon original research, with an oral presentation given to the pharmacology faculty and a thesis committee in defense of the dissertation, is required for the degree. The norm for completion of the Ph.D. program is about six years.

An important aspect of graduate training in pharmacology is the acquisition of teaching skills through the participation in courses appropriate for the student’s scientific interests. These opportunities can be drawn from a diverse menu of lecture, laboratory, and seminar courses given at the undergraduate, graduate, and medical school levels. Ph.D. students are required to participate in two terms (or the equivalent) of teaching. Students are not expected to teach during their first year.

Prior to registering for a second year of study, students must successfully complete MB&B 676b, Responsible Conduct of Research.

**Master’s Degrees**

**M.Phil.** See Degree Requirements under Policies and Regulations.

**M.S. (en route to the Ph.D.)** Students are eligible for the M.S. degree upon successful completion of the first three terms of the Ph.D. program. This includes one year of lab rotations and course requirements.

Program materials are available upon request to the Director of Graduate Studies, Department of Pharmacology, Yale University, PO Box 208066, New Haven CT 06520-8066.

**Courses**

**PHAR 502b, Seminar in Pharmacology and Molecular Medicine**
Readings and discussion in topics relevant to cell biology, signal transduction, immunology, and molecular medicine. The overall theme of the papers discussed is pathogenesis of human infectious disease. The class emphasizes analysis of primary research literature and development of presentation skills. **M 3–5**

**PHAR 504a, Principles of Pharmacology** Elias Lolis
Lectures covering antibiotics, immunotherapy, and chemotherapy. **MW 10:45–12:15**

**PHAR 506a and b, Methods in Pharmacological Research (Rotations)** Elias Lolis
Students work in laboratories of faculty of their choice. The period spent in each laboratory is one term.

**PHAR 521a/NSCI 521a, Neuroimaging in Neuropsychiatry I: Imaging Methods**
Julie Staley, Kelly Cosgrove
Neuroimaging methodologies including Positron Emission Tomography (PET), Single Photon Emission Computed Tomography (SPECT), Magnetic Resonance Imaging (MRI), functional Magnetic Resonance Imaging (fMRI), Magnetic Resonance Spectroscopy (MRS), and gene array imaging (GAI) are rapidly evolving tools used to study the living human brain. Neuroimaging has unprecedented implications for routine clinical diagnosis, for assessment of drug efficacy, for determination of psychotropic drug occupancy, and for the study of pathophysiological mechanisms underlying neurologic
and psychiatric disorders. The course is designed to provide an overview of the theory and current state of development of the different neuroimaging modalities. A second course, offered in the spring, focuses on applications. W 9–10:30

PHAR 521b/NSCI 521b, Neuroimaging in Neuropsychiatry II: Clinical Applications

Hilary Blumberg, Kelly Cosgrove, Julie Staley

Neuroimaging methodologies including Positron Emission Tomography (PET), Single Photon Emission Computed Tomography (SPECT), structural Magnetic Resonance Imaging (sMRI), functional Magnetic Resonance Imaging (fMRI), Diffusion Tensor Imaging (DTI), and Magnetic Resonance Spectroscopy (MRS) are rapidly evolving tools used to study the living human brain. Neuroimaging has unprecedented implications for assessment of drug efficacy, for determination of psychotropic drug occupancy, and for the study of pathophysiological mechanisms underlying neuropsychiatric disorders. The course is designed to provide an overview of the application of state-of-the-art neuroimaging methods to research in neuropsychiatric disorders. It is recommended for PGY I–VI, Child Psychiatry Fellows, Interdepartmental Neuroscience students, and trainees in pharmacology, neurology, neurosurgery, psychiatry, psychology, and radiology.

PHAR 528a, Principles of Signal Transduction

Anton Bennett

The regulation of intracellular signaling is of fundamental importance to the understanding of cell function and regulation. This course introduces the broad principles of intracellular signal transduction. More detailed lectures on specific intracellular signaling pathways are given in which students learn both the basic and most recent and cutting-edge concepts of intracellular signaling. Topics include regulation of signaling by protein phosphorylation, small G proteins, G-protein-coupled receptors, hormones, phospholipids, adhesion, and gasses. TH 10:30–12

PHAR 529b, Structural Pharmacology

Ya Ha, Titus Boggon

The goal of the course is to show students how concepts of structural biology are applied to areas of great importance in pharmacology such as protein kinases, proteases, cell surface receptors, integrins and other membrane-bound enzymes, and transporters and channels, and how these concepts facilitate drug development. TTH 2–3:30

PHAR 550a/C&MP 550au/ENAS 550au/MCDB 550au, Physiological Systems

Emile Boulpaep, W. Mark Saltzman

The course develops a foundation in human physiology by examining the homeostasis of vital parameters within the body, and the biophysical properties of cells, tissues, and organs. Basic concepts in cell and membrane physiology are synthesized through exploring the function of skeletal, smooth, and cardiac muscle. The physical basis of blood flow, mechanisms of vascular exchange, cardiac performance, and regulation of overall circulatory function are discussed. Respiratory physiology explores the mechanics of ventilation, gas diffusion, and acid-base balance. Renal physiology examines the formation and composition of urine and the regulation of electrolyte, fluid, and acid-base balance. Organs of the digestive system are discussed from the perspective of substrate metabolism and energy balance. Hormonal regulation is applied to metabolic control and to calcium, water, and electrolyte balance. The biology of nerve cells is addressed with emphasis on synaptic transmission and simple neuronal circuits within the central
nervous system. The special senses are considered in the framework of sensory transduction. Weekly discussion sections provide a forum for in-depth exploration of topics. Graduate students evaluate research findings through literature review and weekly meetings with the instructor. MWF 9:25–10:15

**PHAR 560b/C&MP 560b/ENAS 570b/MCDB 560b, Cellular and Molecular Physiology: Molecular Machines in Human Disease**  Emile Boulpaep, Fred Sigworth

The course focuses on understanding the processes that transfer molecules across membranes at the cellular, molecular, biophysical, and physiological levels. Students learn about the different classes of molecular machines that mediate membrane transport, generate electrical currents, or perform mechanical displacement. Emphasis is placed on the relationship between the molecular structures of membrane proteins and their individual functions. The interactions among transport proteins in determining the physiological behaviors of cells and tissues are also stressed. Molecular motors are introduced and their mechanical relationship to cell function is explored. Students read papers from the scientific literature that establish the connections between mutations in genes encoding membrane proteins and a wide variety of human genetic diseases. MWF 9:25–10:15

Lecturers  Facundo Alonso, Scott Edgar, Sonny Elizondo, Eric Mandelbaum, Raul Saucedo, Tamina Stephenson

Fields of Study

Fields include most of the major areas of philosophy. Please see the Philosophy Web site (www.yale.edu/philos) for the departmental statement.

Special Requirements for the Ph.D. Degree

In the first two years all students must complete a total of twelve term courses. Graduate courses are grouped: (1) metaphysics, theory of knowledge, philosophy of science; (2) ethics, aesthetics, philosophy of religion, political philosophy, and theory of value; (3) history of philosophy. No more than six and no fewer than two courses may be taken in each group. A course in logic must also be taken, although on the basis of previous work a student may petition to have this requirement waived. Two qualifying papers must be submitted, one in history, the other in another distribution area; normally the first of these papers will be submitted by mid-September, the second by December, of a student’s third year. It is expected that these papers will be more substantial and professional than an ordinary term paper. Students must demonstrate competence in at least one of the following languages: French, German, Greek, or Latin, normally by the end of the second year. Students in Philosophy will teach in the third and fourth years. They must have teaching experience in at least two distribution areas. Approval of the dissertation prospectus is expected before the end of the sixth term. Upon completion of all predissertation requirements, including the prospectus, students are admitted to
candidacy for the Ph.D. Admission to candidacy must take place by the end of the third year of study. The norm for completion of the Ph.D. degree is five to six years.

**Master’s Degrees**

**M.Phil.** See Degree Requirements under Policies and Regulations.

**M.A. (en route to the Ph.D.)** An M.A. degree is awarded to students after completion of six term courses with an average grade of High Pass.

Please see the Philosophy Web site for information on the program (www.yale.edu/philos).

**Classics and Philosophy Joint Ph.D. Program**

The Classics and Philosophy Program is a joint program, offered by the Departments of Classics and Philosophy at Yale, for students wishing to pursue graduate study in ancient philosophy. Suitably qualified students may apply for entry to the program either through the Classics department for the Classics track or through the Philosophy department for the Philosophy track.

Applicants for the Classics track of the joint program must satisfy the general requirements for admission to the Classics graduate program, in addition to the requirements of the Classics track of the joint program. Details of the Classics track of the program are available online at www.yale.edu/classics/research_philosophy_program.html.

Applicants for the Philosophy track of the joint program must satisfy the general requirements for admission to the Philosophy graduate program, in addition to the requirements of the Philosophy track of the joint program. Details of the Philosophy track of the program are available online at www.yale.edu/philos/grad_classics.html.

The joint program is overseen by an interdepartmental committee currently consisting of Professors Susanne Bobzien, Verity Harte, and Barbara Sattler, together with the director of graduate studies for Classics and the director of graduate studies for Philosophy.

**Courses**

**PHIL 567a**, Mathematical Logic I  Sun-Joo Shin
An introduction to the metatheory of first-order logic, up to and including the completeness theorem for the first-order calculus. An introduction to the basic concepts of set theory is included. **MW 1:30–2:20**

**PHIL 570b**, Epistemology  Keith DeRose
Introduction to current topics in the theory of knowledge. The analysis of knowledge, justified belief, rationality, certainty, and evidence. **TTH 11:35–12:50**

**PHIL 600a/GREK 727a**, Aristotle’s Metaphysics XII  John Hare, Verity Harte
In Book XII of his *Metaphysics*, Aristotle embarks on an investigation into substance, in the course of which he sets out to prove and to characterize the existence of a divine substance. The course reads and discusses the Greek text of *Metaphysics* XII and considers the philosophical issues it raises. **W 3:30–5:20**
PHIL 601bu/CLSS 888b, Ancient Philosophy of Science  Barbara Sattler
This seminar focuses on the evolution and development of notions central to the philosophy of science that arose in ancient times. Topics include time, space, motion, matter, continuity, and infinity. We concentrate on the discussion of these topics in the Presocratics, Plato, and Aristotle. M 3:30–5:20

PHIL 602bu/CLSS 850b, Plato's Philebus  Verity Harte
The seminar reads, in translation, and discusses Plato's Philebus, the late work in which he examines the competing claims of pleasure and reason to be the basis of human happiness and provides a portrait of the best human life. W 3:30–5:20

PHIL 604au, The Philosophy of Spinoza  Michael Della Rocca
An in-depth study of Spinoza's major work, the Ethics, with some attention to his earlier writings where helpful. Focus on Spinoza's views in metaphysics and the philosophy of mind. W 1:30–3:20

PHIL 605au, Hume  Kenneth Winkler
A study of Hume's epistemology and metaphysics and his science of human nature. Topics include our knowledge of space and time; inductive reasoning; the nature and representation of causation; the origin and justification of belief in an external world; personal identity; the normative bearing of naturalized epistemology; the explanation and justification of religious belief; and the attractions and limits of skepticism. Readings in Book I of A Treatise of Human Nature, An Enquiry concerning Human Understanding, and Dialogues concerning Natural Religion. W 7–8:50

PHIL 625bu, Frege's Philosophy of Logic and Language  Susanne Bobzien
Reading and evaluation of selected articles by Gottlob Frege, “On Sense and Reference,” “Function and Concept,” “Thought,” and “Negation.” Focus on Frege's contributions and relevance to modern philosophy of language and philosophical logic (as opposed to his contributions to the philosophy of mathematics). F 1:30–3:20

PHIL 627bu, Computability and Logic  Sun-Joo Shin
A technical exposition of Gödel's first and second incompleteness theorems and of some of their main consequences in proof theory and model theory, such as Lob's theorem, Tarski's undefinability of truth, provability logic, and nonstandard models of arithmetic. W 3:30–5:20

PHIL 628bu, Philosophy of Philosophy  George Bealer
The purpose is to examine philosophy's central aims, its methods, and their epistemological basis. Topics include the theoretical/practical distinction; philosophy as dialectical enquiry; the role of intuitions in philosophy; philosophy's relation to science; the possibility of progress in philosophy. W 3:30–5:20

PHIL 629bu, Monism  Michael Della Rocca
The resilience of monism—the thesis that there is only one thing—despite its apparent refutation by the observed multiplicity of things. Focus on the viability of various forms of monism. Attention to topics such as relations, dependence, existence, and modality, as well as to relevant topics in philosophy of language. W 1:30–3:20
Some things have minds, others do not. A long tradition of work within both psychology and philosophy has asked how people make this distinction. Just in the past few years, however, researchers have been taking this work in surprising new directions. Topics include how people attribute minds to machines and robots, to group agents like corporations, to God, and to people from other genders or racial groups.

**PHIL 631a**, **Cognitive Architecture: Belief and Modularity**  
Eric Mandelbaum  
An investigation of cognitive architecture is an attempt to create a model of the mind in the broadest sense. In this seminar we examine multiple possible models of the mind using modular models as the basic starting point. The goal of the course is to peruse workable models of central cognition, in particular focusing on the roles that belief acquisition and belief storage have on constraining models of central cognition.  

**PHIL 632a**, **Convention**  
Zoltán Szabó  
An exploration of the nature of convention, with special emphasis on linguistic convention. Topics include objectivity, normativity, coordination, rule-following, and relativism.

**PHIL 633b**, **Post-Kantian Themes in Analytic Philosophy**  
Paul Franks  
An examination of themes in analytic philosophy that are connected to Kantian and post-Kantian traditions, with a view to assessing the viability of contemporary analytic versions of Kantian, Fichtean, and Hegelian positions in metaphysics and epistemology. Readings include Brandom, Carnap, Davidson, Fichte, Frege, Hegel, Kant, McDowell, and Quine.

**PHIL 634b**, **Propositional Attitudes**  
Bruno Whittle  
The course looks at approaches to modeling propositional attitudes, and at a range of challenges these approaches face. Topics include Fregean and Russellian propositions, possible worlds models of attitudes, de se attitudes, semantic relationism, and the context sensitivity of attitude ascriptions.

**PHIL 650b**, **Animal Ethics**  
Shelly Kagan  
The course explores the moral status of nonhuman animals and the nature of our moral obligations toward them. Most of the course is concerned with theoretical issues (what do the major approaches to ethics imply about the status of animals?), but some attention is paid at the end to practical questions (such as vegetarianism, or the use of animals in research).

**PHIL 652a**, **Recognition**  
Stephen Darwall, Matthew Smith  
At the headwaters of modern moral philosophy emerges a concern with the relationship that two equal moral beings bear toward one another. This was typified initially by questions about property rights: What is the normative structure of the relation between a rights holder and someone against whom he can make a claim? In time, these issues of law and politics gave rise to questions concerning the basic moral relationship, finding expression in a rich literature culminating in Kant and post-Kantian German idealists such as Fichte and Hegel, for whom “recognition” was a fundamental notion. This course explores the emergence and development of theories of recognition, including in recent moral and political philosophy.
PHIL 653b, Metaethics  Matthew Smith
A study of moral theorizing and moral discourse. The linguistic role of words like “good,” “bad,” “right,” and “wrong”; whether propositions that use these terms can be true or false. What ethical claims mean, if anything, and what kinds of reasoning or evidence might justify such claims. TH 1:30–3:20

PHIL 654b, Kant’s Ethical Theory  Sonny Elizondo
An assessment of Kant’s ethical theory. Special attention to Kant’s conception of the aims and methods of moral philosophy and how this conception bears on his substantive ethical views. M 7–7:50

PHIL 655b, Normative Ethics  Shelly Kagan
A systematic examination of normative ethics, the part of moral philosophy that attempts to articulate and defend the basic principles of morality. The bulk of the course surveys and explores some of the main normative factors relevant in determining the moral status of a given act or policy (features that help make a given act right or wrong). Brief consideration of some of the main views about the foundations of normative ethics (the ultimate basis or ground for the various moral principles). T 1:30–3:20

PHIL 656a, Freedom of Expression  Jonathan Gilmore
The history and theory of freedom of expression examined from the standpoints of philosophy, law, art history, and literary criticism. Topics include censorship of art and literature, self-expression and self-realization, First Amendment interpretation, autonomy, paternalism, and rights. TH 1:30–3:20

PHIL 657b, Aesthetics and the Philosophy of Art  Jonathan Gilmore
The nature and significance of works of art. Topics include aesthetic judgment, art and morality, depiction and cognition, fictions and emotions, imagination, originality and forgery, intention and interpretation, artistic style, and freedom of expression. M 3:30–5:20

PHIL 658b, Art Criticism: History, Theory, Practice  Jonathan Gilmore
The nature of art criticism. Readings are drawn from historical and contemporary sources. Students are asked to compose their own critical responses to works of art and art exhibitions in New Haven and New York. TH 1:30–3:20

PHIL 659a, Philosophy and Literature  Jonathan Gilmore
The course addresses some of the major philosophical questions about knowledge, the self, happiness, and how one should live, as they emerge in certain canonical literary works of imaginative art. M 1:30–3:20

PHIL 700b, Agency and the Law  Facundo Alonso
In this course we reflect on central questions in the philosophy of action and on their connection to important issues in the law. Some of these questions include: What is it for one to be an agent? What is it to act intentionally? What is intention? What is it to act for a reason? What is it for one to be an autonomous agent? What is it for us to act together? Connection to issues in criminal law, contract law, and jurisprudence.
PHIL 701a/CPLT 714a/PLSC 606a, From Weber to Derrida  Seyla Benhabib
Topics discussed include modernity and rationalization; science and the problem of values; the concept of public sphere; decisionism and the friend/foe distinction; Heidegger’s ontology and politics; Derrida on cosmopolitanism; and Habermas and Derida on terror and philosophy. This course can only be taken in conjunction with the lecture course European Political Thought from Weber to Derrida (PLSC 604a), since it is not an independent seminar but the graduate seminar attached to the lecture course. W 5–6:50

PHIL 702b, Responsibility  Jules Coleman

PHIL 703b, Epistemology  Keith DeRose
A broad introduction to the theory of knowledge, covering many of the most important basic topics in epistemology. Designed to serve as a first graduate course in the area, preparing students both to take more focused seminars on particular topics in epistemology and to teach their own basic undergraduate courses. T 3:30–5:20

PHIL 704a, Topics in Epistemology  Keith DeRose
A study of one to three prominent issues in current epistemology. Topics may include skepticism, internalist vs. externalist accounts of knowledge and of justification, the structure of knowledge and justification (foundationalism vs. coherentism), the nature of immediate justification, contextualism in epistemology, the epistemology of disagreement, knowledge-based analyses of other important philosophical concepts, and the “relevant alternatives” account of knowledge. T 1:30–3:20

PHIL 705a, Descent of the Logos  Karsten Harries
At the very center of Heidegger’s thinking is a concern with logos and that means also with logic. But what logos and “logic” meant to him changed. Readings in Being and Time, “Phenomenology and Theology,” “The Origin of the Work of Art,” “Poetically Man Dwells,” “Hölderlin and the Essence of Poetry,” “Building Dwelling Thinking.”
T 1:30–3:20

PHIL 706b/CPLT 713b, Time and Value  Karsten Harries
The seminar begins with a consideration of Plato’s Symposium as the paradigmatic statement of what we can call an ethics of satisfaction. Other versions are examined. All are shown to be inseparable from a view of time that gives priority to the present. This view is criticized and contrasted with another that gives primacy to the future. Its consequences for value theory is examined. Readings in Plato, Augustine, Kant, Nietzsche, Heidegger, Sartre, Eliade, and Marcuse. T 1:30–3:20

PHIL 707b/HPA 599b/INRL 524b/LAW 21595/PLSC 594b, Global Health Ethics, Politics, and Economics  Thomas Pogge, Jennifer Ruger
Billions lack access to basic medical care, and global health inequalities are wide and growing. Such radical disparities cast doubt on the justice of supranational institutional arrangements (such as the TRIPS Agreement) and also pose ethical challenges for the global health community, especially international and domestic health and development institutions. Seeking to illuminate the normative issues involved, the course features a series of distinguished visitors, including academics as well as a few important
representatives of international organizations, politics, foundations, NGOs, and relevant industries. Follows Law School academic calendar. T 10:10–12

**PHIL 708a, First-Year Seminar**  Georg Bealer, Bruno Whittle
Required for and limited to first-year students in the Philosophy Ph.D. program. Topic varies from year to year. Preparation for graduate work. Reading, writing, and presentation skills. T 5–6:50

**PHIL 709a, Work in Progress**  Sun-Joo Shin
In consultation with the instructor, each student presents a significant work in progress, for instance, a revised version of an advanced seminar paper or a dissertation chapter. Upon completion of the writing, the student presents the work in a mock colloquium format, including a formal question-and-answer period. M 3:30–5:20

**PHIL 710a, Topics in Semantics: Pragmatic Models**  Tamina Stephenson
The seminar explores formal pragmatic models of conversation, including the representation of common ground, speech acts, speaker commitments, and information structure. T 3:30–5:20

**PHIL 750a or b, Tutorial**
By arrangement with faculty.
PHYSICS

35 Sloane Physics Laboratory, 203.432.3607
www.yale.edu/physics
M.S., M.Phil., Ph.D.

Chair
C. Megan Urry

Director of Graduate Studies
Paul Tipton (JWG 520, 203.432.3375, graduatephysics@yale.edu)

Associate Professors Jerzy Blawdziewicz (Mechanical Engineering), Helen Caines, Richard Easther, Bonnie Fleming, Walter Goldberger, Jack Harris, Sohrab Ismaill-Beigi (Applied Physics), Karyn LeHur, Daniel McKinsey, Corey O’Hern (Mechanical Engineering), Witold Skiba, Volker Werner

Assistant Professors Sarah Demers, Eric Dufresne (Mechanical Engineering), Thierry Emonet (Molecular, Cellular & Developmental Biology), Tobias Golling, Daisuke Nagai, Jill North (Philosophy), Nikhil Padmanabhan, A. Elizabeth Rhoades (Molecular Biophysics & Biochemistry)

Fields of Study
Fields include atomic physics and quantum optics; nuclear physics; particle physics; astrophysics and cosmology; condensed matter; biological physics; quantum information physics; applied physics; and other areas in collaboration with the School of Engineering & Applied Science, and the departments of Applied Physics; Mathematics; Chemistry; Molecular Biophysics and Biochemistry; Molecular, Cellular, and Developmental Biology; Geology and Geophysics; and Astronomy.
Special Admissions Requirements
The prerequisites for work toward a Ph.D. degree in physics include a sound undergraduate training in physics and a good mathematical background. The GRE General Test and the Subject Test in Physics are required.

Special Requirements for the Ph.D. Degree
To complete the course requirements students are expected to take a set of nine term courses. A set of five core courses (Advanced Classical Mechanics, Electromagnetic Theory, Quantum Mechanics I and II, and Statistical Mechanics) serves to complete the student's undergraduate training in classical and quantum physics. A set of four advanced courses, including a required course in quantum field theory, provides an introduction to modern physics and research. Certain equivalent course work and successful completion of a pass-out examination may reduce the course requirement or allow substitution of elective courses for individual students. In addition, all students are required to be proficient and familiar with mathematical methods of physics (such as that necessary to master the material covered in the five core courses) and to be proficient and familiar with advanced laboratory techniques. These requirements can be met either by taking a course offered by the department or by carrying out an approved Special Investigation with individual faculty. In addition to all other requirements, students must successfully complete PHYS 590b, Responsible Conduct in Research for Physical Scientists, prior to the end of their first year of study. This requirement must be met prior to registering for a second year of study.

Students who have completed their course requirements with satisfactory grades (a grade of Honors in PHYS 990, Special Investigations, may be counted toward the Graduate School requirement of two grades of Honors), pass the qualifying examination, and submit an acceptable thesis prospectus are recommended for admission to candidacy. The qualifying examination, normally taken at the beginning of the third term (and no later than the beginning of the fifth term), is a six-hour written examination covering the five core courses and mathematical methods as described above. Students normally submit the dissertation prospectus before the end of the third year of study.

There is no foreign language requirement. Teaching experience is regarded as an integral part of the graduate training program. During their study students are expected to serve as teaching fellows, usually in the first two years. Formal association with a dissertation adviser normally begins in the fourth term after the qualifying examination has been passed and required course work has been completed. An adviser from a department other than Physics can be chosen in consultation with the director of graduate studies (DGS), provided the dissertation topic is deemed suitable for a physics Ph.D.

Master’s Degrees
M.Phil. Students who have successfully advanced to candidacy qualify for the M.Phil. degree.

M.S. (en route to the Ph.D.) Students who complete the first-year graduate courses with a satisfactory record (including two Honors or four High Passes) qualify for the M.S. degree.
Program materials are available upon request to the Director of Graduate Studies, Department of Physics, Yale University, PO Box 208120, New Haven CT 06520-8120; e-mail, graduatephysics@yale.edu; Web site, www.yale.edu/physics.

Courses

PHYS 500a, Advanced Classical Mechanics  Yoram Alhassid

PHYS 502b, Electromagnetic Theory I  Vincent Moncrief
Classical electromagnetic theory including boundary-value problems and applications of Maxwell equations. Macroscopic description of electric and magnetic materials. Wave propagation. MW 11:35–12:50

PHYS 504Lb, Modern Physics Measurements  Steve Lamoreaux and staff
A laboratory course with experiments and data analysis in soft and hard condensed matter, nuclear and elementary particle physics. MW 1:30–4:20

PHYS 506a, Mathematical Methods of Physics  Nicholas Read
Survey of mathematical techniques useful in physics. Includes vector and tensor analysis, group theory, complex analysis (residue calculus, method of steepest descent), differential equations and Green's functions, and selected advanced topics. MW 9–10:15

PHYS 508a, Quantum Mechanics I  Francesco Iachello
The principles of quantum mechanics with application to simple systems. Canonical formalism, solutions of Schrödinger's equation, angular momentum, and spin. MW 9–10:15

PHYS 512b, Statistical Physics I  Nicholas Read
Review of thermodynamics, the fundamental principles of classical and quantum statistical mechanics, canonical and grand canonical ensembles, identical particles, Bose and Fermi statistics, phase transitions and critical phenomena, renormalization group, irreversible processes, fluctuations. MW 9–10:15

PHYS 517b3/ENAS 517b3/MB&B 517b3/MCDB 517b3, Methods and Logic in Interdisciplinary Research  Lynne Regan, Enrique De La Cruz, Eric Dufresne, Thierry Emonet, Paul Forscher, Megan King, Michael Levene, Simon Mochrie, Corey O'Hern, Thomas Pollard, Elizabeth Rhoades, Corey Wilson, and staff
This half-term IGPPEB class is intended to introduce students to integrated approaches to research. Each session is led by faculty with complementary expertise and discusses papers that use different approaches to the same topic (for example, physical and biological or experiment and theory). Counts as 0.5 credit toward graduate course requirements. Required for students in IGPPEB. MW 5–7

PHYS 522a, Introduction to Atomic Physics  David DeMille
The course is intended to develop basic theoretical tools needed to understand current research trends in the field of atomic physics. Emphasis is given to laser-spectroscopic
methods including laser cooling and trapping. Experimental techniques discussed when appropriate.

**PHYS 523a/ENAS 541a/MB&B 523a, Biological Physics**  Eric Dufresne  
An introduction to the physics of several important biological phenomena, including molecular motors, protein folding, bacterial locomotion, and allostery. The material and approach are positioned at the interface of the physical and biological sciences.  
TTH 2:30–3:45

**PHYS 524a, Introduction to Nuclear Physics**  Volker Werner  
Introduction to a wide variety of topics in nuclear structure, nuclear reactions, and the emerging new area in nuclear physics of exotic and weakly bound nuclei far from the valley of stability. A number of related nuclear models as well as experimental methods are discussed. The course also covers topics in nuclear astrophysics and in the use of relativistic heavy ion collisions to study quark-gluon interactions in high density. The aim is to give a broad perspective on the subject and to develop the key ideas in simple ways, with more weight on physics ideas than on mathematical formalism. The course assumes no prior knowledge of nuclear physics and only elementary quantum mechanics. It is accessible to advanced undergraduates.  
TTH 9–10:15

[**PHYS 526b, Introduction to Elementary Particle Physics**]  

**PHYS 529b/AMTH 665bu/MCDB 561bu, Systems Modeling in Biology**  Thierry Emonet, Steven Kleinstein, Kathryn Miller-Jensen, Xiaojing Wang, Steven Zucker  
An introduction to the techniques of integrating knowledge from mathematics, physics, and engineering into the analysis of complex living systems. Use of these techniques to address key questions about the design principles of biological systems. Discussion of experiments and corresponding mathematical models. Reading of research papers from the literature. Students build their own models using MATLAB.  
TTH 2:30–3:45

**PHYS 538a, Introduction to Relativistic Astrophysics and General Relativity**  Walter Goldberger  
Basic concepts of differential geometry (manifolds, metrics, connections, geodesics, curvature); Einstein’s equations and their application to such areas as cosmology, gravitational waves, black holes.  
MW 9–10:15

**PHYS 548au and 549bu/PHY 548au and 549bu/ENAS 850au and 851bu, Solid State Physics I and II**  Paul Fleury, A. Douglas Stone  
A two-term sequence covering the principles underlying the electrical, thermal, magnetic, and optical properties of solids, including crystal structures, phonons, energy bands, semiconductors, Fermi surfaces, magnetic resonance, phase transitions, and superconductivity. Fall: TTH 1–2:15; Spring: TTH 2:30–3:45

[**PHYS 561bu, General Relativity, Astrophysics, and Cosmology**]  

[**PHYS 570a/ASTR 570a, High-Energy Astrophysics**]
PHYS 582b/NBIO 582b/NSCI 582b/PSYC 582b, Introduction to Computational Neuroscience  Xiao-Jing Wang
The course is designed both for students in neuroscience and for those in other fields (physics, mathematics, and engineering) interested in understanding how the brain works from a systems/computational perspective. The lectures introduce basic concepts and models in the field. Topics covered include neural coding and decoding, biophysics of single neurons, kinetics and dynamics of synaptic transmission, balanced excitation and inhibition, feed-forward and feedback neural networks, central pattern generators, brain rhythms, orientation selectivity in visual cortex, selective attention, working memory, decision making and executive functions, memory and synaptic plasticity, and reinforcement learning and reward-based choice behavior. MATLAB/Python-based homework and projects provide practical training in important computational methods. Open to undergraduates with permission of the instructor and the director of undergraduate studies. W 3–5:30

PHYS 590b, Responsible Conduct in Research for Physical Scientists  Staff
Required seminar for all first-year students.

PHYS 600a/ASTR 600au, Cosmology  Priyamvada Natarajan
A comprehensive introduction to cosmology at the graduate level. The standard paradigm for the formation, growth, and evolution of structure in the universe is covered in detail. Topics include the inflationary origin of density fluctuations; the thermodynamics of the early Universe; assembly of structure at late times and current status of observations. The basics of general relativity required to understand essential topics in cosmology are covered. Advanced undergraduates may register for the course with permission of the instructor. TTH 4–5:15

PHYS 608b, Quantum Mechanics II  Thomas Appelquist

PHYS 609a, Relativistic Field Theory I  Thomas Appelquist
The fundamental principles of quantum field theory. Interacting theories and the Feynman graph expansion. Quantum electrodynamics including lowest order processes, one-loop corrections, and the elements of renormalization theory. TTH 11:35–12:50

PHYS 610b/APHY 610b, Quantum Many-Body Theory  Leonid Glazman
Second quantization, quantum statistical mechanics, Hartree-Fock approximation, linear response theory, random phase approximation, perturbation theory and Feynman diagrams, Landau theory of Fermi liquids, BCS theory, Hartree-Fock-Bogoliubov method. Applications to solids and finite-size systems such as quantum dots, nuclei, and nanoparticles. TTH 11:35–12:50

PHYS 628a, Statistical Physics II  Leonid Glazman
An advanced course in statistical mechanics. Topics to be covered may include mean field theory of and fluctuations at continuous phase transitions; critical phenomena, scaling, and introduction to the renormalization group ideas; topological phase transitions; dynamic correlation functions and linear response theory; quantum phase transitions;
superfluid and superconducting transitions; some cooperative phenomena in low-dimensional systems. TTH 2:30–3:45

**PHYS 630b, Relativistic Field Theory II**  Walter Goldberger
An introduction to non-Abelian gauge field theories, spontaneous symmetry breakdown, and unified theories of weak and electromagnetic interactions. Renormalization group methods, quantum chromodynamics, and nonperturbative approaches to quantum field theory. MW 11:35–12:50

**PHYS 633b/APHY 633b, Introduction to Superconductivity**  Daniel Prober
The fundamentals of superconductivity, including both theoretical understandings of basic mechanism and description of major applications. Topics include historical overview, Ginzburg-Landau (mean field) theory, critical currents and fields of type ii superconductors, BCS theory, Josephson junctions and microelectronic and quantum-bit devices, and high Tc oxide superconductors. MW 11:35–12:50

**PHYS 634a/APHY 634a, Mesoscopic Physics I**  Michel Devoret
Introduction to the physics of nanoscale solid state systems, which are large and disordered enough to be described in terms of simple macroscopic parameters like resistance, capacitance, and inductance, but small and cold enough that effects usually associated with microscopic particles, like quantum-mechanical coherence and/or charge quantization, dominate. Emphasis is placed on transport and noise phenomena in the normal and superconducting regimes. MW 9–10:15

**Special Topics Courses**

[**PHYS 662b, Special Topics in Particle Physics: Beyond the Standard Model**]

[**PHYS 667b/APHY 667b, Special Topics in Condensed Matter Physics: Quantum Hall Effect and Conformal Field Theory**]

**PHYS 675a/APHY 675a, Principles of Optics with Applications**  Hui Cao
Introduction to the principles of optics and electromagnetic wave phenomena with applications to microscopy, optical fibers, laser spectroscopy, nanophotonics, plasmonics, and metamaterials. Topics include propagation of light, reflection and refraction, guiding light, polarization, interference, diffraction, scattering, Fourier optics, and optical coherence. TTH 11:35–12:50

[**PHYS 677a/APHY 677a, Noise, Dissipation, Amplification, and Information**]

[**PHYS 679a/APHY 679a, Non-linear Optics and Lasers**]

**PHYS 990a and b, Special Investigations**  Faculty
Directed research by arrangement with individual faculty members and approved by the DGS.

**PHYS 991b/ENAS 991b/MB&B 591b, Integrated Workshop**  Lynne Regan, Eric Dufresne, Thierry Emonet, Paul Forscher, Simon Mochrie
This required course for students in IGPPEB involves hands-on laboratory modules with students working in pairs. A biology student is paired with a physics or engineering student; a computation/theory student is paired with an experimental student. The modules are devised so that a range of skills are acquired, and students learn from each other. HTBA
POLITICAL SCIENCE

Rosenkranz Hall, 203.432.5241
www.yale.edu/polisci
M.A., M.Phil., Ph.D.

Chair
Susan Stokes

Director of Graduate Studies
Gregory Huber

Professors  Bruce Ackerman, Akhil Amar (Law), Seyla Benhabib, Paul Bracken (Management), David Cameron, Bryan Garsten, Alan Gerber, Donald Green, Jacob Hacker, Gregory Huber, Stathis Kalyvas, David Mayhew, Barry Nalebuff (Management), Douglas Rae, John Roemer, Susan Rose-Ackerman, Frances Rosenbluth, Nicholas Sambanis, Kenneth Scheve, James Scott, Ian Shapiro, Stephen Skowronek, Steven Smith, Susan Stokes, Alec Stone Sweet, Peter Swenson, Ivan Szelényi (Sociology), John Wargo (Forestry & Environmental Studies), Steven Wilkinson, Elisabeth Wood

Associate Professors  Thad Dunning, Justin Fox, Ellen Lust, Karuna Mantena, Andrew March

Assistant Professors  Christopher Blattman, John Bullock, Daniel Butler, Seok-ju Cho, Alexandre Debs, Samuel DeCanio, Ana De La O Torres, Eitan Hersh, Susan Hyde, Sigrun Kahl, Hélène Landemore, Adria Lawrence, Jason Lyall, Nikolay Marinov, Nuno Monteiro, Paulina Ochoa Espejo, Ato Kwamena Onoma, Eleanor Powell, Jun Saito, Thania Sanchez, Vivek Sharma, Tariq Thachil, Jessica Weiss

Fields of Study

Fields include political theory, international relations, comparative politics, American politics, political economy, quantitative empirical methods, qualitative and archival methods, and formal theory.

Special Admissions Requirement

The department requires that scores from the GRE General Test accompany an application.

Special Requirements for the Ph.D. Degree

Students are required to pass sixteen term courses before the end of their fifth term in the program and to receive a grade of Honors in at least two Political Science courses. The department regularly offers about sixty term courses for graduate students each year. (Yale has two terms each academic year.) Courses are conducted as seminars and typically have small enrollments. Four of the courses required for the degree may be in departments other than Political Science (two of these can be advanced language courses with the approval of the director of graduate studies [DGS]). Students are normally expected to complete eight courses in the first year, including the required Introduction
to the Study of Politics given in the fall term each year, which is graded on a Satisfactory/Unsatisfactory basis.

As part of the second year of courses, all students are required to take the two-term course in Research and Writing, which is devoted to the preparation of a manuscript based on original research on a topic of the student’s choice. The Research and Writing sequence will count as two of the sixteen credits needed to advance to candidacy. Conducted as a seminar, the course includes all second-year students and is directed by two members of the faculty.

Each student must demonstrate elementary reading competence in one foreign language. Such competence is usually demonstrated by taking, or having completed, two years of undergraduate course work or by examination. Alternatively, the language requirement can be satisfied by successfully completing two terms of formal theory or two terms of statistical methods at the graduate level (beyond the introductory course in statistical methods offered in the department).

Courses are offered in five substantive fields—political theory, international relations, comparative politics, American politics, and political economy—and three methods fields: quantitative empirical methods, qualitative and archival methods, and formal theory. Courses taken must include one each in at least three of the department’s substantive fields. Each student must demonstrate competence in three fields (two of which must be substantive fields) before the start of the fifth term. Competence can be demonstrated either by passing the comprehensive examination in the field or by course work, provided that each student takes at least two comprehensive exams. The fields of formal theory and quantitative empirical methods offer certification only through examination. For fields to be certified by course work, students are required to satisfactorily complete three courses in the field, where courses in the field are determined by the faculty and the DGS, including one in which a research paper is written and presented. The paper must be submitted to review by the instructor of the course for which the paper was written. The department offers exams twice a year, in late August and in early January. Students are expected to pass their comprehensive examinations by August of their second year. Each examination is based on a reading list compiled by the faculty within the field and updated each year. Each list offers an introduction and framework for study in the field and preparation for the examination. A committee of faculty within the field grades the exams as Distinguished, Satisfactory, or Unsatisfactory.

In order to be admitted to candidacy for the Ph.D. degree, the student must have a prospectus approved by a dissertation director and two other members of the faculty. This must occur by no later than May 1 of the student’s third year of study.

Students are admitted to candidacy by the end of the third year, but only after completion of all requirements, including the Introduction to the Study of Politics course, Research and Writing, the necessary field distributions and certifications, and approval of the dissertation prospectus.

Those who successfully complete the Ph.D. in Political Science will often join the faculties of colleges and universities. For that reason, learning what is involved in teaching and gaining teaching experience are also essential and central components of graduate education. The department normally expects students to devote themselves exclusively to course work and comprehensive examinations in their first two years in the Ph.D. program. Students in Political Science typically teach in their third and fourth years.
During each year in residence, graduate students are expected to participate actively and regularly in one or more of the many research workshops run by the department. Students beyond their fourth term are required to enroll in at least one of the workshops for credit, and all workshops are graded on a Satisfactory/Unsatisfactory basis. All students are expected to present a research paper of their own at one of these workshops before the end of their fourth year. Workshop participation does not count toward the requirement of sixteen term courses.

The Graduate School offers a combined degree in Political Science and African American Studies. For details, see the entry under African American Studies in this publication. Students may also pursue a joint degree with the Law School.

Master’s Degrees

M.Phil. The academic requirements for the M.Phil. degree are the same as for the Ph.D. degree except for the completion of the dissertation.

M.A. (en route to the Ph.D.) The M.A. degree is awarded upon completion of a full year of course work in the program (i.e., at least eight term courses) with an average of High Pass or better. The courses must include one each in at least three of the department’s substantive fields. A graduate-level course in statistical analysis is also required for the M.A. degree. Language requirements are the same as for the Ph.D. degree.

Program materials are available upon request to the Director of Graduate Studies, Department of Political Science, Yale University, PO Box 208301, New Haven CT 06520-8301.

Courses

EMPIRICAL ANALYSIS AND RESEARCH METHODOLOGY

PLSC 500a, Statistics Daniel Butler
The goal of the course is to introduce basic statistical theory and techniques for Political Science graduate students. The first part of the course covers probability theory, and the second part is devoted to estimation and inference, including an introduction to the classic multiple linear regression framework. Although emphasis is on the development of the relevant theory and statistical concepts, a series of applications and examples is considered on a variety of political science problems, such as turnout, crime, elections, party systems. WF 9–10:15

PLSC 503b, Quantitative Methods Ana De La O Torres
The course provides an extensive treatment of the linear regression model. It covers a wide array of regression techniques, including those that address problems of measurement error, reciprocal causation, and nonlinearities. Time series and pooled time-series-cross-sectional models are also covered. The aim is to make students intelligent consumers of published quantitative research and to prepare them to conduct original research in political science. The course assumes that students have command of the material covered in PLSC 500a, including basic knowledge of probability and linear regression. Matrix algebra and calculus are helpful but not essential. MW 9–10:15
PLSC 504a, Advanced Quantitative Methods  Donald Green
The course covers a wide range of topics in quantitative methodology. The recurrent theme is the challenge of drawing secure causal inferences from data. Topics covered include matching estimators, differences-in-differences estimators, instrumental variable methods, and regression discontinuity analysis. We also introduce maximum likelihood estimation and an array of linear and nonlinear regression applications such as dichotomous and polychotomous response models, models for censored and truncated data, sample selection models, duration models, and models for count data. The broader aim of the course is to provide students with the statistical background necessary to read and conduct quantitative research. The course assumes students have command of the material covered in PLSC 500a and PLSC 503b, including basic probability theory, matrix algebra, and the linear regression model.

PLSC 505a/SOCY 508a, Qualitative Field Research  Elisabeth Wood
In this seminar we discuss and practice qualitative field research methods. The course covers the basic techniques for collecting, interpreting, and analyzing ethnographic data, with an emphasis on the core ethnographic techniques of participant observation and in-depth interviewing. All participants carry out a local research project. Permission of the instructor required for undergraduates. T 3:30–5:20

PLSC 508b, Causal Inference and Research Design  Thad Dunning
This new class exposes advanced graduate students to cutting-edge empirical projects that use strong identification strategies and/or fieldwork to study topics in comparative politics, political economy, international relations, American politics, and other fields. The class features six or seven presentations by visiting speakers (mainly faculty at other universities), who present their research projects. Students engage presenters not just on the data and findings but also on the nuts and bolts of actually doing the work, e.g., the research design process, question selection, identification strategies, measurement decisions, and the role of various qualitative methods. Outside speakers are encouraged to share data in advance so that students can replicate results. When visiting speakers are not present (roughly every other week), lectures and discussions focus on selected methodological topics. Special emphasis is placed on the merger of quantitative and qualitative methods and the use of research design to facilitate causal inference. Prerequisite: students should normally have completed PLSC 500a, 503b, and 504a before taking this course, though exceptions are allowed in consultation with the instructor. TH 3:30–5:20

PLSC 510a, Introduction to the Study of Politics  Ana De La O Torres
The course introduces students to some of the major controversies in political science. We focus on the five substantive themes that make up the Yale Initiative: Order, Conflict, and Violence; Representation and Popular Rule; Crafting and Operating Institutions; Identities, Affiliations, and Allegiances; and Distributive Politics. We divide our time between discussing readings on these subjects and conversations with different members of the faculty who specialize in them. There is also some attention to methodological controversies within the discipline. Requirements: an annotated bibliography of one of the substantive themes and a take-home final exam. M 9:25–11:15
PLSC 512b, **Experimental Methods in Political Science**  Alan Gerber
An introduction to experimental methods as they can be used to study politics. Exploration of strengths and weaknesses of experimental and nonexperimental studies. Applications include the effects of television advertising, formation of political attitudes, and causes of voter turnout. Students participate in the design and implementation of an experiment. Knowledge of introductory statistics helpful but not required.  

M 3:30–5:20

PLSC 517a, **Fundamentals of Modeling**  John Roemer
The course is an introduction to techniques of microeconomic modeling, as applied to problems in political economy and political science. The level is that of a sophisticated course in intermediate microeconomics. Topics include preferences, utility functions, Pareto efficiency, competitive economic equilibrium, the first theorem of welfare economics, Hotelling-Downs political equilibrium, Nash equilibrium, Wittmann-Nash political equilibrium, Nash bargaining, Arrow’s theorem and social welfare functions, and distributive justice. Prerequisites: differential calculus and/or the Political Science Math Camp. Microeconomics at the intermediate level is helpful but not mandatory.  

W 1:30–3:20

PLSC 518b, **Fundamentals of Modeling II**  Seok-ju Cho
Building upon Fundamentals of Modeling I, the course offers a rigorous introduction to noncooperative game theory. The goal of the course is to help students understand the key concepts and ideas in game theory and to provide students with a road map for applying game theoretic tools to their own research. Topics include strategic form games, extensive form games, and Bayesian games, among others. Students are assumed to have mathematical knowledge at the level of the Political Science Math Camp and to have taken Fundamentals of Modeling I or its equivalent.  

TH 9:25–11:15

PLSC 522a/SOCY 503a, **Historical Approaches to the Study of Politics**  Sigrun Kahl
Provides an overview of the how-to, and the payoff, of a historical approach to the study of politics. Covers a wide range of topics, from the classics of political science and sociology up to recent comparative historical work.  

M 3:30–5:20

PLSC 540, **Research and Writing**  Andrew March, Kenneth Scheve
This is a required course for all second-year students. It meets for the first six weeks of the fall term and the first six weeks of the spring term. The fall meetings are devoted to discussion of research design as well as individual student projects. The spring meetings are devoted to discussion of drafts of student papers. The work of the spring-term seminar includes criticism of the organization, arguments, data evaluation, and writing in each student’s paper by the instructors and the other students. Using this criticism, and under the supervision of the instructors, each student conducts additional research, if necessary, rewrites the paper as required, and prepares a final paper representing the best work of which the student is capable. Students must submit a one-page outline of the proposed project for the first fall-term meeting and a complete draft of the paper at the first meeting in the spring.  

M 9:25–11:15

POLITICAL THEORY

PLSC 572a, **Non-Domination as a Political Ideal**  Ian Shapiro
An exploration of the ideal of non-domination as it operates in political theory and argument. Authors discussed include Aristotle, Machiavelli, Nietzsche, Weber, Gaventa,
Foucault, Adorno, Habermas, Sen, Walzer, Young, Skinner, Pettit, and the instructor.
M 3:30–5:20

PLSC 587a, The People Paulina Ochoa Espejo
In a democracy, the people rule, but who constitutes “the people” and what does it mean for them “to rule”? In fact, what is “A People”? This course examines the concept of the people in the history of political philosophy and in contemporary theories of liberalism, democracy, and popular sovereignty. Specifically, we consider the problem of how to constitute the demos in a liberal democratic state, and how this problem relates to debates on the legitimacy of rule, nationalism, cosmopolitanism, immigration, and populism.
M 3:30–5:20

PLSC 604a, European Political Thought from Weber to Derrida Seyla Benhabib
A survey of major themes in twentieth-century continental political thought. Topics include reason and rationalization in modernity; legality, legitimacy, and sovereignty; decline of the public sphere; origins of totalitarianism; and communicative ethics and the inclusion of the “other” in the new Europe. Readings from Max Weber, the Frankfurt school, and Walter Benjamin.
TTH 2:30–3:20

PLSC 606a/CPLT 714a/PHIL 701a, From Weber to Derrida Seyla Benhabib
Topics discussed include modernity and rationalization; science and the problem of values; the concept of public sphere; decisionism and the friend/foe distinction; Heidegger’s ontology and politics; Derrida on cosmopolitanism, and Habermas and Derrida on terror and philosophy. This course can only be taken in conjunction with the lecture course European Political Thought from Weber to Derrida (PLSC 604a), since it is not an independent seminar but the graduate seminar attached to the lecture course. For political science students, this course serves as their Introduction to Contemporary Theory.
W 5–6:50

PLSC 632b/LAW 21676, Persuasion and Politics Bryan Garsten, Paul Kahn, Eugene Garver
A study of select philosophical writings from the history of political thought on the topic of persuasive speech and how it fits into different sorts of political systems, touching on questions about the nature of practical judgment, the roots and character of liberal theory, and the relations between religious, political, and philosophical modes of thinking and argument. Texts to include works by Aristotle, Spinoza, and Hobbes as well as recent books grappling with these issues. Seeking an interdisciplinary approach, the instructors include professors of law, political science, and philosophy. Requirements: class participation, occasional short responses to the readings, and a final paper. Follows Law School academic calendar.
T 4:10–6

PLSC 639a, Advanced Topics in Ancient Political Philosophy Bryan Garsten, Steven Smith
A graduate-level discussion of select texts in the history of Western political philosophy from Thucydides through the Renaissance. We discuss major existing debates about the interpretation and relevance of each author that we study, and consider their later appropriation as well as analyzing their arguments in depth. The course runs concurrently with
the lecture course Modern Political Philosophy, and students are encouraged to attend the lectures. The authors covered in both courses are the same.

**PLSC 640b, Advanced Topics in Modern Political Philosophy**  Bryan Garsten, Steven Smith
A graduate-level discussion of select texts in the history of Western political philosophy from Machiavelli through the twentieth century. We discuss major existing debates about the interpretation and relevance of each author that we study, and consider their later appropriation as well as analyzing their arguments in depth. The course runs concurrently with the lecture course Ancient Political Philosophy, and students are encouraged to attend the lectures. The authors covered in both courses are the same.

**INTERNATIONAL RELATIONS**

**PLSC 594b/HPA 599b/INRL 524b/LAW 21595/PHIL 707b, Global Health Ethics, Politics, and Economics**  Thomas Pogge, Jennifer Ruger
Billions lack access to basic medical care, and global health inequalities are wide and growing. Such radical disparities cast doubt on the justice of supranational institutional arrangements (such as the TRIPS Agreement) and also pose ethical challenges for the global health community, especially international and domestic health and development institutions. Seeking to illuminate the normative issues involved, the course features a series of distinguished visitors, including academics as well as a few important representatives of international organizations, politics, foundations, NGOs, and relevant industries. Follows Law School academic calendar. T 10:10–12

**PLSC 651b, The Balance of Power: Theory and Practice**  Nuno Monteiro
The seminar explores the role of the balance of power in the theory and practice of international relations. We cover the development of different theoretical views on the balance of power as well as the history of the international balance of power since the turn of the twentieth century. The emphasis is analytic rather than historical; we therefore focus on what the balance of power can highlight on recent, post-Cold War events and trends. By the end of the course, students should be conversant with the theoretical aspects of balance-of-power scholarship and also have a broad picture of the historical development of the rise and fall of great powers in the last hundred years. MW 4:30–5:20

**PLSC 655a, Nationalism and Identity**  Keith Darden
Exploration of the formation of national identity and the expression of nationalist sentiments through ethnic parties, autonomy movements, resistance to occupation, and warfare. Particular focus on Europe and post-Soviet Eurasia.

**PLSC 658a, International Institutions**  Nikolay Marinov
The role of international institutions in structuring cooperation between nations. Emphasis is both theoretical — on the theory of cooperation — and empirical, with examples drawn from the post-WWII world order. M 1:30–3:20

**PLSC 660a, Religion and War**  Vivek Sharma
This seminar is intended for graduate students and a select few undergraduates interested in exploring problems of religion and war in a broad comparative historical framework with perspectives from history, political science, and sociology.
PLSC 662a\textsuperscript{c}/INRL 592a/MGT 586a, Strategy, Technology, and War  Paul Bracken
The interrelationship of strategy, foreign policy, and technology has shaped international relations from Napoleon to the global information grid. Transformations arise from political change and technological advance. Topics include the role of “big” military organizations in the United States, Europe, and Asia; organizing for defense and intelligence; arms control; and the challenge of a second nuclear age. TTH 11:35–12:50

PLSC 667b\textsuperscript{b}, The Causes of War  Keith Darden
Examination of classical and contemporary theories of the causes of war. Consideration of historical cases that spawned such theories, including the Peloponnesian War, the Thirty Years’ War, and World Wars I and II.

PLSC 668a\textsuperscript{b}, International Dimensions of Democratization  Nikolay Marinov
The current wave of democratizations around the world leads us to investigate the role played by international factors such as socialization, coercion, emulation. The main question of interest is how much democratic processes can be affected from the outside. M 3:30–5:20

PLSC 674b\textsuperscript{b}, Military Power  Nuno Monteiro
The seminar explores the foundations, applications, evolution, and limits of military power. We read the main foundational text on the topic—Clausewitz’s \textit{On War}—and pair it with contemporary readings that complement it on the several aspects referred above. By the end of the course, students should have a general grasp of the main questions pertaining to the use of military power and its relation to international and domestic politics. T 3:30–5:20

PLSC 679b, International Relations Field Seminar  Nicholas Sambanis
The course examines theories of international relations and evaluates empirical evidence in favor of or against those theories. The course surveys the main theoretical traditions in international relations and considers how empirical methods can be used to identify causation in the international relations field. Students acquire broad familiarity with the diverse literature in this field, learn to identify opportunities for new research, and apply rigorous methodology to evaluate theoretical claims. The course is designed for students who plan to pursue doctoral-level research in international relations and want to pass the Ph.D. qualifying exam in the field. T 1:30–3:20

PLSC 683b\textsuperscript{b}, Europe, the United States, and the Iraq Crisis  Jolyon Howorth
Examination of the contrasting relations between the main European powers and the United States in their approaches to Iraq, in order to understand the divisions that attended the 2003 War and subsequent transfer of sovereignty. Topics include the Iran-Iraq War (1980–88), the first Persian Gulf crisis (1990–91), the sanctions regime (1991–2002), and the problems of peacekeeping and nation-building. M 1:30–3:20

PLSC 715b/HIST 985b/MGT 984b, Studies in Grand Strategies, Part I  
John Gaddis, Paul Kennedy, Charles Hill
This two-term course begins in January with readings in classical works from Sun Tzu to Clausewitz to Kissinger. Students identify principles of strategy and examine the extent to which these were or were not applied in historical case studies from the Peloponnesian War to the post-Cold War period. During the summer students undertake research
projects or internships designed to apply resulting insights to the detailed analysis of a particular strategic problem or aspect of strategy. Written reports are presented and critically examined early in the fall term. Students must take both terms, fulfill the summer research/internship, and attend additional lectures to be scheduled throughout the spring and fall terms. Admission is by competitive application only; deadline is early November. Please visit www.yale.edu/iss/gs for application information. M 3:30–5:20

PLSC 716a/HIST 985a/MGT 984a, Studies in Grand Strategies, Part II
John Gaddis, Paul Kennedy, Charles Hill
Part II of the two-term linked seminar offered during the calendar year 2010. Research seminar. M 3:30–5:20

COMPARATIVE POLITICS

PLSC 714b/LAW 21042, Corruption, Economic Development, and Democracy
Susan Rose-Ackerman
A seminar on the link between political and bureaucratic institutions, on the one hand, and economic development, on the other. A particular focus is the impact of corruption on development and the establishment of democratic government. Enrollment limited to fifteen. T 2:10–4

PLSC 727a/b/F&ES 853a/INRL 680a/b/MGT 697a, Capitalism: Success, Crisis, and Reform
Douglas Rae
Examination of capitalism as it functions in practice, with extensive use of business cases. The role of capitalism in generating wealth and innovation unprecedented in history. Negative consequences of capitalist development such as radical inequality, disruption of the natural environment, and intermittent social crises. MW 1:30–2:20, 1 HTBA

PLSC 734a,b/SOCY 560a,b, Comparative Research Workshop
Sadia Saeed
This workshop is a weekly interdisciplinary seminar dedicated to group discussion of work-in-progress by distinguished visiting scholars, Yale graduate students, and in-house faculty from various social science disciplines. Papers are distributed a week ahead of time and also posted at the Web site of the Center for Comparative Research (www.yale.edu/ccr). Students who take the course for a letter grade are expected to present a paper-in-progress the term that they are enrolled for credit. HTBA

PLSC 736b, Formal Models of Comparative Politics
Thad Dunning
We discuss recent formal models of the determinants of democracy and autocracy, as well as the causes and consequences of electoral rules. The focus throughout is on the substantive insights provided by analytic models of these political phenomena, yet we spend substantial time discussing technical aspects of the models. One goal is to become better consumers and critics as well as producers of formal work and to learn modeling techniques through the study of leading applications. A previous course in game theory (such as Fundamentals of Modeling I or II) and some math background at the level of undergraduate calculus is recommended. W 9:25–11:15

PLSC 741a, Armed Groups and Violence Patterns
Elisabeth Wood
Characteristics of armed organizations such as state militaries, police forces, insurgent groups, secessionist movements, and terrorist organizations. The patterns of political
violence used by these groups. Readings from political science, history, anthropology, and sociology. W 3:30–5:20

**PLSC 756au, The European Union**  David Cameron

An examination of the origins, development, institutions, contemporary policy-making processes, and challenges facing the European Union. Topics include theories of European integration, the creation of a single internal market, the creation of an Economic and Monetary Union, the several enlargements, the contemporary role of the Union in economic policy, justice and home affairs, and foreign and defense policy, efforts to address the so-called democratic deficit in the Union, and the recent negotiation of a constitutional treaty. T 3:30–5:20

**PLSC 758au, Political Parties in the Developing World**  Tariq Thachil

Political parties are routinely described as ineffective, unresponsive, and corrupt. Yet they are vital players in both democratic and nondemocratic regimes across the globe. Parties are essential for several basic political functions, ranging from representing societal interests, providing political alternatives, mobilizing voting publics, and even maintaining social control. It is thus essential for any serious student of democracy to understand how political parties emerge and function. This course seeks to introduce students to the big questions surrounding parties and party systems, with an emphasis on the non-Western world. It examines how different kinds of parties form, the various ways in which they seek to forge linkages with ordinary citizens, and the effect of their competition on democratic institutions. The readings examine a variety of parties, from those that led independence movements, to those that represent particular ethnic groups or religious ideology. Examples are drawn from countries in Latin America, Asia, the Middle East, and sub-Saharan Africa. T 3:30–5:20

**PLSC 760au, India and Pakistan: Democracy, Conflict, and Development**  Steven Wilkinson

Introduction to important ideas and events that shaped the development of South Asia in the nineteenth and twentieth centuries. Focus on the role of key thinkers in grappling with problems and issues that continue to be important today. Topics include coping with ethnic and religious difference, caste, social inequality, the role of government in economy and society, and ways to improve institutions. T 1:30–3:20

**PLSC 764b, Civil Wars**  Stathis Kalyvas

This is a seminar about cutting-edge research on civil wars, violent ethnic conflict, and the dynamics of violence. We read recent and forthcoming work as well as older pieces, and discuss various approaches and methods. Although the readings include some historical material and a few case studies, the emphasis is analytical and theoretical. This seminar also aims to address questions of research design in comparative politics, with a particular emphasis on conceptually ambiguous phenomena and data-poor environments.

**PLSC 773au, Identities**  Ato Kwamena Onoma

The seminar explores the following questions: How are identities formed? How do they evolve over time? How are they deployed in political economic life? Why are some identities more salient than others? T 1:30–3:20
PLSC 777a, Comparative Politics I: Research Design  Thad Dunning
This course, the first in the yearlong introduction to the study of comparative politics for Ph.D. students in political science, examines the purpose and methodology of comparative inquiry. Designed to introduce students to the study of comparative politics and to assist students in developing research topics and strategies, the course explores key themes—the origins of political regimes, the building of nations and states, ethnicity and nationalism, collective action, the politics of welfare states, and the logic of institutional change—through the critical reading and discussion of classic and contemporary works. T 9:25–11:15

PLSC 778b, Comparative Politics II  Susan Stokes
The second part of a two-part sequence designed to introduce graduate students to the fundamentals of comparative politics, including the major debates, topics, and methods.

PLSC 779a/ANTH 541a/F&ES 836a/HIST 965a, Agrarian Societies: Culture, Society, History, and Development  James Scott, Michael McGovern, Kalyanakrishnan Sivaramakrishnan
An interdisciplinary examination of agrarian societies, contemporary and historical, Western and non-Western. Major analytical perspectives from anthropology, economics, history, political science, and environmental studies are used to develop a meaning-centered and historically grounded account of the transformations of rural society. Team-taught. M 1:30–5:20

POLITICAL ECONOMY
PLSC 713bu, Political Economy of Taxation  Kenneth Scheve
The course examines the politics and economics of taxation in historical and comparative perspective. Why do some countries tax more than others? What determines the capacity of states to tax? What accounts for variation across time and across countries in the types of taxes used to fund the state? What are consequences of tax policy for economic growth and inequality? How do these consequences affect the politics of taxation? What normative theories inform ideas about the fairness of tax regimes? How do these ideas influence the politics of taxation and policy outcomes? The course approaches these questions by examining alternative theoretical approaches and evaluates these theories using historical and contemporary evidence. T 3:30–5:20

PLSC 725a/ECON 790a, Political Economy  Marco Battaglini, Mikhail Golosov
Political competition in democracies is party competition. We develop, from the formal viewpoint, theories of party competition in democracies. We develop a theory in which parties (1) compete over several issues, not just one issue as in A. Downes; (2) are uncertain about how citizens respond to platforms; and (3) represent interest groups in the population. Applications, particularly to the theory of income distribution and tax. HTBA

AMERICAN POLITICS
PLSC 800a, Introduction to American Politics  David Mayhew
An introduction to the analysis of U.S. politics. Approaches given consideration include institutional design and innovation, social capital and civil society, the state, attitudes, ideology, econometrics of elections, rational actors, formal theories of institutions, and
transatlantic comparisons. Assigned authors include R. Putnam, T. Skocpol, J. Gerring, J. Zaller, D.R. Kiewiet, L. Bartels, D. Mayhew, K. Poole & H. Rosenthal, G. Cox & M. McCubbins, K. Krehbiel, E. Schickler, and A. Alesina. Students are expected to read and discuss each week’s assignment and, for each of five weeks, to write a three- to five-page analytic paper that deals with a subject addressed or suggested by the reading.

T 1:30–3:20

PLSC 801a, Political Preferences and American Political Behavior  
John Bullock
Introduction to research methods and topics in American politics. Focus on ideas about choice that are useful for the study of politics. Topics include utility theory, heuristics and biases, proximity vs. directional voting, Bayesian updating, retrospective voting, priming and framing, the role of emotion, and the consequences of political ignorance. 

M 1:30–3:20

PLSC 802b, Collective Action and Choice  
Alan Gerber
A graduate-level course, open to undergraduates, about the basic issues of collective action and choice (preference aggregation), with a particular focus on issues of American politics. Topics include externalities and public goods provision, social choice theory, models of electoral competition (including “median voter” models, and extensions to those models that incorporate strategic challenger entry, campaign spending, heterogeneity in voter attentiveness, valence dimensions, and primaries, etc.), the effects of different institutional settings (e.g., competitive versus retention elections) on choices, the incumbency advantage, lobbying, and decision-making in small groups (e.g., issues of deliberation). Course work includes reading and writing assignments. The course meets for the first six weeks of the spring term at the time assigned to PLSC 802b and PLSC 803b.

M 1:30–3:20

PLSC 803b, American Political Institutions  
Daniel Butler
A graduate-level course, open to undergraduates, designed to introduce students to research on American political institutions. We examine different explanations for and models of the sources of institutions, discuss their internal organization and governance, and consider the effects of institutions on outcomes of interest. Particular topics include alternatives to institutions, agenda-setting models, influences on bureaucratic decisions, the size of government and state building, congressional organization, the presidency, policy feedback and path dependence, and interest groups. Course work includes reading and writing assignments. While this course builds on material covered in 801a and 802b, it is a stand-alone course without any prior requirements. The course meets for the second six weeks of the spring term at the time assigned to PLSC 802b and PLSC 803b.

W 1:30–3:20

PLSC 804b, Empirical Research Strategies in the Study of American Political Behavior and Institutions  
Donald Green
The aim of the course is to expose students to the challenge of drawing secure causal inferences about political behavior and institutions. We give a close, critical reading to journal articles in various literatures, among them prejudice, political participation, and agenda setting. Students write a research paper in which they identify and estimate an interesting causal relationship.
PLSC 827b, Politics, Law, and Economics of Affirmative Action  Ian Shapiro, Michael Graetz
An exploration of the politics, law, and economics of affirmative action, principally in the United States. M 1:30–3:20

PLSC 828b, American Political Development  Stephen Skowronek
An examination of patterns of political change and institutional development in the United States. The course considers patterns of reform, the political construction of interests and movements, problems of political culture, party-building, and state-building. W 3:30–5:20

PLSC 840b/LAW 21576, The Crisis of Twenty-First-Century Constitutionalism  Bruce Ackerman

PLSC 842b/LAW 21046, The Constitution: Philosophy, History, and Law  Bruce Ackerman
An inquiry into the foundations of the American Constitution, at its founding and at critical moments in its historical transformation—most notably in response to the Civil War, the Great Depression, and the Civil Rights Movement. Philosophically speaking, do we still live under the Constitution founded by the Federalists, or are we inhabitants of the Second or Third or Nth Republic? Institutionally, in what ways are the patterns of modern American government similar to, and different from, those in post-Revolutionary (1787–1860) and post-Civil War (1868–1932) America? Legally, what is or was the role of constitutional law in the organization of each of these historical regimes? Through asking and answering these questions, the course tries to gain a critical perspective on the effort by the present Supreme Court to create a new constitutional regime for the twenty-first century. HTBA

PLSC 853a, U.S. National Elections  David Mayhew, Eitan Hersh
A research seminar centering on presidential and congressional elections. Topics include electoral realignments, current presidential alignments, the electoral college, voter turnout, aggregate House election patterns, House incumbency advantage, challenger quality, career decisions, election laws, House and Senate constituencies, campaign finance, Senate elections, and divided party control. Assigned authors include R. Erikson, E. Tufte, G. Jacobson, A. Abramowitz, M. Fiorina, R. Wolfinger, E. Ladd, G. King, J. Snyder, and B. Grofman. Students are expected to read weekly assignments and write a twenty- to thirty-page research paper. W 1:30–3:20

RESEARCH WORKSHOPS

PLSC 919, American Politics Workshop  John Bullock
The course meets throughout the year in conjunction with the ISPS American Politics Workshop. It serves as a forum for graduate students in American politics to discuss current research in the field as presented by outside speakers and current graduate students. Can be taken as Satisfactory/Unsatisfactory only. W 12–1:30

PLSC 920, Comparative Politics Workshop  Stathis Kalyvas
A forum for the presentation of ongoing research by Yale graduate students, Yale faculty, and invited external speakers in a rigorous and critical environment. The workshop's
methodological and substantive range is broad, covering the entire range of comparative politics. There are no formal presentations. Papers are read in advance by participants; a graduate student critically discusses the week’s paper, the presenter responds, and discussion ensues. The workshop faculty director is Stathis Kalyvas (stathis.kalyvas@yale.edu). Detailed information can be found at www.yale.edu/cpworkshop. Can be taken as Satisfactory/Unsatisfactory only. T 12–1:30

**PLSC 921, Political Theory Workshop**  Andrew March

The Political Theory Workshop is an interdisciplinary forum that focuses on theoretical and philosophical approaches to the study of politics. The workshop seeks to engage with (and expose students to) a broad range of current scholarship in political theory and political philosophy, including work in the history of political thought; theoretical investigations of contemporary political phenomena; philosophical analyses of key political concepts; conceptual issues in ethics, law, and public policy; and contributions to normative political theory. The workshop features ongoing research by Yale faculty members, visiting scholars, invited guests, and advanced graduate students. Papers are distributed and read in advance, and discussions are opened by a graduate student commentator. The workshop faculty director is Andrew March (andrew.march@yale.edu). Detailed information can be found at www.yale.edu/isps/seminars/politheo/index.html. Can be taken as Satisfactory/Unsatisfactory only. W 4:15–5:45

**PLSC 922, Order, Conflict, and Violence (OCV) Seminar Series**  Stathis Kalyvas

The OCV seminar series focuses on processes related to the emergence and breakdown of order. The key assumption is that understanding and studying these processes requires better theoretical and empirical foundations and calls for challenging existing disciplinary and methodological divides. The seminar series is, therefore, dedicated to the presentation of cutting-edge work from all social science disciplines and includes the presentation of ongoing research by Yale graduate students. The faculty director is Stathis Kalyvas (stathis.kalyvas@yale.edu) and the coordinator for 2011–2012 is Anne Nguyen. Detailed information can be found at www.yale.edu/macmillan/ocvprogram. Can be taken as Satisfactory/Unsatisfactory only. W 6–8

**PLSC 924, Leitner Political Economy Seminar Series**  Kenneth Scheve, Thad Dunning

The Leitner Political Economy Seminar Series engages research on the interaction between economics and politics as well as research that employs the methods of political economists to study a wide range of social phenomena. The workshop serves as a forum for graduate students and faculty to present their own work and to discuss current research in the field as presented by outside speakers, faculty, and students. The faculty directors are Thad Dunning and Kenneth Scheve. Detailed information can be found at www.yale.edu/leitner/seminars.html. Can be taken as Satisfactory/Unsatisfactory only. M 12–1:30

**PLSC 926, International Relations Workshop**  Nicholas Sambanis

The International Relations Workshop engages work in the fields of international security, international political economy, and international institutions. The forum attracts outside speakers, Yale faculty, and graduate students. It provides a venue to develop ideas,
polish work-in-progress, or showcase completed projects. Typically, the speaker would prepare a 35- to 40-minute presentation, followed by a question-and-answer session. The workshop faculty director is Nicholas Sambanis. More information can be found at www.yale.edu/polisci/conferences/ir.html. Can be taken as Satisfactory/Unsatisfactory only. W 12–1:30

**PLSC 990, Directed Reading**
By arrangement with individual faculty.
PSYCHOLOGY

Kirtland Hall, 203.432.4500
www.yale.edu/psychology
M.S., M.Phil., Ph.D.

Chair
Susan Nolen-Hoeksema (203.432.0699, susan.nolen-hoeksema@yale.edu)

Director of Graduate Studies
To be announced

Professors  Woo-kyoung Ahn, Stephen Anderson (Linguistics), Amy Arnsten (Neurobiology), John Bargh, Sidney Blatt (Psychiatry), Paul Bloom, Thomas Brown, Kelly Brownell, Marvin Chun, Margaret Clark, Ravi Dhar (School of Management), John Dovidio, Carol Fowler (Haskins Laboratories), Robert Frank (Linguistics), Donald Green (Political Science; ISPS), Marcia Johnson, Alan Kazdin, Frank Keil, Marianne LaFrance (Women’s, Gender & Sexuality Studies), Lawrence Marks (Epidemiology & Public Health), Gregory McCarthy, Susan Nolen-Hoeksema, Donald Quinlan (Psychiatry), Peter Salovey, Brian Scholl, Fred Volkmar (Child Study Center), Victor Vroom (School of Management), Allan Wagner, Karen Wynn

Associate Professors  Walter Gilliam (Child Study Center), Jeremy Gray, Elena Grigorenko (Child Study Center), Jeannette Ickovics (Epidemiology & Public Health), Joan Kaufman (Psychiatry), Robert Kerns (Veterans Administration Medical Center), Ami Klin (Child Study Center), Linda Mayes (Child Study Center), Nathan Novemsky (School of Management), Maria Piñango (Linguistics), Laurie Santos, Glenn Schafe, Mary Schwab-Stone (Child Study Center), Jane Taylor (Psychiatry)

Assistant Professors  June Gruber, Julia Kim-Cohen, Jaime Napier, Kristina Olson

Lecturers  Nancy Close, Nelson Donegan, Carla Horwitz, David Klemanski, Kristi Lockhart, Michael Pantalon, Benjamin Toll

Fields of Study
Fields include behavioral neuroscience; clinical psychology; cognitive psychology; developmental psychology; social/personality psychology.

Special Admissions Requirement
The department requires that scores from the GRE General Test accompany an application.

Special Requirements for the Ph.D. Degree
In order to allow each student to be trained in accordance with his or her own interests and career goals, the general requirements of the department are kept to a minimum. The formal requirements are: (1) Course work selected to meet the individual’s objectives with a minimum of three basic-level courses and one course in data analysis. Two of the
three required basic-level courses must be in two different areas of psychology outside the student’s main area of concentration. The basic-level course requirement must be completed by the end of the second year. Students must attain an Honors grade in at least two term courses by the end of the second year of study. (2) Nine units of teaching are required in years two through four. (3) Completion of a First-Year Research Paper due by May 1 of the second term. (4) Completion of a predissertation research project, to be initiated not later than the second term and completed not later than May 1 of the second year. Certification of this research project as well as performance in course work and other evidence of scholarly work at a level commensurate with doctoral study, as judged by the faculty, are necessary for continuation beyond the second year. (5) Submission of a dissertation prospectus, and a theme essay that demonstrates the candidate’s comprehensive knowledge and understanding of the area of concentration. Certification of the theme essay completes the qualifying examination. (6) Approval of the dissertation by an advisory committee and the passing of an oral examination on the dissertation and its general scientific implications. The theme essay and the dissertation prospectus are completed during the third year. Students are then formally admitted to Ph.D. candidacy. There are no language requirements.

The faculty considers teaching to be an essential element of the professional preparation of graduate students in Psychology. For this reason participation in the Teaching Fellow Program is a degree requirement for all doctoral students. They are expected to serve as teaching fellows for a total of nine teaching fellow units over the course of the second through fourth years in the program. Opportunities for teaching are matched as closely as possible with students’ academic interests.

Combined Ph.D. Program

A combined Ph.D. degree with African American Studies is available. Students must apply to the African American Studies department with Psychology as the secondary department. Consult departments for details.

Master’s Degrees

**M.Phil.** The academic requirements for the M.Phil. degree are the same as for the Ph.D. degree except for the submission of a prospectus, a dissertation area review, and the completion and defense of a dissertation, which define the Ph.D.

**M.S. (en route to the Ph.D.)** The M.S. degree is awarded upon satisfactory completion of the second year of the program leading to the Ph.D. degree and also of the departmental predissertation research requirement.

Program materials are available online at www.yale.edu/psychology.

Courses

[PSYC 501b, Social Cognitive Development]

[PSYC 504au, Neurobiology of Emotion]

[PSYC 505a, Stereotyping and Prejudice]
[PSYC 506b/LING 540b], Computational Models in Cognitive Science

[PSYC 509a, Social Cognition]

[PSYC 510b], Thinking

[PSYC 511b, Cognitive Development]

[PSYC 514a], Topics in Infant Studies

PSYC 518a, Multivariate Statistics  John Dovidio
Introduction to the analysis of quantitative data from experiments—primarily the analysis of variance and contrast analyses. Some coverage of correlation and regression. Required of first-year students except with instructor’s permission. MWTH 1:30–2:20

[PSYC 521b], Multivariate Statistics with Observable Variables

[PSYC 522a], Mapping the Human Brain

PSYC 523a, Cognitive Neuroscience  Jeremy Gray
MW 1–2:15

PSYC 526a, Research Methods in Human Neuroscience  Gregory McCarthy
This laboratory course provides students with experience in the major methods used in human neuroscience research. The focus is on functional magnetic resonance imaging, electroencephalography, and evoked potentials. Psychophysiological techniques such as the measurement of skin conductance are also covered, but in less detail. Students acquire a firm understanding of each technique, and design experiments, acquire data, and perform analyses. The course makes extensive use of MATLAB. F 12–4

PSYC 531a, Psychopharmacology  Thomas Brown
The purpose of this course is to provide an overview of pharmacological principles and the properties of psychoactive drugs. Background is furnished on neuroanatomy and neurophysiology. Topics include therapies for neurological and psychiatric disorders as well as drugs of abuse. Special attention is paid to the molecular, cellular, and physiological mechanisms of drug effects. TTH 2:30–3:45

PSYC 543a, Motivation  John Bargh
Classic and contemporary approaches to human motivation are reviewed and discussed in seminar format. Emphasis is on modern cognitive and neuroscience approaches to motivational dynamics, as well as the relations and interplay between motivation and other basic mental systems such as affect, emotion, and social perception. W 2:30–3:45

PSYC 544b, Computational Neuroscience  Xiao-Jing Wang
HTBA
PSYC 553a/MGMT 753a, Behavioral Decision Making I  Nathan Novemsky, Ravi Dhar, Joseph Simmons
The seminar examines research on the psychology of decision making, focusing on judgment. Although the normative issue of how decisions should be made is relevant, the descriptive issue of how decisions are made is the main focus of the course. Topics of discussion include judgment heuristics and biases, confidence and calibration, issues of well-being including predictions and experiences, regret and counterfactuals. The goal of the seminar is threefold: to foster a critical appreciation of existing knowledge in behavioral decision theory, to develop the students’ skills in identifying and testing interesting research ideas, and to explore research opportunities for adding to that knowledge. Students generally enroll from a variety of disciplines including cognitive and social psychology, behavioral economics, finance, marketing, political science, medicine, and public health.

PSYC 556b, Developmental Psychopathology  Julia Kim-Cohen
The course provides an overview of the theoretical and empirical literature in the field of developmental psychopathology. Psychopathology is studied as a series of models of atypical development that can elucidate underlying mechanisms of stability and change. Although emphasis is placed on the causes and correlates of child and adolescent psychopathology, continuities and discontinuities in psychopathology across the lifespan are also covered. Readings include epidemiological, experimental, neurobiological, psychosocial, and ecological perspectives. Theoretical, methodological, and clinical implications of empirical findings are discussed. T 2:30–4:20

PSYC 557a, Social and Emotional Relationships  Margaret Clark
The course focuses on determinants of initial attraction and interpersonal processes that serve to promote and detract from high-quality relationships, together with individual differences and how they relate to those processes. Initial sessions focus on ways of conceptualizing attraction and relationships. The remaining sessions (constituting the bulk of the course) are organized around the theories that have organized the empirical research in this field including evolutionary approaches, interdependence theory, attachment theory, and self-evaluation maintenance theory. Grades are based on participation in the seminar and on three written assignments linked to the material covered in each third of the class. Each assignment can take the form either of answering a set of distributed questions that require knowledge of the material covered but also require going beyond that material to explore some implications of the work, or proposing a specific study relating to the material covered but also going beyond that material in some way. T 9:25–11:15

PSYC 575b, Brain and Behavior
PSYC 582b/NBIO 582b/NSCI 582b/PHYS 582b, Introduction to Computational Neuroscience  Xiao-Jing Wang
The course is designed both for students in neuroscience and for those in other fields (physics, mathematics, and engineering) interested in understanding how the brain works from a systems/computational perspective. The lectures introduce basic concepts and models in the field. Topics covered include neural coding and decoding, biophysics of
single neurons, kinetics and dynamics of synaptic transmission, balanced excitation and inhibition, feed-forward and feedback neural networks, central pattern generators, brain rhythms, orientation selectivity in visual cortex, selective attention, working memory, decision making and executive functions, memory and synaptic plasticity, and reinforcement learning and reward-based choice behavior. MATLAB/Python-based homework and projects provide practical training in important computational methods. Open to undergraduates with permission of the instructor and the director of undergraduate studies. W 3–5:30

[PSYC 607bU, Cognitive Science of Causality]

PSYC 608bU, Cognitive Science of Ignorance  Frank Keil
Examination of how adults and children make sense of the artificial and natural world with incomplete knowledge and understanding. Topics include: awareness of one’s knowledge limits, mistakes in understanding, gullibility and cynicism, deference, the division of cognitive labor, knowledge management, and science literacy. M 1:30–3:20

[PSYC 610aU, The Modern Unconscious]
[PSYC 611bU, What We Eat and Why]
[PSYC 613aU, Mind, Brain, and Society]
[PSYC 615a, Psychology, Psychotherapy, History, Systems, and Practice]
[PSYC 618aU, The Social Brain]
[PSYC 619aU, Food Policy and Science]
[PSYC 621bU, Cognitive Science of Pleasure]
[PSYC 623bU, Cognitive Science of Good and Evil]
[PSYC 624bU, The Psychology of Legitimacy]
[PSYC 625bU, Social Perception]

PSYC 627a, Topics in Infant Studies  Karen Wynn
The course investigates selected advanced topics in infant cognitive, social, and/or emotional development. The topic varies from year to year. Some examples are: infants’ concept of object, concept of number, early social cognition, and early emotional development. TH 2:30–4:20

[PSYC 632bU, Food and the Brain]

PSYC 648b/NSCI 648b, Cellular Analysis of Learning and Memory: Vertebrate Model Systems  Glenn Schafe
We focus on the brain circuitries and cellular/molecular mechanisms involved in learning and memory, with particular emphasis on vertebrate model systems. Review of work on habituation, sensitization, Pavlovian and instrumental conditioning, and declarative memory formation. TH 1:30–3:20

[PSYC 650aU/LING 660aU, Topics in Syntax: The Mental Lexicon]
PSYC 654b, Sensory Information Processing

PSYC 657a/CDE 505a, Social and Behavioral Foundations of Health
Jeannette Ickovics
The course provides students with an introduction to social and behavioral science issues that influence patterns of health and health care delivery. The focus is on the integration of biomedical, social, psychological, and behavioral factors that must be taken into consideration when public health initiatives are developed and implemented. The course emphasizes the integration of research from the social and behavioral sciences with epidemiology and biomedical sciences. T 1–2:50

PSYC 664a/CDE 531a, Health and Aging
Becca Levy
Since 1900 the number of individuals aged sixty-five and older has tripled and life expectancy has increased by about thirty years. The course examines some of the health issues related to this growing segment of the population. Class discussions address such questions as: How does the aging process differ between cultures? What kinds of interventions can best reduce morbidity in old age? How can health policy adapt to the aging populations? The course integrates psychosocial and biomedical approaches.

PSYC 670b, Personality and Individual Differences
Michael Pantalon
We focus on the second level of study described in this well-known quote: “Every person is in certain respects (a) like all other people, (b) like some other people, (c) like no other person” (H. A. Murray and C. Kluckhohn, 1953). Particular emphasis is placed on personality, or a person’s dynamic and unique set of characteristics that influence what he/she does, thinks, and feels. We seek to distinguish an individual differences approach to psychology from the more common study of group effects (e.g., randomized controlled trials of the effectiveness of psychotherapy) by emphasizing dimensions shared by all individuals but upon which individuals differ. TH 9:25–11:15

PSYC 684a, Introduction to Psychotherapy: Technique
Faculty
Introduction to basic clinical skills and clinical issues. Topics for discussion include developing a therapeutic relationship, barriers to effective communication, strategies for managing resistance, and developing a professional identity. Class format includes informal discussion, assigned readings, and student case presentations. Prerequisite: permission of the instructor. Enrollment limited to fifteen. HTBA

PSYC 684b, Introduction to Psychotherapy: Technique
Faculty
The focus of the seminar is on formulating and conceptualizing psychological problems from a cognitive-behavioral perspective. Special consideration is paid to individual and cultural diversity in conceptualizing cases and planning treatment. Also discussed are ways in which cognitive-behavioral perspectives can be integrated with other theoretical orientations (e.g., interpersonal theory, experiential therapy). HTBA

PSYC 689a, Psychopathology and Diagnostic Assessment
David Klemanski
Didactic practicum for first-year clinical students. Main emphasis is initial assessment. Treatment planning and evaluation of progress also covered. Students first observe and then perform initial interviews. Applicable ethics and local laws reviewed. HTBA
PSYC 690b, Ethics and Clinical Practice: Legislation and Diversity Issues
David Klemanski
Introduction to ethical and legal guidelines for clinical practice. In addition, supervision on diagnostic interview using the Structured Clinical Interview for DSM-IV is provided. HTBA

PSYC 702, Current Work in Cognition  Marcia Johnson
A weekly seminar in which students, staff, and guests report on their research in cognition and information processing. T 11:35–12:50

PSYC 704, Current Work in Behavioral Neuroscience  Thomas Brown
An informal student/faculty seminar in which each participant chooses, lays groundwork for, and presents some current work in behavioral neuroscience. Currently emphasizes the psychobiology of learning, but involves a variety of research approaches, designs, and methods. F 12–1:15

PSYC 708, Current Work in Developmental Psychology  Faculty
A luncheon meeting of the faculty and graduate students in developmental psychology for reports of current research and discussion on topics of general interest. W 11:35–12:50

PSYC 710, Current Work in Social Psychology and Personality  Faculty
Faculty and students in personality/social psychology meet during lunchtime to hear about and discuss the work of a local or visiting speaker. M 11:35–12:50

PSYC 711, Current Work in Child Development and Social Policy  Walter Gilliam, Edward Zigler, Sandra Bishop-Josef
A series of lectures by guest speakers from academia, various levels of government, community organizations, service agencies, the business world, and the media. Speakers discuss their work and its social policy implications. Topics may include early childhood education, child care, intervention programs for children and families, education reform, mental health, child and family policies, research at the intersection of psychology and social policy, and media presentation of child and family issues, among others. F 10:35–12:25

PSYC 720, Current Work in Clinical Psychology  Kelly Brownell
Basic and applied current research in clinical and community psychology is presented by faculty, visiting scientists, and graduate students, and examined in terms of theory, methodology, and ethical and professional implications. TH 11:35–12:50

PSYC 721, Research Topics in Infant Cognition  Karen Wynn
Investigation of various topics in infant cognition: early mechanisms for representing and reasoning about number; infants’ ability to represent time; early object knowledge; foundations of intentional understanding. Prerequisite: permission of the instructor. HTBA

PSYC 722, Research Topics in Food, Nutrition, and Obesity  Kelly Brownell
In-depth discussion and analysis of current research topics on bulimia, anorexia nervosa, and obesity. Topics include, but are not limited to, physiology, cultural influences, treatment studies, body image, binge eating, and epidemiology. HTBA
PSYC 723, Research Topics in Child and Adolescent Therapy  Alan Kazdin
The course focuses on the development and execution of research related to child and adolescent treatment, and the factors with which clinical dysfunction and therapeutic change are associated.

PSYC 725, Research Topics in Human Neuroscience  Gregory McCarthy
Discussion of current and advanced topics in the analysis and interpretation of human neuroimaging and neurophysiology. HTBA

PSYC 726, Research Topics in Mood Regulation and Mental Health  Susan Nolen-Hoeksema
We discuss a range of topics related to mood regulation and psychological disorders, including models of depression, anxiety, and related disorders. We also discuss how gender impacts vulnerability to emotional problems, and how gender-related factors may serve to protect against certain types of psychopathology. HTBA

PSYC 729, Research Topics in Language and Cognition  Paul Bloom
Seminar focusing on ongoing research projects in language, cognition, and development. Prerequisite: permission of the instructor. HTBA

PSYC 731, Research Topics in Cognition and Development  Frank Keil
A weekly seminar discussing research topics concerning cognition and development. Primary focus on high-level cognition, including such issues as the nature of intuitive or folk theories, conceptual change, relations between word meaning and conceptual structure, understandings of divisions of cognitive labor, and reasoning about causal patterns. HTBA

PSYC 732, Research Topics in Visual Cognitive Neuroscience  Marvin Chun
Examines current research in visual cognitive neuroscience, including discussion of proposed and ongoing research projects. Topics include visual attention, perception, memory, and contextual learning. HTBA

PSYC 735, Research Topics in Thinking and Reasoning  Woo-kyoung Ahn
In this lab students explore how people learn and represent concepts. Weekly discussions include proposed and ongoing research projects. Some topics include computational models of concept acquisition, levels of concepts, natural kinds and artifacts, and applications of some of the issues. HTBA

PSYC 736, Research Topics in Stereotyping and Prejudice  John Dovidio
Explores the nature of prejudice in its traditional and contemporary forms. Although the emphasis is on the causes and consequences of racial bias in the United States, the dynamics of intergroup relations are considered more broadly as well. Emphasis is on developing critical thinking, reading, and research skills to test ideas relevant to understanding and combating stereotyping, prejudice, and discrimination. HTBA

PSYC 739, Research Topics in Autism and Related Disorders  Fred Volkmar,
Ami Klin
Focus on research approaches in the study of autism and related conditions including both psychological and neurobiological processes. The seminar emphasizes the
importance of understanding mechanisms in the developmental psychopathology of autism and related conditions. F 9–10

**PSYC 741, Research Topics in Emotion and Relationships**  Margaret Clark
Members of this laboratory read, discuss, and critique current theoretical and empirical articles on relationships and on emotion (especially those relevant to the functions emotions serve within relationships). In addition, ongoing research on these topics is discussed along with designs for future research. HTBA

**PSYC 747, Research Topics in Affective Neuroscience**  Glenn Schafe
This laboratory course studies the neurobiological substrates of emotion, with particular emphasis on Pavlovian fear conditioning. We cover the current literature in fear conditioning, ranging from studies that emphasize the behavior/systems level of analysis to those that emphasize the cellular and/or molecular. HTBA

**PSYC 748, Research Topics in Emotion and Cognitive Control**  Jeremy Gray
The course covers (1) research in emotion and cognitive control and (2) science communication skills. For research, the emphasis is on the design, conduct, and analysis of behavioral and fMRI studies, emphasizing individual differences. Once a month, we have a session on science communication skills, with topics chosen by students to meet their interests and needs (spoken research presentations, persuasive communication, graph design, Web design, and so on). Students may enroll in the course and attend only the science communication skills component. HTBA

**PSYC 749, Research Topics in Memory**  Marcia Johnson
Examines current research on cognition and memory, including discussion of proposed and ongoing research projects. Topics include issues in design, analysis, and interpretation of empirical studies exploring human memory.

**PSYC 750/C&MP 750, Research Topics in the Neurobiology of Learning and Memory**  Thomas Brown
Discussion and analysis of current work on the neurobiological foundations of learning and memory systems in mammals. Informal weekly discussions span several levels of analysis, including molecular and biophysical studies, cellular and systems neurophysiology and neuro-anatomy, and contemporary behavioral neuroscience. HTBA

**PSYC 766, Research Topics in Perception and Cognition**  Brian Scholl
Seminar-style discussion of recent research in perception and cognition, covering both recent studies from the literature and the ongoing research in the Yale Perception and Cognition Laboratory. HTBA

**PSYC 767, Research Topics in Emotion, Health, and Social Behavior**  Peter Salovey
A forum for graduate students conducting research in the Health, Emotion, and Behavior Laboratory. HTBA

**PSYC 771, Research Topics in Nonconscious Processes**  John Bargh
The lab group focuses on nonconscious influences of motivation, attitudes, social power, and social representations (e.g., stereotypes) as they impact on interpersonal behavior, as well as the development and maintenance of close relationships. HTBA
PSYC 775, Research Topics in Animal Cognition  Laurie Santos
Investigation of various topics in animal cognition, including what nonhuman primates know about tools and foods; how nonhuman primates represent objects and number; whether nonhuman primates possess a theory of mind. Prerequisite: permission of the instructor. HTBA

PSYC 777, Research Topics in Gender and Psychology  Marianne LaFrance
The “Gender Lab” meets weekly to consider research being done in the department that bears on some gender-related issue. HTBA

PSYC 801, Clinical Internship (Child)  Faculty
Advanced training in clinical psychology with children. Adapted to meet individual needs with location at a suitable APA-approved internship setting.

PSYC 802, Clinical Internship (Adult)  Faculty
Advanced training in clinical psychology with adults. Adapted to meet individual needs with location at a suitable APA-approved internship setting.

PSYC 806, Practicum in Childhood Intervention  Faculty
Advanced supervised work in settings where child and family policies are developed and/or implemented. Adapted to meet individual needs with location at suitable sites.

PSYC 808, Practicum in Child Psychology  Faculty
The Yale Child Study Center offers a yearlong practicum, which includes assessment of children, psychotherapy, team meetings, supervision, and didactic experiences.

PSYC 809, Practicum in Assessment of School-Aged Children  Faculty
Students gain practical experience in testing with children.

PSYC 810, Practicum in Developmental Assessment  Linda Mayes
Practicum in early childhood screening and assessment of infants and toddlers at high risk for social adaptive and emotional developmental problems.

PSYC 811, Anxiety Disorders Practicum  Faculty
Discussion of current topics in psychopathology and treatment of anxiety disorders. Group supervision of therapy cases involving OCD, panic, social phobia.

PSYC 812, Conduct Problem Practicum  Alan Kazdin
Provides training in the diagnosis, assessment, and treatment of aggressive and antisocial children and their families. Prerequisite: permission of the instructor.

PSYC 813, Eating and Weight Disorders Practicum  Kelly Brownell, Marlene Schwartz
Practical work for graduate students in clinical psychology on therapeutic interventions for eating and weight disorders. Assessment, diagnosis, and treatment are covered.

PSYC 815, Mood Disorders Practicum  David Klemanski
Supervised practicum in the assessment and treatment of mood disorders, with an emphasis on cognitive-behavioral perspectives. HTBA
PSYC 816b, Practicum in Developmental Disabilities and Developmental Assessment

Fred Volkmar, Ami Klin

An introduction to approaches in developmental assessment in infants and young children (under age five years) with a range of developmental difficulties. Students observe and/or participate in developmental assessments. Students are exposed to a range of assessment instruments including developmental tests, speech-communication assessments, and psychiatric diagnostic instruments appropriate to this age group. Prerequisite: permission of the instructor. HTBA

PSYC 817, Other Clinical Practica

Faculty

For credit under this course number, clinical students register for practicum experiences other than those listed elsewhere in clinical psychology, so that transcripts reflect accurately the various practicum experiences completed.

PSYC 883, Practicum in Clinical Assessment

Donald Quinlan

Supervised psychological assessment using measures of intellectual functioning, projective testing, and neuropsychological testing with patients.

PSYC 923, Individual Study: Theme Essay

By arrangement with faculty.

PSYC 925, Individual Tutorial

By arrangement with faculty and approval of director of graduate studies.

PSYC 930, Predissertation Research

By arrangement with faculty.
RELIGIOUS STUDIES

451 College Street, 203.432.0828
www.yale.edu/religiousstudies
M.A., M.Phil., Ph.D.

Chair
Christine Hayes

Director of Graduate Studies
Dale Martin

Professors Harold Attridge (Divinity), Gerhard Böwering, Robert Brody (Visiting), Jon Butler, Adela Collins (Divinity), John J. Collins (Divinity), John Darnell (Near Eastern Languages & Civilizations), Stephen Davis, Carlos Eire, Steven Fraade, Bruce Gordon (Divinity), Philip Gorski (Sociology), Phyllis Granoff, Frank Griffel, John Hare (Divinity), Christine Hayes, Jennifer Herdt (Divinity), Paula Hyman, Bentley Layton, Ivan Marcus, Dale Martin, Harry Stout, Emilie Townes (Divinity), Denys Turner, Miroslav Volf (Divinity), Robert Wilson

Associate Professors Shannon Craigo-Snell, Hindy Najman, Carolyn Sharp (Divinity)

Assistant Professors Zareena Grewal (American Studies), Willis Jenkins (Divinity), Kathryn Lofton, Andrew Quintman, Eliyahu Stern, Tisa Wenger (Divinity)

Senior Lecturers Koichi Shinohara, David H. Smith (Political Science)

Lecturers Hugh Flick, Jr., John Grim (Visiting), Jonathan Kaplan, Margaret Olin, George Syrimis, Mary Evelyn Tucker (Visiting), Blake Wentworth (South Asian Studies)

Fields of Study

Special Admissions Requirement

The department requires the scores of the GRE General Test and previous study in areas relevant to the chosen field of study, including ancient languages where applicable.

Special Requirements for the Ph.D. Degree

Twelve term courses must be completed, in which the Graduate School Honors requirement must be met. Proficiency in two modern scholarly languages, normally French and German, must be shown, one before the end of the first year, the other before the beginning of the third; this may be done by passing an examination administered by the department, by accreditation from a Yale Summer School course designed for this purpose, or by a grade of A or B in one of Yale’s intermediate language courses. Mastery
of the languages needed in one's chosen field (e.g., Chinese, Hebrew, Greek, Japanese) is also required in certain fields of study. A set of four qualifying examinations is designed for each student, following guidelines and criteria set by each field of study; these are normally completed in the third year. The dissertation prospectus must be approved by a colloquium, and the completed dissertation by a committee of readers and the departmental faculty. Upon completion of all predissertation requirements, including the prospectus, students are admitted to candidacy for the Ph.D. This is expected before the seventh term in American Religious History, Philosophy of Religion, Religious Ethics, and Theology; before the eighth term in other fields. Students begin writing their dissertation in the fourth year and normally will have finished by the end of the sixth. There is no oral examination on the dissertation.

In the Department of Religious Studies, the faculty considers learning to teach to be an important and integral component of the professional training of its graduate students. Students are therefore required to teach as teaching fellows for at least two years during their graduate programs. Such teaching normally takes place during their third and fourth years, unless other arrangements are approved by the director of graduate studies.

A combined Ph.D. degree is available with African American Studies. Consult department for details.

Master’s Degrees

M.Phil. and M.A. (both en route to the Ph.D.)  See Degree Requirements under Policies and Regulations. Additionally, students in Religious Studies are eligible to pursue a supplemental M.Phil. degree in Medieval Studies. For further details, see Medieval Studies.

Prospective students must apply in one of the ten fields of study, and when requesting information they should specify their particular field of interest. Program materials are available upon request to the Registrar, Department of Religious Studies, Yale University, PO Box 208287, New Haven CT 06520-8287.

Courses

RLST 514b/CLSS 806b/HIST 511b, Hellenistic Civilization and the Jews

J.G. Manning, John J. Collins
This seminar examines two incidents in the Hellenistic world that can be construed as persecution of the Jews. The first was in the years 167–164 B.C.E., when the Seleucid Antiochus Epiphanes tried to suppress the traditional Jewish cult in Jerusalem. The second was in Alexandria in 38 C.E., when the Jewish community came under attack from its Gentile neighbors and the Roman authorities. The seminar examines these incidents in the context of Seleucid and Roman policies toward subject peoples. TH 3:30–5:20

RLST 584a/EALL 560a, Introduction to the Chinese Buddhist Canon

Koichi Shinohara
The course introduces students to the critical study of diverse documents in the Chinese Buddhist canon. It begins with a brief survey of the history of the canon. The main part is devoted to the close reading of sections of the seventh-century thematic Chinese
Buddhist encyclopedia, the *Fayuan zhulin* (“The Jade Forest of the Dharma Garden”). Each entry in this encyclopedia consists of quotations from a wide range of sources. We study a chosen section together in class, and each student traces these citations to their original contexts scattered throughout the entire canon and examines them in their original contexts. Prerequisite: sufficient skill in literary Chinese or *kanbun* to be able to begin reading the canon in the original. T 3:30–5:30

**RLST 585b, Material Culture in Asian Religions**  Koichi Shinohara

This seminar is designed as a forum in which students can begin developing substantial research papers in their respective fields of specialization. The term begins with a series of assigned readings; participants are asked to post reading responses for the entire class each week and come to class prepared to discuss each other’s responses. The second half of the course is devoted to the presentation of paper proposals and focused discussions of the previously circulated examples of primary source material on which the arguments in the research papers are to be based. T 3:30–5:30

**RLST 586a, Readings in Jain and Buddhist Texts**  Phyllis Granoff

An advanced course in which we read selections from the Pali Buddhist commentaries and selections from Jain Prakrit texts. Prerequisite: while no knowledge of Pali or Prakrit is required, students should have had at least two years of Sanskrit. T 1:30–3:20

**RLST 587b, Buddhist Hybrid Sanskrit**  Phyllis Granoff

We read selections from the Mahavastu and Mahayana sutras. Prerequisite: at least two years of Sanskrit. T 1:30–3:20

**RLST 657b/HIST 681b, Eastern Orthodoxy and Society, 850–1700**  Paul Bushkovitch

The development of Eastern Orthodoxy in its interaction with state and society in Byzantium, the Balkans, and Russia to 1700. A basic introduction to Orthodoxy and its different regional variants, including topics such as monasticism and political power, the problem of popular piety, and responses to heresy, paganism, and Islam. W 1:30–3:20

**RLST 659au/HIST 531au/NELC 534au, Seminar: The Making of Monasticism**  Bentley Layton

The social and intellectual history of Christian monasteries, hermits, ascetics, and monastic institutions and values in late antiquity and the early Middle Ages, as seen in classic texts of monastic literature and in monastic archaeology. Readings are studied in translation. Prerequisite: permission of the instructor. T 3:30–5:20

**RLST 666b, Arabic Christian Literature and Theology**  Stephen Davis

The course is designed to introduce students to the rich heritage of Middle Eastern Christian theology produced in the Arabic language. Special attention is paid to how medieval Arabic Christian writers reinterpreted patristic tradition, how their theology was contextualized by liturgical practices, and how it was shaped by the Christian-Muslim encounter. Prerequisite: reading knowledge of Arabic. TH 9:25–11:15

**RLST 675b/JDST 722b, Ancient Judaism**  Christine Hayes

An in-depth survey of the history and literature of Judaism in late antiquity through the rabbinic period. Special attention is given to the problems and possibilities of employing
rabbinic sources for the purposes of historical reconstruction in the period that saw the
emergence of the Gospels and the formation of Christianity. Emphasis on methodologi-
cal trends and cutting-edge scholarship. The course is designed primarily for students
in the Ph.D. program in New Testament and Ancient Christianity. Doctoral students in
Hebrew Bible and Ancient Judaism are also welcome. W 10–12

RLST 678a/HIST 569a/REL 732a, Readings in Reformation History: Calvin and
Calvinism  Bruce Gordon, Carlos Eire
The course begins with the life and thought of John Calvin considered within the his-
torical context of the sixteenth century. Particular emphasis is placed on Calvin’s role in
the wider Reformation and his interaction with allies and opponents. The course then
shifts to study the phenomenon of Calvinism as it spread through Europe and, later, New
England. Prerequisite: some background in Reformation history. T 1:30–3:20

RLST 717a, Islamic Theology and Philosophy  Frank Griffel
Historical survey of major themes in Muslim theology and philosophy, from teachings
of the Qur’an to contemporary Muslim thought. The systematic character of Muslim
thought and of the arguments given by thinkers; reason vs. revelation; the emergence
of Sunnism in the tenth through eleventh centuries; the reaction of Muslim theology
(from 1800) to the challenges of the West; and contemporary Muslim thought.
TTH 10:30–11:20, 1 HTBA

RLST 720a, Seminar on the Qur’an  Gerhard Bowering
Intensive study of the Qur’an. Readings in commentaries on the Qur’an. Special empha-
sis on textual and hermeneutical problems. Prerequisites: reading knowledge of Arabic
and permission of the instructor. TH 4–6

RLST 742a/JDST 786a, Jewish Philosophy  Paul Franks
An introduction to problems arising from the claim that God speaks to human beings.
Topics include anthropomorphic language, kabbalistic anthropology, purposiveness in
nature and history, law and commandment, chosenness and universality, and messian-
ism. MW 11:35–12:50

RLST 743b/JDST 738b, Text and Context of the Dead Sea Scrolls  Hindy Najman
An in-depth study of the Dead Sea Scrolls. Focus is on the development of law, inter-
pretation, ritual, and prayer in the late Second Temple period and on the impact that the
finding of the Dead Sea Scrolls has had on our understanding of the formation of the
Hebrew Bible. Prerequisite: two years of Hebrew or Aramaic. T 9:25–11:15

RLST 744b/JDST 752b, Monuments of Early Geonic Literature  Robert Brody
Introduction to the most important works of the early Geonic period (eighth and
ninth centuries): Halachot Pesuqot, Halachot Gedolot, and She’iltot. Examines the rel-
vent secondary literature and outstanding research questions regarding these works.
M 2:30–4:20

RLST 745a/JDST 751a, The Academic Study of Talmud  Robert Brody
Critical study of selected passages from tractate Ketubot of the Babylonian Talmud in
conjunction with related passages elsewhere in classical rabbinic literature. Emphasis
on talmudic philology and contemporary scholarly trends in the academic study of the Talmud. Prerequisite: reading knowledge of rabbinic Hebrew and talmudic Aramaic.

M 3:30–5:20

RLST 746b/JDST 736b, Midrash Seminar: Sifre Shofetim  Steven Fraade
Close study of the earliest rabbinic commentary to the Book of Deuteronomy, focusing on its interpretations of laws dealing with the responsibilities of public figures: judges, kings, priests, and prophets. Particular attention to the interrelation of rabbinic legal rhetoric and the hermeneutics of scriptural commentary, with comparative excursions into other corpora of ancient Jewish and non-Jewish law. Prerequisite: reading competency in classical Hebrew. TH 9:25–11:15

RLST 747b/JDST 780b, Jewish Citizenship in Modern Europe  Eliyahu Stern
Seventeenth- to twentieth-century responses to Jewish citizenship in modern European states. Religious law; modern Jewish identity; Zionism; Judaism as a religion vs. a nation; the place of minorities in contemporary Europe. W 9:25–11:15

RLST 748a, Secularism from the Enlightenment to the Present  Eliyahu Stern
Seminar examining the historical construction of secularism from the eighteenth to the twentieth century. Attention is paid to recent scholarship on the formation of secular ideologies and their effect on conceptions of time, space, and knowledge. Readings include works by José Casanova, Reinhart Koselleck, Charles Taylor, and Talal Asad. W 9:25–11:15

RLST 751b/JDST 721b, Introduction to Judaism in the Ancient World  Steven Fraade
The emergence of classical Judaism in its historical setting. Jews and Hellenization; varieties of early Judaism; apocalyptic and postapocalyptic responses to suffering and catastrophe; worship and atonement without sacrificial cult; interpretations of scriptures; law and life; the rabbi; faith in reason; Sabbath and festivals; history and its redemption. No prior background in Jewish history assumed. MW 11:35–12:50

RLST 756b/JDST 756b, Ancient Judaism Seminar  Hindy Najman
The topic of this seminar, which is required of graduate students in Ancient Judaism, changes yearly. The seminar focuses this year on the connections between (1) the formation of texts, corpora, and discourses; (2) the formation of the concept of the personality to whom these textual units come to be ascribed; and (3) the formation of the personality of the reader of these textual units. Investigates the development of the author function in ancient Judaism, the role played by that function in the formation of textual traditions, the authoritative figures around whom traditionary collections grew, and the formative role of traditions to which special authority was ascribed. W 1:30–3:20

RLST 759b/HIST 503b/JDST 723b, Jews and Christians in Late Antique Roman Palestine  Oded Irshai
An examination of the strategies and mechanisms enabling the appropriation and Christianization of late Roman Palestine from the fourth to the seventh century. Topics include Christian attitudes toward the land of Jesus, sacred space, memory, pilgrimage, and the formation of liturgy, as well as manifestations of Jewish resistance to the transformation of the Holy Land. T 3:30–5:20
RLST 760a/JDST 737a, Hellenistic Jewish Thought  Hindy Najman
Consideration of the development of Greek-speaking Jewish communities in antiquity, both in their commonality with contemporaneous Jewish communities and in their distinctiveness. Attention is given to the development of the Greek Bible, the Hellenization of the biblical figures, Greek influences on the interpretation of Jewish scriptures, and the role of prayer and ritual outside the Jerusalem Temple. TTH 11:35–12:50

RLST 761a/JDST 739a, Destruction and Recovery in Ancient Judaism
Hindy Najman
The seminar focuses on the relationship between destruction and recovery in ancient Jewish writings. How was Judaism reworked in the face of the destruction of the first temple in 586 B.C.E. and of the second temple in 70 C.E.? To what extent did Judaism internalize the experience of destruction? M 1:30–3:20

RLST 764a/HIST 765a/JDST 789a, America and Its Jews, 1654 to the Present
Paula Hyman
The history of Jews in America from the colonial period to the present. Topics include immigration, religious development, politics, and participation in culture. Special attention to how Jews, as a minority, have negotiated their place in American society. MW 2:30–3:45

RLST 768b/HIST 979b/JDST 788b, Holocaust in Historical Perspective
Paula Hyman
A survey of the major historical issues raised by the Holocaust, including the roots of Nazism; different theoretical perspectives and ways of accounting for genocide; the behavior of perpetrators, victims, and bystanders; and problems of representation. TTH 10:30–11:20, 1 HTBA

RLST 772b/JDST 760b, Rabbinics Research Seminar  Christine Hayes
An in-depth survey of research debates and of methods and resources employed in the study of classical (pre-Geonic) rabbinic literature of all genres. This seminar is required of graduate students in Ancient Judaism. Prerequisites: knowledge of Hebrew and Aramaic; ability to read academic Hebrew; and permission of the instructor. TH 10–12

RLST 773a/HIST 535a/JDST 761a, History of the Jews to Early Modern Times
Ivan Marcus
A broad introduction to the history of the Jews from biblical beginnings until the European Reformation and the Ottoman Empire. Focus on the formative period of classical rabbinic Judaism and on the symbiotic relationships among Jews, Christians, and Muslims. An overview of Jewish society and culture in its biblical, rabbinic, and medieval settings. TTH 11:35–12:50

RLST 776b/HIST 541b/JDST 790b, The Jews in Medieval Societies  Ivan Marcus
Research seminar that focuses on a comparison of the two medieval Jewish subcultures of Ashkenaz (northern Christian Europe) and Sefarad (mainly Muslim and Christian Spain). Issues in historiography and comparative methodology complement discussions about the symbols and reality of literary, political, and economic features of each society. Prerequisite: reading knowledge of modern Hebrew. T 1:30–3:20
RLST 777b/U/HIST 532b/U/JDST 764b/U, Jews in Muslim Lands from the Seventh to the Sixteenth Century  Ivan Marcus
Introduction to Jewish culture and society in Muslim lands from the Prophet Muhammad to Suleiman the Magnificent. Topics include Islam and Judaism; Jerusalem as a holy site; rabbinic leadership and literature in Baghdad; Jewish courtiers, poets, and philosophers in Muslim Spain; and the Jews in the Ottoman Empire. Prerequisite: reading knowledge of modern Hebrew. TTH 11:35–12:50

RLST 790a/U/HIST 977a/U/JDST 796a/U, Anti-Semitism in Modern Times  Paula Hyman
An exploration of anti-Semitism as a religious, social, and political prejudice in different historical contexts. Examination of premodern religious and secular stereotypes. Focus on the role of anti-Semitism in Europe, the United States, and the Middle East from the late nineteenth century to contemporary times. W 9:25–11:15

RLST 795b/U/HIST 950b/U/JDST 787b/U, Women in Modern Jewish History  Paula Hyman
The roles and representation of Jewish women in the modern period. Special attention to the role of gender in Judaism; the social, cultural, and political activity of women; and the development and impact of feminism. T 1:30–3:20

RLST 798b/HSAR 731b/JDST 692b/REL 936b, Witnessing, Remembrance, Commemoration  Margaret Olin
Memory and its expressions structure and inform many aspects of contemporary visual culture. This seminar pursues readings about memory and witnessing chosen from among the works of such writers as Sigmund Freud, Albert Camus, Frances Yates, Maurice Halbwachs, Michel de Certeau, and the authors of the Book of Genesis, as well as writings about commemoration by James Young and Pierre Nora, among others. Discussions apply these readings to the study of witnessing and memorializing as artistic practices, and examine visual realizations of such works, including some monuments and memorials near campus and videos in the Fortunoff archive. Student projects center on theory or on special cases of witnessing or commemoration, ritual, memorial practice, and monuments, whether built, written, aural, electronic, or played out on the streets. Qualified undergraduates welcome. Prerequisite: permission of the instructor. T 2:30–4:20

RLST 799a/U/JDST 793a/U/HIST 951a/U, Introduction to Modern Jewish Thought  Eliyahu Stern
An overview of Jewish philosophical trends, movements, and thinkers from the seventeenth to twenty-first century. Topics include enlightenment, historicism, socialism, secularism, religious radicalism, and Zionism. TTH 11:35–12:25, 1 HTBa

[RLST 802b/U, Apocalyptic Religion in Cross-Cultural Perspective]

RLST 809a/HIST 543a/REL 809a, Apocalypticism: Ancient and Modern  Abbas Amanat, John J. Collins
This seminar reviews the history of apocalyptic thought and movements in the three great monotheistic religions from their origins in the ancient world to contemporary trends. T 1:30–3:20
This seminar examines the many different ways in which the idea of a natural moral law has been articulated and defended across the Christian tradition and into the present day. Along the way we also consider how and with what success natural law thinking has been put to work in various areas of the moral life: property and poverty, sovereignty and war, and sexual ethics.

RLST 848a/AFAM 837a/REL 631a, African American Moral and Social Thought
Emilie Townes
The course concentrates on the theo-ethical perspectives of selected African American Christian and humanist thinkers. This term, the course focuses on the writings of Maria Stewart, David Walker, Frederick Douglass, Ida B. Wells, W.E.B. Du Bois, Martin Luther King, Jr., Barbara Jordan, Peter Paris, Katie Cannon, and Traci West. Attention is given to implications for the contemporary church. W 8:30–10:20

RLST 865a/F&ES 879b/REL 917b, World Religion and Ecology: Asian Religions
John Grim, Mary Evelyn Tucker
The emerging relationships of world religions to the global environmental crisis. Attention to both the problems and the promise of these relationships. Ways in which religious ideas and practices have contributed to cultural attitudes and human interactions with nature. Examples from Hinduism, Buddhism, Confucianism, and Taoism. T 2:30–5:20

RLST 875a/F&ES 876a/REL 915a, Indigenous Religions and Ecology
John Grim
Exploration of how particular indigenous peoples relate to local bioregions and biodiversity. Differences between and within indigenous societies, especially in cultural relationships to place. Ways in which values associated with physical places are articulated in symbols, myths, rituals, and other embodied practices. T 2:30–5:20

RLST 905a, Required Theology Seminar
Kathryn Tanner
The course this year involves a close reading of my most recent book, Christ the Key (Cambridge, 2010). One chapter of the book is assigned each session, with supplementary readings to include major historical sources in theology that inform my constructive work, and contemporary theologies treating the same issues in theological anthropology, Christology, pneumatology, nature and grace, trinitarian theology, and atonement theory.

RLST 920a, Reason, Faith, and Feeling: Early Modern Christian Thought
Shannon Craigo-Snell
A survey of major developments in religious thought in the West from Descartes to Schleiermacher, focusing on the struggles to defend, discredit, or distance religious
belief in relation to reason. Connections between theology, philosophy, and social history. TTH 11:35–12:35, 1 HTBA

**RLST 921b**, History, Hope, and the Self: Modern Christian Thought

Shannon Craigo-Snell

An overview of important developments in Western religious thought during the nineteenth and twentieth centuries. Connections between philosophy, theology, and social history. Authors include Hegel, Barth, Tillich, Rahner, and Gutiérrez. TTH 11:35–12:25, 1 HTBA
RENAISSANCE STUDIES

53 Wall Street, Rm. 310, 203.432.0672
www.yale.edu/renstudies
M.A., M.Phil., Ph.D.

Chair and Director of Graduate Studies
Robert Nelson (robert.nelson@yale.edu)

Executive Committee
Edwin Duval, Carlos Eire, Roberto González Echevarría, Bruce Gordon, Lawrence Manley, John Matthews, Giuseppe Mazzotta, Robert Nelson, David Quint, John Rogers, Ellen Rosand, Christopher Wood, Keith Wrightson

Faculty associated with the program
Rolena Adorno, Emily Bakemeier, Leslie Brisman, Paul Bushkovitch, Susan Byrne, Angela Capodivacca, Judith Colton (Emeritus), Edwin Duval, Carlos Eire, Roberta Frank, Paul Freedman, Roberto González Echevarría, Bruce Gordon, Emily Greenwood, Karsten Harries, K. David Jackson, Maija Jansson, David Scott Kastan, Christina Kraus, David Lummus, Lawrence Manley, John Matthews, Giuseppe Mazzotta, Mary Miller, Alastair Minnis, Robert Nelson, Catherine Nicholson, Lee Patterson (Emeritus), Steven Pincus, David Quint, John Rogers, Ellen Rosand, Francesca Trivellato, Brian Walsh, Christopher Wood, Keith Wrightson

Fields of Study
Renaissance Studies offers a combined Ph.D. degree that integrates concentration in a departmental field with interdisciplinary study of the broader range of culture in the Renaissance and early modern periods. The program is designed to train Renaissance specialists who are firmly based in a traditional discipline but who can also work across disciplinary boundaries. Departmental areas of concentration available are Classics, Comparative Literature, English, History, History of Art, History of Music, Italian, and Spanish and Portuguese.

Special Admissions Requirements
Only candidates wishing to proceed to a doctorate should apply. Application should be made to the department of concentration, with an indication that the candidate seeks nomination to the combined degree in Renaissance Studies. Applications should be accompanied by scores from the GREs and one research or critical paper.

Special Requirements for the Ph.D. Degree
Students are subject to the combined Ph.D. supervision of the Renaissance Studies program and the relevant participating department. The student’s program will be decided in consultation with an adviser, the director of graduate studies in Renaissance Studies, and the director of graduate studies in the participating department. Requirements for the combined degree will vary slightly to accommodate the requirements of the participating departments, but all candidates for the combined degree are expected to meet, at a minimum, the following requirements. Students must demonstrate a reading knowledge
of Latin, Italian, and a third language, which will vary according to departmental requirements. At the minimum, an examination in Latin or Italian should normally be passed upon entrance; a second language should be passed before the third term; and a third language by the end of the second year. Each student is required to take sixteen term courses (in History of Art, fifteen). The normal pattern is to have completed fifteen courses during the first two years of study, no more than two of which may be individual reading and research. A two-term core seminar, designed to present a wide range of topics concerned with Renaissance and early modern culture, is required of all combined degree candidates. This course, offered every other year, is open to students from other departments.

Students concentrating in modern language and literature departments (including Comparative Literature, English, Italian, and Spanish and Portuguese) are required to complete three courses in at least two disciplines outside of literature, three courses in the Renaissance literature of the primary department, and two courses in Renaissance literatures outside of the primary department. The remaining courses will be taken in other periods and topics as required by the department of concentration. Students concentrating in History or Music are required to complete four courses dealing with Renaissance culture in disciplines outside of the primary department and four courses in the Renaissance period within the department; the remaining courses are to be taken in other periods and topics as required by the department of concentration. Students concentrating in History of Art are required to take four courses within the department and three courses outside the department dealing with the Renaissance period. Students concentrating in Classics are required to take six courses outside the department in the Renaissance period. Training in teaching, through teaching fellowships, is considered an important part of every student’s program. Most students teach in their third and fourth years.

The scheduling of the oral examination and the dissertation prospectus follows the practice of the primary department, but in every case the two requirements must be completed not later than September of the fourth year. The oral examination, varying in length from two hours to two hours and fifteen minutes, will include a standard fifteen-minute question on the bibliographical resources for Renaissance Studies across the disciplines and three fifteen-minute questions (in the case of English two fifteen-minute questions) in Renaissance topics outside the primary discipline. The remainder of the examination will be devoted to the primary discipline, including (except in the case of Classics) some further coverage of the Renaissance period. Students take additional written examinations as required by the primary departments.

Upon completion of all predissertation requirements, including the prospectus, students are admitted to candidacy for the combined Ph.D. degree. Admission to candidacy must be completed by the beginning of the fourth year. The dissertation will be advised and completed according to departmental guidelines, but one of the readers will normally be a member of the Renaissance Studies Executive Committee.

**Master’s Degrees**

**M.Phil.** The combined M.Phil. degree may be requested after all requirements but the dissertation are met.
M.A. (en route to the Ph.D.) The M.A. degree is awarded upon completion of eight term courses, taken in at least three disciplines, and with at least three grades of Honors. The examination in Latin or Italian must have been passed.

Program materials are available upon request to the Chair, Renaissance Studies Program, Yale University, PO Box 208298, New Haven CT 06520-8298.

Courses

RNST 500a/CPLT 501a/HIST 564a/ITAL 600a, Introduction to Renaissance Studies: Renaissance Italy Angela Capodivacca, Francesca Trivellato
An introduction to the major texts, issues, and methods in the interdisciplinary study of the Renaissance, with an emphasis on Italy. T 7–8:50

RNST 500b/CPLT 501b/HIST 564b, Introduction to Renaissance Studies: Northern Europe Bruce Gordon, David Scott Kastan
An introduction to the major texts, issues, and methods in the interdisciplinary study of the Renaissance, with an emphasis on northern Europe. T 1:30–3:20

RNST 900a,b, Directed Reading
By arrangement with faculty.
SLAVIC LANGUAGES AND LITERATURES

2704 Hall of Graduate Studies, 203.432.1300, slavic.department@yale.edu
www.yale.edu/slavic
M.A., M.Phil., Ph.D.

Chair
Harvey Goldblatt (harvey.goldblatt@yale.edu)

Director of Graduate Studies
Vladimir Alexandrov (vladimir.alexandrov@yale.edu)

Professors  Vladimir Alexandrov, Katerina Clark, Laura Engelstein (History), Harvey Goldblatt, Robert Greenberg (Adjunct), John MacKay, Tomas Venclova

Assistant Professors  Molly Brunson, Bella Grigoryan

Senior Lector II  Irina Dolgova

Senior Lector I  Krystyna Illakowicz

Fields of Study
Fields include Russian literature, medieval Slavic literature and philology (by special arrangement), Polish literature (by special arrangement).

Special Admissions Requirement
An advanced-level command of the Russian language is required.

Special Requirements for the Ph.D. Degree
All entering graduate students must pass departmental proficiency examinations in Russian. During their residence, students specializing in Russian literature take a minimum of sixteen term courses (including three required courses) and are expected to acquire a comprehensive knowledge in all periods of Russian literature, a familiarity with medieval Slavic literature, a thorough command of the Russian language, and a mastery of a field of concentration within Russian literature. The student’s course work, with the approval of the director of graduate studies (DGS), may be selected from the offerings of the department and (if relevance can be demonstrated) any other department of the University. In addition, the student will be responsible for developing a minor field of specialization in one of the following: (1) a Western or non-Western literature; (2) film studies; (3) a topic in intellectual history; (4) one of the other arts; (5) another Slavic literature; (6) Slavic linguistics; (7) another discipline relevant to the student’s primary interests in Russian literature. A special curriculum may be arranged for students wishing to specialize in either medieval Slavic literature and philology or Polish literature. A reading examination in either French or German, administered and evaluated by the department, must be passed by all graduate students by the beginning of the fifth term of study. The qualifying examinations should be passed by the end of the sixth term of study. A dissertation prospectus must be submitted no later than September 15 of the
seventh term of study. For additional details, see the DGS and the departmental Web site: www.yale.edu/slavic. Upon completion of all pre-dissertation requirements, including the prospectus and its defense, students are admitted to candidacy for the Ph.D.

The faculty considers teaching to be an important part of the professional preparation of graduate students. Students in Slavic normally teach in their third and fourth years.

**Joint Ph.D. Program with Film Studies**

The Department of Slavic Languages and Literatures also offers, in conjunction with the Film Studies Program, a joint Ph.D. in Slavic Languages and Literatures and Film Studies. For further details, see Film Studies. Applicants to the joint program must indicate on their application that they are applying both to Film Studies and to Slavic Languages and Literatures. All documentation within the application should include this information.

**Master’s Degrees**

**M.Phil.** See Degree Requirements under Policies and Regulations. Additionally, students in Slavic Languages and Literatures are eligible to pursue a supplemental M.Phil. degree in Medieval Studies. For further details, see Medieval Studies.

**Terminal Master’s Degree Program** The Department of Slavic Languages and Literatures does not admit students for the terminal M.A. degree, nor does it award an M.A. en route to the Ph.D. degree. If, however, a student admitted for the Ph.D. leaves the program prior to completion of the doctoral degree, he or she may be eligible to receive a terminal master’s degree. He or she must have completed at least fifteen term courses in Russian literature and linguistics, chosen in consultation with the director of graduate studies. A grade of Honors in at least two term courses and an average of High Pass in the remaining courses must be attained. A reading knowledge of French or German is required, and candidates must pass departmental proficiency examinations in Russian.

Program materials are available upon request to the Chair, Slavic Languages and Literatures, Yale University, PO Box 208236, New Haven CT 06520-8236.

**Courses**

**RUSS 605b, Topics in Russian Literature: From the Origins of East Slavic Writing to 1750**  Harvey Goldblatt

Representative works, selected from both “old” Russian “bookish writing” and the “new” Russian literature of the seventeenth and first half of the eighteenth century, are examined against a broad comparative background to illustrate the development of various literary types and writing techniques. Special attention is devoted to diverse historiographic and methodological approaches; traditional and innovative theories of literary expression; and the connections between writing activity and ideological trends. **M 9:25–11:15**

**RUSS 624b, Pushkin and Gogol**  Bella Grigoryan

The course surveys Russian literary production during the first half of the nineteenth century with an emphasis on the major works of Pushkin and Gogol. Topics of interest include the formation of a normative literary language; debates about poetic forms; the rise and evolution of Romanticism; salon culture, print media, and the professionalization
of the author; and shifts in the status, representational capacities, and genres of prose fiction. T 1:30–3:20

RUSS 675b/AMST 683b/CPLT 571b, Promised Lands: Slavery, Literature, and Modernity in Russia and the United States  John MacKay

Close, comparative, contextualized examination of literary and other forms of cultural production associated with U.S. slavery and Russian serfdom. Special attention is paid to the relation between bondage and national, cultural, and personal identity; the role of bondage in definitions of “aesthetic experience” in the pre- and post-emancipation periods; the relation between literacy and the literary; literature of protest in the two countries; and connections between geographical and subjective space within cultures of enslavement. We examine works by Pushkin, Aksakov, Gogol, Simms, Cooper, Crèvecoeur, Radishchev, Karamzin, Goncharov, Tolstoy, Kennedy and the “plantation novelists,” Stowe, Melville, Turgenev, slave and serf autobiographers, freedman’s textbooks, Fet, Lanier, Page, Chesnutt, and Bunin; historical treatments by Kolchin, Genovese, and others; and theoretical works by Said, Jameson, Saidiya Hartman, Bakhtin, and others. Requirements: in-class presentations and research paper. No knowledge of Russian required. M 3:30–5:20

RUSS 677a/CHNS 540a/FILM 753a, Cinemas of Late and Post-Socialist China and Russia  John MacKay

Close, contextualized, comparative analysis and interpretation of major Chinese and Russian films, fiction and nonfiction, from the mid-1980s to the present. We examine the films in terms of their formal structures and their reception, in relation to the revolutionary political and cultural legacies of both countries, and in light of the epochal social and economic changes occurring in China and Russia during this period. Filmmakers to be studied include Wang Bing, Sergei Dvortsevoy, Aleksei German, Chen Kaige, Alexander Sokurov, and Jia Zhangke. Open to both undergraduate and graduate students; no knowledge of Russian or Chinese required. M 3:30–5:20, screenings W 7

RUSS 678a, Brodsky  Tomas Venclova

An investigation of Joseph Brodsky’s poetic work against the background of contemporary Russian poetry. Close readings of approximately twenty selected poems. T 2:30–4:20

RUSS 689a, Russian Symbolist Poetry  Tomas Venclova

Theory and history of symbolism. Close readings of poems by Bryusov, Blok, Ivanov, Annensky, and others. TH 1:30–3:20

RUSS 693b, Aspects of Turn-of-the-Century Russian Culture  Vladimir Alexandrov

A seminar on selected works by Bunin, Sologub, and Bely, plays by Chekhov and Blok, films by Bauer, paintings by representatives of Mir iskusstva, and music by Scriabin. M 2:30–4:20

RUSS 695a, Soviet Literature of the 1920s and 1930s  Katerina Clark

The 1920s were both the most fertile and the most fateful years in Soviet literature. The period ended in 1932 with the imposition of Socialist Realism, but that resolution represented only a small fraction of the possibilities that had emerged during the decade. This course presents an historical overview, incorporating some of the main landmarks
of the 1920s and 1930s including works by Pilnyak, Bakhtin, the Formalists, Eisenstein, Platonov, Mayakovsky, Bulgakov, and Zoshchenko.

**RUSS 833a, Advanced Russian Conversation and Composition: Topics in Contemporary Russian Press and Media**  
Rita Lipson  
A course designed to equip students with language skills necessary to comprehend complexities of contemporary Russia. Accompanied by a grammar review. **TH 3:30–5:20**

**RUSS 834a, Aspects of Russian Grammar and Teaching Methodology**  
Irina Dolgova  
The course examines various aspects of Russian grammar and the use of different teaching methodologies. Special emphasis is placed on the connection between linguistic knowledge and its application for teaching Russian in an English-speaking classroom. Different types of language learners, diverse teaching strategies, and existing resources for teaching Russian are discussed. **W 1:30–3:20**

**SLAV 754a, Old Church Slavic**  
Harvey Goldblatt  
The study of Old Church Slavic and its place in the history of Church Slavic. The main features and the grammar of OCS. The Glagolitic and Cyrillic writing systems. Close readings from the “canon” of OCS literary monuments. OCS in relation to modern Slavic languages (especially Russian). **M 9:25–11:15**

**SLAV 784bU, Language and Politics**  
Robert Greenberg  
The course explores political controversies surrounding issues of language planning and language policy. Consideration is given to how social and political actors differentiate languages and dialects, and how nationalist ideology has shaped language choices. Topics include the English-only movements in the United States, the policy of official bilingualism in Canada, and language policies in Europe with emphasis on the Slavs. **M 7–8:50**

**SLAV 785aU, Language, Nationalism, and Ethnic Conflict in the Balkans**  
Robert Greenberg  
An exploration of the role of linguistic controversies in the polarization of ethnic relations within the former Yugoslavia. Topics include language and nationalism, the integration and disintegration of Yugoslavia, and the Balkans in the context of other charged ethnolinguistic controversies from the United States to India. **M 7–8:50**

**SLAV 900, Directed Reading**  
By arrangement with faculty.
SOCILOGY

www.yale.edu/sociology
M.A., M.Phil., Ph.D.

Chair
Julia Adams

Director of Graduate Studies
Philip Gorski (on leave [F])

Acting Director of Graduate Studies [F]
Richard Breen

Professors Julia Adams, Jeffrey Alexander, Elijah Anderson, Scott Boorman, Richard Breen, Hannah Brueckner, Deborah Davis, Ron Eyerman, Philip Gorski (on leave [F]), Philip Smith

Assistant Professors Rene Almeling, Emily Erikson, Marcus Hunter, Vida Maralani, Peter Stamatov, Christopher Wildeman, Jonathan Wyrtzen

Lecturer Sadia Saeed

Fields of Study
Fields include Comparative Sociology/Macrosociology, Cultural and Historical Sociology, Life Course/Social Stratification, Mathematical Sociology, Methodology (Qualitative and Quantitative Approaches), Networks, Political Sociology, Race/Gender/ Ethnic/Minority Relations, Social Change, Social Demography, Social Movements, Theory (General, Critical, Hermeneutic), Urban Sociology.

Special Requirements for the Ph.D. Degree
Qualification for admission to candidacy for the Ph.D. will take place during the student’s first three years of study at Yale. A student who has not been admitted to candidacy will not be permitted to register for the seventh term of study. To qualify for candidacy the student must take twelve seminars to be completed in years one and two, four required courses (SOCY 542a, 578a, 580a, 581b), and eight electives, including at least one workshop. After completion of courses, students prepare a research paper and one field exam and defend a dissertation prospectus.

Teaching is an important part of the professional preparation of graduate students in Sociology. Students teach therefore in the third and fourth years of study.

Combined Ph.D. Degree in Sociology and African American Studies
The Department of Sociology offers, in conjunction with the Department of African American Studies, a combined Ph.D. degree in Sociology and African American Studies.

Students accepted to the combined Ph.D. program must meet all of the requirements of the Ph.D. in Sociology with the exception that, excluding the courses required,
a research paper, and a field exam, combined-degree students may substitute African American Studies courses for six of the twelve term courses required to qualify for the Ph.D. in Sociology. For further details see African American Studies.

Master’s Degrees

M.Phil. See Degree Requirements under Policies and Regulations.

M.A. (en route to the Ph.D.) Eight term courses are required for the M.A. degree. Two of these courses must include statistics and theory. A grade of High Pass or Honors must be achieved in five of the eight required courses. A student may petition for the M.A. degree in the term following the one in which he/she completes the course requirements.

Program materials are available at www.yale.edu/sociology.

Courses

SOCY 502a, Contemporary Sociological Theory: Durkheimian Sociology
Philip Smith
The course looks at the work of Emile Durkheim and his legacy for both social theory and empirical sociology. In the first part we examine Durkheim’s major writings and key concepts. Next an exploration is made of the multiple and often contending ways these have been taken up and interpreted over the past hundred or so years. Particular emphasis is given to the decline in functionalist and positivist readings of Durkheim and his emergence as a major cultural theorist in recent decades. We consider the contributions of Mauss, Bataille, Goffman, Victor Turner, Collins, Lukes, Douglas. W 9:25–11:15

SOCY 503au/PLSC 522a, Historical Approaches to the Study of Politics
Sigrun Kahl
Provides an overview of the how-to, and the payoff, of a historical approach to the study of politics. Covers a wide range of topics, from the classics of political science and sociology up to recent comparative historical work. M 3:30–5:20

SOCY 507/EAST 501, Social Science Workshop on Contemporary China
Deborah Davis
A yearlong course for one credit. Students must register for and complete both disciplinary perspectives, including anthropology, economics, law, political science, and sociology. At each session, Yale faculty, visitors, and advanced graduate students deliver short presentations of current works in progress, circulated in advance, for group discussion and critique. In addition there are two weekend data analysis workshops in each term to which seminar members are invited. One unit of course credit is available to students who attend the colloquium in both terms and submit a thirty-page paper. Prerequisite: permission of the instructor. M 12–1

SOCY 508a/PLSC 505a, Qualitative Field Research
Elisabeth Wood
In this seminar we discuss and practice qualitative field research methods. The course covers the basic techniques for collecting, interpreting, and analyzing ethnographic data, with an emphasis on the core ethnographic techniques of participant observation and in-depth interviewing. All participants carry out a local research project. Permission of the instructor required for undergraduates.
SOCY 510b⁴, Religious Nationalism

SOCY 511b⁴, Building Social Theory for Empirical Analysis

SOCY 515a⁴, Urban Poverty and Policy

SOCY 520b, Revolutions in a Comparative Perspective

SOCY 523b/WGSS 623b, Sociology of Sex and Gender  
Rene Almeling
The course provides graduate students with an introduction to major theoretical approaches to sex and gender, and it covers recent empirical research in key arenas, including care work, sex work, work and family, mothering and fathering, reproductive technologies, and health. Readings have been selected to reflect a variety of methodological approaches and to spotlight the ways in which sex and gender intersect with other social categories (e.g. race, class, and nationality) at different stages in the life course.  
M 1:30–3:20

SOCY 534a⁵, Cultural Sociology  
Jeffrey Alexander, Philip Smith
Cultural sociology is a new and vibrant area in social science. Collective meanings make a profound difference in modern societies. They are symbolic, but also sensual, emotional, and moral. They inspire ritual, but also creative performance and strategy. Examining codes, narratives, icons, and metaphors, this course analyzes how cultural structures energize capitalism, direct politics, create institutions, inspire social movements, and motivate war and peace.  
TTH 1–2:15

SOCY 542a, Sociological Theory  
Julia Adams
The course seeks to give graduate students the conceptual tools for a constructive engagement with sociological theory and theorizing. We trace the genealogies of dominant theoretical approaches and explore the ways in which theorists contend with these approaches when confronting the central questions of both modernity and the discipline.  
W 2:30–4:20

SOCY 543b⁵, Demography, Gender, and Health

SOCY 547a⁵, Gender, Race, and Genetic Testing  
Rene Almeling
Overview of sociological approaches to genetics, including gene/environment interactions and the history of genetic medicine. A focus on genetic testing in Huntington’s disease, pregnancy, cancer, and psychological disorders to explore how genetic information is provided to patients, and how patients experience genetic risk. Discussion of commercial firms offering direct-to-consumer genetic testing.  
W 2:30–4:20

SOCY 550a, A Secular Age?

SOCY 551a, Comparative and Historical Methods

SOCY 552a⁵, Punishment and Inequality  
Christopher Wildeman
Massive increases in the American imprisonment rate since the mid-1970s have rendered contact with the criminal justice system a common event for marginalized Americans. The course considers effects on inequality in the labor market, family life, civic participation, and health.  
TH 9:25–11:15
[SOCY 553a\textsuperscript{u}, Empires and Imperialism]

[SOCY 555b\textsuperscript{u}, Social Dimensions of Medicine and Health]

[SOCY 557b, Political Sociology]

[SOCY 558b, Topics in Social Stratification]

SOCY 560a,b/PLSC 734a,b, Comparative Research Workshop  Sadia Saeed

This workshop is a weekly interdisciplinary seminar dedicated to group discussion of work-in-progress by distinguished visiting scholars, Yale graduate students, and in-house faculty from various social science disciplines. Papers are distributed a week ahead of time and also posted at the Web site of the Center for Comparative Research (www.yale.edu/ccr). Students who take the course for a letter grade are expected to present a paper-in-progress the term that they are enrolled for credit. HTBA

[SOCY 561b\textsuperscript{u}, Civil Society in China]

SOCY 562b, Topics in Cultural Sociology  Jeffrey Alexander

After reviewing contemporary sociological perspectives on culture, the seminar concentrates on the intellectual origins, theories, and empirical exemplars of the strong program in cultural sociology. We discuss hermeneutics and interpretation, critical theory, semiotics, structuralism, and post-structuralism; how a cultural-sociological program emerged in the late 1980s and early 1990s; and how this program has produced a range of research studies. We examine in particular emerging foci on social drama and performance, cultural trauma, and the iconic turn. TH 9:25–11:15

SOCY 563b\textsuperscript{u}, Imperialism, Insurgency, and State Building  Jonathan Wyrtzen

The course considers the evolution of political order in the “Greater Middle East” (from Morocco to Central Asia) in the past two centuries by examining imperialist and nationalist state building, insurgency, and counterinsurgency in the region. W 1:30–3:20

[SOCY 565, Advanced Seminar in Cultural Sociology]

[SOCY 566b, Public Sociologies]

[SOCY 570b, Social Theory Trauma and Memory]

[SOCY 576a\textsuperscript{u}, Civil Society and Democracy]

SOCY 578a, Logic of Empirical Social Research  Richard Breen

The seminar is an intensive introduction into the methodology of the social sciences. It covers such topics as concepts and indicators, propositions and theory, explanation and understanding, observation and measurement, methods of data collection, types of data, units of analysis and levels of variables, research design inference, description and causal modeling, verification and falsification. The course involves both the study of selected texts and the analysis and evaluation of recent research papers. T 9:25–11:25

SOCY 580a, Statistics I  Christopher Wildeman

Introduction to probability and descriptive statistics. In-depth coverage of the linear model and its assumptions. TH 3:30–5:20, 1 HTBA
SOCY 581b, Statistics II  Christopher Wildeman
The course provides the second part of a two-term introduction to statistical analysis for quantitative social science research. The course covers advanced topics in linear regression and provides an introductory overview of models for categorical and count data, the analysis of time data, and longitudinal data. We also discuss data-related issues such as missing data and weighting, and data that are complicated by issues of non-random design. TTH 4–5:15, 1 HTBA

SOCY 582a, Statistics III: Advanced Quantitative Analysis for Social Scientists  Richard Breen
Covers more advanced statistical topics following on from Statistics II. Topics include matrix algebra; properties of estimators; maximum likelihood estimation; identification; simultaneous equation models; estimation of measurement and structural models; latent variable models; hierarchical linear models. T 2:30–4:20

[SOCY 583b, Ethnography of the African American Community]

[SOCY 585a, Sociology of the Life Course]

[SOCY 589bU, Classical Social Theory: The Marx-Weber Debate]

[SOCY 591bU, Sociology of the Arts and Popular Culture]

SOCY 595a, Inequality and Life Course Workshop  Christopher Wildeman, Richard Breen, Hannah Brueckner
In this workshop we present and discuss ongoing research work, primarily but not exclusively quantitative analyses. In addition, we address theoretical and methodological issues in the areas of the life course (education, training, labor markets, aging, as well as family demography), social inequality (class structures, stratification, and social mobility), and related topics. F 2–4

SOCY 595b, Inequality and Life Course Workshop  Christopher Wildeman, Richard Breen, Hannah Brueckner
See SOCY 595a for course description.

SOCY 597a,b, Special Topics in Sociology  Faculty
Students enroll in Special Topics if they wish to retake a course for credit when there is a new instructor and a substantially different syllabus from the first time they took the course. Only with the permission of the DGS.

SOCY 598a, 599b, Independent Study
By arrangement with faculty. When students register for the course online, the dropdown menu should be completed.

[SOCY 610bU/WGSS 745bU, Race, Gender, and the African American Experience]

[SOCY 612b, Agency and Action]

[SOCY 616a, Urban Ethnography]
SOCY 620bU, Material Culture and the Iconic Consciousness  Jeffrey Alexander
Exploration of how and why modern and postmodern societies have continued to sustain material symbolism and iconic consciousness. Study of theoretical approaches to debates about icons and symbols in philosophy, sociology, linguistics, psychoanalysis, and semiotics. Use of case studies to analyze modern iconography in advertisements and brand, food and bodies, nature, fashion, celebrities, popular culture, art, and politics. T 9:25–11:15

SOCY 625a, Analysis of Social Structure  Scott Boorman
Emphasizing analytically integrated viewpoints, the course develops a variety of major contemporary approaches to the study of social structure and social organization. Building in part on research viewpoints articulated by Kenneth J. Arrow in The Limits of Organization (1974), by János Kornai in an address at the Hungarian Academy of Sciences published in 1984, and by Harrison C. White in Identity and Control (2nd ed., 2008), four major species of social organization are identified as focal: (1) social networks, (2) competitive markets, (3) hierarchies/bureaucracy, and (4) collective choice. This lecture course uses mathematical and computational models — and comparisons of their scientific styles and contributions — as analytical vehicles in coordinated development of the four species. M 9:25–11:15

SOCY 628a, Workshop in Cultural Sociology  Jeffrey Alexander, Ron Eyerman, Philip Smith
This workshop is designed to be a continuous part of the graduate curriculum. Meeting weekly throughout both the fall and spring terms, it constitutes an ongoing, informal seminar to explore areas of mutual interest among students and faculty, both visiting and permanent. The core concern of the workshop is social meaning and its forms and processes of institutionalization. Meaning is approached as both structure and performance, drawing not only on the burgeoning area of cultural sociology but on the humanities, philosophy, and other social sciences. Discussions range widely among methodological, theoretical, empirical, and normative issues. Sessions alternate between presentations by students of their own work and by visitors. Contents of the workshop vary from term to term, and from year to year. Enrollment is open to auditors who fully participate and for credit to students who submit written work. HTBA

SOCY 628b, Workshop in Cultural Sociology  Jeffrey Alexander, Ron Eyerman, Philip Smith
Continuation of SOCY 628a; see 628a for course description. HTBA

SOCY 630a or b/AFAM 773a or b, Workshop in Urban Ethnography  Elijah Anderson
The ethnographic interpretation of urban life and culture. Conceptual and methodological issues are discussed. Ongoing projects of participants are presented in a workshop format, thus providing participants with critical feedback as well as the opportunity to learn from and contribute to ethnographic work in progress. Selected ethnographic works are read and assessed. M 11:30–1:20

[SOCY 631a, Sociology of Work]
SOCY 647b, Social Processes  Scott Boorman
Focus is on identifying and exploring robust alternatives/complements to the rational choice models that have come to dominate so much of the analysis of social (including organizational) processes in recent years. Specifically, emphasis is placed on a range of mathematical models and related analytic approaches originating outside of the rational choice literature—in fields such as social network analysis, evolutionary biology, organization theory, and the law. Possible starting points include the Boorman-Levitt network matching model and its applications to nonprofits and complex statutes; weak ties models of job information transmission and other information transfer in elite social networks; and “garbage can” models of the internal problem-solving dynamics of complex organizations. M 9:25–11:15

SOCY 656a, Professional Seminar  Marcus Hunter
This required seminar aims at introducing incoming sociology graduate students to the department and the profession. Yale Sociology faculty members are invited to discuss their research. There are minimum requirements, such as writing a book review. No grades are given; students should take for Audit. Held biweekly. F 9:25–11:15

Fields of Study
Fields include Spanish Peninsular literature, Spanish American literature, Portuguese and Brazilian literatures.

The doctoral program offers: (1) a concentration in Spanish specializing in a single field of study (medieval, Renaissance/Golden Age, modern Spanish Peninsular, colonial Spanish American, contemporary Spanish American); (2) a joint concentration in Spanish and Portuguese offering the student the opportunity to work in both the Luso Brazilian and Spanish/Spanish American fields. In addition, the department participates in (1) a combined Ph.D. program in Spanish and Portuguese and African American Studies offered in conjunction with the Department of African American Studies and (2) a combined Ph.D. program in Spanish and Portuguese and Renaissance Studies offered in conjunction with the Renaissance Studies Program.

Special Admissions Requirements
Thorough command of the language in which the student plans to specialize and a background in its literature, as well as command of at least one of the three additional languages in which the student will need to fulfill requirements.

Application must include GRE scores, a personal statement, and an academic writing sample in the language of the proposed specialization, not to exceed twenty-five pages in length. Students whose native language is not English must submit scores of the Test of English as a Foreign Language (TOEFL).

Special Requirements for the Ph.D. Degree
The department requires two years of course work, sixteen term courses, a grade of Honors in at least two of these courses each year, and a minimum grade average of High Pass. Course work includes two required courses, SPAN 500, History of the Spanish Language, and SPAN 790, Methodologies of Modern Foreign Language Teaching, and two courses taken outside the department. Also required are a reading knowledge of Latin and a second language, as well as a third language-literature minor. In the third year, the
student is expected to pass the qualifying examination (written and oral components) and submit and receive approval of the dissertation prospectus. Upon completion of all predissertation requirements, including the dissertation prospectus, students are admitted to candidacy for the Ph.D. The entire program, including the dissertation, can be completed in five years.

Participation in the department’s teaching and pedagogy program is a degree requirement. It consists of taking the required course SPAN 790 in the second year and teaching one section per term of a course in the beginning language sequence during the third and fourth years of study. Viewed as an integral part of the course of study for the doctorate, this program includes supervision by the director of the language program and course directors.

Combined Ph.D. Programs

SPANISH AND PORTUGUESE AND AFRICAN AMERICAN STUDIES
The Department of Spanish and Portuguese also offers, in conjunction with the Department of African American Studies, a combined Ph.D. in Spanish and Portuguese and African American Studies. For further details, see African American Studies.

SPANISH AND PORTUGUESE AND RENAISSANCE STUDIES
The Department of Spanish and Portuguese also offers, in conjunction with the Renaissance Studies Program, a combined Ph.D. in Spanish and Portuguese and Renaissance Studies. For further details, see Renaissance Studies.

Master’s Degrees

M.Phil. See Degree Requirements under Policies and Regulations. Additionally, students in Spanish and Portuguese are eligible to pursue a supplemental M.Phil. degree in Medieval Studies. For further details, see Medieval Studies.

M.A. (en route to the Ph.D.) The M.A. en route is awarded upon the satisfactory completion of eight term courses and two of the three language requirements (Latin and one other language).

Courses

PORT 922a", Brazil’s Modern Art Movement  K. David Jackson
Study of Brazilian modernism in literature and the arts, centered on São Paulo’s “Modern Art Week” of 1922, from the perspective of the European avant-gardes (cubism, futurism, surrealism) and Brazilian content. Themes include the Cannibal Manifesto and cultural independence from Europe; and avant-garde practices in literature and the arts from the 1920s to the construction of Brasilia and Sao Paulo Concrete Poetry. Special attention to major authors — Oswald de Andrade, Mário de Andrade, Manuel Bandeira, Carlos Drummond de Andrade, Murilo Mendes, João Cabral, Haroldo and Augusto de Campos — and artists Villa-Lobos, Portinari, Di Cavalcanti, and Tarsila do Amaral. Includes influential visitors to Brazil, as well as radio, film, and music of the period. T 9:25–11:15

PORT 991a, Tutorial
By arrangement with faculty.
PORT 991b, Tutorial
By arrangement with faculty.

SPAN 502b, Medieval Spain, Crossroads of Western Culture  María Rosa Menocal
This interdisciplinary overview of medieval Spanish culture focuses on a series of points of literary, cultural, and religious intersections that strongly shape European culture, including: the framed tale narrative tradition and the lyric song revolution; the translation movement and the scientific and philosophical innovations of the age; pilgrimage routes and epic encounters. In Spanish. TTH 11:35–12:50

SPAN 519a/CPLT 577a/MDVL 559a, Framed Narratives of Medieval Europe  María Rosa Menocal
A study of the vernacular storytelling traditions central to the cultural transformation of medieval Europe that begins in the twelfth century. The framed tale collections include intertwined texts, and stories many times retold, in a half dozen different linguistic and cultural traditions, beginning with the Disciplina Clericalis and the Kalila wa Dimna and their many versions, and culminating in the fourteenth-century masterpieces considered foundational to the national language traditions: the Decameron, the Conde Lucanor, and the Canterbury Tales. Topics of special interest include: translation, variations, and originality; the transition from oral storytelling to written texts; and the flourishing of the tradition in postmedieval literature, often with a distinct self-consciousness of the “medievalness” of the form. In English. TH 1:30–3:20

SPAN 523b, The Comedia: Theory and Practice  Susan Byrne
Spain’s Golden Age theater gave the world a number of unforgettable character types in bold thematic scripts: the first don Juan, the existentially preoccupied Segismundo, and collective protagonists who commit murder and suicide to uphold the principle of honor. A study of canonical works and production semiotics (staging, acting, sound, wardrobe), along with historical-political contexts, the corrales and the cofradías, the demands of a diverse public and state censorship, as well as theoretical debates and developments. Theoretical readings of Bartolomé de Torres Naharro, Lope de Vega, Miguel de Cervantes, and Aristotle. Dramatic works by Juan del Encina, Torres Naharro (the only dramaturg to have all his works prohibited on the Índices), Lope de Rueda, Juan de la Cueva, Cervantes, Lope de Vega, Ruiz de Alarcón, Mira de Amescua, and Calderón de la Barca. Time permitting, we cross the Atlantic but, in any case, students have the option of doing so for their written work. In Spanish. W 1:30–3:20

SPAN 660a/CPLT 674a, Cervantes’s Don Quijote  Roberto González Echevarría
A close reading of Cervantes’s masterpiece with emphasis on its significance for modern fiction. The relationship of author, character, and reader; reality and fantasy in fiction; literary imitation vs. literary invention. Conducted in Spanish, but Comparative Literature students may do their presentation and paper in English. W 3:30–5:20

SPAN 748a, Representing the Spanish Civil War  Noël Valis
The course examines the continuing fascination and complexities of the Spanish Civil War (1936–39) through a dual national and international perspective and an analysis of the literature and culture produced during and after the conflict. The course is divided into four sections: the war “from within,” the war “from without,” women in the war, and
memory of the war. Texts include Sender’s Réquiem por un campesino español, Rodoreda’s La plaza del Diamante, Llamazares’ Luna de lobos, Cercas’s Soldados de Salamina, Orwell’s Homage to Catalonia, Hemingway’s For Whom the Bell Tolls, poems by Miguel Hernández, Auden, and Spender, and films (Rojo y Negro, El laberinto del fauno, The Spanish Earth). In Spanish. M 1:30–3:20

SPAN 765b, El barroco de Indias Rolena Adorno
A study of the Baroque as a cultural and literary phenomenon in colonial Latin America, examined in relation to its canonical counterparts in Spanish Golden Age literature and in light of the theories and critical assessments that evaluate the Baroque and its place in the Hispanic literary and cultural tradition. Authors include Luis de Góngora, Francisco de Quevedo, Pedro Calderón de la Barca, Fray Luis de Granada, Bernardo de Balbuena, Juan Rodríguez Freyle, Juan del Valle y Caviedes, Juan de Espinosa Medrano, Sor Juana Inés de la Cruz, and Carlos de Sigüenza; critics include D’Ors, Picón-Salas, Wellek, Lezama Lima, Paz, Sarduy, and González Echevarría. In Spanish. T 1:30–3:20

SPAN 790b, Methodologies of Modern Language Teaching Sonia Valle
Preparation for a teaching career through readings, lectures, classroom discussions, and presentations on current issues in foreign/second language acquisition theory and teaching methodology. Classroom techniques at all levels. In Spanish. M 3:30–5, practicum M 5–6:30

SPAN 904b/CLPT 962b, Latin American Intellectual Debates Moira Fradinger
The seminar looks at the development of central cultural debates in the region over two centuries, mainly through the form of the essay, but including poems, novels, and films. We explore polemics over the “Idea of America” and the foundations of the regional nation-states in authors such as Bolívar, Martí, and Sarmiento; debates over the cultural independence from Europe, over the Indian question and the movement of indigenismo; issues of cultural hybridity and mestizaje, the movement of negritude; and the question of modernity and postmodernity. Twentieth-century authors include Rodó, Vasconcelos, Reyes, de Andrade, Mariátegui, Roumain, Césaire, Fanon, Rama, Retamar, Galeano, Glissant, and García Canclini. W 3:30–5:20

SPAN 919a, Modernismo: Literatura, periodismo, filología Aníbal González
A comprehensive study of the first autonomous Spanish American literary movement and its foundational role in modern Spanish American literature. Modernismo’s cosmopolitanism and its relation to the discourses of philology, journalism, and literature are examined through readings of modernista poetry, novels, short stories, essays, and crónicas. Authors to be discussed include Delmira Agustini, Rubén Darío, Manuel Díaz Rodríguez, Julián del Casal, Enrique Gómez Carrillo, Manuel Gutiérrez Nájera, Julio Herrera y Reissig, Enrique Larreta, Leopoldo Lugones, José Martí, José Enrique Rodó, José Asunción Silva, and José María Vargas Vila. In Spanish. W 1:30–3:20

SPAN 991a, Tutorial
By arrangement with faculty.

SPAN 991b, Tutorial
By arrangement with faculty.
STATISTICS

24 Hillhouse Avenue, 203.432.0666
www.stat.yale.edu
M.A., Ph.D.

Chair
Joseph Chang (on leave [Sp])

Acting Chair [Sp]
Harrison Zhou

Director of Graduate Studies
David Pollard (24 Hlh, david.pollard@yale.edu)

Professors  Donald Andrews (Economics), Andrew Barron, Joseph Chang (on leave [Sp]), Donald Green (Political Science), John Hartigan (Emeritus), Theodore Holford (Epidemiology & Public Health; Biostatistics), Peter Phillips (Economics), David Pollard, Heping Zhang (Epidemiology & Public Health; Biostatistics), Hongyu Zhao (Epidemiology & Public Health; Biostatistics), Harrison Zhou

Associate Professors  John Emerson, Sekhar Tatikonda (Electrical Engineering)

Assistant Professors  Lisha Chen, Mokshay Madiman, Jing Zhang

Senior Lecturer  Jonathan Reuning-Scherer

Lecturer  David Salsburg

Fields of Study
Fields comprise the main areas of statistical theory (with emphasis on foundations, Bayes theory, decision theory, nonparametric statistics), probability theory (stochastic processes, asymptotics, weak convergence), information theory, bioinformatics and genetics, classification, statistical computing, and graphical methods.

Special Admissions Requirements
GRE scores for the General Test and for the Subject Test in the area closest to the undergraduate major should accompany an application; the Math Subject Test is strongly recommended. All applicants should have a strong mathematical background, including advanced calculus, linear algebra, elementary probability theory, and at least one course providing an introduction to mathematical statistics. An undergraduate major may be in statistics, mathematics, computer science, or in a subject in which significant statistical problems may arise. For those whose native language is not English, the Test of English as a Foreign Language (TOEFL) scores are required.

Special Requirements for the Ph.D. Degree
There is no foreign language requirement. Normally during the first two years, fourteen term courses in this and other departments are taken to prepare students for research and
practice of statistics. These include courses devoted to case studies and practical work, for which students prepare a written report and give an oral presentation. The qualifying examination consists of three parts: a written report on an analysis of a data set, a written examination on theoretical statistics, and an oral examination. The examination is taken not later than when scheduled by the department in the middle of the second year, with provision for one subsequent reexamination of one or more parts in the event that a student does not pass the first time. All parts of the qualifying examination must be completed before the beginning of the third year. A prospectus for the dissertation should be submitted no later than the first week of March in the third year. The prospectus must be accepted by the department before the end of the third year if the student is to register for a fourth year. Upon successful completion of the qualifying examination and the prospectus (and meeting of Graduate School requirements), the student is admitted to candidacy. Students are expected to attend weekly departmental seminars.

Master’s Degree

M.A. (en route to the Ph.D.) This degree may be awarded upon completion of eight term courses and two terms of residence.

Terminal Master’s Degree Program Students are also admitted directly to a terminal master’s degree program. To qualify for the M.A., the student must successfully complete an approved program of eight term courses, chosen in consultation with the director of graduate studies (DGS). Full-time students must take a minimum of four courses per term. Part-time students are also accepted into the master’s degree program. See Terminal M.A./M.S. Degrees, under Policies and Regulations.

Program information is available on the Web at www.stat.yale.edu.

Courses

STAT 500b, Introductory Statistics  Andrew Barron
An introduction to statistical reasoning. Topics include numerical and graphical summaries of data, data acquisition and experimental design, probability, hypothesis testing, confidence intervals, correlation and regression. Application of statistical concepts to data; analysis of real-world problems. MWF 10:30–11:20

STAT 501–506, Introduction to Statistics
A basic introduction to statistics, including numerical and graphical summaries of data, probability, hypothesis testing, confidence intervals, and regression. Each course focuses on applications to a particular field of study and is taught jointly by two instructors, one specializing in statistics and the other in the relevant area of application. The first seven weeks are attended by all students in STAT 501–506 together as general concepts and methods of statistics are developed. The course separates for the last six and a half weeks, which develop the concepts with examples and applications. Computers are used for data analysis. These courses are alternatives; they do not form a sequence and only one may be taken for credit.
Statistical and probabilistic analysis of biological problems presented with a unified foundation in basic statistical theory. Problems are drawn from genetics, ecology, epidemiology, and bioinformatics. Graduate students are expected to finish a course project in addition to regular homework and exams. TTH 1–2:15

STAT 502au, Introduction to Statistics: Political Science  Conor Dowling, Jonathan Reuning-Scherer
Statistical analysis of politics, elections, and political psychology. Problems presented with reference to a wide array of examples: public opinion, campaign finance, racially motivated crime, and public policy. TTH 1–2:15

STAT 503au, Introduction to Statistics: Social Sciences  Jonathan Reuning-Scherer
Descriptive and inferential statistics applied to analysis of data from the social sciences. Introduction of concepts and skills for understanding and conducting quantitative research. TTH 1–2:15

STAT 505au, Introduction to Statistics: Medicine  Jonathan Reuning-Scherer, David Salsburg
Statistical methods relied upon in medicine and medical research. Practice in reading medical literature competently and critically, as well as practical experience performing statistical analysis of medical data. TTH 1–2:15

STAT 506au, Introduction to Statistics: Data Analysis  Huibin Zhou, Jonathan Reuning-Scherer
An introduction to probability and statistics with emphasis on data analysis. TTH 1–2:15

STAT 530bu, Introductory Data Analysis  John Emerson
Survey of statistical methods: plots, transformations, regression, analysis of variance, clustering, principal components, contingency tables, and time series analysis. The R computing language and Web data sources are used. Prerequisite: STAT 501a. MW 2:30–3:45

STAT 538au, Probability and Statistics  Jing Zhang
Fundamental principles and techniques of probabilistic thinking, statistical modeling, and data analysis. Essentials of probability: conditional probability, random variables, distributions, law of large numbers, central limit theorem, Markov chains. Statistical inference with emphasis on the Bayesian approach: parameter estimation, likelihood, prior and posterior distributions, Bayesian inference using Markov chain Monte Carlo. Introduction to regression and linear models. Computers are used throughout for calculations, simulations, and analysis of data. Prerequisite: MATH 118a or b or 120a or b; some acquaintance with matrix algebra and computing is assumed. MWF 10:30–11:20

STAT 541au, Probability Theory  David Pollard
A first course in probability theory: probability spaces, random variables, expectations and probabilities, conditional probability, independence, some discrete and continuous distributions, central limit theorem, Markov chains, probabilistic modeling. Prerequisite: after or concurrent with MATH 120a or b or the equivalent. MWF 9:25–10:15
STAT 542b, Theory of Statistics  Lisha Chen
Principles of statistical analysis: maximum likelihood, sampling distributions, estimation, confidence intervals, tests of significance, regression, analysis of variance, and the method of least squares. Prerequisites: STAT 541a; after or concurrent with MATH 222. MWF 9:25–10:15

STAT 551b, Stochastic Processes  Jing Zhang
Introduction to the study of random processes, including Markov chains, Markov random fields, martingales, random walks, Brownian motion, and diffusions. Techniques in probability such as coupling and large deviations. Applications to image reconstruction, Bayesian statistics, finance, probabilistic analysis of algorithms, genetics, and evolution. Prerequisite: STAT 541a or the equivalent. MW 1–2:15

STAT 600b, Advanced Probability  Mokshay Madiman
Measure theoretic probability, conditioning, laws of large numbers, convergence in distribution, characteristic functions, central limit theorems, martingales. Some knowledge of real analysis is assumed. TTH 2:30–3:45

STAT 609b, Empirical Processes  David Pollard
A rigorous discussion of probabilistic methods distilled from empirical process literature. Chaining arguments; maximal inequalities; symmetrization and combinatorial entropy; VC dimension and beyond; bracketing; concentration of measure; majorizing measures; uniform laws of large numbers and Donsker theorems. Applications to asymptotics for statistical inference and econometrics. Knowledge of probability theory at the level of STAT 600b is assumed.

STAT 610a, Statistical Inference  Andrew Barron
A systematic development of the mathematical theory of statistical inference covering methods of estimation, hypothesis testing, and confidence intervals. An introduction to statistical decision theory. Knowledge of probability theory at the level of STAT 541a is assumed. TTH 10:30–11:45

STAT 611b, Decision Theory  Harrison Zhou
A detailed study of some topics in statistical decision theory, including admissibility and minimaxity; the James-Stein estimator; Stein’s unbiased estimator of risk; empirical Bayes estimators; hierarchical Bayes methods and random effects; complete class theorems; asymptotic minimaxity for nonparametric estimation; and sparsity models. Prerequisite: STAT 610a.

STAT 612a, Linear Models  Joseph Chang
The geometry of least squares; distribution theory for normal errors; regression, analysis of variance, and designed experiments; numerical algorithms (with particular reference to the R statistical language); alternatives to least squares. Prerequisites: linear algebra and some acquaintance with statistics. MW 11:35–12:50

STAT 625a, Case Studies  John Emerson
Statistical analysis of a variety of statistical problems using real data. Emphasis on methods of choosing data, acquiring data, assessing data quality, and the issues posed by extremely large data sets. Extensive computations using R.
STAT 626b, Practical Work  Staff
Individual one-term projects, with students working on studies outside the department, under the guidance of a statistician.

STAT 627a and b, Statistical Consulting  John Emerson
Statistical consulting and collaborative research projects often require statisticians to explore new topics outside their area of expertise. This course exposes students to real problems, requiring them to draw on their expertise in probability, statistics, and data analysis. Students complete the course with individual projects supervised jointly by faculty outside the department and by one of the instructors. Students enroll for both terms and receive one credit at the end of the year. F 2:30–4:30

STAT 645b/CB&B 645b, Statistical Methods in Genetics and Bioinformatics  Jing Zhang
Introduction to problems, algorithms, and data analysis approaches in computational biology and bioinformatics; stochastic modeling and statistical methods applied to problems such as mapping disease-associated genes, analyzing gene expression microarray data, sequence alignment, SNP analysis, transcription regulation and sequence motif finding, and RNA/protein structure prediction. Statistical methods include maximum likelihood, EM, Bayesian inference, Markov chain Monte Carlo, and some methods of classification and clustering; models include hidden Markov models, Bayesian networks, and the coalescent. The limitations of current models, and the future opportunities for model building, are critically addressed. Prerequisite: STAT 361, 538a, or 542b. Prior knowledge of biology is not required, but some interest in the subject and a willingness to carry out calculations using R is assumed. TTH 10:30–11:45

STAT 660bu, Multivariate Statistical Methods for the Social Sciences  Jonathan Reuning-Scherer
An introduction to the analysis of multivariate data. Topics include principal components analysis, factor analysis, cluster analysis (hierarchical clustering, k-means), discriminant analysis, multidimensional scaling, and structural equations modeling. Emphasis is placed on practical application of multivariate techniques to a variety of examples in the social sciences. Students complete extensive computer work using either SAS or SPSS. Prerequisites: knowledge of basic inferential procedures, experience with linear models (regression and ANOVA). Experience with some statistical package and/or familiarity with matrix notation is helpful but not required. Requirements: regular assignments and a final project. TTH 1–2:15

STAT 661au, Data Analysis  Lisha Chen
By analyzing data sets using the R statistical computing language, a selection of statistical topics are studied: linear and nonlinear models, maximum likelihood, resampling methods, curve estimation, model selection, classification, and clustering. Weekly sessions are held in the Social Sciences Statistical Laboratory. Prerequisites: after or concurrent with STAT 542b and MATH 222a or b or 225a or b or the equivalents. MW 2:30–3:45
STAT 664b/ENAS 954b, Information Theory  Mokshay Madiman
Foundations of information theory in communications, statistical inference, statistical mechanics, probability, and algorithmic complexity. Quantities of information and their properties: entropy, conditional entropy, divergence, redundancy, mutual information, channel capacity. Basic theorems of data compression, data summarization, and channel coding. Applications in statistics. TTH 4–5:15

STAT 665b, Data Mining and Machine Learning  Lisha Chen
Techniques for data mining and machine learning are covered from both a statistical and a computational perspective, including support vector machines, bagging, boosting, neural networks, and other nonlinear and nonparametric regression methods. The course gives the basic ideas and intuition behind these methods, a more formal understanding of how and why they work, and opportunities to experiment with machine learning algorithms and apply them to data. Prerequisite: STAT 242b. MW 11:35–12:50

[STAT 667b/AMTH 605b/ENAS 503b, Probabilistic Networks, Algorithms, and Applications]

STAT 680a, Nonparametric Statistics  Harrison Zhou
Introduction to nonparametric methods such as kernel estimation, Fourier basis estimation, wavelet estimation. Optimal minimax convergence rates and constants for function spaces, with connections to information theory. Adaptive estimators (e.g., adaptive shrinkage estimation). If time permits: high dimensional function estimation, functional data estimation, classification, or nonparametric asymptotic equivalence. Applications to real data. Prerequisite: some knowledge of statistical theory at the level of STAT 610a. TH 4–6

STAT 690a or b, Independent Study
By arrangement with faculty. Approval of DGS required.

STAT 694a, Introduction to Research  David Pollard
Students learn how to read important statistical papers and how to present seminars of professional quality. T 4–6
Non-Degree-Granting Programs, Councils, and Research Institutes

ATMOSPHERIC SCIENCE

Advisory Committee  Hagit Affek (Geology & Geophysics), Donald Aylor (Forestry & Environmental Studies), Sarbani Basu (Astronomy), Michelle Bell (Forestry & Environmental Studies), William Boos (Geology & Geophysics), Alexey Fedorov (Geology & Geophysics), Debra Fischer (Astronomy), Gary Haller (Chemical Engineering; Chemistry), Xuhui Lee (Forestry & Environmental Studies), Rajendra Pachauri (Forestry & Environmental Studies), Mark Pagani (Geology & Geophysics), Daniel Rosner (Chemical Engineering; Mechanical Engineering), Ronald Smith (Geology & Geophysics), Mitchell Smooke (Mechanical Engineering), Sabatino Sofia (Astronomy), Trude Storelvmo (Geology & Geophysics), Mary-Louise Timmermans (Geology & Geophysics), Andrew Wells (Applied Mathematics), John Wettlaufer (Applied Mathematics; Geology & Geophysics; Physics)

A number of departments of the Graduate School offer courses dealing with the physics, dynamics, and chemistry of the atmosphere, and the interactions of the atmosphere with the biosphere, oceans, and cryosphere, including all biogeochemical cycles. The mathematical and physical science basis for these phenomena is developed in course work and research foci across a range of departments. In order to permit students whose interests lie in the field of atmospheric science to develop an integrated program of studies, an interdisciplinary program is offered. Typical areas of interest included in the scope of the program are theory of weather and climate, computational fluid dynamics, air pollution from industrial and natural sources, urban environmental health, global climatic change, paleoclimatology, hydrometeorology, and dynamics of atmospheric and oceanic motions. The program is individually planned for each student through a faculty adviser system.

Special Admissions Requirements

A student should, on the basis of scientific orientation, seek admission to one of the participating departments. The Department of Geology and Geophysics is the focus for studies of physical and dynamical meteorology, oceanography, and atmospheric chemistry, with allied methods and approaches in the Program on Applied Mathematics. The departments of Epidemiology and Public Health and Engineering & Applied Science (which includes the programs of Applied Physics, Biomedical Engineering, Chemical Engineering, Electrical Engineering, Environmental Engineering, and Mechanical Engineering) provide additional courses in environmental health and atmospherically related processes. The Ph.D. and M.Phil. requirements are those of the admitting departments (see entries in this publication).
COMBINED PROGRAM IN THE BIOLOGICAL AND BIOMEDICAL SCIENCES (BBS)

L-203A Sterling Hall of Medicine, 203.785.5663
www.bbs.yale.edu

Director
Lynn Cooley (lynn.cooley@yale.edu)

Fields of Study
The Yale Combined Program in the Biological and Biomedical Sciences (BBS) offers unprecedented access to Yale’s extensive array of bioscience resources, encompassing everything the University has to offer in one comprehensive, interdisciplinary graduate program. BBS has no boundaries, either departmental or geographical. Students therefore have access to courses, seminars, and faculty labs in every department. Moreover, students can participate in research activities anywhere — on the main University campus as well as at the School of Medicine.

Within BBS there are approximately 280 participating faculty, several dozen courses, and a great many seminars from which to choose. BBS is currently divided into eight interest-based “tracks”:
- Computational Biology and Bioinformatics
- Immunology
- Microbiology
- Molecular Biophysics and Biochemistry
- Molecular Cell Biology, Genetics, and Development
- Neuroscience
- Pharmacological Sciences and Molecular Medicine
- Physiology and Integrative Medical Biology

Students apply to and, upon matriculation, affiliate with one of these eight tracks. It is important to note that, regardless of a student’s home track, all courses, faculty, and research opportunities at the University remain available.

Year 1 Each track has a faculty director who helps first-year students select courses and find suitable lab rotations. Students typically take two to three courses per term and conduct two to four lab rotations over the course of the year.

Year 2 Just prior to the start of the second year, students select a thesis adviser in whose lab they will conduct their doctoral research. They also then leave their BBS track and formally join one of twelve Ph.D.-granting programs:
- Cell Biology
- Cellular and Molecular Physiology
- Computational Biology and Bioinformatics
- Experimental Pathology
- Genetics
- Immunobiology
- Interdepartmental Neuroscience Program
Students in year 2 complete the course requirements for the graduate program they have joined, take a qualifying exam, act as teaching assistants in lecture or lab courses, and begin thesis research.

**Year 3 and beyond** Students focus primarily on thesis research, publishing their results, and presenting their work at scientific meetings.

The average time to degree is 5.5 years.

For the duration of their studies all students receive a stipend, full tuition, and health coverage. Financial support comes from university fellowships, National Institutes of Health (NIH) training grants, and grants from foundations and companies.

### Special Admissions Requirements

Entrance requirements to BBS are track-specific but include the following: GRE General Test scores; relevant GRE Subject Test scores (strongly recommended but not a strict requirement); undergraduate major in a relevant biological, chemical, or physical science; three letters of recommendation addressing the student’s academic performance and/or laboratory training; and TOEFL exam scores for students whose native language is not English. Track-specific requirements are listed below.

**COMPUTATIONAL BIOLOGY AND BIOINFORMATICS**

All applicants are expected to meet general BBS requirements for entrance. In addition, successful applicants will have a strong foundation in the basic sciences such as biology, chemistry, and mathematics. Training in computing/informatics is also essential and should include significant computer programming experience. The GRE Subject Test in cellular and molecular biology, biology, biochemistry, chemistry, computer science, or other relevant discipline is recommended. The MCAT is also accepted.

**IMMUNOLOGY**

All applicants are expected to meet general BBS requirements for entrance. In addition, successful applicants are expected to have a firm foundation in the biological and physical sciences. It is preferred that students have taken courses in biology, organic chemistry, biochemistry, genetics, cell biology, physics, and mathematics. Actual course requirements are not fixed, however, and students with outstanding records in any area of the biological sciences may qualify for admission. There are no specific grade requirements for prior course work, but a strong performance in basic science courses is of great importance for admission. In special cases the Medical College Admission Test (MCAT) may be substituted.

**MICROBIOLOGY**

No additional requirements or recommendations.
MOLECULAR BIOPHYSICS AND BIOCHEMISTRY
All applicants are expected to meet general BBS requirements for entrance. Successful applicants will have a firm foundation in the sciences. Desirable courses include biology; biochemistry; general, organic, and physical chemistry; physics; and math. A pertinent GRE Subject Test is strongly recommended.

MOLECULAR CELL BIOLOGY, GENETICS, AND DEVELOPMENT
In addition to general BBS requirements, the GRE Subject Test in Biochemistry, Cell and Molecular Biology, Biology, or Chemistry is recommended.

NEUROSCIENCE
All applicants are expected to meet general BBS requirements for entrance. Successful applicants will have a firm foundation in the sciences. The Neuroscience track will accept the Medical College Admission Test (MCAT) in lieu of the Graduate Record Examination (GRE) General Test.

PHARMACOLOGICAL SCIENCES AND MOLECULAR MEDICINE
All applicants are expected to meet general BBS requirements for entrance. Successful applicants will have a firm foundation in the sciences. A GRE Subject Test in Biochemistry, Cell and Molecular Biology, or Chemistry is preferred. The experimental approaches and methods in this track are diverse and involve chemistry, biochemistry, physiology, and biophysics. For this reason, appropriate undergraduate preparation may involve majors that emphasize biology, chemistry, or physics.

PHYSIOLOGY AND INTEGRATIVE MEDICAL BIOLOGY
All applicants are expected to meet general BBS requirements for entrance. Successful applicants should have backgrounds in the biological, chemical, and/or physical sciences. These include majors in biology, biochemistry, physiology, genetics, chemistry, physics, mathematics, engineering, computer science, and psychology. Courses in biology, biochemistry, organic and physical chemistry, and mathematics through elementary calculus are recommended.

Program materials are available upon request to Bonnie Ellis, Assistant Administrative Director, BBS Program, Yale University, PO Box 208084, New Haven CT 06520-8084; telephone 203.785.5663; fax 203.785.3734; e-mail, bbs@yale.edu; Web site, www.bbs.yale.edu.
THE COWLES FOUNDATION

30 Hillhouse Avenue, 203.432.3702
http://cowles.econ.yale.edu

Director
Philip Haile

The Cowles Foundation for Research in Economics at Yale University has as its purpose the conduct and encouragement of research in economics and related fields. The Cowles Foundation seeks to foster the development and application of rigorous logical, mathematical, and statistical methods of analysis. Members of the Cowles research staff are faculty members with appointments and teaching responsibilities in the Department of Economics and other departments. Among its activities, the Cowles Foundation provides financial support for research, visiting faculty, postdoctoral fellowships, workshops, and graduate students. Cowles regularly sponsors conferences and publishes a working paper series and research monographs.
The Economic Growth Center is a research organization within the Yale Department of Economics that was created in 1961 to analyze, both theoretically and empirically, economic growth and the economic relations between low- and high-income countries. The research program emphasizes the search for regularities in the process of growth and changes in economic structure using existing data sets. In recent years the center has also undertaken new and continuing long-term panel studies and is carrying out randomized field experiments in a number of countries to provide new information on and analyses of the consequences and mechanisms of development. An increasing share of the research involves historical analysis of long-term processes as part of the Economic History Program that is housed in the Economic Growth Center. Current projects in the center include research on technology development; choice and transfer; microfinance and credit markets; formal insurance; household consumption; investment and demographic behavior; the role of networks; agricultural research and productivity growth; labor markets and the returns to education of women and men; income distribution; domestic and international migration; the relationship between trade and development; and international political economy. The center’s research faculty hold appointments in the Department of Economics and other departments and schools at Yale, and accordingly have teaching as well as research responsibilities.

The center sponsors a number of activities, including a regular series of workshops on development, trade, labor and population, and economic history, and provides competitive research grants to graduate students and faculty as well as graduate student fellowships.

The Economic Growth Center Collection, housed in a separate facility at the Social Science Library, is a special collection focused on the statistical, economic, and planning documents of developing countries, including government documents.

The center administers, jointly with the Department of Economics, the Yale master’s degree training program in International and Development Economics.
INSTITUTION FOR SOCIAL AND POLICY STUDIES

77 Prospect Street, 203.432.3234
http://isps.research.yale.edu

Director
Jacob Hacker

Executive Committee  Kelly Brownell, Hannah Brueckner, Ian Shapiro, Jody Sindelar, Stephanie Spangler, Christopher Udry

The Institution for Social and Policy Studies (ISPS) facilitates interdisciplinary inquiry in the social sciences and research on important public policy subjects. Recognizing that important social problems cannot be studied adequately by a single discipline, the Yale Corporation established the Institution for Social and Policy Studies in 1968 in order to stimulate interdisciplinary collaboration within the University. Faculty and students from many departments in the Faculty of Arts and Sciences and from Yale’s graduate and professional schools are involved in a variety of activities. These include interdisciplinary faculty seminars, research projects, postdoctoral programs, and the undergraduate major in Ethics, Politics, and Economics. Through these activities, ISPS seeks to provide intellectual leadership in the social sciences and shape public policies of local, national, and international significance.

Among the major programs at ISPS are the Yale University Interdisciplinary Center for Bioethics, Stephen Latham, director; the Center for the Study of American Politics, Alan Gerber, director; the Agrarian Studies Program, James Scott and K. Sivaramakrishnan, co-directors; and the Program in Ethics, Politics, and Economics, Nicholas Sambanis, director. One of the hallmarks of ISPS is its commitment to field experimentation. For examples of experiments currently being conducted by ISPS scholars, please visit our Web site: http://isps.research.yale.edu/research-2/projects.
INTERNATIONAL SECURITY STUDIES

31 Hillhouse Avenue, 203.432.6242
http://iss.yale.edu

Director
Paul Kennedy

International Security Studies (ISS) supports interdisciplinary research and teaching in grand strategy, as well as international, diplomatic, and strategic history. Its goals are to fill the critical national need for educators and leaders with knowledge of these fields; to advance analysis, training, and teaching in its areas of interest; and to provide a forum for informed and independent discussions of historical and contemporary policy thinking and policy making on relevant issues.

ISS is not a degree-granting program: it facilitates the work and welcomes the participation of all Yale undergraduate, graduate, and professional school students in its events and its program of research grants and internship support. ISS is supported by Yale University, the Smith Richardson Foundation, the George Frederick Jewett Foundation, and the Friends of ISS, an organization of private donors.

The Brady-Johnson Program in Grand Strategy at Yale University, led by John Lewis Gaddis, is part of ISS. The program—which includes the Ivy Scholars Program, a rigorous academic experience for outstanding high school students (http://ivyscholars.yale.edu) — seeks to revive the study and practice of grand strategy by teaching future leaders to appreciate and apply its principles; by supporting undergraduate, graduate, and postdoctoral education and scholarship grounded in these principles; and by promoting a broader recognition of the centrality of grand strategy to successful, pragmatic leadership.

The program, launched in January 2000 and dedicated on December 11, 2006, to Nicholas F. Brady (B.A. 1952) and Charles B. Johnson (B.A. 1954), combines historical depth and analytical range with the belief that training future leaders at the graduate and undergraduate levels is the best long-term investment ISS can make in the future.

Inquiries should be directed to International Security Studies, Yale University, PO Box 208353, New Haven CT 06520-8353. Further information on ISS and the Brady-Johnson Program can be found at http://iss.yale.edu.
JUDAIC STUDIES

451 College Street, 203.432.0843
www.yale.edu/judaicstudies

Chair and Director of Graduate Studies
Steven Fraade

Professors  Robert Brody (Visiting, Religious Studies), Shmuel Feiner (Visiting, History), Steven Fraade (Religious Studies), Paul Franks (Philosophy), Christine Hayes (Religious Studies), Paula Hyman (History; Religious Studies), Ivan Marcus (History; Religious Studies)

Associate Professors  Oded Irshai (Visiting, History), Hindy Najman (Religious Studies), Marci Shore (History)

Assistant Professor  Eliyahu Stern (Religious Studies; History)

Senior Research Scholar  Margaret Olin (Divinity School; History of Art; Religious Studies)

Lecturers  Jonathan Kaplan, Liora Halperin

Senior Lector II  Ayala Dvoretzky (Near Eastern Languages & Civilizations)

Senior Lector  Shiri Goren (Near Eastern Languages & Civilizations)

Lector  Dina Roginsky (Near Eastern Languages & Civilizations)

Judaic Studies offers an interdisciplinary approach to the critical study of the languages, history, literature, religion, and culture of the Jews. Jewish society, texts, ideologies, and institutions are studied in comparative historical perspective in relation to the surrounding societies and cultures.

Graduate-level programs are available through the following departments: History (Ancient, Medieval, and Modern Jewish History), Religious Studies (History and Literature of Ancient Judaism, Medieval and Modern Jewish History), Near Eastern Languages and Civilizations (Northwest Semitic, Hebrew Language and Literature), Comparative Literature (Hebrew and Comparative Literature). Applications are made to a specific department, and programs of study are governed by the degree requirements of that department.

Other resources include the Judaica collection of Sterling Memorial Library and its Judaica bibliographer, the Fortunoff Archive for Holocaust Testimonies, the biweekly faculty/graduate student Judaic Studies Seminar, several lecture series, postdoctoral fellowships, and graduate fellowships in Judaic Studies.

Program materials are available on request to the director of graduate studies of the department of intended specialization, or to the Chair, Program of Judaic Studies, Yale University, PO Box 208282, New Haven CT 06520-8282, and at www.yale.edu/judaicstudies.
Courses

JDST 692b/HSAR 731b/REL 936b/RLST 798b, Witnessing, Remembrance, Commemoration Margaret Olin

Memory and its expressions structure and inform many aspects of contemporary visual culture. This seminar pursues readings about memory and witnessing chosen from among the works of such writers as Sigmund Freud, Albert Camus, Frances Yates, Maurice Halbwachs, Michel de Certeau, and the authors of the Book of Genesis, as well as writings about commemoration by James Young and Pierre Nora, among others. Discussions apply these readings to the study of witnessing and memorializing as artistic practices, and examine visual realizations of such works, including some monuments and memorials near campus and videos in the Fortunoff archive. Student projects center on theory or on special cases of witnessing or commemoration, ritual, memorial practice, and monuments, whether built, written, aural, electronic, or played out on the streets. Qualified undergraduates welcome. Prerequisite: permission of the instructor. T 2:30–4:20

JDST 717b, Compilation of the Pentateuch Joel Baden

A methodological and practical introduction to the issues and theories regarding the composition of the Pentateuch. Detailed readings of the biblical material, along with secondary analyses of the texts. We attempt to identify the problems in the narratives of the Pentateuch and arrive at the literary solutions to these problems. TTH 9–10:15

JDST 721b/RLST 751b, Introduction to Judaism in the Ancient World Steven Fraade

The emergence of classical Judaism in its historical setting. Jews and Hellenization; varieties of early Judaism; apocalyptic and postapocalyptic responses to suffering and catastrophe; worship and atonement without sacrificial cult; interpretations of scriptures; law and life; the rabbi; faith in reason; Sabbath and festivals; history and its redemption. No prior background in Jewish history assumed. MW 11:35–12:50

JDST 722b/RLST 675b, Ancient Judaism Christine Hayes

An in-depth survey of the history and literature of Judaism in late antiquity through the rabbinic period. Special attention is given to the problems and possibilities of employing rabbinic sources for the purposes of historical reconstruction in the period that saw the emergence of the Gospels and the formation of Christianity. Emphasis on methodological trends and cutting-edge scholarship. The course is designed primarily for students in the Ph.D. program in New Testament and Ancient Christianity. Doctoral students in Hebrew Bible and Ancient Judaism are also welcome. W 10–12

JDST 723b/HIST 503b/RLST 759b, Jews and Christians in Late Antique Roman Palestine Oded Irshai

An examination of the strategies and mechanisms enabling the appropriation and Christianization of late Roman Palestine from the fourth to the seventh century. Topics include Christian attitudes toward the land of Jesus, sacred space, memory, pilgrimage, and the formation of liturgy, as well as manifestations of Jewish resistance to the transformation of the Holy Land. T 3:30–5:20
JDST 736b/RLST 746b, Midrash Seminar: Sifre Shofetim  Steven Fraade
Close study of the earliest rabbinic commentary to the Book of Deuteronomy, focusing on its interpretations of laws dealing with the responsibilities of public figures: judges, kings, priests, and prophets. Particular attention to the interrelation of rabbinic legal rhetoric and the hermeneutics of scriptural commentary, with comparative excursions into other corpora of ancient Jewish and non-Jewish law. Prerequisite: reading competency in classical Hebrew. TH 9:25–11:15

JDST 737a/RLST 760a, Hellenistic Jewish Thought  Hindy Najman
Consideration of the development of Greek-speaking Jewish communities in antiquity, both in their commonality with contemporaneous Jewish communities and in their distinctiveness. Attention is given to the development of the Greek Bible, the Hellenization of the biblical figures, Greek influences on the interpretation of Jewish scriptures, and the role of prayer and ritual outside the Jerusalem Temple. TTH 11:35–12:50

JDST 738b/RLST 743bU, Text and Context of the Dead Sea Scrolls  Hindy Najman
An in-depth study of the Dead Sea Scrolls. Focus is on the development of law, interpretation, ritual, and prayer in the late Second Temple period and on the impact that the finding of the Dead Sea Scrolls has had on our understanding of the formation of the Hebrew Bible. Prerequisite: two years of Hebrew or Aramaic. T 9:25–11:15

JDST 739a/RLST 761a, Destruction and Recovery in Ancient Judaism  Hindy Najman
The seminar focuses on the relationship between destruction and recovery in Ancient Jewish writings. How was Judaism reworked in the face of the destruction of the first temple in 586 B.C.E. and of the second temple in 70 C.E.? To what extent did Judaism internalize the experience of destruction? M 1:30–3:20

JDST 751a/RLST 745a, The Academic Study of Talmud  Robert Brody
Critical study of selected passages from tractate Ketubot of the Babylonian Talmud in conjunction with related passages elsewhere in classical rabbinic literature. Emphasis on talmudic philology and contemporary scholarly trends in the academic study of the Talmud. Prerequisite: reading knowledge of rabbinic Hebrew and talmudic Aramaic. M 3:30–5:20

JDST 752b/RLST 744b, Monuments of Early Geonic Literature  Robert Brody
Introduction to the most important works of the early Geonic period (eighth and ninth centuries): Halachot Pesuqot, Halachot Gedolot, and She’iltot. Examines the relevant secondary literature and outstanding research questions regarding these works. M 2:30–4:20

JDST 756b/RLST 756b, Ancient Judaism Seminar  Hindy Najman
The topic of this seminar, which is required of students in Ancient Judaism, changes yearly. The seminar focuses this year on the connections between (1) the formation of texts, corpora, and discourses; (2) the formation of the concept of the personality to whom these textual units come to be ascribed; and (3) the formation of the personality of the reader of these textual units. Investigates the development of the author function in ancient Judaism, the role played by that function in the formation of textual traditions,
the authoritative figures around whom traditionary collections grew, and the formative role of traditions to which special authority was ascribed. W 1:30–3:20

JDST 760b/RLST 772b, Rabbinics Research Seminar Christine Hayes
An in-depth survey of research debates and of methods and resources employed in the study of classical (pre-Geonic) rabbinic literature of all genres. This seminar is required of graduate students in Ancient Judaism. Prerequisites: knowledge of Hebrew and Aramaic; ability to read academic Hebrew; and permission of the instructor. TH 10–12

JDST 761au/HIST 535au/RLST 773au, History of the Jews to Early Modern Times Ivan Marcus
A broad introduction to the history of the Jews from biblical beginnings until the European Reformation and the Ottoman Empire. Focus on the formative period of classical rabbinic Judaism and on the symbiotic relationships among Jews, Christians, and Muslims. An overview of Jewish society and culture in its biblical, rabbinic, and medieval settings. TTH 11:35–12:50

JDST 763au, Medieval Jews, Christians, and Muslims Imagining Each Other Ivan Marcus
How members of Jewish, Christian, and Muslim communities thought of and interacted with members of the other two cultures during the Middle Ages. Topics include the cultural grids and expectations each imposed on the other; the rhetoric of otherness such as humans or devils, purity or impurity, and animal imagery; and models of religious community and power in dealing with the other when confronted with cultural differences. T 1:30–3:20

JDST 764bu/HIST 532bu/RLST 777bu, Jews in Muslim Lands from the Seventh to the Sixteenth Century Ivan Marcus
Introduction to Jewish culture and society in Muslim lands from the Prophet Muhammad to Suleiman the Magnificent. Topics include Islam and Judaism; Jerusalem as a holy site; rabbinic leadership and literature in Baghdad; Jewish courtiers, poets, and philosophers in Muslim Spain; and the Jews in the Ottoman Empire. Prerequisite: reading knowledge of modern Hebrew. TTH 11:35–12:50

JDST 776au/HIST 575au, The Cultural Revolution of the Jewish Enlightenment Shmuel Feiner
Examines the origins, history, major texts, and cultural and social impact of the Jewish Enlightenment. Begins with the Enlightenment project of Voltaire, Lessing, and Kant, and considers the cultural revolution among the Jews in Germany and the construction of the modern public sphere; the life and thought of Moses Mendelssohn; the cultural conflicts between the “maskilim” and their orthodox opponents; the issue of gender; and the latest stages of Jewish Enlightenment in nineteenth-century Galicia and Russia. TH 3:30–5:20

JDST 780bu/RLST 747bu, Jewish Citizenship in Modern Europe Eliyahu Stern
Seventeenth- to twentieth-century responses to Jewish citizenship in modern European states. Religious law; modern Jewish identity; Zionism; Judaism as a religion vs. a nation; the place of minorities in contemporary Europe. W 9:25–11:15
JDST 786au/RLST 742au, Jewish Philosophy  Paul Franks
An introduction to problems arising from the claim that God speaks to human beings. Topics include anthropomorphic language, kabbalistic anthropology, purposiveness in nature and history, law and commandment, chosenness and universality, and messianism. MW 11:35–12:50

JDST 787bU/HIST 950bU/RLST 795bU, Women in Modern Jewish History  Paula Hyman
The roles and representation of Jewish women in the modern period. Special attention to the role of gender in Judaism; the social, cultural, and political activity of women; and the development and impact of feminism. T 1:30–3:20

JDST 788bU/HIST 979bU/RLST 768bU, Holocaust in Historical Perspective  Paula Hyman
A survey of the major historical issues raised by the Holocaust, including the roots of Nazism; different theoretical perspectives and ways of accounting for genocide; the behavior of perpetrators, victims, and bystanders; and problems of representation. TTH 10:30–11:20, 1 HTBA

JDST 789aU/HIST 765aU/RLST 764aU, America and Its Jews, 1654 to the Present  Paula Hyman
The history of Jews in America from the colonial period to the present. Topics include immigration, religious development, politics, and participation in culture. Special attention to how Jews, as a minority, have negotiated their place in American society. MW 2:30–3:45

JDST 790b/HIST 541b/RLST 776b, The Jews in Medieval Societies  Ivan Marcus
Research seminar that focuses on a comparison of the two medieval Jewish subcultures of Ashkenaz (northern Christian Europe) and Sefarad (mainly Muslim and Christian Spain). Issues in historiography and comparative methodology complement discussions about the symbols and reality of literary, political, and economic features of each society. Prerequisite: reading knowledge of modern Hebrew. T 1:30–3:20

JDST 791bU, Jews, Language, and Nationalism in Modern Times  Liora Halperin
An exploration of the intersection of language, community, and national identity in the Jewish experience, with an emphasis on the modern period. We consider theories of language and identity; the Tower of Babel myth and premodern views of multilingualism; the politics of translation; Yiddish, Ladino, and other Jewish languages; the idea of linguistic degeneracy and language reform; the modern Hebrew revival; and the politics of language in Israel. W 2:30–4:30

JDST 793aU/HIST 951aU/RLST 799aU, Introduction to Modern Jewish Thought  Eliyahu Stern
An overview of modern Jewish philosophical trends, movements, and thinkers from the seventeenth to the twenty-first century. Subject matter addressed: enlightenment, historicism, socialism, secularism, religious radicalism, and Zionism. TTH 11:35–12:25, 1 HTBA
JDST 796a/U/HIST 977a/U/RLST 790a/U, Anti-Semitism in Modern Times
Paula Hyman
An exploration of anti-Semitism as a religious, social, and political prejudice in different historical contexts. Examination of premodern religious and secular stereotypes. Focus on the role of anti-Semitism in Europe, the United States, and the Middle East from the late nineteenth century to contemporary times. W 9:25–11:15

JDST 799a/U, Tel Aviv: Culture, History, and the City  Liora Halperin
An exploration of culture, politics, and society in modern Palestine and Israel through the study of Tel Aviv, the Jewish city founded adjacent to the ancient port city of Jaffa in 1909. Topics include the city in Zionist ideology; immigration and cosmopolitanism; Hebrew culture and language; architecture; city planning; centers and peripheries; and the city as a site of political activism. T 2:30–4:30

THE WHITNEY AND BETTY MACMILLAN CENTER FOR INTERNATIONAL AND AREA STUDIES AT YALE

Luce Hall, 203.432.3410
www.yale.edu/macmillan

Director
Ian Shapiro (Political Science)

Executive Committee  Ian Shapiro (Chair; Political Science), Nancy Ruther (Secretary; Associate Director, The MacMillan Center), Julia Adams (Sociology), Elizabeth Bradley (School of Public Health), Richard Bribiescas (Anthropology), Michael Cappello (Medicine; World Fellows Program), Judith Chevalier (School of Management), Pinelopi Goldberg (Economics), Oona Hathaway (Law), Sandra Nuhn (Associate Director, The MacMillan Center), Timothy O’Connor (Associate Provost), Thomas Pogge (Philosophy), Benjamin Polak (Economics; School of Management), Adam Tooze (History), Christopher Udry (Economics), Steven Wilkinson (Political Science)

For more than four decades the Whitney and Betty MacMillan Center for International and Area Studies at Yale has been the University’s principal institution for encouraging and coordinating teaching and research on international affairs and on societies and cultures around the world. The MacMillan Center endeavors to make understanding the world outside the borders of the United States an integral part of liberal education and professional training at the University. It brings together scholars from all relevant schools and departments to provide insightful interdisciplinary comparative and problem-oriented teaching and research on regional, international, and global issues.

The MacMillan Center provides eleven degree programs. The seven undergraduate majors include African Studies; East Asian Studies; Global Affairs; Latin American Studies; Modern Middle East Studies; Russian and East European Studies; and South Asian Studies. The four graduate degree programs award master’s degrees in African Studies, East Asian Studies, International Relations, and European and Russian Studies. There are joint-degree graduate programs with the schools of Forestry & Environmental Studies, Law, Management, and Public Health. Additionally, the programs offer seven Graduate Certificates of Concentration: in African Studies, European Studies, Global Health, International Development Studies, International Security Studies, Latin American and Iberian Studies, and Modern Middle East Studies.

The many councils, committees, and programs at the MacMillan Center support research and teaching across departments and professions, support doctoral training, advise students at all levels, and provide extracurricular learning opportunities, as well as funding resources for student and faculty research related to their regions and subject areas. Regional studies programs include African Studies, British Studies, Canadian Studies, East Asian Studies, European Studies, Hellenic Studies, Latin American and Iberian Studies, Middle East Studies, South Asian Studies, and Southeast Asia Studies. Comparative and international programs include the Jackson Institute for Global Affairs; the Center for the Study of Globalization; European Union Studies; Genocide Studies; the Gilder Lehrman Center for the Study of Slavery, Resistance, and Abolition; Global
The MacMillan Center’s regional councils regularly teach all levels of nine foreign languages (Zulu, Yorùbá, Vietnamese, Tamil, Swahili, Sanskrit, Modern Greek, Indonesian, Hindi). With the Jackson Institute, they collaborate with the Center for Language Study in supporting Directed Independent Language Study of another sixty-four languages for undergraduate, graduate, and professional school students.

The MacMillan Center provides opportunities for scholarly research and intellectual innovation; awards nearly 500 fellowships and grants each year; encourages faculty/student interchange; sponsors some 750 lectures, conferences, workshops, seminars, and films each year (most of which are free and open to the public); produces a range of working papers and other academic publications; and contributes to library collections comprising 1.4 million volumes in the languages of various areas. In addition to administering the master’s program in International Relations, the Jackson Institute for Global Affairs provides career counseling services to Yale students interested in diplomatic service or careers with international agencies or nongovernmental organizations. Through the Programs in International Educational Resources (PIER), it brings international education and training to educators, K–12 students, the media, businesses, and the community at large. The MacMillan Center also supports The MacMillan Report, an online show that features Yale faculty in international and area studies and their research in a one-on-one interview format. Webisodes can be viewed at www.yale.edu/macmillanreport.

For details on degrees, programs, and faculty leadership, please consult www.yale.edu/macmillan.

**Graduate Certificates of Concentration in International and Area Studies**

**GENERAL GUIDELINES — PROGRAM DESCRIPTION**

The Whitney and Betty MacMillan Center for International and Area Studies at Yale, through the Jackson Institute for Global Affairs and the regional councils on African, European, Latin American and Iberian, and Middle East Studies, sponsors graduate certificates of concentration that students may pursue in conjunction with graduate-degree programs in the Graduate School of Arts and Sciences and the professional schools. The certificate is intended for students seeking to demonstrate substantial preparation in the study of one of the seven areas of concentration: regional (Africa, Europe, Latin America, Middle East) or thematic and international (Development, Global Health, and Security).

Candidates for the certificate must demonstrate expertise in the area of concentration through their major graduate or professional field, as well as show command of the diverse interdisciplinary, geographic, and cultural-linguistic approaches associated with expertise in the area of concentration. Admission to the graduate certificate is contingent on the candidate’s acceptance into a Yale graduate-degree program. Award of the graduate certificate, beyond fulfilling the relevant requirements, is contingent on the successful completion of the candidate’s Yale University degree program.
Application Procedure

Specific requirements of each council are reflected in its application, monitoring, and award procedures. Application forms can be picked up at the relevant council or downloaded from its Web site. Prospective students should submit a completed application form to the relevant council.

Applications may be submitted by students admitted to a graduate program at Yale or during their program of study but no later than the beginning of the penultimate term of study. Each council may set limits on the number of candidates for its program in any given year. For further information, see the council administrator.

Summary of General Requirements

While the general requirements are consistent across all councils of the MacMillan Center, the specific requirements of each council may vary according to the different expertise required for its area of concentration. In addition to the specific requirements, students pursuing the certificate are expected to be actively engaged in the relevant council’s intellectual community and to be regular participants at its events, speaker series, and other activities. Serious study, research, and/or work experience overseas in the relevant region is highly valued. The requirements:

1. Six courses in the area of concentration (in at least two different fields).
2. Language proficiency in at least one language relevant to the area of concentration beyond proficiency in English. For some councils and for some individual circumstances, proficiency in two languages beyond English is required.
3. Interdisciplinary research paper focused on the area of concentration.

Further Details on General Requirements

1. Course work

Students must complete a total of six courses focused on the area from at least two different fields including a Foundations Course if designated by the council. Of the remaining five courses only two may be “directed readings” or “independent study.” Please note:

• No more than four courses may count from any one discipline or school.
• Courses from the home field of the student are eligible. Courses may count toward the student’s degree as well as toward the certificate.
• Literature courses at the graduate level may count toward the six-course requirement, but elementary or intermediate language courses may not. At the discretion of the faculty adviser, an advanced language course at the graduate level may be counted if it is taught with substantial use of field materials such as literature, history, or social science texts and journals relevant to the area.
• Course work must demonstrate broad comparative knowledge of the region rather than focus on a specific country.
• Course work must demonstrate a grasp of the larger thematic concerns affecting the region, such as environment, migration, or global financial movements.
• Only those courses listed on the Graduate Course Listings provided by the area council may be used to fulfill course requirements. For courses not listed there,
please consult the certificate adviser. Non-listed courses may only be counted with prior approval of the council adviser, not after the fact.

- A minimum grade of HP must be obtained or the course will not be counted toward the certificate.
- Only course work taken during the degree program at Yale may be counted toward the certificate.

2. Language proficiency

In the major-area language targeted for meeting the proficiency requirement, students must demonstrate the equivalent ability of two years of language study at Yale with a grade of HP or better. Language proficiency must encompass reading, writing, speaking, and listening skills plus grammar. Students may demonstrate proficiency by completing course work, by testing at Yale, or by other means as approved by the council adviser. When a second major language of the region beyond English is required, the relevant council will specify the target level. The typical departmental graduate reading exam is not sufficient for certifying the four-skill language requirement of the certificate.

Normally, when the candidate is a native speaker of one of the area’s major languages, he/she will be expected to develop language proficiency in a second major area language.

3. Interdisciplinary research paper

A qualifying research paper is required to demonstrate field-specific research ability focused on the area of concentration. After they have completed substantial course work in the area of concentration, students must seek approval from the council faculty adviser for the research project they propose as the qualifying paper. Normally, the student will submit the request no later than the fourth week of the term in which he or she plans to submit the qualifying paper.

The interdisciplinary research paper may be the result of original research conducted under the supervision of a faculty member in a graduate seminar or independent readings course or in field research related to the student’s studies. An M.A. thesis, Ph.D. prospectus, or dissertation may also be acceptable if it is interdisciplinary as well as focused on the area of concentration. The qualifying paper should examine questions concerning the area of concentration in a comparative and/or interdisciplinary context. It should also use relevant international and area-focused resource materials from a relevant region and/or resource materials in the language(s) of a relevant region or regions. Normally the paper should incorporate at least two of the following elements:

- Address more than one country relevant to the area of concentration
- Draw on more than one disciplinary field for questions or analytic approaches
- Address a transregional or transnational theme relevant to the area of concentration

The paper will be read by two faculty members selected in agreement with the council adviser. The readers will be evaluating the paper for the quality of research, knowledge of the relevant literature, and depth of analysis of the topic. The qualifying paper must be fully footnoted and have a complete bibliography. The council adviser may call for a third reader as circumstances warrant.
Progress Reports and Filing for the Award of the Certificate/Qualification

Students should submit a progress report along with a copy of their unofficial transcript to the council faculty adviser at the end of each term. Ideally, this will include a brief narrative describing the student’s engagement in the relevant council’s intellectual community and participation in its events, speaker series, and the like, as well as any planned or newly completed experience overseas.

A student who intends to file for the final award of the certificate should contact the council no later than the end of the term prior to award. By the fourth week of the term of the expected award at the latest, the candidate should demonstrate how he/she has or will have completed all the requirements on time.

At the end of the term as grades are finalized, the council will confirm that the candidate is cleared to receive the home degree and has fulfilled all the requirements of the certificate. The final award will require review and clearance by the relevant associate director of the MacMillan Center.

Pursuit of Two Certificates by a Single Student

No courses may overlap between the two certificates. Any application for two certificates by a single student must robustly fulfill all of the requirements for each of the two certificates. Each certificate must be approved independently by each respective council’s certificate adviser.

In addition to the approval of both council advisers, any award of two certificates will require review and approval by the relevant associate director of the MacMillan Center.
COUNCIL ON AFRICAN STUDIES

The MacMillan Center
309 Luce Hall, 203.432.9903

Graduate Certificate of Concentration in African Studies

Chair
M. Kamari Clarke (Anthropology)

Faculty
For faculty listings, see the section on African Studies under Degree-Granting Departments and Programs in this bulletin.

Special Requirements for the Graduate Certificate of Concentration in African Studies

The Graduate Certificate of Concentration in African Studies enables graduate and professional school students in fields other than African Studies to demonstrate interdisciplinary area expertise, language proficiency, and research competence in African Studies. The certificate program is intended to complement existing fields of studies in other M.A. and Ph.D. programs and to provide the equivalent of such specialization for students in departments and schools without Africa-related fields of study. The certificate program is designed to be completed within the time span of a normal Ph.D. residence. Professional school students and M.A. students in the Graduate School may require an additional term of registration to complete the certificate requirements depending on the requirements of specific programs.

The certificate program includes interdisciplinary course work, language study, and research components. The specific requirements are:

1. Successful completion of at least six courses in African Studies from at least two departments or schools, one of which is a core course in African Studies (AFST 764b, Topics in African Studies, or AFST 501a, Research Methods in African Studies).
2. Demonstration of proficiency in an African language.
3. Evidence of research expertise in African Studies. Research expertise may be demonstrated by completion of an interdisciplinary thesis, dissertation prospectus, or dissertation or by completion of a substantive research seminar paper or the equivalent as approved by the faculty adviser.

The certificate courses and research work should be planned to demonstrate clearly fulfillment of the goals of the certificate. Certificate candidates should design their course schedules in consultation with the director of graduate studies for African Studies. Ideally, students should declare their intention to complete the certificate requirements early in their program at Yale. Graduate and professional school students who intend to complete the certificate program must declare their intention to do so no later than during their penultimate term of enrollment.
For course listings, see African Studies under Degree-Granting Departments and Programs in this bulletin.

Program materials are available upon request to the Director of Graduate Studies, Council on African Studies, Yale University, PO Box 208206, New Haven CT 06520-8206; e-mail, africanstudies@yale.edu.
COUNCIL ON EAST ASIAN STUDIES

The MacMillan Center
320 Luce Hall, 203.432.3426
http://eastasianstudies.research.yale.edu

Chair
To be announced

Faculty
For faculty listings, see the section on East Asian Studies, under Degree-Granting Departments in this bulletin.

The Council on East Asian Studies (CEAS) was founded in 1961 and continues a long tradition of East Asian Studies at Yale. CEAS provides an important forum for academic exploration and support related to the study of China, Japan, and Korea. For almost fifty years, it has promoted education about East Asia both in the college curricula and through lectures and workshops, conferences, cultural events, and educational activities open to faculty, students, K–16 educators, and the general public. CEAS has been designated a National Resource Center for the study of Asian languages and cultures by the U.S. Department of Education. With more than twenty core faculty and twenty language instructors spanning twelve departments on campus, East Asian Studies remains one of Yale’s most extensive area studies programs. Its interdisciplinary emphasis encourages collaborative linkages across fields and departments and contributes to diversity across the curricula and in the classroom. Approximately one hundred fifty courses on East Asia in the humanities and social sciences are offered each year.

CEAS administers Bachelor of Arts (B.A.) and Master of Arts (M.A.) programs. The M.A. program focuses on Chinese, Japanese, and East Asian transnational studies. For details on the M.A. program, see the section on East Asian Studies, under Degree-Granting Departments in this bulletin.

Graduate Certificate of Concentration in European Studies

Chair
Philip Gorski (Sociology)

Faculty and Participating Staff
For faculty listings, see the section on European and Russian Studies under Degree-Granting Departments and Programs in this bulletin.

The European Studies Council formulates and implements new curricular and research programs on European politics, culture, economy, society, and history. The geographical scope of the council’s activities extends from Ireland to the lands of the former Soviet Union. Its concept of Europe transcends the conventional divisions into Western, Central, and Eastern Europe, and includes the Balkans and Russia. In 2010 the U.S. Department of Education again designated the council a National Resource Center under its HEA Title VI program.

The European Studies Council builds on existing programmatic strengths at Yale while serving as a catalyst for the development of new initiatives. Yale’s current resources in European Studies are vast and include the activities of many members of the faculty who have teaching and research specialties in the area. Such departments as Comparative Literature, Economics, English, History, History of Art, Political Science, Slavic Languages and Literatures, and Sociology regularly offer courses with a European focus. These are complemented by the rich offerings and faculty strength of the French, German, Italian, and Spanish and Portuguese language and literature departments, as well as the European resources available in the professional schools and other programs, such as Film Studies. By coordinating Yale’s existing resources, including those in the professional schools, encouraging individual and group research, and promoting an integrated comparative curriculum and degree programs, the council strongly supports the disciplinary and interdisciplinary study of European regions and their interactions. The council is also home to special programs in European Union Studies, British Studies, Baltic Studies, and Hellenic Studies, and a Polish Cultural Initiative.

In addition to the M.A. degree program, the council offers students in the University’s doctoral and other professional degree programs the chance to obtain a Graduate Certificate of Concentration in European Studies by fulfilling a supplementary curriculum. The undergraduate major in Russian and East European Studies is administered by the Department of Slavic Languages and Literatures.

The benefits provided to the Yale community by the European Studies Council include not only its status as an HEA Title VI National Resource Center, but also its affiliation with interuniversity and international organizations that can offer specialized training programs and research grants for graduate students (see http://studentgrants.yale.edu), support conferences among European and American scholars, and subsidize European visitors to Yale. The Fox International Fellowship Program, for example, offers
generous fellowship support to qualified students who undertake research at specified institutions in the United Kingdom, Germany, France, and Russia. Furthermore, the council supplements the regular Yale curriculum with lectures and seminars by eminent European and American scholars, diplomats, and political officials. Each year the European Commission sponsors a European Union Fellow at Yale. The European Studies Council is now pursuing formal links with a variety of European institutions and is in its fifth year of a scholarly exchange with École des Hautes Études en Sciences Sociales (EHESS) in Paris.

Fields of Study
European and Slavic languages and literatures; economics; history; music; political science; law; sociology and other social sciences.

Special Requirements for the Graduate Certificate of Concentration in European Studies

Yale students may pursue the Graduate Certificate of Concentration in European Studies in conjunction with graduate-degree programs in the Graduate School of Arts and Sciences and the professional schools. Candidates will specify as an area of primary focus either (1) Russia and Eastern Europe or (2) Central and Western Europe. Admission is contingent on the candidate’s acceptance into a Yale graduate-degree program. To complete the certificate, candidates must demonstrate expertise in the area through their major graduate or professional field, as well as show command of the diverse interdisciplinary, geographic, and cultural-linguistic approaches associated with expertise in the area of concentration. Award of the certificate, beyond fulfilling the relevant requirements, is contingent on successful completion of the candidate’s Yale University degree program.

Specific Requirements

1. Minimum L4 language proficiency in two modern European languages, in addition to English. Students wishing to focus on Russia and Eastern Europe will need to demonstrate knowledge of Russian or an Eastern European language; those focusing on Central and Western Europe will need to demonstrate knowledge of one of the appropriate languages. Students must demonstrate proficiency in oral (speaking/listening), reading, and writing skills.

2. Six courses in the area of concentration, of which:
   a. three courses must offer transnational approaches to Europe-related issues, and
   b. of the remaining three courses, students focusing on Russia and Eastern Europe must take at least one course concerning the nations of Central and Western Europe. For those focusing on Central and Western Europe, at least one course must concern Russia and Eastern Europe.

3. Interdisciplinary research paper written either:
   a. in the context of one of the six courses in the area of concentration, or
   b. as independent work under faculty supervision, replacing one of the six required courses.
A qualifying research paper is required to demonstrate field-specific research ability focused on the area of concentration. After they have completed substantial course work in the area, students must seek approval from the council faculty adviser for the research project they propose as the qualifying paper. Normally, students will submit their proposals no later than the fourth week of the term in which they plan to submit the qualifying paper.

For course listings, see European and Russian Studies under Degree-Granting Departments and Programs in this bulletin.

For more information, visit www.yale.edu/macmillan/grad_certificates.htm and www.yale.edu/macmillan/iac/certificates.htm; write to European Studies Council, Yale University, PO Box 208206, New Haven CT 06520-8206; or call 203.432.3423.
The Graduate Certificate of Concentration in Development Studies provides recognition that a graduate or professional student at Yale has completed interdisciplinary study and integrative research to address fundamental and applied economic, political, social, and cultural issues facing developing countries.

The certificate in Development Studies may be pursued only in conjunction with graduate degree programs in the Graduate School of Arts and Sciences and the professional schools. By pursuing the certificate, students are able to develop and demonstrate their competence in this interdisciplinary field. Award of the certificate, beyond fulfilling the relevant requirements, is contingent on the successful completion of the candidate’s Yale University degree program. The Development Studies faculty adviser may set a limit on the number of applicants accepted into this certificate program in any given year.

The certificate courses and research should be planned, in consultation with the Development Studies faculty adviser, to clearly demonstrate fulfillment of the goals of the Development Studies certificate. The application deadline is November 15 each year.

REQUIREMENTS

1. Six courses in the area of Development Studies. Each year, the Development Studies faculty adviser will provide a list of courses that will count toward the six-course requirement. This list will draw primarily on Graduate School offerings in economics, political science, history, international relations, anthropology, and sociology, and on courses at the professional schools, including Forestry & Environmental Studies, Law, Management, and Public Health. Candidates may petition the faculty adviser to have other relevant courses count.

2. Candidates must demonstrate proficiency in one relevant language other than English. The language should be either a major world language relevant to development studies or the language of the region on which the candidate is focusing.

3. Candidates must demonstrate proficiency in the basic concepts of economic analysis, either by demonstrating substantial prior course work in economics or by taking a
graduate- or professional-level economics course at Yale. Such a course may count toward the certificate with the approval of the faculty adviser.

4. Candidates must write a substantial research paper. The paper must demonstrate the ability to use interdisciplinary resources in development studies, including, where appropriate, primary sources, field research, data analysis, and non-English sources.

**Graduate Certificate of Concentration in Global Health**

Graduate and professional students at Yale may pursue the Graduate Certificate of Concentration in Global Health as part of their degree program. M.P.H. students enrolled in the Global Health Concentration at Yale School of Public Health are not eligible for this certificate. This certificate allows students to develop expertise and demonstrate competence in Global Health and provides recognition that a student has completed interdisciplinary study and integrative research to address fundamental and applied economic, political, social, cultural, and scientific issues relevant to Global Health.

Students are expected, in consultation with the Global Health faculty adviser, to develop a coherent plan of courses and research that focuses on a specific significant Global Health issue that requires an interdisciplinary perspective (e.g., health and human rights, the worldwide obesity epidemic, economic development and tropical diseases). Often this focal issue will be studied in the context of a particular region of the world (e.g., East Asia, Latin America, sub-Saharan Africa) or comparatively across countries or regions.

We expect that students pursuing the certificate will engage with the community of scholars and practitioners working on Global Health at Yale and around the world, demonstrating the ability and cultural sensitivity to work with them in languages beyond English. Overseas field experience in Global Health is also highly desirable. The application deadline is November 15 each year. Master’s students in particular are advised to apply during the fall term of their first year.

**REQUIREMENTS**

1. Six courses in the area of Global Health. Each year, the Global Health faculty adviser will provide a list of courses that will count toward the six-course requirement. Candidates must work with the adviser to organize their course selections around their chosen focal issue within Global Health. Two courses must be from the School of Public Health, one of which must provide a broad-based foundation in epidemiology.

2. Candidates must demonstrate proficiency in one relevant language other than English. The language should be either a major world language relevant to global health or one of the main working languages of the region on which the candidate is focusing.

3. Candidates must write a substantial, interdisciplinary research paper. The paper must demonstrate the ability to use interdisciplinary resources in global health, including, where appropriate, field research, primary sources, data analysis, and non-English sources.
Graduate Certificate of Concentration in International Security Studies

The Graduate Certificate of Concentration in International Security Studies provides recognition that a graduate or professional student at Yale has completed interdisciplinary study and integrative research to address fundamental and applied economic, political, social, and cultural issues relevant to the study of international security.

The certificate in International Security Studies may be pursued only in conjunction with graduate-degree programs in the Graduate School of Arts and Sciences and the professional schools. It allows students to develop and demonstrate their competence in this interdisciplinary field. Award of the certificate, beyond fulfilling the relevant requirements, is contingent on successful completion of the candidate’s Yale University degree program. The International Security Studies faculty adviser may set a limit on the number of applicants accepted into this certificate program in any given year.

The certificate courses and research should be planned, in consultation with the International Security Studies faculty adviser, to clearly demonstrate fulfillment of the goals of the International Security Studies certificate. The application deadline is November 15 each year.

Requirements

1. Six courses in the area of International Security. Each year, the International Security Studies faculty adviser will provide a list of courses that will count toward the six-course requirement. This list will draw primarily on Graduate School offerings in anthropology, economics, history, international relations, political science, and sociology, and on courses at the professional schools, including Forestry & Environmental Studies, Law, Management, and Public Health. Candidates may petition the faculty adviser to have other relevant courses count.

   One of these six courses must have a core focus on international security issues. The International Security Studies faculty adviser will provide a list each year that meet this requirement.

   Up to three courses may focus on a particular region.

2. Candidates must demonstrate proficiency in one relevant language other than English. The language should be either a major world language relevant to international security studies or the language of the region on which the candidate is focusing.

3. Candidates must write a substantial research paper. The paper must demonstrate the ability to use interdisciplinary resources in international security studies, including, where appropriate, primary sources, field research, data analysis, and non-English sources. If the paper is of sufficient quality, the faculty adviser may submit it for publication in the IAC International Security Studies Working Paper Series.

COUNCIL ON LATIN AMERICAN AND IBERIAN STUDIES

The MacMillan Center
232 Luce Hall, 203.432.3422
www.yale.edu/macmillan/lais
Graduate Certificate of Concentration in Latin American and Iberian Studies

Chair
Stuart B. Schwartz (History)

Professors  Rolena Adorno (Spanish & Portuguese), Mark Ashton (Forestry & Environmental Studies), Ned Blackhawk (History; American Studies), Garry Brewer (School of Management), Richard Burger (Anthropology), Hazel Carby (African American Studies; American Studies), Amy Chua (Law), Carlos Eire (History; Religious Studies), Eduardo Engel (Economics), Paul Freedman (History), Aníbal González (Spanish & Portuguese), Roberto González Echevarría (Spanish & Portuguese), K. David Jackson (Spanish & Portuguese), Gilbert Joseph (History), Efstathios Kalyvas (Political Science), Enrique Mayer (Anthropology), Robert Mendelsohn (Forestry & Environmental Studies), María Rosa Menocal (Spanish & Portuguese), Mary Miller (History of Art), Florencia Montagnini (Forestry & Environmental Studies), Patricia Pessar (Adjunct; American Studies; African American Studies; Anthropology), Stephen Pitti (History), Susan Rose-Ackerman (Law; Political Science), T. Paul Schultz (Economics), Stuart B. Schwartz (History), Susan Stokes (Political Science), Robert Thompson (History of Art), Noël Valis (Spanish & Portuguese), Michael Veal (Music; American Studies; African American Studies), Elisabeth Wood (Political Science)

Associate Professors  Moira Fradinger (Comparative Literature), Leonard Munstermann (Senior Research Scientist, Epidemiology & Public Health), Alicia Schmidt-Camacho (American Studies)

Assistant Professors  Jafari Allen (Anthropology; African American Studies), Robert Bailiss (Forestry & Environmental Studies), P. Sean Brotherton (Anthropology), Susan Byrne (Spanish & Portuguese), Ana De La O Torres (Political Science), Thad Dunning (Political Science), Mariola Espinoza (Medicine), Paulo Moreira (Spanish & Portuguese), Paulina Ochoa Espejo (Political Science), Kevin Poole (Spanish & Portuguese)

Senior Lectors I, II (Spanish & Portuguese)  Sybíl Alexandrov, Marta Almeida, Maria Pilar Asensio-Manrique, Teresa Carballal, Mercedes Carreras, Ame Cividanes, Sebastián Díaz, María de la Paz García, Oscar González-Barreto, María Jordán, Juliana Ramos-Ruano, Lissette Reymundi, Lourdes Sabé, Barbara Safille, Terry Seymour, Margherita Tortora, Sonia Valle

Lector (Spanish & Portuguese)  Rosamaría León

Others  Jane Edwards (Associate Dean, Yale College), Nancy Ruther (Lecturer, Political Science)
Professors Emeriti  Emilia Viotti da Costa (History), Juan Linz (Political Science; Sociology), Josefina Ludmer (Spanish & Portuguese), Gustav Ranis (Economics)

A variety of Latin American Studies options are available for graduate students in history and other humanities disciplines, the social sciences, and the professional schools. Latin American Area course offerings are available in twenty-five disciplines with distinct strengths in Anthropology, History, Political Science, and Spanish and Portuguese. Latin Americanist faculty specialize in the Andes (Burger, Mayer), Brazil (Jackson, Moreira, Pessar, Schwartz), the Caribbean (Pessar, Thompson), Central America (Joseph, Miller, Wood), Mexico (Camacho, Joseph, Miller, Pitti), and the Southern Cone (Engel, Stokes). F&ES faculty (Anisfeld, Ashton, Clark, Doolittle, Dove, Mendelsohn, Montagnini) have tropical research interests or participate in educational exchanges with Argentina, Bolivia, Brazil, Costa Rica, Dominica, Ecuador, Guyana, Honduras, Mexico, Nicaragua, Panama, Peru, and Venezuela. Latin American content courses are also offered in the Divinity School, Law, Management, and Public Health.

Students may pursue the Graduate Certificate of Concentration in Latin American and Iberian Studies in conjunction with graduate degree programs in the Graduate School of Arts and Sciences and the professional schools. To complete the certificate, candidates must demonstrate expertise in the area through their major graduate or professional field, as well as show command of the diverse interdisciplinary, geographic, cultural, and linguistic approaches associated with expertise in Latin America or Iberia.

Admission is contingent on the candidate’s acceptance into a Yale graduate degree program, and award of the certificate, beyond fulfilling the relevant requirements, requires the successful completion of the candidate’s Yale University degree program. Active participation in the council’s extracurricular and research programs and seminars is also strongly encouraged.

Limited financial resources, such as the LAIS Summer Research grants, are available to graduate and professional school students.

Specific Requirements for the Graduate Certificate of Concentration

Language proficiency  The equivalent of two years’ study of one language and one year of the other, normally Spanish and Portuguese. Less frequently taught languages, such as Nahuat, Quechua, or Haitian Creole, may also be considered for meeting this requirement.

Course work  Six graduate courses in at least two different disciplines. No more than four courses may count in any one discipline.

Geographical and disciplinary coverage  At least two countries and two languages must be included in the course work or thesis.

Research  A major graduate course research paper or thesis that demonstrates the ability to use field resources, ideally in one or more languages of the region, normally with a focus on a comparative or regional topic rather than a single country.

The certificate adviser of the Council on Latin American and Iberian Studies will assist graduate students in designing a balanced and coordinated curriculum. The council will provide course lists and other useful materials.
Academic Resources of the Council

The council supplements the graduate curriculum with annual lecture and film series, special seminars, and conferences that bring visiting scholars and experts to campus. The council also serves as a communications and information center for a vast variety of enriching events in Latin American studies sponsored by the other departments, schools, and independent groups at Yale. It is a link between Yale and Latin American centers in other universities, and between Yale and educational programs in Latin America and Iberia.

The Latin American Collection of the University library has approximately 522,000 printed volumes, plus newspapers and microfilms, CD-ROMs, films, sound recordings, and maps. The library’s Latin American Manuscript Collection is one of the finest in the United States for unpublished documents for the study of Latin American history. Having the oldest among the major Latin American collections in the United States, Yale offers research opportunities unavailable elsewhere.

Information about the Graduate Certificate of Concentration in Latin American Studies may be requested from the Council on Latin American and Iberian Studies, Yale University, PO Box 208206, New Haven CT 06520-8206; e-mail, latin.america@yale.edu; or telephone, 203.432.3422.
COUNCIL ON MIDDLE EAST STUDIES

The MacMillan Center
346 Rosenkranz Hall, 203.436.2553
www.yale.edu/macmillan/cmes
Graduate Certificate of Concentration in Modern Middle East Studies

Chair
Frank Griffel (Religious Studies)

Professors  Abbas Amanat (History), Harold Attridge (Divinity; Religious Studies), Gerhard Böwering (Religious Studies), Adela Yarbro Collins (Divinity), John J. Collins (Divinity), John Darnell (Near Eastern Languages & Civilizations), Stephen Davis (Religious Studies), Owen Fiss (Law), Benjamin Foster (Near Eastern Languages & Civilizations), Steven Fraade (Religious Studies), Eckart Frahm (Near Eastern Languages & Civilizations), Frank Griffel (Religious Studies), Beatrice Gruendler (Near Eastern Languages & Civilizations), Dimitri Gutas (Near Eastern Languages & Civilizations), Christine Hayes (Religious Studies), Frank Hole (Emeritus, Anthropology), Paula Hyman (History; Religious Studies), Marcia Inhorn (Anthropology), Stanley Insler (Linguistics), Anthony Kronman (Law), Bentley Layton (Religious Studies), James Leckman (Psychology; Pediatrics), J.G. Manning (Classics; History), Ivan Marcus (History), Robert Nelson (History of Art), Ashgar Rastegar (Medicine), W. Michael Reisman (Law), Lamin Sanneh (Divinity; History), Harvey Weiss (Near Eastern Languages & Civilizations), Robert Wilson (Divinity)

Associate Professors  Ellen Lust (Political Science), Colleen Manassa (Near Eastern Languages & Civilizations), Andrew March (Political Science)

Assistant Professors  Narges Erami (Anthropology), Zareena Grewal (American Studies; Religious Studies), Kaveh Khoshnood (Epidemiology & Public Health), Adria Lawrence (Political Science), Mark Lazenby (Nursing), Nikolay Marinov (Political Science), Alan Mikhail (History), Ahmed Mobarak (Economics), Kishwar Rizvi (History of Art), Edwige Tamalet Talbayev (French), Jonathan Wyrtzen (Sociology)

Senior Lecturers and Lecturers  Adel Allouche (History; Religious Studies), Karen Foster (Near Eastern Languages & Civilizations; History of Art), Tolga Köker (Economics), Kathryn Slanski (Near Eastern Languages & Civilizations)

Senior Lectors (I, II) and Lectors  Sarab Al Ani (Arabic), Muhammad Aziz (Arabic), Ayala Dvoretzky (Hebrew), Etem Erol (Turkish), Shiri Goren (Hebrew), Fereshteh Kowssar (Persian), Shady Nasser (Arabic), Dina Roginsky (Hebrew), Hasmik Tovmasyan (Arabic)

Librarians and Curators  Ulla Kasten (Babylonian Collection), Susan Matheson (Ancient Art, Yale University Art Gallery), Nanette Stahl (Judaica Collection)

The Council on Middle East Studies is part of the Whitney and Betty MacMillan Center for International and Area Studies. The council brings together faculty and students sharing an interest in the Middle East by sponsoring conferences, discussions, films, and
lecture series by scholars from Yale as well as visiting scholars. It provides information concerning grants, fellowships, research programs, and foreign study opportunities. It also administers research projects in a variety of Middle East-related areas.

In addition to the resources of the individual departments, Yale’s library system has much to offer the student interested in Middle East studies. Of particular note are the collections of Arabic and Persian manuscripts, as well as large holdings on the medieval and modern Middle East.

The Council on Middle East Studies administers the Middle East Studies National Resource Center at Yale, which is funded by the U.S. Department of Education under HEA Title VI. As a National Resource Center, the council supports a number of projects and activities, including summer- and academic-year language fellowships and an extensive outreach program.

The council also offers a Graduate Certificate of Concentration in Modern Middle East Studies. Students with an interest in the Middle East should first apply to one of the University’s degree-granting departments, such as Anthropology, History, Linguistics, Near Eastern Languages and Civilizations, Political Science, Religious Studies, or Sociology, and then apply for the graduate certificate of concentration no later than the beginning of their penultimate term of study.

**The Graduate Certificate of Concentration in Modern Middle East Studies**

The certificate represents acknowledgment of substantial preparation in Middle East Studies, both in the student’s major graduate or professional field and also in terms of the disciplinary and geographical diversity required by the council for recognized competency in the field of Middle East Studies. As language and culture are the core of the area studies concept, students are required to attain or demonstrate language proficiency.

**Requirements**

1. Language proficiency: the equivalent of two years of study at a passing grade in one of the four languages of the Middle East—Arabic, Hebrew, Persian, and Turkish.
2. Course work: six graduate courses in at least two different disciplines. No more than four courses may count in any one discipline. Included in these six courses must be an introductory Middle East history course, such as State and Society and Culture in the Middle East (taken with special supplemental graduate readings and assignments), and a foundations course, such as Culture and Politics in the Contemporary Middle East.
3. Interdisciplinary coverage: both courses and any research project undertaken in lieu of a course must reflect experience of at least two disciplines.
4. Research: a major graduate course research paper, dissertation prospectus, dissertation, or thesis that demonstrates ability to use field resources, ideally in one or more languages of the region.

For more information on the Graduate Certificate and inquiries about Middle East Studies, contact the Council on Middle East Studies, Yale University, PO Box 208206, New Haven CT 06520-8206, or the council e-mail, cmes@yale.edu.
SOUTH ASIAN STUDIES COUNCIL

The MacMillan Center
210 Luce Hall, 203.436.3517
www.yale.edu/macmillan/southasia

Chair
Kalyanakrishnan Sivaramakrishnan (Anthropology)

Professors Akhil Amar (Law), Timothy Barringer (History of Art), Michael Dove (Forestry & Environmental Studies), Phyllis Granoff (Religious Studies), Inderpal Grewal (Women's, Gender & Sexuality Studies), Gustav Ranis (Emeritus, Economics), Kalyanakrishnan Sivaramakrishnan (Anthropology), Shyam Sunder (School of Management), Christopher Udry (Economics), Steven Wilkinson (Political Science)

Associate Professors Nihal deLanerolle (School of Medicine), Sarah Weiss (Music)

Assistant Professors Ashwini Deo (Linguistics), Mayur Desai (Psychiatry/VAMC), Ravi Durvasula (School of Medicine), Zareena Grewal (Ethnicity, Race & Migration), Karuna Mantena (Political Science), Shital Pravinchandra (English), Kishwar Rizvi (History of Art), Tamara Sears (History of Art), Sara Shneiderman (Anthropology), Tariq Thachil (Political Science)

Senior Lecturers Geetanjali Singh Chanda (Women's, Gender & Sexuality Studies), Koichi Shinohara (Religious Studies)

Lecturers Harry Blair (Political Science), Carol Carpenter (Forestry & Environmental Studies), Hugh Flick (Religious Studies), El Mokhtar Ghambou (English)

Senior Lector Seema Khurana (Hindi)

Lectors David Brick (Sanskrit), Swapna Sharma (Hindi), Blake Wentworth (Tamil)

Associate Research Scholar Mark Turin (South Asian Studies Council)

Students with an interest in South Asian Studies should apply to one of the University’s degree-granting departments, such as Anthropology, History, Political Science, Economics, or Religious Studies. The South Asian Studies Council is part of the MacMillan Center for International and Area Studies. It has been organized to provide guidance to graduate students who desire to use the resources of the departments of the University that offer South Asia-related courses.

The South Asian Studies Council aims to bring together faculty and students sharing an interest in South Asia, and it supplements the curriculum with seminars, conferences, and special lectures by scholars from Yale as well as visiting scholars. It provides information concerning grants, fellowships, research programs, and foreign study opportunities.

Language instruction is offered in Hindi and Tamil. Students planning to undertake field research or language study in South Asia may apply to the council for summer fellowship support.
For information and program materials, contact the South Asian Studies Council, Yale University, PO Box 208206, New Haven CT 06520-8206; or see www.yale.edu/macmillan/southasia.

Courses

**HNDI 510au, Elementary Hindi**  Seema Khurana, Swapna Sharma
An in-depth introduction to modern Hindi, including the Devanagari script. Through a combination of graded texts, written assignments, audiovisual material, and computer-based exercises, the course provides cultural insights and increases proficiency in understanding, speaking, reading, and writing Hindi. Emphasis placed on spontaneous self-expression in the language. No prior background in Hindi assumed.

*510a-1: MWF 10:30–11:20; TTH 1:30–2:20*
*510a-2: MWF 1:30–2:20; TTH 10:30–11:20*

**HNDI 520bu, Elementary Hindi II**  Seema Khurana, Swapna Sharma
Continuation of HNDI 510a.

*520b-1: MWF 10:30–11:20; TTH 1:30–2:20*
*520b-2: MWF 1:30–2:20; TTH 10:30–11:20*

**HNDI 530au, Intermediate Hindi I**  Seema Khurana, Swapna Sharma
First half of a two-term sequence designed to develop proficiency in the four language skill areas. Extensive use of cultural documents including feature films, radio broadcasts, and literary and nonliterary texts to increase proficiency in understanding, speaking, reading, and writing Hindi. Focus on cultural nuances and various Hindi literary traditions. Emphasis on spontaneous self-expression in the language. Prerequisite: HNDI 520b or equivalent.

*530a-1: MWF 2:30–3:20*
*530a-2: TTH 9:30–10:20*

**HNDI 532au, Hindi for Heritage Speakers I**  Swapna Sharma

**HNDI 540bu, Intermediate Hindi II**  Seema Khurana, Swapna Sharma
Continuation of HNDI 530a, focusing on further development of proficiency in the four language skill areas. Prerequisite: HNDI 530a or equivalent.

*540b-1: MWF 2:30–3:20*
*540b-2: TTH 9:30–10:20*

**HNDI 542bu, Hindi for Heritage Speakers II**  Swapna Sharma, Seema Khurana
Continuation of HNDI 532a. Development of increased proficiency in the four language skills. Focus on reading and higher language functions such as narration, description, and comparison. Reading strategies for parsing paragraph-length sentences in Hindi newspapers. Discussion of political, social, and cultural dimensions of Hindi culture as well as contemporary global issues. Prerequisite: HNDI 532a or equivalent. TTH 4–5:15

**HNDI 550au, Advanced Hindi**  Seema Khurana
An advanced language course aimed at enabling students to engage in fluent discourse in Hindi and to achieve a comprehensive knowledge of formal grammar. Introduction to
a variety of styles and levels of discourse and usage. Emphasis on the written language, with readings on general topics from newspapers, books, and magazines. Prerequisite: HNDI 540b or permission of instructor. TTH 4–5:15

HNDI 598a or b, Advanced Tutorial
For students with advanced Hindi language skills who wish to engage in concentrated reading and research on material not otherwise offered by the department. The work must be supervised by an adviser and must terminate in a term paper or its equivalent. Prerequisites: HNDI 540b, and submission of a detailed project proposal and its approval by the language studies coordinator. 1 HTBA

SKRT 510a/LING 515a, Introductory Sanskrit I  David Brick
An introduction to Sanskrit language and grammar. Focus on learning to read and translate basic Sanskrit sentences in the Indian Devanagari script. No prior background in Sanskrit assumed. Credit only on completion of SKRT 520b/LING 525b. MTWTHF 9:25–10:15

SKRT 520b/LING 525b, Introductory Sanskrit II  David Brick
Continuation of SKRT 510a/LING 515a. Focus on the basics of Sanskrit grammar; readings from classical Sanskrit texts written in the Indian Devanagari script. Prerequisite: SKRT 510a/LING 515a. MTWTHF 9:25–10:15

SKRT 530a, Intermediate Sanskrit I  David Brick
The first half of a two-term sequence aimed at helping students develop the skills necessary to read texts written in Sanskrit. Readings include selections from the Hitopadesa; Kathasaritsagara; Mahabharata; and Bhagavad Gita. Prerequisite: SKRT 520b or equivalent. MTWTHF 10:30–11:20

SKRT 540b, Intermediate Sanskrit II  David Brick
Continuation of SKRT 530a, focusing on Sanskrit literature from the kavya genre. Readings include selections from the Jatakamala of Aryasura and the opening verses of Kalidasa’s Kumarasambhava. Prerequisite: SKRT 530a or equivalent. MTWTHF 10:30–11:20

SKRT 550b, Advanced Sanskrit  David Brick
The course is designed as an advanced tutorial offered in connection with the proposed seminar course Law and Religion in Ancient India. Its purpose is to introduce students to Sanskrit commentarial literature in general and to Dharmasastra in particular. Dharmasastra is a major genre of Brahmanical literature dedicated to the explication and analysis of everything falling under the broad rubric of dharma. Prerequisite: knowledge of Sanskrit equivalent to at least two years of college course work. TTH 1–2:15

TAML 510a, Introductory Tamil I  Blake Wentworth
An in-depth introduction to modern Tamil, focusing on comprehension, speaking, reading, and writing skills as well as on cultural understanding. Course work includes graded texts, written assignments, audiovisual material, and computer-based exercises. No prior background in Tamil assumed. MTWTHF 10:30–11:20

TAML 520b, Introductory Tamil II  Blake Wentworth
Continuation of TAML 510a. MTWTHF 10:30–11:20
TAML 530a†, Intermediate Tamil I  Blake Wentworth
First half of a two-term sequence designed to develop proficiency in the four language
skill areas. Focus on improving comprehension, speaking, reading, and writing skills
through the use of visual media, newspapers and magazines, modern fiction and poetry,
and public communications such as pamphlets, advertisements, and government
announcements. Prerequisite: TAML 520b or equivalent. MTWHF 11:35–12:25

TAML 540b†, Intermediate Tamil II  Blake Wentworth
Continuation of TAML 530a, focusing on further development of proficiency in four
language skill areas. Students are prepared to begin conducting field work in Tamil.
Prerequisite: TAML 530a or equivalent. MTWHF 11:35–12:25

TAML 598a or 598b, Advanced Tutorial  Blake Wentworth
For students with advanced Tamil language skills who wish to engage in concentrated
reading and research on material not otherwise included in the courses offered by the
department. The work is supervised by the instructor and concludes with a term paper or
its equivalent. Prerequisites: submission of a detailed proposal of study and its approval
by the instructor and DGS. W 3:30–5:20
COUNCIL ON SOUTHEAST ASIA STUDIES

The MacMillan Center
311 Luce Hall, 203.432.3431, seas@yale.edu
www.yale.edu/seas

Chair
Benedict Kiernan (History)

Professors William Burch (Forestry & Environmental Studies), Michael Dove (Forestry & Environmental Studies), J. Joseph Errington (Anthropology), Benedict Kiernan (History), James Scott (Political Science), Mimi Yiengpruksawan (History of Art)

Associate Professor Sarah Weiss (Music)

Assistant Professor Erik Harms (Anthropology)

Lecturers and Senior Lectors (I, II) Carol Carpenter (Forestry & Environmental Studies), Amity Doolittle (Forestry & Environmental Studies), Quang Phu Van (Southeast Asian Languages), Indriyo Sukmono (Southeast Asian Languages)

Curators Ruth Barnes (Indo-Pacific Art, Yale University Art Gallery), Richard Richie (Southeast Asia Collection, Yale University Library)

Yale does not offer higher degrees in Southeast Asia Studies. Instead, students apply for admission to one of the regular degree-granting departments and turn to the Council on Southeast Asia Studies for guidance regarding the development of their special area interest, courses outside their department, and instruction in Southeast Asian languages related to their research interest. The council aims to bring together faculty and students sharing an interest in Southeast Asia and supplements the graduate curriculum with an annual seminar series, periodic conferences, and special lectures.

Yale offers extensive library and research collections on Southeast Asia in Sterling Memorial Library, the Economic Growth Center, the Peabody Museum of Natural History, and the Human Relations Area Files. Further information on library resources is available from Richard Richie, Curator, Southeast Asia Collection, Sterling Memorial Library (203.432.1858, rich.richie@yale.edu).

Language instruction is offered in two Southeast Asian languages, Indonesian and Vietnamese. The council supports language tables and tutoring in other Southeast Asian languages by special arrangement. Students planning to undertake field research or language study in Southeast Asia may apply to the council for summer fellowship support.

For information on program activities and participating faculty, contact the Council on Southeast Asia Studies, Yale University, PO Box 208206, New Haven CT 06520-8206; or see our Web site, www.yale.edu/seas.

Courses

INDN 520 U, Elementary Indonesian Indriyo Sukmono
An introductory course in Standard Indonesian with emphasis on developing communicative skills through systematic survey of grammar and graded exercises. Introduction to
reading in the second term, leading to mastery of language patterns, essential vocabulary, and basic cultural competence. 5 HTBA

**INDN 527**<sup>υ</sup>, Intermediate Indonesian  Indriyo Sukmono
Continues practice in colloquial Indonesian conversation and reading and discussion of texts. 3 HTBA

**INDN 560, Readings in Indonesian**  Indriyo Sukmono
For students with advanced Indonesian language skills working on modern Indonesian literature.

**VIET 515**<sup>υ</sup>, Elementary Vietnamese  Quang Phu Van
Students acquire basic working ability in Vietnamese including sociocultural knowledge. Attention paid to integrated skills such as speaking, listening, writing (Roman script), and reading. No previous knowledge of or experience with Vietnamese language required. MTWTHF 9:25–10:15

**VIET 530**<sup>υ</sup>, Intermediate Vietnamese  Quang Phu Van
An integrated approach to language learning aimed at strengthening students' listening, speaking, reading, and writing skills in Vietnamese. Students are thoroughly grounded in communicative activities such as conversations, performance simulation, drills, role playing, and games. Discussion of aspects of Vietnamese society and culture. Prior knowledge of Vietnamese required. MTWTHF 10:30–11:20

**VIET 560, Readings in Vietnamese**  Quang Phu Van
For students with advanced Vietnamese language skills who wish to engage in concentrated reading and research.
ORGANISMAL AND INTEGRATIVE BIOLOGY (OIB)

122 Osborn Memorial Laboratories, 203.432.3837
www.biology.yale.edu/oib

Advisory Committee
Durland Fish (Vice Director; Epidemiology & Public Health), Leo Hickey (Geology & Geophysics), Andrew Hill (Anthropology), Richard Prum (Director; Ecology & Evolutionary Biology), Nancy Ruddle (Epidemiology & Public Health), Oswald Schmitz (Forestry & Environmental Studies), David Skelly (Forestry & Environmental Studies)

Organismal and Integrative Biology (OIB) was created in response to changing opportunities for cross-disciplinary research in the biological sciences. Our goal is to provide an environment for doctoral study utilizing Yale's diverse resources to encourage broad intellectual development. New theory, empirical findings, and technological developments promise unification of formerly disparate biological fields through research approaches that are actively synthetic, reaching across levels of organization to uncover fundamental organizing principles of biology.

Special Admissions Requirements
Based on their interests, students should seek admission to one of the participating departments: Anthropology, Ecology and Evolutionary Biology, Epidemiology and Public Health, Forestry & Environmental Studies, Geology and Geophysics. The Ph.D. and M.Phil. requirements are those of the participating departments.
WOMEN’S, GENDER, AND SEXUALITY STUDIES

315 William L. Harkness Hall, 203.432.0845
www.yale.edu/wgss

Chair
Inderpal Grewal

Director of Graduate Studies
Jill Campbell

Professors
Elizabeth Alexander (African American Studies), Carol Armstrong (History of Art), Seyla Benhabib (Political Science), Hannah Brueckner (Sociology), Jill Campbell (English), Hazel Carby (African American Studies; American Studies; on leave [Sp]), Kang-i Sun Chang (East Asian Languages & Literatures), George Chauncey (History), M. Kamari Clarke (Anthropology), Glenda Gilmore (History; American Studies; African American Studies), Inderpal Grewal (Women’s, Gender & Sexuality Studies; American Studies; Anthropology; on leave [Sp]), Dolores Hayden (Architecture; American Studies; on leave [Sp]), Margaret Homans (English; Women's, Gender & Sexuality Studies), Paula Hyman (History; Religious Studies), Marianne LaFrance (Psychology; Women’s, Gender & Sexuality Studies), Joanne Meyerowitz (History; on leave [Sp]), Sally Promey (American Studies; Institute of Sacred Music; Religious Studies), Cynthia Russett (History), Alicia Schmidt Camacho (American Studies), Emilie Townes (Divinity), John Treat (East Asian Languages & Literatures), Michael Warner (English), Laura Wexler (American Studies; Women’s, Gender & Sexuality Studies; on leave [F])

Associate Professors
Shannon Craigo-Snell (Religious Studies), Naomi Rogers (History of Science & Medicine)

Assistant Professors
Jafari Allen (African American Studies; Anthropology), Rene Almeling (Sociology), GerShun Avilez (English; African American Studies), Averil Clarke (Sociology), Crystal Feimster (African American Studies; American Studies), Moira Fradinger (Comparative Literature), Terri Francis (Film Studies), Lillian Guerra (History), Kathryn Lofton (American Studies; Religious Studies; on leave [Sp]), Karen Nakamura (Anthropology; on leave), Sam See (English)

Lecturers
Melanie Boyd (Women’s, Gender & Sexuality Studies), Geetanjali Singh Chanda (Women’s, Gender & Sexuality Studies), Kathleen Cleaver (African American Studies), Maria Trumpler (Women’s, Gender & Sexuality Studies)

Fields of Study
The Program in Women’s, Gender, and Sexuality Studies considers gender and sexuality as fundamental categories of social and cultural analysis and offers critical perspectives upon them as a basis from which to study the diversity of human experience. Gender (the social and historical meanings of the distinction between the sexes) and sexuality (the domain of sexual practices, identities, discourses, and institutions) are studied as they intersect with class, race, ethnicity, nationality, and other axes of human difference. The
Introduction of these perspectives into all fields of knowledge necessitates new research, criticism of existing research, and the formulation of new paradigms and organizing concepts.

The Qualification in Women’s, Gender, and Sexuality Studies is open to students already enrolled in a Ph.D. program at Yale. Interested students are strongly encouraged to register for the Qualification by meeting with the director of graduate studies (DGS) during their first year. Students who wish to receive the Qualification must (1) complete the core course, WGSS 619b, Feminist and Queer Theory: National and Transnational Perspectives, or, with permission of the DGS, another course in the theory of gender and sexuality; (2) complete two electives to be determined in consultation with the DGS and their individual WGSS graduate adviser; (3) demonstrate the capacity to pursue independent, interdisciplinary research in Women’s, Gender, and Sexuality Studies by presenting a qualifying paper at a meeting of the WGSS Colloquium; and (4) demonstrate readiness to teach basic and advanced courses in this field by serving as TF in a WGSS lecture course or teaching a seminar on a WGSS topic, or by preparing appropriate course syllabi. Students who fulfill these expectations will receive a letter from the DGS, indicating that they have completed the work for the Qualification.

Program information and the requirements for the Qualification are available on the Women’s, Gender, and Sexuality Studies Web site, or by contacting 203.432.0845 or wgss@yale.edu.

Courses

**WGSS 619a, Feminist and Queer Theory: National and Transnational Perspectives**

Inderpal Grewal

This seminar provides a beginning understanding of what constitutes the foundational texts in these fields, how to map the fields of theory, and what the various strands of theory might be across humanities and social sciences. It is also an introduction to some of the theories that have been important to WGSS Yale faculty; thus, each week, a different WGSS faculty member visits the class and discusses readings that he or she has suggested. The course is an introduction not only to theories of gender and sexuality as they are practiced in the research of Yale faculty, but also to how the fields are being constituted in one specific time and place. Seminar students are also required to attend lectures sponsored by WGSS and LGBT during the fall term.

**WGSS 623b/SOCY 523b, Sociology of Sex and Gender**

Rene Almeling

The course provides graduate students with an introduction to major theoretical approaches to sex and gender, and it covers recent empirical research in key arenas, including care work, sex work, work and family, mothering and fathering, reproductive technologies, and health. Readings have been selected to reflect a variety of methodological approaches and to spotlight the ways in which sex and gender intersect with other social categories (e.g. race, class, and nationality) at different stages in the life course.

M 1:30–3:20
WGSS 645a/AFAM 723a/AMST 645a/CPLT 949a, Caribbean Diasporic Intellectuals
   Hazel Carby
The course examines work by writers of Caribbean descent from different regions of
the transatlantic world. In response to contemporary interest in issues of globalization,
the premise of the course is that in the world maps of these black intellectuals we can
see the intertwined and interdependent histories and relations of the Americas, Europe,
and Africa. Thinking globally is not a new experience for black peoples, and we need
to understand the ways in which what we have come to understand and represent as
“Caribbeanness” is a condition of movement. Literature is most frequently taught within
the boundaries of a particular nation, but this course focuses on the work of writers who
shape the Caribbean identities of their characters as traveling black subjects and refuse
to restrain their fiction within the limits of any one national identity. We practice a new
and global type of cognitive mapping as we read and explore the meanings of terms like
black transnationalism, migrancy, globalization, and empire. Diasporic writing embraces
and represents the geopolitical realities of the modern, modernizing, and postmodern
worlds in which multiple racialized histories are inscribed on modern bodies. T 1:30–3:20

WGSS 651b/ANTH 651b, Intersectionality on Women’s Health   Marcia Inhorn
This interdisciplinary seminar explores how the intersections of race, class, gender, and
other axes of “difference” (age, sexual orientation, disability status, nation, religion)
affect women’s health, primarily in the contemporary United States. Recent feminist
approaches to intersectionality and multiplicity of oppressions theory are introduced. In
addition, the course demonstrates how anthropologists studying women’s health issues
have contributed to social and feminist theory at the intersections of race, class, and
gender. T 9:25–11:15

WGSS 659bu/ANTH 655bu, Masculinity and Men’s Health   Marcia Inhorn
This interdisciplinary seminar, designed for students in Anthropology; Women’s, Gen-
der, and Sexuality Studies; and Global Health, explores in an in-depth fashion ethno-
graphic approaches to masculinity and men’s health around the globe. The course begins
with two theoretical texts on masculinity, followed by eleven anthropological ethnogra-
phies on various dimensions of men’s health and well-being. Students gain broad expo-
sure to a number of exigent global men’s health issues, issues of ethnographic research
design and methodology, and the interdisciplinary theorizing of masculinity scholars in
anthropology, sociology, and cultural studies. In particular, the course demonstrates how
anthropologists studying men’s health issues in a variety of Western and non-Western
sites, including the Middle East, Africa, Latin America, and Asia, have contributed to both
social theory and ethnographic scholarship of importance to health policy. M 2:30–4:20

WGSS 693a/AMST 693a/HSAR 720a, Material Sensations: Sense and Contention in
   Material Religious Practice   Sally Promey
This interdisciplinary graduate seminar explores the sensory and material histories of
religious images, objects, buildings, and performances. With a focus on American things
and religions, the course also considers broader geographical and categorical parameters
so as to invite intellectual engagement with the most challenging and decisive develop-
ments in relevant fields. The goal is to study not only the visual cultures of religions but
also to investigate possibilities for scholarly examination of a more robust human sensoria
tion of sound, taste, touch, scent, and sight—and even “sixth senses” — the points where
the senses meet material things (and vice versa) in religious life and practice. Topics for
consideration include the cultural construction of the senses and sensory hierarchies;
investigation of the sensory capacities of (religious) things; and episodes of sensory
contestation in and among various religious traditions. In addition, the course invites
thinking beyond the “Western” five senses to other locations and historical possibili-
ties for identifying the dynamics of sensing human bodies in (trans)national religious
practices, experience, and ideas. Prerequisite: permission of the instructor. T 1:30–3:20

WGSS 706b/AMST 635b, Cultural Studies in the Americas

Alicia Schmidt Camacho

A seminar in American cultural studies with readings from Latin America, the Carib-
bean, and the United States devoted to culture, popular movements, and social theory.
The course pairs cultural texts with theoretical readings and historical monographs. We
consider questions of global political and economic transformations in the region; dis-
courses and practices of migration and displacements; nationalism and transnational
movements; processes of racial, gender, class, and sexual formation; and vernacular and
official discourses of rights and justices. We address these themes through an examina-
tion of popular movements and expressive cultures, and mass media. Prerequisite: stu-
dents need basic familiarity with the Spanish language to participate fully. W 9:25–11:20

WGSS 715b/AFAM 829b, American Legal History: Citizenship and Race

Kathleen Cleaver

This seminar examines the evolution of U.S. citizenship as defined and interpreted by
courts during the nineteenth and twentieth centuries, with particular attention to the
way historical events that defined race have affected citizenship. Topics of study include
the Thirteenth, Fourteenth, and Fifteenth Amendments to the U.S. Constitution; the
1866 Civil Rights Act; Reconstruction legislation; immigration restrictions imposed on
Asians; legislation impacting the racial classification of Mexicans; statutes governing
the citizenship of indigenous native peoples; racially based prohibitions against voting,
education, and employment; and efforts to reduce them by civil rights legislation culmi-
nating with the 1964 Civil Rights Act. Each seminar participant has to research several
topics and make a presentation to the class on at least one topic. Engagement in seminar
discussion and the drafting of research papers are the basis for grading. This seminar is
open to seniors. TH 3:30–5:20

WGSS 736b/AFAM 709b/AMST 709b/HIST 736b, Research in U.S. Political and

Social History after 1865

Glenda Gilmore

Projects chosen from the post-Civil War period, with emphasis on twentieth-century
social and political history, broadly defined. Research seminar. T 1:30–3:20

[WGSS 745b/ /SOCY 610b, Race, Gender, and the African American Experience]
WGSS 750a/AMST 770a/HIST 770a, Research in Gender and Sexuality
George Chauncey, Joanne Meyerowitz

Students conduct research in primary sources and write original monographic essays on the history of gender and sexuality. Readings include key theoretical works as well as journal articles that might serve as models for student research projects. W 1:30–3:20

WGSS 770b\!/CHNS 501b\!, Women and Literature in Traditional China
Kang-i Sun Chang

The course focuses on major women writers in traditional China, as well as representations of women by male authors. Topics include the power of women's writing; women and material culture; women in exile; courtesans; Taoist and Buddhist nuns; widow poets; the cross-dressing women; the female body and its metaphors; foot binding and its implications; women's notion of love and death; the aesthetic of illness; women and revolution; women's poetry clubs; the function of memory in women's literature; problems of gender and genre. All readings in translation; no knowledge of Chinese required. Chinese texts provided from time to time for students who read Chinese. TTH 1–2:15
Yale Center for the Study of Globalization

Betts House, 203.432.1900, globalization@yale.edu
YCSG Website: www.ycsg.yale.edu
YaleGlobal Online magazine: www.yaleglobal.yale.edu

Director
Ernesto Zedillo

The Yale Center for the Study of Globalization (YCSG) is devoted to examining the impact of our increasingly integrated world on individuals, communities, and nations. The center’s purpose is to support the creation and dissemination of ideas for seizing the opportunities and overcoming the challenges resulting from globalization’s impact on the world’s people and places. The center also studies problems that, even if they do not result directly from globalization, are global in nature and can therefore be effectively addressed only through international cooperation. In pursuit of this mission, and to assist in Yale’s effort to become a more international institution, the core of our strategy is collaboration both with the Yale community and with a variety of institutions and individuals across the globe.

One of the center’s strengths, and an important area of focus, is its ability to engage with multilateral institutions and global organizations in activities pertinent to its mission, thereby connecting academia with the world of public policy. Through these projects, YCSG produces reports, policy papers, and other publications that contribute toward influencing the attitudes and actions of policy makers, academics, and institutions. Natural opportunities exist to present the results of this work at Yale through seminars, colloquia, and public lectures.

Included among the center’s recent international activities are the following:

YCSG collaborated with the Commission on Modernization of World Bank Group Governance to explore ways in which the World Bank can operate more effectively, efficiently, dynamically, and legitimately in a transformed global political economy. This work concluded with the commission’s final report, Repowering the World Bank for the 21st Century, presented to World Bank President Robert Zoellick in October of 2009.

The center is collaborating with the International Commission on Nuclear Non-Proliferation and Disarmament in an effort to reinvigorate at a high political level the global debate on the need for nuclear nonproliferation and disarmament, in the context both of the 2010 NPT Review Conference and beyond. The commission’s report, Eliminating Nuclear Threats: A Practical Agenda for Global Policymakers, was launched in December of 2009. YCSG also collaborated with the International Atomic Energy Agency to produce a report on the future of the IAEA that has now become the primary reference for the institution’s reform.

Through its collaboration with the Global Development Network, the center has been successful in networking with research development institutions in eleven regions in the developing world and more than 100 countries, and involved in the support of over 7,800 researchers and 800 development projects worldwide.

The center joined with the Commission on Growth and Development to compile the best contemporary understanding about the policies and strategies underlying rapid and sustained economic growth and poverty reduction.
On campus, the center hosts international conferences, organizes workshops and panels, and works constantly to bring to the Yale community individuals who have input on international policy. YCSG’s Distinguished Visiting Fellows interact with faculty and students and are expected to produce one or more publications during their tenure.

In order to multiply the effects of the internal and external dimensions of the center’s strategy, YCSG has developed a global media instrument, *YaleGlobal Online* magazine (www.yaleglobal.yale.edu). *YaleGlobal* explores the growing interconnectedness of the world and aims to analyze and promote debate on all aspects of globalization. A Chinese-language edition, *YaleGlobal Fudan Edition*, was launched in September of 2009 with partner institution Fudan University. The magazine posts three original articles per week, republishes and archives articles from around the globe, and offers interviews with eminent visitors as well as video recordings of the center’s events at Yale. With a vastly increased readership in over 160 countries, *YaleGlobal* now receives 1.5 to 2 million hits per week.
YALE CLIMATE AND ENERGY INSTITUTE

http://climate.yale.edu

Director  Rajendra K. Pachauri

The Yale Climate and Energy Institute (YCEI) seeks to understand Earth’s climate system, the ecological and social impacts of climate change, and the strengths and weaknesses of current political and economic systems’ ability to respond to climate change, and to provide realistic, implementable solutions to societies and communities around the world.

The YCEI is an umbrella organization within Yale University, composed of all relevant departments, centers, and faculty. Its mission promotes a multidisciplinary approach to learning, research, and the development of strategies that help societies contribute to solutions and adapt to the challenges of local and global climatic changes.
Policies and Regulations

ADMISSIONS

www.yale.edu/graduateschool/admissions

Application for admission to any of the Graduate School’s programs should begin in the summer or fall of the academic year prior to the one in which the applicant proposes to matriculate. Application can be made to only one department, program, or combined program. The Graduate School utilizes an online application. Access to this application as well as application procedures, guidelines, requirements, fees, deadline dates, and all other information that an applicant will need are available at the Web site listed above.

Holders of American Ph.D. or Sc.D. degrees, or their international equivalents, are not eligible for admission to the Graduate School in the field in which they have already earned a degree. They may, however, apply in other fields and are also eligible to apply for admission to the Division of Special Registration as special students for nondegree study (see Nondegree Study below for more information or visit the Web site listed above). With the approval of the appropriate associate dean, holders of master’s degrees are eligible for admission to a terminal master’s degree program in the same field at the Graduate School provided that there is significant curricular distinction between the previous and proposed programs of study.

Individual program descriptions, prerequisites, special admissions requirements, and links to these programs are available via the Admissions Web site. Although programs may have varying prerequisites and special requirements for admission, all programs will require, in addition to an application and the application fee, three letters of recommendation, transcripts from each academic institution previously attended, and the results of the Graduate Record Examinations (GRE) General Test, which is administered in the United States and abroad by Educational Testing Service (ETS). This examination, in addition to any GRE Subject Tests that may be required by the student’s program of study, should be taken as early as possible to ensure that official scores are released and received no later than the stated deadline of the program for which the student is applying.

Applicants whose native language is not English must present evidence of proficiency in English by satisfactorily completing the Test of English as a Foreign Language (TOEFL), which is administered by ETS, or the International English Language Testing System (IELTS). This requirement is waived only for applicants who will have received a baccalaureate degree, or its international equivalent, prior to matriculation at Yale, from a college or university in which English is the primary language of instruction. The examination, if required, should be taken as early as possible to ensure that official scores are released and received no later than the stated deadline of the program for which the student is applying.

Students who do not demonstrate sufficient proficiency in English may be retested or asked to take courses in English for speakers of other languages. A higher level of proficiency will be required in order for students to serve as teaching fellows.

International applicants who accept offers of admission will be required to give appropriate evidence of necessary financial support before the University will be able to issue visa documents.
The application contains questions regarding prior or pending criminal convictions and disciplinary actions. When an applicant answers affirmatively to either of these questions, the Graduate School will evaluate the circumstances outlined by the applicant to determine if they are potentially relevant to his or her participation in the Yale community as a graduate student. In cases where such charges are pending, the Graduate School may decide to admit the applicant contingent upon the charges being resolved or to defer the decision on admission until the charges are resolved.

Applicants are typically notified of decisions regarding their applications during the months of February and March. Official notification is sent from the Graduate School of Arts and Sciences only.

All entering students must have obtained the bachelor’s degree or its international equivalent. Offers of admission are contingent on a student providing an official transcript indicating that the student has been awarded a baccalaureate degree (or its international equivalent) prior to matriculation. Students who are not able to provide such evidence will not be permitted to register. Those who have been engaged in graduate work at Yale or another university must also present an official transcript giving evidence of degree(s) awarded and/or satisfactory completion of the previous year’s work.

Applicants who have been previously denied admission to the Graduate School of Arts and Sciences three times may not apply again.

The Office of Graduate Admissions will not release application materials, including standardized test scores, letters of recommendation, or transcripts, to the applicant or other institutions or agencies for any purpose. Students will need to contact ETS, recommenders, or educational institutions they have previously attended in order to furnish such materials to a third party.

PROGRAMS OF STUDY

Full-Time Degree Candidacy
Most students enrolled in the Graduate School are registered for full-time study as they pursue a Ph.D. or master’s degree program. These students devote their full effort to course work, preparation for qualifying examinations, gaining teaching experience, and the research and writing leading to the completion of the dissertation.

Part-Time Study
In rare circumstances, qualified individuals who are unable to devote their full time to graduate study may apply and be admitted as part-time students in either doctoral or terminal master’s programs. For more complete information, see Part-Time Study under Degree Requirements, below.

Nondegree Study
Qualified individuals who wish to study at the graduate level as nondegree candidates may be admitted to the Division of Special Registration (DSR). Admission to the DSR is for one term or for one year only and carries with it no commitment by the Graduate School for further study. Students admitted for the academic year must demonstrate satisfactory academic performance in the first term in order to register for the second
term. Students in the DSR may obtain transcripts indicating the appropriate credit for work completed.

Application procedures and forms for the DSR are available online at www.yale.edu/graduateschool/admissions/nondegreeprograms.html. In addition, applicants to the DSR must provide evidence of health care for the duration of their studies at Yale at the time of application.

DSR students engaged in course work or a combination of course work and research are identified as Special Students. Although normally admitted for full-time study, Special Students may be admitted for part-time study and are charged tuition on a per-course basis, whether for credit or audit. Please refer to Financing Graduate School below for a schedule of tuition and fee charges. Students admitted to the DSR as Special Students are not eligible for financial aid, including federal and most nonfederal student loans.

More advanced graduate students who are degree candidates at other universities and who wish to do full-time dissertation-level research or a combination of research and course work at Yale may be admitted to the DSR as Visiting Affiliated Research Graduate Students. Such students are charged full tuition. A limited amount of tuition assistance based on need may be available. Please refer to Financing Graduate School below for a schedule of tuition and fee charges. Applicants for admission as Visiting Affiliated Research Graduate Students should complete the Applicant’s Financial Statement and must submit any other documentation that would clearly establish their need for tuition assistance. Support beyond tuition in the form of fellowship stipends, teaching fellowships, or research assistantships is not available.

In certain circumstances, advanced graduate students who are degree candidates at another university and who have made arrangements with a specific Graduate School faculty member for a research project under his or her direct supervision may be admitted to the DSR as Visiting Assistants in Research. Undergraduate students in combined or simultaneous B.S./M.S., B.A./M.A., or similar programs are not considered advanced graduate students. Student research conducted at Yale must be part of the visiting student’s thesis or dissertation. The extent and location of the research completed at Yale must be cited in the completed thesis or dissertation. Any proposal for the admission of a Visiting Assistant in Research must be discussed by the relevant departmental director of graduate studies and the appropriate associate dean. The Graduate School does not provide financial support to Visiting Assistants in Research. Such students either hold standard graduate student Assistantship in Research appointments that are funded by the faculty adviser, or provide their own funding through external awards or personal resources. Please refer to Financing Graduate School below for a schedule of tuition and fee charges.

Some departments at Yale have formal exchange agreements with universities in other countries that have been approved by the Graduate School. Graduate students who are admitted to Yale under such approved exchange agreements may be registered as Visiting International Exchange Students. Visiting International Exchange Students normally are not charged tuition.

In rare circumstances, students may apply for a second year of registration in the DSR; however, cumulative enrollment is limited to two years. Students enrolled in the DSR who are subsequently admitted to degree programs in the Graduate School may receive
academic and tuition credit for no more than four courses completed while enrolled in the DSR, provided that the department recommends such credit and the appropriate associate dean approves.

**Interdisciplinary Study**

All graduate students are formally associated with one department or program, and in the case of students in combined-degree programs, with two. Students may, however, be encouraged to take one or more courses in related departments. Students are often advised by faculty members from more than one department during their dissertation research. Students in the Graduate School, with permission of the director of graduate studies and the relevant school, may take advantage of particular course or research opportunities in Yale College and in Yale’s professional schools.

**Combined and Joint-Degree Programs**

Students interested in African American Studies, Film Studies, and Renaissance Studies pursue a combined Ph.D. with departments in related fields. In addition to these academic programs, there are several formal interdisciplinary Ph.D. programs in the Graduate School listed under the appropriate departmental entries of this bulletin. Ad hoc programs may also be approved. A student who is interested in an ad hoc program should prepare a written proposal for review and approval by the relevant departments and associate deans before the student has advanced to candidacy.

Students are encouraged to contact the appropriate directors of graduate studies about specific opportunities for interdisciplinary study throughout the Graduate School and the University.

The Graduate School also participates in the following formal joint-degree programs with the professional schools: the J.D./M.A. and J.D./Ph.D. programs in cooperation with the Law School; the M.D./Ph.D. program in cooperation with the School of Medicine; the M.A./M.B.A. and Ph.D./M.B.A. programs in cooperation with the School of Management; the M.A./M.P.H. program in cooperation with the School of Public Health; and the M.A./M.F.S. and M.A./M.E.S. programs in cooperation with the School of Forestry & Environmental Studies. For all joint-degree programs except the M.D./Ph.D., students are required to submit formal applications to both the professional school and the Graduate School indicating their interest in enrolling in the joint program. Individuals interested in the M.D./Ph.D. program apply directly to the School of Medicine (see Requirements for Joint-Degree Programs, below).

**Exchange Scholar Program**

[www.yale.edu/graduateschool/academics/exchanges.html](http://www.yale.edu/graduateschool/academics/exchanges.html)

Graduate students in Yale Ph.D. programs may petition to enroll full- or part-time for a term or for an academic year as exchange scholars at the University of California at Berkeley, Brown, University of Chicago, Columbia, Cornell, Harvard, MIT, University of Pennsylvania, Princeton, and Stanford. The Exchange Scholars Program enables students to take advantage of special educational opportunities not available at their home institutions. Applications are available at the Web site listed above. Please direct questions
to Assistant Dean Edward Barnaby (edward.barnaby@yale.edu). Applications must be received at least six weeks prior to the beginning of the term for which the student is applying.

**International Graduate Student Exchange Agreements**

All international exchange agreements must be approved in advance by the Graduate School to ensure that they meet University policy and Graduate School guidelines. Departments interested in establishing an exchange program must prepare a statement that demonstrates that there is a clear academic and reciprocal need for such a program, and that the program will conform to the established guidelines for all such exchange agreements.

**International Exchange Programs**

**Agrarian Studies**

Summer Study
Doctoral students are funded year-round and are expected to make progress toward the completion of their degrees during the summer months (see Summer Registration under Registration Status and Leaves of Absence, below). See individual departmental policies in this bulletin regarding specific expectations for degree programs during the summer. Although the Graduate School does not offer courses in the summer, intensive language instruction is available through the Yale Summer Session, and graduate students may wish to take advantage of those programs while in New Haven. For further details on summer offerings at Yale, please consult the Yale Summer Session Web site at www.yale.edu/summer.

Degree Requirements
The requirements set forth in the pages that follow are the minimum Graduate School degree requirements and apply to all degree candidates. Students should consult the listings of individual departments and programs for additional specific departmental requirements.

Requirements for the Degree of Doctor of Philosophy

Length of Study
In most fields of study, six years should normally be sufficient for the completion of the Ph.D., although it is understood that seven years may be needed by students in fields requiring extensive fieldwork or the mastery of difficult foreign languages. Departments and programs make every effort to design a course of study and to provide advice and guidance to make it possible for students to complete their work within six years. Normally three, or at most three and one-half, years are devoted to the completion of predissertation requirements (courses, examinations, selection of a dissertation topic). The remaining time, typically two to three years, is devoted to conducting research and
writing the dissertation. Advanced standing that has been granted for work done in a Yale M.A./M.S. program is counted as part of the six years (for further information, see Transfer Credit and Advanced Standing, below).

**Residence Requirement**

Students seeking the Ph.D. degree are required to be in residence in the New Haven area during at least three academic years. This is an academic requirement, distinct from and independent of the tuition requirement described below. The residence requirement must normally be met within the first four years of study. Any exception to the residence requirement must be approved by the department and by the appropriate associate dean.

**Tuition Requirement and the Continuous Registration Fee**

All Ph.D. candidates are charged four years (eight terms) of full tuition, or proportionately less if all degree requirements, including submission of the dissertation, are completed in less than four continuous years of full-time study from the date of matriculation in the Ph.D. program.

Once the full-tuition obligation has been completed, registered students are charged the Continuous Registration Fee (CRF).

**Transfer Credit and Advanced Standing**

The Graduate School does not award transfer credit for graduate work completed before matriculation at Yale. A department may, with the approval of the Graduate School, waive a portion of the Ph.D. course requirement (normally a maximum of three courses) in recognition of previous graduate-level work done at Yale or elsewhere. Such a waiver does not affect the full-tuition requirement. Courses taken previous to matriculation at Yale will not appear on the student’s Graduate School transcript.

With the approval of the department, a student who is currently enrolled may petition for advanced standing in the Graduate School of up to one year for work completed in a Yale master’s or professional doctoral program that is relevant to the student’s Ph.D. program. This petition must be received by the appropriate associate dean in the Graduate School before the end of the student’s first year of study in the Ph.D. program. Such students may also be offered admission with advanced standing by the department and the Graduate School. Such advanced standing will reduce the four-year tuition requirement and eligibility for Graduate School fellowship aid accordingly. The normal six-year period of registration will be similarly reduced.

**Language Requirement**

Language requirements are set by individual departments and programs. Specific language requirements are explained in the individual department listings. All departmental requirements are subject to initial approval by the Executive Committee of the Graduate School and are monitored by the divisional degree committees. A department cannot make exceptions to its own requirements without authorization by the appropriate degree committee.

The required level of proficiency in foreign languages, and the method for demonstrating it, are determined by the individual departments. Most give their own examinations.
A few permit the requirement to be satisfied by passing particular courses. Students are urged to be prepared to meet language requirements at the beginning of their first year of study.

**COURSE AND HONORS REQUIREMENTS**

The course requirements for the Ph.D. degree are set individually by each department or program. Each course offered in the Graduate School counts for a single credit or, in rare cases, one-half credit. Only courses offered by the Graduate School and officially numbered on the graduate level (i.e., 500 or higher) can fulfill requirements for the doctoral degree, with the exception of certain language courses or where specified in advance by the department or program. Although departments may set more stringent requirements, to meet the minimum Graduate School quality requirement for the Ph.D., students must achieve the grade of Honors in at least one full-year or two full-term graduate courses, taken after matriculation in the Graduate School and during the nine-month academic year. The Honors requirement must be met in courses other than those concerned exclusively with dissertation research and preparation.

A student who has not met the Honors requirement at the end of the fourth term of full-time study will not be permitted to register for the fifth term. In exceptional circumstances, the director of graduate studies may petition the degree committee, through the appropriate dean, that a student who has not met the Honors requirement be permitted to continue study. Such a petition should be made before the end of the fourth term of study in time to be considered by the degree committee at its meeting that term. A student who is not in good academic standing with regard to course work or research as defined by the minimum standards established by the Graduate School and the expectations outlined by the student’s department or program may be dismissed from the Graduate School. Such dismissal will be recorded on the student’s transcript.

**QUALIFYING EXAMINATION**

Each Ph.D. student must pass a general examination, separate from course examinations, in the major subject offered and in such subordinate subjects as may be required by the department. Such examinations are described in the individual department listings. Students should consult with the director of graduate studies for further information about this requirement.

**PROSPECTUS**

The dissertation topic, in the form of a prospectus, must be approved by the department. Certification of this approval, together with a copy of the prospectus, must be filed with the Graduate School registrar at least six months prior to the submission of the dissertation. Students who plan to submit the dissertation before the end of the fourth year of study should be sure to reserve time to satisfy this requirement.

The prospectus should be viewed as a preliminary statement of what the student proposes to do in his or her dissertation and not as an unalterable commitment. However, substantive deviation from the dissertation project outlined in a prospectus (as determined by the director of graduate studies and associate dean) will require that the student draft a new prospectus to be approved by the dissertation committee at least six months prior to the submission of the dissertation.
In consultation with their faculty advisers and directors of graduate studies, students should give serious thought to the scale of proposed dissertation topics. There should be a reasonable expectation that the project can be completed during the stipulated duration of the degree program.

The appropriate form and typical content of a prospectus inevitably vary from field to field. In most cases, however, a prospectus should contain the following information:

1. A statement of the topic of the dissertation and an explanation of its importance. What in general might one expect to learn from the dissertation that is not now known, understood, or appreciated?

2. A concise review of what has been done on the topic in the past. Specifically, how will the proposed dissertation differ from or expand upon previous work? A basic bibliography should normally be appended to this section.

3. A statement of where most of the work will be carried out—for example, in the Yale library or another library or archive, in the laboratory of a particular faculty member, or as part of a program of fieldwork at specific sites in the United States or abroad.

4. If the subject matter permits, a tentative proposal for the internal organization of the dissertation—for example, major sections, subsections, sequence of chapters.

5. A provisional timetable for completion of the dissertation.

ADMISSION TO CANDIDACY

Admission to candidacy indicates that the department and the Graduate School consider the student prepared to do original and independent research. Students will be admitted to candidacy when they have completed all predissertation requirements, including the dissertation prospectus and excluding any required teaching. Admission to candidacy will normally take place by the end of the third year of study. Any programmatic variations from this pattern that have been approved by the Executive Committee of the Graduate School are described in the individual department statements. Training in teaching can occur both before and after a student is admitted to candidacy. A student who has not been admitted to candidacy at the expected time will not be permitted to register for the following term. At the time of advancement to candidacy, students who have not petitioned for or received en route degrees (e.g., M.A., M.S., M.Phil.) will automatically be considered for such degrees. If a student advances to candidacy after the deadline to submit a petition for the degree in that term, the student will be considered for a degree in the following term.

TRAINING IN TEACHING

The Teaching Fellow Program (TFP) is the principal framework at Yale in which graduate students learn to become effective teachers. Learning to teach and to evaluate student work is fundamental to the education of graduate students. Teaching is required in many departments and is an expectation for all doctoral students. The TFP provides opportunities for graduate students to develop teaching skills, under faculty guidance, through active participation in the teaching of Yale undergraduates. Teaching fellows who encounter problems or difficulties related to their teaching appointments are encouraged to meet with the director of the TFP (Judith Dozier Hackman) or their associate dean. A student must be registered in the Graduate School to be appointed as a teaching fellow (TF) or as a part-time acting instructor (PTAI). TFs assist faculty in teaching
relatively large undergraduate courses. PTAIs are responsible for small undergraduate courses, subject to guidance and advice by department faculty. For a more detailed description of these types of appointments, see Teaching Fellow Levels under Financing Graduate School.

Faculty should clearly communicate to students and teaching fellows their expectations about evaluation of work, feedback to students, and grading policies. Faculty are expected to prepare course syllabi, assignments, and examinations. Typically, they should not ask teaching fellows to give lectures when they are unable to attend class, although they are encouraged to offer occasional opportunities for student lectures when they can attend and advise. While on rare occasions teaching fellows may be asked to assist with administrative activities (such as placing course material on library reserve or online, making photocopies for class, ensuring that audiovisual resources are available and working, and the like), in general such activities should not be done by students.

Graduate students may occasionally serve as graders for graduate-level courses, but only in highly quantitative courses with grading demands for frequent assignments. Even there, the grading may not count toward final grades, and the students may not grade exams. In courses that are double-titled with both graduate and undergraduate numbers, the same guidelines hold for the grading of assignments; all other grading of graduate students should be done by the faculty member.

The Graduate School requires that all students who teach be in good academic standing. In addition, they must be fluent in English, except for those who solely grade. Graduate students whose native language is not English are required to meet the oral English proficiency standard before they may begin teaching. The standard may be met by (1) passing the SPEAK test, (2) passing the ELI oral exam, (3) passing the speaking section of the iBT TOEFL, (4) passing the speaking portion of the IELTS exam, or (5) having received an undergraduate baccalaureate degree or its equivalent from an institution where the principal language of instruction is English. In some instances, a student’s director of graduate studies may require that students with an undergraduate degree from English-speaking institutions also pass the SPEAK test to satisfy the language requirement.

DEFERRAL OF TEACHING YEAR

In the humanities and social sciences, students in a teaching year, normally years three and four, may request to defer a teaching year or term into the fifth or sixth year for compelling academic reasons. Such reasons include but are not limited to a need to conduct research in absentia or undertake additional preparation for teaching.

A student who wishes to defer a teaching year must make arrangements to do so no later than the beginning of the fourth year. At the time the deferral is requested, the student and director of graduate studies should agree on the teaching the student will do in the fifth or sixth year. The assignment should be at the level normally expected in a regular teaching year, that is, a TF 3.5 or 4, depending on the department.

The deferral must be approved by the DGS and the associate dean. If the deferral is approved, the conditions associated with the formal teaching years will apply to the specified terms of study, including that the student will receive priority in terms of assignment; the assignment will not be changed unless the student, DGS, and instructor agree upon it, or enrollment is fewer than six students; and the student will receive the
standard departmental stipend. Under no circumstances may a student defer a teaching year beyond the sixth year, and all students must still complete the Dissertation Fellowship by the end of the sixth year.

**Dissertation**

The dissertation should demonstrate the student’s mastery of relevant resources and methods and should make an original contribution to knowledge in the field. Normally, it is expected that a dissertation will have a single topic, however broadly defined, and that all parts of the dissertation will be interrelated, but can constitute essentially discrete units. Beyond this principle, the faculty will apply the prevailing intellectual standards and scholarly practices within their fields in advising students with regard to the suitable scope, length, and structure of the dissertation, including what constitutes an original contribution to that field. Principal advisers of doctoral candidates must have appointments on the Graduate School faculty.

In accord with the traditional scholarly ideal that the candidate for a doctorate must make a contribution to knowledge, all dissertations that have been accepted by the Graduate School are published on microfilm by University Microfilms International and then deposited in the Manuscripts and Archives section of the Sterling Memorial Library. As such, classified or restricted research is not acceptable as part of the dissertation. Exceptions must be approved in advance by the appropriate degree committee.

Dissertations must be written in and submitted in English except in some disciplines in which there are strong academic reasons for the submission of a dissertation in a foreign language. At the time of the submission of their prospectus, students must petition for permission to submit all or a portion of their dissertations in a foreign language. The petition should be submitted in the form of a letter explaining the academic reasons for using a foreign language and will be evaluated by the DGS and the appropriate associate dean. Petitions for writing and submitting a dissertation in a foreign language will not be accepted after students have advanced to candidacy. A dissertation may not be translated into English by someone other than the student.

Dissertations must be submitted to the Graduate School by the respective deadlines in the academic calendar to be considered for December or May degrees. No exceptions are made to these deadlines, which have been established to allow sufficient time for departments to receive evaluations from readers and recommend students to the degree committees. Once the adviser and committee have approved a dissertation for submission and the director of graduate studies has been notified, the student submits one unbound copy of the dissertation, softbound copies that will be distributed to each reader, a completed set of required forms (available at [www.yale.edu/graduateschool/academics/forms/dissertationChecklist.pdf](http://www.yale.edu/graduateschool/academics/forms/dissertationChecklist.pdf)), and any requisite fees to the Graduate School. The department must submit to the Graduate School a fully completed “Notification of Readers” form that has been approved by the director of graduate studies.

The Graduate School requires that each dissertation be read by at least three persons but not more than five, at least two of whom are ladder or ladder-track faculty members at Yale. All readers must hold the Ph.D. degree as well as a faculty position or be considered otherwise qualified to evaluate the dissertation. The process for assigning readers is determined by the department, which is responsible for confirming the qualifications,
contact information, and willingness of all readers before notifying the Graduate School of these appointments. All appointments of readers are subject to review by the associate deans. The department is responsible for reassigning readers as necessary, and this process will not extend the deadline for readers’ reports to be returned to the Graduate School. The Graduate School will send each student a copy of the readers’ reports and place a copy in the student’s permanent academic record.

Award of the Ph.D. will be considered by the degree committee only if all readers’ evaluations have been received by the Graduate School and are positive, all other degree requirements have been met, and the department has recommended the awarding of the degree. Should a reader indicate that a dissertation contains significant errors in typing, grammar, spelling, reference citations, or other textual matters, the student will be required to revise the dissertation by a date provided by the registrar. Corrected pages or a new unbound copy of the dissertation must be submitted to the Graduate School, as well as a letter from the director of graduate studies indicating that the student has addressed the readers’ concerns, before the dissertation can be recommended for a degree. In the event that a dissertation is evaluated as failing, departmental practice determines the number of reevaluations normally permitted.

The Graduate School does not require departments to evaluate the dissertations of degree candidates who are no longer registered. The decision to review such dissertations rests with the department.

**Requirements for the Degree of Master of Philosophy**

The Master of Philosophy is awarded en route to the Ph.D. in many departments. The minimum general requirements for this degree are that a student shall have completed all requirements for the Ph.D. except required teaching, the prospectus, and dissertation. Students will not generally have satisfied the requirements for the Master of Philosophy until after two years of study, except where graduate work done before admission to Yale has reduced the student’s graduate course work at Yale. In no case will the degree be awarded for less than one year of residence in the Yale Graduate School.

Not all departments offer the M.Phil. degree. Information regarding special departmental requirements for the degree, if any, are stated in the individual department listings.

**Requirements for the Degree of Master of Arts or Master of Science**

Except in the case of programs listed below under Terminal M.A./M.S. Degrees, students are not admitted as candidates for the Master of Arts or Master of Science degree. However, students in most doctoral departments may be awarded the M.A. or M.S. en route to the Ph.D. degree.

Although departments may set more stringent requirements, the minimum general requirements that must be met for award of the M.A. or M.S. en route are (1) completion of the first year of the program leading to the Ph.D., with grades that satisfy departmental requirements; (2) completion of one academic year in full-time residence, or the equivalent, at Yale; (3) recommendation by the department for award of the degree, subject to final review and approval by the appropriate degree committee. In no case may courses
taken prior to matriculation in the Graduate School, or in Yale College or other summer programs, be applied toward the requirements for the Master of Arts or Master of Science degree.

Some departments do not offer the M.A. or M.S. en route to the Ph.D., or award it only to students who are withdrawing from the Ph.D. program. For information about this or any special departmental requirements additional to the general requirements stated above, see the department listings.

Students enrolled in a Ph.D. program may receive a master’s degree from another department provided that it is in a related field of study and deemed necessary for the completion of the proposed dissertation research. The student’s proposed program of study must receive formal approval in writing from the director of graduate studies in both departments and the appropriate associate dean prior to enrollment in courses that will fulfill master’s degree requirements in another department. Courses taken toward a master’s degree in another department must be part of the student’s course requirement for the Ph.D., as approved by the director of graduate studies in both departments. However, such course work cannot also be counted toward a master’s degree in the department to which the student was admitted. A student may not advance to candidacy until all requirements have been completed for both the en route master’s degree in the program to which the student was admitted and the proposed master’s degree in a related field. Students who wish to obtain a master’s degree in a field that is not directly related to the doctoral degree must apply for a personal leave from the Ph.D. program and submit an application for admission to the master’s program. Any financial aid offered to the student for a Ph.D. program may not be transferred to a master’s degree course of study. Students enrolled in combined programs normally receive combined en route degrees as well.

**TERMINAL M.A./M.S. DEGREES**

The residence and tuition requirements for a terminal M.A./M.S. degree are a minimum of one year of full tuition and course work in residence in one-year programs, or a minimum of two years of full tuition and course work in residence in two-year programs. For information about which departments offer one-year programs and which offer two-year programs, see the department listings.

With the approval of the department and the appropriate associate dean, a student may be admitted for part-time study toward the master’s degree. In that case, tuition will be charged on a per-course basis. Part-time study does not change the one- or two-year full-tuition obligation described above. Part-time students must complete all degree requirements within five years of matriculation.
Individual departments establish the specific course and language requirements for these degrees. Although departments may set more stringent requirements, the minimum Graduate School requirement for students admitted for M.A./M.S. degrees is an overall grade average of High Pass, including a grade of Honors in at least one full-term graduate course (for students enrolled in one-year programs), or in at least two full-term graduate courses (for students enrolled in two-year programs). In order to maintain the minimum average of High Pass, each grade of Pass on the student’s transcript must be balanced by one grade of Honors. Each grade of Fail must be balanced by two grades of Honors. If a student retakes a course in which he or she has received a failing grade, only the newer grade will be considered in calculating this average. The initial grade of Fail, however, will remain on the student’s transcript. A grade awarded at the conclusion of a full-year course in which no grade is awarded at the end of the first term would be counted twice in calculating this average.

Each course offered in the Graduate School counts for one or one-half credit. Only courses offered by the Graduate School and officially numbered on the graduate level can fulfill requirements for the master’s degree, with the exception of certain language courses or when specified in advance by the department or program. A student who has not fulfilled the course requirements for the degree at the conclusion of the standard duration of the program can, at the discretion of the department and associate dean, be granted one additional term to fulfill degree requirements. If the student has not taken the requisite number of courses but has fulfilled the tuition requirement, the student will be charged the Continuous Registration Fee. If the student must take additional courses beyond the number required, the student will be charged tuition on a per-course basis.

No credit will be awarded toward the M.A./M.S. degree for courses taken prior to matriculation in the Graduate School, or taken in Yale or other summer programs. Students in one of Yale’s professional schools who matriculate in the Graduate School to complete a joint master’s degree may, however, with the permission of their director of graduate studies, count courses already completed in their professional school program toward the joint degree. See the individual program or department listings.

The master’s degree may also be earned jointly with the B.A./B.S. in certain departments by students enrolled in Yale College. For further information, see Yale College Programs of Study, available from the Office of the Dean of Yale College.

**Requirements for Joint-Degree Programs**

Students who are candidates for degrees in any of the joint programs sponsored by the Graduate School and Yale’s professional schools must meet the requirements established by each school for the degree they are seeking. Degree requirements in the Graduate School include both the Graduate School’s general requirements and any special requirements set by the relevant department or program. In all cases the Honors requirement must be fulfilled in non-research courses offered primarily for Graduate School students, taken after matriculation in the Graduate School.

In addition to the J.D./Ph.D., J.D./M.A., M.D./Ph.D., and Ph.D./M.B.A. programs described below, joint-degree programs with other professional schools have been approved for students in European and Russian Studies, International Relations, and International and Development Economics. These programs are described in the individual department listings.
J.D./PH.D. AND J.D./M.A. PROGRAMS

Admission to the Graduate School joint-degree programs with the Law School, described below, requires separate admission to both schools as well as approval by the appropriate associate dean in each school, and by the director of graduate studies in the student’s Graduate School department. Students must apply for admission to a joint program no later than their first year of study in a J.D., Ph.D., or two-year M.A. program, and must matriculate in the joint program no later than the beginning of their second year. Students wishing to pursue a J.D./M.A. in a one-year M.A. program must apply for admission no later than their first year of study in the J.D. program and must matriculate in the M.A. program as a joint-degree candidate.

In the J.D./Ph.D. program, the first year of study is spent principally in the Law School. The second and third years are combined according to the interest of the student. As many as six term courses, designated by the student at the beginning of the term, may be counted toward both degrees. During this time all course work and language requirements for the Ph.D. program are normally completed. The J.D. should be completed by the end of the fourth year. During the fifth year the student is expected to complete all remaining predissertation requirements and be admitted to candidacy. The teaching requirement for the Ph.D. will normally be completed by this time. Any exception to this pattern of study must be approved by the appropriate associate dean.

The minimum residence requirement in the J.D./Ph.D. program is four years. The tuition requirement is two and one-half years in the Law School and three and one-half years in the Graduate School. Financial aid is provided by each school according to its own criteria, typically for two and one-half years in the Law School and three and one-half years in the Graduate School, and is awarded by each school during the terms in which the student pays tuition in that school. Students are not eligible for financial aid from the Graduate School during terms in which they are registered at another school.

In the J.D./M.A. program, the J.D. and M.A. degrees are awarded simultaneously at the end of the fourth year of study in one-year M.A. programs and at the end of four and one-half years of study in two-year M.A. programs. The Graduate School tuition requirement for J.D./M.A. students in one-year M.A. programs is one year of tuition; students in two-year M.A. programs have a one and one-half year tuition requirement in the Graduate School. In all cases students pay three years of tuition in the Law School. Students in J.D./M.A. programs, like other students in M.A. programs, are not ordinarily eligible for University Fellowship aid through the Graduate School. Students usually enroll in the Law School during the first year of study. The pattern of enrollment in subsequent years depends on whether the M.A. program is a one-year or a two-year program.

M.D./PH.D. PROGRAM

This program is sponsored jointly by the Graduate School and the School of Medicine. Applications for admission to the joint program are reviewed by a committee composed of faculty members and deans from both schools. Normally, admission to the program includes simultaneous admission to both schools. However, students may apply to the joint program by October 15 of their second year of study in either the M.D. or Ph.D. program, and they must matriculate in the joint program no later than the beginning of the following year.
Students request affiliation with a particular department or program in the Graduate School by the middle of their third year of study in the joint program, after their course and research interests have been defined. Although students usually pursue their research in one of the biological sciences, those interested in earning the Ph.D. through work in another department may do so under certain circumstances, with the approval of the M.D./Ph.D. committee.

The residence requirement in this program is seven years. The full-tuition requirement is three and one-half years in the School of Medicine and two and one-half years in the Graduate School. To qualify for the M.D. and Ph.D. degrees, students must satisfy all degree requirements of both schools. Normally, a student admitted to this joint program must satisfy the Graduate School Honors requirement by the end of the second year of study and must complete all remaining predissertation requirements within four terms of affiliation with the Ph.D. department. This schedule may be adjusted for students who have been enrolled in either the School of Medicine or the Graduate School before admission to the M.D./Ph.D. program.

PH.D./M.B.A.

The joint degree combines the two-year M.B.A. degree from the School of Management (SOM) with the six-year Ph.D. It would allow its students to complete requirements for both degrees in roughly seven years rather than the eight or more years that would be required if the degrees were pursued separately. Both degrees will be awarded simultaneously once the student has fulfilled the degree requirements of both programs. Like all graduate students, joint-degree students will receive a full financial aid package from the Graduate School during the terms registered there. For students in the humanities and social sciences, this includes four years of tuition, five years of stipend, and health insurance for each term registered. Funding for students in the sciences will mirror standard, departmental packages. Students will pay one and one-half years of tuition for the three terms registered at SOM.

The School of Management and the Graduate School will use independent admissions processes and make independent admissions decisions. Applicants must take both the GRE tests and the GMAT. Prospective students who are currently enrolled neither in the Graduate School nor in SOM may apply to both schools simultaneously. Students already enrolled in the Graduate School normally apply to SOM after taking one course at SOM for matriculation any time after they have passed their Ph.D. qualifying examinations at the Graduate School but prior to beginning the fifth year of study. This pattern, however, is flexible, and students interested in the joint degree should consult the Web pages of their departments or programs for further information. Students registered in SOM may apply to the Graduate School during the first year of study at SOM. Following admission to both programs, each student must complete a form requesting joint-degree status. The form must be signed by the appropriate associate dean at the Graduate School and at SOM and the student’s director of graduate studies.

A student in the Graduate School who wishes to pursue the joint degree will normally be required to take one course in SOM before applying there. The student will need to obtain the permission of the SOM instructor and state his or her intention to apply to the joint-degree program. The Graduate School will waive one course during the term in
which the student takes this preliminary course at SOM. For students in some disciplines, this prerequisite to admission will be waived. The student is expected to complete the qualifying exams and prospectus according to the standard schedule set by the Graduate School. The student will normally begin study at SOM after completing the departmental Ph.D. qualifying examinations at the Graduate School, but there are exceptions to this pattern described on the departmental Web sites. Upon admission to SOM, the joint-degree student will register at SOM for the first-year core of courses. Students may not fulfill any Graduate School requirements during this time, nor may they serve as teaching fellows in the Graduate School in any capacity. The student must register for a third term at SOM and complete four additional courses, normally prior to the beginning of the sixth year of study at the Graduate School. Depending on the schedule of individual students, they may or may not complete all four of these remaining courses within a single term at SOM. If they do not, they may complete outstanding courses while registered at the Graduate School, but in all circumstances, students are required to pay a third term of tuition to SOM.

A student who has been admitted to the Graduate School while completing the first-year core at SOM may begin course work in the Graduate School the following year. Once a joint-degree student has matriculated at the Graduate School, it is expected that the student remain registered continuously until completing the qualifying exams. During this time, the student may undertake limited course work at SOM, but may not register there for the third and final term until he or she has passed the departmental exams at the Graduate School. Prospective students who apply simultaneously may start the joint degree at either school and follow the schedules outlined above.

All joint-degree students are subject to the codes of conduct published in the bulletins of their respective programs. Joint-degree students will receive separate transcripts from SOM and the Graduate School. Each transcript will list the courses required for the respective school’s portion of the joint degree. Each course taken may be counted toward one degree only. The transcripts will reflect the joint-degree status. If a joint-degree student decides not to complete both degrees, he or she may petition both schools to receive a single degree if the requirements for the single degree, including the two-year tuition requirement at SOM, are met.

**Responsible Conduct in Research**

The Graduate School is committed to training its students in the importance of professional ethics. All graduate students are required to complete an online training module in professional ethics before they can register for the spring term of their first year. Additionally, students in the sciences are required to complete a training course in the responsible conduct of research by the end of their first year of study. These training opportunities are not necessarily independent of compliance work required by participation in certain externally administered grants. They are meant to establish a basis of understanding among graduate students at Yale concerning their participation in scholarship and research.
Petitioning for Degrees

Graduate School degrees are awarded twice each year, at Commencement in May and in the fall (normally in December, depending on the schedule of the Yale Corporation). Degrees are not granted automatically. Students must file a petition for each degree by the appropriate date (see Schedule of Academic Dates and Deadlines). Petitions that have received favorable recommendations from the student’s department are reviewed by the appropriate degree committee. When the degree committee has given its approval, the petition is forwarded to the faculty of the Graduate School and then to the Yale Corporation. If the petition is successful, the student will be notified in writing by the dean of the Graduate School.

Students enrolled in Ph.D. programs should not petition for M.A./M.S. and M.Phil. degrees until the end of the term in which requirements for the degree are completed (e.g., students completing degree requirements during the spring term should petition for award of the degree the following fall). At the time of advancement to candidacy, students who have not petitioned for or received en route degrees (e.g., M.A., M.S., M.Phil.) will automatically be considered for such degrees. Students in terminal M.A./M.S. programs may petition for their degrees in the term in which they expect to complete them.

Commencement

www.yale.edu/graduateschool/academics/commencement.html
GScommencement@yale.edu

There is only one University Commencement ceremony each year, in May. All degrees awarded for both December and May of each academic year are presented at the May ceremony.

ACADEMIC REGULATIONS

Registration

Only registered students may attend classes, receive financial aid, or use the facilities of the University. Students must register every term for the duration of their degree program (normally six years or less for Ph.D. programs and one or two years for students in M.A./M.S. programs). This regulation applies to all students, whether engaged in course work, preparation for qualifying examinations, or dissertation research, and, in the case of students in Ph.D. programs, whether study is in residence or in absentia. Students who do not register for any term for which they have not been granted a leave of absence (see Leaves of Absence, under Registration Status and Leaves of Absence, below) will be considered to have withdrawn from the Graduate School. Privileges associated with registered status (i.e., library privileges, health care coverage, and e-mail accounts) will likewise be withdrawn.

No student may register for any term unless he or she is making satisfactory progress toward the degree and has been cleared by the Office of Student Financial Services to register. In compliance with Connecticut state law, no student will be allowed to register unless satisfactory evidence of immunity to measles and rubella has been presented to Yale Health (see Required Immunizations, under Health Services).
Satisfactory progress means that the student has met all Graduate School and departmental requirements normally expected for each stage of the student’s program. For Ph.D. students before admission to candidacy and for M.A./M.S. students, this includes satisfactory completion of courses from the preceding term(s). As indicated in the sections on Course and Honors Requirements and Admission to Candidacy, students in Ph.D. programs must satisfy the Honors requirement before beginning the fifth term of study and must be admitted to candidacy by the appropriate time. In addition to satisfying these general Graduate School requirements, students must meet any additional requirements specified by their departments. Ph.D. students who have been admitted to candidacy must continue to demonstrate satisfactory progress toward the degree in the annual dissertation progress report. Students who fail to meet departmental or Graduate School requirements by the designated deadlines, and students who have been admitted to candidacy who fail to submit the annual dissertation progress report, will be administratively withdrawn.

Students must register each term until the dissertation is submitted or until six years (twelve terms) of study have been completed. Registered students who submit dissertations will remain registered until the end of the term (i.e., through December for those submitting during the fall term, through May for those submitting before the spring degree deadline, and through August for those submitting after the spring degree deadline) and will retain all privileges of registration (e.g., library privileges, health care coverage, and e-mail accounts). Students who complete all Ph.D. requirements within four continuous years of full-time study in the Ph.D. program will be registered and charged full tuition only through the term in which the dissertation is submitted. Students who have registered part-time or taken a leave of absence must complete the four-year, full-tuition obligation, regardless of when they submit the dissertation.

Students who have not yet submitted the dissertation by the end of the sixth year of study may do so subsequently without registering at the discretion of the department or may request a period of extended registration by submitting the petition for extended registration, which includes the standard Dissertation Progress Report that is required annually by May 1 of all students admitted to candidacy. Before a seventh year of registration is approved, the student and his or her adviser, as well as the director of graduate studies, must complete a report that specifies the progress the student has already made in writing the dissertation and that also includes a detailed plan for completing the dissertation in the seventh year. In addition to this requirement, students seeking an eighth year of registration must demonstrate serious circumstances beyond their control that have prevented them from completing the dissertation by the end of the seventh year of study. Students who receive extended registration must register online each term and are normally expected to be in residence.

Alternatively, a doctoral student who has completed at least six years of study and who was registered as a full-time student during the previous term may request to enroll with the status “Dissertation Completion.” This part-time status enables advanced students to maintain an active NetID in order to access electronic library resources and their Yale e-mail accounts while completing their dissertations under the supervision of a member of the Graduate School faculty. A student may hold this status for a maximum of four consecutive terms and will be charged the Continuous Registration Fee in each term for
which it is approved. Once a student enters this status, he or she may not petition to register as a full-time student in a subsequent term.

**Noncumulative registration** In certain areas of study it may be necessary for a registered student to acquire an academic skill (typically, knowledge of a foreign language) that is essential for a degree requirement or for research in a particular field and for the overall progress of the dissertation but is not an inherent part of the dissertation itself. A student in this situation may request up to one year of “noncumulative registration.” It is important to note that general study in a field related to or parallel with the topic of the dissertation is not appropriate for noncumulative registration.

A student who wishes to have a specific period of study designated as “noncumulative” should discuss the reasons for such a period of study with and secure prior approval from his or her associate dean. If prior authorization has been given by the Graduate School, the period of time spent in acquiring the necessary academic skill will not be counted as part of the student’s six-year period of candidacy. Noncumulative registration does not change the four-year full-tuition obligation. The tuition charge and any University Fellowship aid will be postponed if a student registers noncumulatively before the four-year full-tuition obligation has been satisfied. While registered noncumulatively, students pay the Continuous Registration Fee and doctoral students continue to receive the Health Award from the Graduate School.

**Part-time study** Students in Ph.D. programs are expected to register for full-time study. In extraordinary circumstances a student may petition the Graduate School for permission to register as a half-time student for a limited period. Students may not register for half-time study for more than three of the first four academic years they are enrolled. Thereafter they must register full-time until the four-year tuition obligation has been satisfied. Any Ph.D. student who registers half-time at any point in his or her graduate program must fulfill the four-year tuition obligation to receive the Ph.D. (see below). Ph.D. students may not register less than half-time.

Students who wish to study part-time should consult with their director of graduate studies and the appropriate associate dean to develop a proposed plan of study, so that both the student and the Graduate School have a common understanding about the time by which the requirements leading to admission to candidacy must be completed. Such a plan of study may be modified with the consent of the director of graduate studies and the associate dean.

**Course Enrollment**

Any student who wishes to enroll in courses during a term must register through the Online Course Selection (OCS) process. The deadlines for registration each term are listed in the Schedule of Academic Dates and Deadlines. Students who submit course enrollment forms after the appropriate deadline will be assessed a fee.

No student may attend any class unless officially registered in the course. No credit will be given for work done in any course for which a student is not officially registered, even if the student entered the course with the approval of the instructor and the director of graduate studies. Graduate students who wish to register for courses that are offered on both the graduate and undergraduate levels must register with the graduate-level
course number (i.e., 500 or higher) in order to receive credit toward their degrees. In rare instances, a graduate student may be granted permission to register for an undergraduate course that will count toward the fulfillment of course requirements for the student’s graduate degree. In such cases, the student must file an approved Graduate Credit Request form (www.yale.edu/graduateschool/academics/forms/Credit_Request_Form.pdf) with the Registrar’s Office by the end of the registration period. Graduate students may not utilize the “Credit/D/Fail” option within the Yale College grading scale. Students enrolling in courses offered by a Yale professional school are subject to all policies and deadlines of both the professional school and the Graduate School. Graduate students taking a course through the School of Management and the Law School must also obtain written permission from the respective schools’ registrars to be officially enrolled. Permission must be obtained within two weeks of the close of registration at the Graduate School.

A student who wishes to audit a course must receive permission from the instructor (as not all faculty permit auditors in their classes) and register for the course as an auditor. The minimum general requirement for auditing is attendance in two-thirds of the class sessions; instructors may set additional requirements for auditing their classes. Audited courses appear on the student’s transcript.

COURSE CHANGES
Once the Online Course Selection (OCS) process has closed for a given term, all subsequent changes must be made using the Course Schedule Change Notification Form, approved by the student’s director of graduate studies and then filed with the registrar. If a student is enrolled in a professional school course, all changes in enrollment status must be reported to the registrar of that school as well as to the Graduate School. Forms for reporting changes to the Graduate School are available at the Graduate School Student Information Office, 113 HGS, through the student’s department, or online at www.yale.edu/graduateschool/forms.

The dates for changing enrollment in a course from Credit to Audit or Audit to Credit and for withdrawing from a course are listed in the Schedule of Academic Dates and Deadlines. If a student stops attending a course in which he or she is enrolled for credit but does not file a course change form with the registrar, a permanent “Incomplete” will be recorded on the student’s record for that course. Similarly, if a student attends a course, for credit or audit, that was not listed on the student’s approved course enrollment form for that term, the course will not be entered in the student’s record and credit for the course will not be given.

Grades
The grades assigned in the Graduate School are:

- H: Honors
- HP: High Pass
- P: Pass
- F: Fail
- TI: Temporary Incomplete
- I: Incomplete
A mark of “Y” is assigned as the grade for the first term of a full-year course and will be converted to a standard grade once both terms are completed, depending on the number of credits the course fulfills.

Marks of Satisfactory/Unsatisfactory may be assigned only when the department sponsoring the course has designated such marks. In such cases, the grading mode is the same for all students enrolled in the course.

The Graduate School does not calculate grade-point averages, nor does it assign numerical or letter equivalents to Graduate School grades. Grades assigned according to grading scales other than those described above will be returned to the instructor for conversion.

The Schedule of Academic Dates and Deadlines indicates the dates on which grades are due for the current year. Instructors have the responsibility for assigning dates for submission of course work to meet these grade deadlines. If a student and instructor have agreed that an extension is appropriate, the student must submit to the Registrar’s Office a request for the Temporary Incomplete (TI) (available on the Graduate School Web site at www.yale.edu/graduateschool/forms) with the intended completion date, signed by the instructor and the director of graduate studies. Only one TI in a single term is permitted. Temporary Incompletes received in an academic year must be converted to final grades by October 1 of the following academic year. If a grade is not received by the registrar by this date, the TI will be converted to a permanent Incomplete (I) on the student’s record.

In certain extraordinary circumstances, such as serious illness or a family emergency, and on the recommendation of the student’s department, the associate dean may grant an additional extension. A written request for such an extension must be made by the director of graduate studies on the student’s behalf within two weeks of the grade submission deadline. The request should indicate the special circumstances and suggest a date by which the student will complete the work. If the request is approved, the associate dean will inform the student and instructor. If the grade is submitted to the registrar by the new deadline approved by the associate dean, it will replace the Temporary Incomplete. If a grade is not received by the registrar by this date, a Temporary Incomplete (TI) will be converted to a permanent Incomplete (I) on the student’s record.

“Provisional” or “temporary” grades (as opposed to Incompletes) are not permitted. Once submitted to the Office of the Registrar, a grade may be changed only in cases of arithmetical or clerical error on the part of the instructor and only with the approval of the appropriate associate dean.

Students are reminded that the policies stated above are the Graduate School minimum general requirements. Departments or individual instructors may have more stringent policies, and students should consult their departmental handbooks or directors of graduate studies about such requirements.

Registration Status and Leaves of Absence

Registration in Residence

Students who are studying on campus, attending classes, and using University facilities are considered to be in residence. All M.A./M.S. and nondegree (DSR) students must register in residence each term, as do most students in Ph.D. programs (see also
Registration in Absentia and Continuous Registration Fee, below). Students who will be in residence during any term are required to register through the Online Course Selection process during the normal registration period at the beginning of that term (see the Schedule of Academic Dates and Deadlines).

A fee will be charged to students who register in residence after the close of the registration period. Late fees may be waived only if the registrar receives written notification from the student or director of graduate studies before the start of the registration period that the student will register late because of participation in an academic program, such as a summer language course or professional meeting, that coincides with the registration period. A student who cannot register during the registration period because of a sudden serious illness or family emergency should contact the deputy registrar (246 Church Street) as soon as possible.

**REGISTRATION IN ABSENTIA**

Ph.D. students whose program of study requires full-time dissertation research, full-time fieldwork, or full-time study at another academic institution outside the New Haven area may request to be registered in absentia. Such registration requires the recommendation of the director of graduate studies and the approval of the appropriate associate dean. Forms for requesting registration in absentia may be obtained at the Graduate School Student Information Office reception desk or online at www.yale.edu/graduateschool/forms and should be filed at least one month before the beginning of the term during which the student expects to be studying away from New Haven. A student who has not completed the three-year residence requirement will be permitted to register in absentia for compelling academic reasons only, and normally only if the student has completed all other predissertation requirements. Registration in absentia does not reduce the four-year full-tuition or three-year residence requirements. For additional information, see Eligibility for Fellowships under Financing Graduate School.

Students who are enrolled in Yale Health and are registering in absentia should consult the staff of the Member Services Department at the Yale Health Center about the policies governing coverage while they are away from New Haven.

**CONTINUOUS REGISTRATION FEE**

Ph.D. students who have completed the tuition and residence requirements described above must continue to register each term through the sixth year whether in residence or in absentia, or until they submit the dissertation, whichever occurs first. Students who have met the tuition requirement are charged a Continuous Registration Fee (CRF) for each term in which they remain registered. Students who are granted permission to register beyond the sixth year are also charged this fee.

**SUMMER REGISTRATION**

Ph.D. students receive funding and are expected to continue full-time independent study or research during the summer. Continuing students who were registered during the preceding spring term remain registered through August 31. Ph.D. students who wish to interrupt their studies during the summer (e.g., to accept an internship) must notify their associate dean prior to May 15.
Many M.A./M.S. students continue full- or half-time independent study or research during the summer. Continuing students who were registered during the preceding spring term remain registered through August 31.

Students can obtain verification of summer registration from the Office of the Graduate Registrar.

LEAVES OF ABSENCE

Students who wish or need to interrupt their study temporarily may request a leave of absence. There are three types of leave—personal, medical, and parental—all of which are described below. The general policies that apply to all types of leave are:

1. All leaves of absence must be approved by the appropriate associate dean on the recommendation of the department. Medical leaves also require the written recommendation of a Yale Health physician, as described below.

2. Students in Ph.D. programs may be granted a leave for one term or one academic year. A leave extends the eligibility for fellowship aid by a time equal to the duration of the leave, but not for partial terms. The expected last date of registration will be adjusted by one term for each term of the leave.

   Students in one-year M.A./M.S. programs may be on leave for a maximum of one term. Students in two-year M.A./M.S. programs may be on leave for a maximum total of one year.

   In exceptional circumstances renewal of a one-term or one-year leave, to a cumulative maximum total of two years of personal and medical leave, may be granted for students in Ph.D. programs. Leaves of absence for students in M.A./M.S. programs are not renewable. The duration of a parental leave is one term or one year, renewable for each birth or adoption event.

3. International students who apply for a leave of absence must consult with OISS regarding their visa status.

4. Students on leave may complete outstanding work in courses for which they have been granted approved Incompletes. They may not, however, fulfill any other degree requirements during the time on leave. (Students who intend to work toward the degree while away from the University must request registration in absentia.) Students who in fact make progress toward the degree while on leave will have their registration changed retroactively to in absentia for the period of the leave.

5. A leave of absence does not exempt the student from meeting the tuition requirement (payment of eight terms of full tuition in Ph.D. programs, or the appropriate established tuition charge in M.A./M.S. programs) or from paying the Continuous Registration Fee (if appropriate), but merely postpones the required charges.

6. A student on leave of absence is not eligible for financial aid, including loans; and in most cases, student loans are not deferred during periods of nonenrollment.

7. A student on leave of absence is not eligible for the use of any University facilities normally available to enrolled students.

8. A student on leave of absence may continue to be enrolled in Yale Health by purchasing coverage through the Student Affiliate Coverage plan. In order to secure continuous coverage from Yale Health, enrollment in this plan must be requested prior to the beginning of the term in which the student will be on leave or, if the leave commences
during the term, within thirty days of the date when the leave is approved. Coverage is not automatic; enrollment forms are available from the Member Services Department of Yale Health, 203.432.0246.

9. Students living in University housing units are encouraged to review their housing contract and the related policies of the Graduate Housing Office before applying to the Graduate School for a leave of absence.

10. Students on leave of absence do not have to file a formal application for readmission. However, they must notify the registrar in writing of their intention to return. Such notification should be given at least eight weeks prior to the end of the approved leave.

11. Students who fail to register for the term following the end of the approved leave will be administratively withdrawn from the Graduate School.

**Personal leave of absence** A student who wishes or needs to interrupt study temporarily because of personal exigencies may request a personal leave of absence. The general policies governing all leaves of absence are described above. A student who is current with his or her degree requirements is eligible for a personal leave after satisfactory completion of at least one term of study. Normally, students in Ph.D. programs are not eligible for personal leaves after the fourth year of study. In certain exceptional cases, however, personal leaves may be granted to students beyond the fourth year of study. Personal leaves cannot be granted retroactively and normally will not be approved after the tenth day of a term.

To request a personal leave of absence, the student must complete the appropriate form (available online at www.yale.edu/graduateschool/forms) before the beginning of the term for which the leave is requested, explaining the reasons for the proposed leave and stating both the proposed start and end dates of the leave and the address at which the student can be reached during the period of the leave. If the dean finds the student to be eligible and the department approves, the leave will be granted. In any case, the student will be informed in writing of the action taken. Students who do not apply for a personal leave of absence, or whose application for a personal leave is denied, and who do not register for any term, will be administratively withdrawn from the Graduate School.

**Medical leave of absence** A student who must interrupt study temporarily because of illness or injury may be granted a medical leave of absence with the approval of the appropriate associate dean and the student’s department, on the written recommendation of a physician on the staff of Yale Health. The general policies governing all leaves of absence are described above. A student who is making satisfactory progress toward his or her degree requirements is eligible for a medical leave any time after matriculation. The final decision concerning a request for a medical leave of absence will be communicated in writing by the appropriate associate dean.

The Graduate School reserves the right to place a student on a medical leave of absence when, on the recommendation of the director of Yale Health or the chief of the Department of Mental Health and Counseling, the dean of the Graduate School determines that the student is a danger to self or others because of a serious medical problem.

A student who is placed on medical leave during any term will have his or her tuition adjusted according to the same schedule used for withdrawals (see Schedule of Academic Dates and Deadlines). Before re-registering, a student on medical leave must secure
written permission to return from a Yale Health physician. Advanced Ph.D. students may return at any time during the term with the permission of Yale Health. Forms for requesting a medical leave of absence are available at the Graduate School Student Information Office and online at www.yale.edu/graduateschool/forms.

Eligible Ph.D. students will receive a Health Award from the Graduate School to cover the cost of the Student Affiliate Coverage plan for the remainder of the coverage period in which the medical leave is started, if they apply for this coverage through Yale Health within thirty days of the start of their leave.

**Leave of absence for parental responsibilities**  A student who wishes or needs to interrupt study temporarily for reasons of pregnancy, maternity care, or paternity care may be granted a leave of absence for parental responsibilities. The general policies governing all leaves of absence are described above. A student who is making satisfactory progress toward his or her degree requirements is eligible for parental leave any time after matriculation.

Any student planning to have or care for a child is encouraged to meet with his or her director of graduate studies and appropriate associate dean to discuss leaves and other short-term arrangements. For many students, short-term arrangements rather than a leave of absence are possible.

Eligible Ph.D. students will receive a Health Award from the Graduate School to cover the cost of the Student Affiliate Coverage plan for the remainder of the coverage period in which the parental leave is started, if they apply for this coverage through Yale Health within thirty days of the start of their leave.

Students granted a parental leave may continue to reside in University housing to the end of the academic term for which the leave was first granted, but no longer.

**Parental Support and Relief**

Registered Ph.D. students who wish to modify their academic responsibilities because of the birth or adoption of a child may request parental support and relief during or following the term in which the birth or adoption occurs. For the whole of the term in which the support and relief are requested, the student’s academic clock stops, effectively adding an additional term to the total time to degree. During this period, students remain registered, receive the full financial aid package as specified in their letter of admission, and will have departmental academic expectations modified to best suit the specific situation. The precise nature of the academic responsibilities undertaken or suspended during this period should be a matter of consultation among the adviser, the student, and the Graduate School, with the understanding that students are entitled to full relief for at least an eight-week period. Students who take only eight weeks of relief during the term in which, or just after, a birth or adoption occurs may receive an additional eight weeks of stipend funded by the Graduate School in a later term. Parental relief may not be combined with other funding. To arrange for parental relief, a student should contact the appropriate associate dean four months prior to the birth or adoption.

Graduate students in terminal M.A./M.S. programs may modify their academic responsibilities because of the birth or adoption of a child. They should contact their associate dean the term before the planned modifications would occur.
WITHDRAWAL AND READMISSION

A student who wishes to terminate his or her program of study should confer with the director of graduate studies and the appropriate associate dean regarding withdrawal; their signatures on an official withdrawal form (available on the Graduate School Web site at www.yale.edu/graduateschool/forms) are required for withdrawal in good standing. The associate dean will determine the effective date of the withdrawal, upon consultation with the department. The University identification card must be submitted with the approved withdrawal form in order for withdrawal in good standing to be recorded.

Students who fail to meet departmental or Graduate School requirements by the designated deadlines will be administratively withdrawn, unless an extension or exception has been granted by the appropriate dean or degree committee. Students who do not register for any fall or spring term, and for whom a leave of absence has not been approved by the appropriate associate dean, will be administratively withdrawn from the Graduate School.

A student who discontinues his or her program of study during the academic year without submitting an approved withdrawal form and the University identification card will be liable for the tuition charge (or Continuous Registration Fee) for the term in which the withdrawal occurs. Tuition charges for students who withdraw in good standing will be adjusted as described in the Schedule of Academic Dates and Deadlines. The Continuous Registration Fee for the term is not canceled if a student withdraws after the fourteenth day of the term. Health service policies related to withdrawal and readmission are described under Health Services, below.

A student who has withdrawn from the Graduate School in good standing and who wishes to resume study at a later date must apply for readmission. Normally, students seeking readmission must do so within three years of the original withdrawal. Neither readmission nor financial aid is guaranteed to students who withdraw. The deadline for making application for readmission is six weeks prior to the term in which the student wishes to return to the Graduate School. The student’s application will be considered by the department, which will make a recommendation for review by the appropriate associate dean. The student’s remaining tuition obligation will be determined at the time of readmission. Ph.D. students who withdraw after completion of the full tuition requirement and who are subsequently readmitted will be charged the accumulated CRF up to a maximum of four terms. Students may seek readmission no more than once. If subsequent to a readmission they must again withdraw, they are ineligible for readmission.

U.S. MILITARY LEAVE READMISSIONS POLICY

Students who wish or need to interrupt their studies to perform U.S. military service are subject to a separate U.S. military leave readmissions policy. In the event a student withdraws or takes a leave of absence from the Graduate School to serve in the U.S. military, the student will be entitled to guaranteed readmission under the following conditions:

1. The student must have served in the U.S. Armed Forces for a period of more than thirty consecutive days.
2. The student must give advance written or verbal notice of such service to the appropriate dean. In providing the advance notice the student does not need to indicate whether he or she intends to return. This advance notice need not come directly from...
the student, but rather, can be made by an appropriate officer of the U.S. Armed Forces or official of the U.S. Department of Defense. Notice is not required if precluded by military necessity. In all cases, this notice requirement can be fulfilled at the time the student seeks readmission, by submitting an attestation that the student performed the service.

3. The student must not be away from the Graduate School to perform U.S. military service for a period exceeding five years (this includes all previous absences to perform U.S. military service but does not include any initial period of obligated service). If a student’s time away from the Graduate School to perform U.S. military service exceeds five years because the student is unable to obtain release orders through no fault of the student or the student was ordered to or retained on active duty, the student should contact the appropriate dean to determine if the student remains eligible for guaranteed readmission.

4. The student must notify the Graduate School within three years of the end of the U.S. military service of his or her intention to return. However, a student who is hospitalized or recovering from an illness or injury incurred in or aggravated during the U.S. military service has up until two years after recovering from the illness or injury to notify the Graduate School of his or her intent to return.

5. The student cannot have received a dishonorable or bad conduct discharge or have been sentenced in a court-martial.

A student who meets all of these conditions will be readmitted for the next term, unless the student requests a later date of readmission. Any student who fails to meet one of these requirements may still be readmitted under the general readmission policy but is not guaranteed readmission.

Upon returning to the Graduate School, the student will resume his or her education without repeating completed course work for courses interrupted by U.S. military service. The student will have the same enrolled status last held and with the same academic standing. For the first academic year in which the student returns, the student will be charged the tuition and fees that would have been assessed for the academic year in which the student left the institution. Yale may charge up to the amount of tuition and fees other students are assessed, however, if veteran’s education benefits will cover the difference between the amounts currently charged other students and the amount charged for the academic year in which the student left.

In the case of a student who is not prepared to resume his or her studies with the same academic status at the same point at which the student left or who will not be able to complete the program of study, the Graduate School will undertake reasonable efforts to help the student become prepared. If after reasonable efforts, the Graduate School determines that the student remains unprepared or will be unable to complete the program, or after the Graduate School determines that there are no reasonable efforts it can take, the Graduate School may deny the student readmission.

**Personal Conduct**

Yale University is an academic community dedicated to the advancement of learning. Its members freely associate themselves with the University and in doing so affirm their
commitment to a philosophy of tolerance and respect for all members of the community. They pledge to help sustain the intellectual integrity of the University and to uphold its standards of honesty, free expression, and inquiry. They are expected to abide by the regulations of the University. They are also expected to obey local, state, and federal laws, and violations of these may be cause for discipline by the Graduate School.

The Graduate School specifically prohibits the following forms of behavior by graduate students:

1. Cheating on examinations, problem sets, and any other form of test; also, falsification and/or fabrication of data.
2. Plagiarism, that is, the failure in a dissertation, essay, or other written exercise to acknowledge ideas, research, or language taken from others.
3. Misuse of the materials or facilities of the University library.
4. Unauthorized use of University services, equipment, or facilities, such as telephones and photocopying equipment.
5. Violation of University rules for using information technology services and facilities, including computers, the University network, and electronic mail. (See Policies for Use of Information Technology Services Facilities.)
6. Assault on, or coercion, harassment, or intimidation of, any member of the University community, including harassment on the basis of race, religion, gender, ethnicity, or sexual orientation; sexual harassment; or the use of a teaching position to harass or intimidate another student.
7. Engaging in a relationship with a student while serving as the student’s teaching fellow or in any other direct supervisory role over the student (as outlined in the University’s policy prohibiting “Teacher-Student Consensual Relationships”).
8. Disruption of a legitimate function or activity of the University community, including disrupting classes and meetings, blocking entrances and exits to University buildings, unauthorized occupation of any space on the Yale campus, or preventing the free expression or dissemination of ideas. (See Freedom of Expression, below.)
9. Refusal to comply with the direction of a University police officer or other University official, including a member of the faculty, acting in the performance of her or his duties.
10. Misuse, alteration, or fabrication of University credentials or documents, such as an identification card or a transcript or grade list, including grade lists submitted by teaching fellows.
11. Misrepresentation or lying during a formal inquiry by University officials.
12. Misrepresentation in applying for admission or financial aid.
13. Theft, misuse of funds, or willful damage of University property.
14. Trespassing on University property to which access is prohibited.
15. Possession or use of explosives, incendiary devices, or weapons on or about the campus.
16. Interference with the proper operation of safety or security devices, including fire alarms, electronic gates, and sprinkler systems.
17. Unlawful manufacture, possession, use, or distribution of illicit drugs or alcohol on University property or as part of any University activity.
Violations of any of the above regulations will be referred to the Graduate School Committee on Regulations and Discipline, composed of three graduate students, three faculty members, normally one from each division, and an associate dean. Violations of regulations pertaining to sexual misconduct or the University’s Consensual Relations Policy will be referred to the University-Wide Committee on Sexual Misconduct. Students found guilty of such violations will be subject to one or more of the following penalties:

- Reprimand
- Probation
- Suspension
- Dismissal
- Fines
- Restriction

Penalties of suspension or dismissal will be noted on the student’s transcript. Pending disciplinary charges will be noted on a student’s transcript if he or she withdraws from the Graduate School after being formally charged but before such charges have been resolved. A student who has been dismissed for a disciplinary violation may petition for a degree, to be awarded at the discretion of the Degree Committee, based on work completed before the infraction occurred. A student dismissed for academic misconduct will not receive a degree from the Graduate School regardless of requirements fulfilled before the infraction occurred. In addition to imposing these penalties for offenses subject to disciplinary action, the University may refer students for prosecution, and students found guilty of unlawful possession, use, or distribution of illicit drugs or alcohol on University property or as part of any University activity may be required to complete an appropriate rehabilitation program.

Copies of the procedures of the Committee on Regulations and Discipline may be obtained from the office of each of the associate deans of the Graduate School or via the Graduate School Web site (www.yale.edu/graduateschool/policies). The deans may be consulted for further information and advice. A copy of the procedures is sent automatically to any student who is charged with a violation of the Graduate School’s regulations.

**Grievance Procedures**

To address complaints and grievances of various kinds, the Graduate School maintains a set of procedures. Copies of the grievance procedures of the Graduate School may be obtained from the office of each of the associate deans of the Graduate School or via the Graduate School Web site: www.yale.edu/graduateschool/policies. The deans may be consulted for further information and advice.

**COMPLAINTS OF SEXUAL MISCONDUCT**

On April 7, 2011, the Provost announced the formation of the University-Wide Committee on Sexual Misconduct (UWC). The UWC will address complaints of sexual misconduct made across the University and will begin its work on July 1, 2011. As of that date, any complaint of sexual misconduct brought against any faculty member, student, and
in certain cases other members of the community, will be heard by the UWC. For more 
information, see http://provost.yale.edu/uwc.

THE GRADUATE SCHOOL PROCEDURE FOR 
STUDENT COMPLAINTS

This procedure governs any case in which a student has a complaint, including but 
not limited to a complaint of discrimination on the basis of race, sex, color, religion, 
national or ethnic origin, sexual preference, or handicap, against a member of the faculty 
or administration of the Graduate School. Complaints that involve a misapplication of 
Graduate School policy are also appropriate for consideration by the Dean's Advisory 
Committee on Student Grievances. Complaints that require an emendation of policy will 
be referred to the Graduate School Executive Committee.

PROVOST’S PROCEDURE

The Provost’s Procedure governs cases in which a student has a complaint, including but 
not limited to a complaint of sexual harassment or of discrimination on the basis of race, 
sex, color, religion, national or ethnic origin, sexual preference, or handicap, against a 
faculty member who is not a member of the Faculty of Arts and Sciences, or against an 
employee who is not an administrator in the Graduate School or who is not subject to 
discipline by the student’s dean.

Freedom of Expression

The Yale faculty has formally endorsed as an official policy of Yale University the fol-
lowing statement from the Report of the Committee on Freedom of Expression at Yale, 

The primary function of a university is to discover and disseminate knowledge by 
means of research and teaching. To fulfill this function a free interchange of ideas is 
necessary not only within its walls but with the world beyond as well. It follows that 
the university must do everything possible to ensure within it the fullest degree of 
intellectual freedom. The history of intellectual growth and discovery clearly dem-
onstrates the need for unfettered freedom, the right to think the unthinkable, discuss 
the unmentionable, and challenge the unchallengeable. To curtail free expression 
strikes twice at intellectual freedom, for whoever deprives another of the right to state 
unpopular views necessarily also deprives others of the right to listen to those views.

We take a chance, as the First Amendment takes a chance, when we commit our-

selves to the idea that the results of free expression are to the general benefit in the 
long run, however unpleasant they may appear at the time. The validity of such a 
belief cannot be demonstrated conclusively. It is a belief of recent historical develop-
ment, even within universities, one embodied in American constitutional doctrine but 
not widely shared outside the academic world, and denied in theory and in practice 
by much of the world most of the time.

Because few other institutions in our society have the same central function, few 
assign such high priority to freedom of expression. Few are expected to. Because no 
other kind of institution combines the discovery and dissemination of basic knowl-
edge with teaching, none confronts quite the same problems as a university.
For if a university is a place for knowledge, it is also a special kind of small society. Yet it is not primarily a fellowship, a club, a circle of friends, a replica of the civil society outside it. Without sacrificing its central purpose, it cannot make its primary and dominant value the fostering of friendship, solidarity, harmony, civility, or mutual respect. To be sure, these are important values; other institutions may properly assign them the highest, and not merely a subordinate, priority; and a good university will seek and may in some significant measure attain these ends. But it will never let these values, important as they are, override its central purpose. We value freedom of expression precisely because it provides a forum for the new, the provocative, the disturbing, and the unorthodox. Free speech is a barrier to the tyranny of authoritarian or even majority opinion as to the rightness or wrongness of particular doctrines or thoughts.

If the priority assigned to free expression by the nature of a university is to be maintained in practice, clearly the responsibility for maintaining that priority rests with its members. By voluntarily taking up membership in a university and thereby asserting a claim to its rights and privileges, members also acknowledge the existence of certain obligations upon themselves and their fellows. Above all, every member of the university has an obligation to permit free expression in the university. No member has a right to prevent such expression. Every official of the university, moreover, has a special obligation to foster free expression and to ensure that it is not obstructed. The strength of these obligations, and the willingness to respect and comply with them, probably depend less on the expectation of punishment for violation than they do on the presence of a widely shared belief in the primacy of free expression. Nonetheless, we believe that the positive obligation to protect and respect free expression shared by all members of the university should be enforced by appropriate formal sanctions, because obstruction of such expression threatens the central function of the university. We further believe that such sanctions should be made explicit, so that potential violators will be aware of the consequences of their intended acts.

In addition to the university’s primary obligation to protect free expression there are also ethical responsibilities assumed by each member of the university community, along with the right to enjoy free expression. Though these are much more difficult to state clearly, they are of great importance. If freedom of expression is to serve its purpose and thus the purpose of the university, it should seek to enhance understanding. Shock, hurt, and anger are not consequences to be weighed lightly. No member of the community with a decent respect for others should use, or encourage others to use, slurs and epithets intended to discredit another’s race, ethnic group, religion, or sex. It may sometimes be necessary in a university for civility and mutual respect to be superseded by the need to guarantee free expression. The values superseded are nevertheless important, and every member of the university community should consider them in exercising the fundamental right to free expression.

We have considered the opposing argument that behavior which violates these social and ethical considerations should be made subject to formal sanctions, and the argument that such behavior entitles others to prevent speech they might regard as offensive. Our conviction that the central purpose of the university is to foster the free access of knowledge compels us to reject both of these arguments. They assert a
right to prevent free expression. They rest upon the assumption that speech can be suppressed by anyone who deems it false or offensive. They deny what Justice Holmes termed “freedom for the thought that we hate.” They make the majority, or any willful minority, the arbiters of truth for all. If expression may be prevented, censored, or punished, because of its content or because of the motives attributed to those who promote it, then it is no longer free. It will be subordinated to other values that we believe to be of lower priority in a university.

The conclusions we draw, then, are these: even when some members of the university community fail to meet their social and ethical responsibilities, the paramount obligation of the university is to protect their right to free expression. This obligation can and should be enforced by appropriate formal sanctions. If the university’s overriding commitment to free expression is to be sustained, secondary social and ethical responsibilities must be left to the informal processes of suasion, example, and argument.

*It is anticipated that tuition will be increased in subsequent years.
†It is anticipated that the Continuous Registration Fee will be increased in subsequent years.
Other fees are subject to change without notice. For fees relating to registration and course enrollment, see Course Enrollment, under Academic Regulations.
‡See Registration Status and Leaves of Absence, under Academic Regulations.
§Hospitalization fees are for single students. Rates are higher for students needing dependent coverage.

Appointment to a University post does not exempt a student from registration and payment of other fees. Full-time (and certain part-time) Yale managerial and professional employees and their spouses, as well as the spouses of Yale faculty, are eligible for a tuition reduction in the DSR and master's programs. They should consult Human Resources for details. Full-time faculty members and their spouses, emeritus faculty and their spouses, and University employees may audit courses without charge.

Candidates for degrees in the Graduate School, nondegree students paying full tuition, and spouses of full-time candidates for degrees in the Graduate School may audit courses without charge provided that they have received the approval of the course instructor.

STUDENT ACCOUNTS AND BILLS

Student accounts, billing, and related services are administered through the Office of Student Financial Services, which is located at 246 Church Street. The telephone number is 203.432.2700.
Bills

Yale University’s official means of communicating monthly financial account statements is through the University’s Internet-based system for electronic billing and payment, Yale University eBill-ePay.

Student account statements are prepared and made available twelve times a year at the beginning of each month. Payment is due in full by 4 p.m. Eastern Standard Time on the first business day of the following month. E-mail notifications that the account statement is available on the University eBill-ePay Web site (www.yale.edu/sis/ebep) are sent to all students at their official Yale e-mail addresses and to all student-designated authorized payers. It is imperative that all students monitor their Yale e-mail accounts on an ongoing basis.

Bills for tuition, room, and board are available to the student during the first week of July, due and payable by August 1 for the fall term; and during the first week of November, due and payable by December 1 for the spring term. The Office of Student Financial Services will impose late fees of $125 per month (up to a total of $375 per term) if any part of the term bill, less Yale-administered loans and scholarships that have been applied for on a timely basis, is not paid when due. Nonpayment of bills and failure to complete and submit financial aid application packages on a timely basis may result in the student’s involuntary withdrawal from the University.

No degrees will be conferred and no transcripts will be furnished until all bills due the University are paid in full. In addition, transcripts will not be furnished to any student or former student who is in default on the payment of a student loan.

The University may withhold registration and certain University privileges from students who have not paid their term bills or made satisfactory payment arrangements by the day of registration. To avoid delay at registration, students must ensure that payments reach Student Financial Services by the due dates.

Charge for Rejected Payments

A processing charge of $25 will be assessed for payments rejected for any reason by the bank on which they were drawn. In addition, the following penalties may apply if a payment is rejected:

1. If the payment was for a term bill, a $125 late fee will be charged for the period the bill was unpaid.
2. If the payment was for a term bill to permit registration, the student’s registration may be revoked.
3. If the payment was given to settle an unpaid balance in order to receive a diploma, the University may refer the account to an attorney for collection.

Yale University eBill-ePay

There are a variety of options offered for making payments. Yale University eBill-ePay is the preferred means for payment of bills. It can be found at www.yale.edu/sis/ebep. Electronic payments are easy and convenient—no checks to write, no stamps, no envelopes, no hassle. Payments are immediately posted to the student’s account. There is no charge to use this service. Bank information is password-protected and secure, and there
is a printable confirmation receipt. Payments can be made twenty-four hours a day, seven days a week, up to 4 p.m. Eastern Standard Time on the due date to avoid late fees. (The eBill-ePay system will not be available when the system is undergoing upgrade, maintenance, or repair.) Students can authorize up to three authorized payers to make payments electronically from their own computers to the student’s account using Yale’s system.

Use of the student’s own bank payment service is not authorized by the University because it has no direct link to the student’s Yale account. Payments made through such services arrive without proper account identification and always require manual processing that results in delayed crediting of the student’s account, late fees, and anxiety. Students should use Yale eBill-ePay to pay online. For those who choose to pay by check, remittance advice with mailing instructions is available on the Web site.

**Yale Payment Plan**

The Yale Payment Plan (YPP) is a payment service that allows students and their families to pay tuition, room, and board in ten equal monthly installments throughout the year based on individual family budget requirements. It is administered by the University’s Office of Student Financial Services. The cost to enroll in the YPP is $100 per contract. The deadline for enrollment is June 17. For additional information, please contact Student Financial Services at 203.432.2700 and select “Press 1” from the Main Menu. The enrollment form can be found online in the Yale Payment Plan section of the Student Accounts Web site: [www.yale.edu/sfas/financial/accounts.html#payment](http://www.yale.edu/sfas/financial/accounts.html#payment).

**TRANSCRIPTS**

Transcripts may be ordered online at [www.yale.edu/sis](http://www.yale.edu/sis) or in writing from the Office of the Registrar for the Faculty of Arts and Sciences (246 Church Street, third floor). For each transcript order, the charge for the first transcript is $7, with a charge of $3 for each additional transcript ordered at the same time for the same address. Normally a transcript order is processed within forty-eight hours after receipt. There are additional charges for overnight delivery. [www.yale.edu/sfas/registrar](http://www.yale.edu/sfas/registrar)

**FINANCIAL AID**

Financial assistance is provided in the form of Yale University Fellowships, tuition fellowships, teaching fellowships, traineeships, and research assistantships. The nature of the assistance varies among the divisions and departments. In most departments and programs, doctoral students are guaranteed five years of 12-month stipend and tuition support. Applicants for admission to Ph.D. programs will automatically be considered for all Yale fellowships, traineeships, research assistantships, and teaching fellowships for which they are eligible. These awards of financial aid are announced in letters of admission, which are usually mailed during the month of March. Applicants for admission to nondegree and terminal master’s programs are required to complete the financial statement contained in the application brochure. Students are strongly encouraged to seek financial support from external sources (see External Fellowships and Combined Award Policy, below).
In addition to grants and fellowships for tuition and living costs, Yale Health Basic Coverage is provided at no cost to students enrolled at least half-time in M.A., M.S., and Ph.D. programs. Eligible Ph.D. students also receive a Health Award, which covers the full cost of single-student Yale Health Hospitalization/Specialty Coverage, half the cost of two-person coverage, and the full cost for family coverage. Students who do not participate in Yale Health Hospitalization/Specialty Coverage will not be provided with Health Awards. Yale Health Prescription Plus Coverage is an option that eligible students may choose to purchase for themselves and their dependents. The Prescription Plus plan is not covered by the Health Award. (For further information regarding health care options through Yale Health, see Health Services, below.)

**University Fellowships**

The Graduate School provides all Ph.D. students with a minimum level of support for five years upon admission. Fellowships are awarded at admission to entering students on the basis of merit and recommendations made by individual departments. In most departments the source of stipend support will change after the first or second year of study to a teaching fellowship or research assistantship. Students who teach when such teaching is not part of the standard departmental pattern defer their University Fellowships to a later year and do not receive more than the standard departmental stipend while teaching.

Students awarded a University Fellowship may not accept any other award without the permission of the appropriate associate dean. The Graduate School is the final authority on University Fellowships and any combination of University funding with other sources of financial aid (see External Fellowships and Combined Award Policy, below).

**Dissertation Fellowships**

The Graduate School offers University Dissertation Fellowships as part of its five-year financial aid package to eligible advanced graduate students in the humanities and social sciences once they have advanced to doctoral candidacy. These awards are made when a student’s adviser and director of graduate studies certify that the student will be engaged full-time in research and writing, is making satisfactory progress toward the degree, and has a reasonable schedule for the timely completion of the dissertation. The University Dissertation Fellowship is usually taken in consecutive terms (beginning in either the fall or spring term) and must be completed by the end of the sixth year of study. With the permission of the Graduate School, it may be interrupted in certain circumstances when recommended by the department. It may never be held concurrently with a teaching fellowship of any kind. Students who accept a teaching position in the fall or spring of the year of final eligibility will forfeit that term’s dissertation fellowship amount. Prize dissertation fellowships awarded by the Graduate School, such as the Whiting Fellowship, replace the University Dissertation Fellowship. Students receiving external funding for dissertation research or writing may be eligible for a combined award and should consult the External Fellowships and Combined Award policy. Application materials and additional information can be obtained online at www.yale.edu/graduateschool/funding or from the appropriate associate dean.
**Teaching Fellowships**

**Teaching and Admission Offers**

Because the Graduate School considers teaching experience to be an integral part of graduate education, doctoral students receive financial aid packages that include teaching fellowships. In many programs there are specific years when students are expected to teach. For example, most humanities and social science students will teach in their third and fourth years. In the natural sciences, the timing of teaching is earlier or is flexible across several years. When requested by the student for compelling academic reasons, these patterns may be adjusted with the permission of an associate dean and the director of graduate studies contingent on the student’s satisfactory academic progress and on sufficient course enrollment.

When students are teaching as specified in their letters of admission, appointments for these students will change only if a course is canceled; if enrollment in any of the teaching fellow’s discussion sections falls below six students, or if course enrollment falls below eight students for a grader; or if the student, course instructor, and director of graduate studies all agree upon a reassignment. The Graduate School provides a supplementary fellowship in cases where the teaching fellowship is less than the standard departmental stipend. If an associate dean and director of graduate studies determine that no suitable teaching is available in a term in which a student is expected to teach, the student will continue to receive his or her standard departmental stipend that term. Stipend support will be withheld if a student elects not to teach as outlined in the student’s offer of admission.

**Access to Teaching Fellowships**

When departments are considering applications for teaching fellowships, priority is given to qualified graduate students who are expected to teach as indicated in their letter of admission (usually in years three and four in the humanities and social sciences). Students in their fifth or sixth year of study may teach if enrollments permit and as long as they have been admitted to candidacy and do not currently hold a dissertation fellowship. Students who are permitted to register beyond the sixth year of study may be appointed as TFs or PTAIs, but only if there is no other qualified candidate available in the first six years of study in any department or program of the Graduate School. In cases where an appointing department must choose between two or more graduate students who are each well qualified to teach a particular course, the student or students who have not yet had a chance to teach or who have taught the least should be given preference.

**Limits on Teaching**

Except when specified in their letters of admission, first-year and second-year doctoral students may be appointed as teaching fellows only in exceptional cases, and only after prior approval by their director of graduate studies, the appropriate associate dean, and the director of the Teaching Fellow Program (TFP). In any year of study, the maximum amount of teaching a student may do is four TF units or one PTAI per term. Students may not serve as faculty lecturers while registered in the Graduate School.

Students with outside fellowships are eligible to serve as TFs according to the policies of the Graduate School and the conditions of their outside awards. Students receiving a
University Dissertation Fellowship are not eligible for appointments through the Teaching Fellow Program.

**APPOINTMENT LETTERS**

Letters of appointment are sent to graduate students via the online Teaching Fellow System (TFS) indicating the course in which a graduate student is expected to teach and the level of the assignment. An appointment is not official until the appointment letter has been reviewed and transmitted by the TFP and the student has responded affirmatively. This acceptance is required before teaching fellow appointments are processed for payment.

**TEACHING FELLOW LEVELS**

There are five primary levels of TFs at Yale. They are distinguished from one another by several considerations, including the kind or kinds of activity required, the approximate hours per week, and the number of students taught. For example, courses in which TFs are expected to provide frequent and intensive writing criticism, to grade problem sets or vocabulary tests frequently, or to prepare especially complicated visual or laboratory materials may be accorded a higher-level teaching fellowship than courses that do not carry such an expectation. A graduate student’s teaching assignment is measured in terms of teaching fellow units (one unit for a term as TF 1, two units for a term as TF 2, and so on).

**Teaching Fellow 1** The responsibilities of a TF 1 are primarily (a) grading, (b) a combination of the following: attending class, reading, advising undergraduates, offering an occasional discussion section, helping to set up a lab, or assisting in the administrative details of the course, (c) in nonlanguage courses providing Language-across-the-Curriculum one-on-one language tutoring, or (d) in language courses providing one-on-one tutoring sessions. A TF 1 does not engage in regular classroom teaching. Approximate weekly effort, 5 hours. The 2011–2012 teaching fellowship is $2,465 per term.

**Teaching Fellow 2** A TF 2 typically leads and grades one discussion or laboratory section of up to 20 students in courses in the natural sciences and some social sciences, tutors in language courses, or combines responsibilities (a) and (b) as described under TF 1. A TF 2 also may lead a Language-across-the-Curriculum session for courses with fewer than 30 students and no other sections. Approximate weekly effort, 10 hours. The 2011–2012 teaching fellowship is $4,930 per term.

**Teaching Fellow 3** Depending on department policy, the duties of a TF 3 may include leading and grading one or two lab or discussion sections, as in Chemistry. Alternatively, a TF 3 may be appropriate for a combination of duties that might include attending lectures, office hours and consultations, and grading, as in Psychology. Approximate weekly effort, 15 hours. The 2011–2012 teaching fellowship is $7,395 per term.

**Teaching Fellow 3.5** This appointment is appropriate for TFs who lead and grade one section in English, History of Art, or the Literature major; in any literature course in the national language departments that may conform to the same mode of teaching; in courses double-titled with these departments and programs; and in a few designated courses. Discussion section leaders are appointed for lecture courses with 30 or more
students; a section size is expected not to exceed 18 students, with 20 the absolute maximum and six the minimum. This appointment is also used for Writing Requirement TFs and Language-across-the-Curriculum section leaders. Approximate weekly effort, 17.5 hours. The 2011–2012 teaching fellowship is $8,627.50 per term.

**Teaching Fellow 4** This appointment is appropriate for TFs in humanities and social science departments in which teaching fellows usually lead and grade two sections. Discussion section leaders are appointed for lecture courses with 30 or more students; a section size is expected not to exceed 18 students, with 20 the absolute maximum and six the minimum. Approximate weekly effort, 20 hours. The 2011–2012 teaching fellowship is $9,860 per term.

**PART-TIME ACTING INSTRUCTORS**

Graduate students appointed as part-time acting instructors (PTAIs) conduct sections of introductory courses or advanced seminars, normally seminars in their special fields. Even in the case of seminars, PTAIs are supervised by faculty. In the case of multisection introductory courses, this may include the use of a common syllabus and examinations. No student should teach more than one PTAI course per term. PTAIs who teach advanced seminars must have satisfied all predissertation requirements (including the dissertation prospectus) and must be registered full-time to be eligible for the appointment. Hours of effort for PTAIs will vary from one individual to another. The 2011–2012 teaching fellowship is $9,960 per term.

**Traineeships and Assistantships in Research**

Traineeships (National Research Service Awards) from the National Institutes of Health are available in most of the biological sciences and in some other departments. These awards support full-time Ph.D. study by U.S. citizens, noncitizen nationals of the United States, and permanent residents. In combination with University and departmental supplements, they provide payment of tuition, a monthly stipend, and the hospitalization premium. Federal rules require that trainees pursue their research training on a full-time basis. In some instances, there is a federal payback provision, which is ordinarily satisfied by serving in health-related research or teaching at the conclusion of training. Information about this obligation and other matters relating to traineeships is available from the director of graduate studies or the principal investigator of the specific training grant in question.

**Research Appointments**

Doctoral students in departments where the faculty receive research grants or contracts may be eligible for appointments as assistants in research (AR). In most of the science departments, advanced Ph.D. students are normally supported as ARs by individual faculty research grants. An assistantship in research provides a monthly salary at a rate agreed upon by the department and the Graduate School. It is understood that the work performed not only is part of the faculty principal investigator’s research project but also is the student’s dissertation research and therefore in satisfaction of a degree requirement. For a standard AR appointment, in addition to the salary, the grant pays half of
the tuition or all of the CRF. When the appointee is eligible for a University Fellowship, the other half of tuition is covered by a fellowship.

An appointment as a project assistant (PA) is intended for a student who performs services for a research project that are not a part of the student’s degree program. A project assistant may normally work no more than ten hours per week. The rate of compensation is based on the department-approved rate paid to assistants in research. With the permission of the director of graduate studies and the appropriate associate dean, a student may receive a combination of project assistant and assistant in research appointments.

Questions about AR or PA appointments should be directed to the director of graduate studies or the appropriate associate dean in the Graduate School.

EXTERNAL FELLOWSHIPS AND COMBINED AWARD POLICY

To benefit both their current work and their future career prospects, students are strongly encouraged to seek funding from external agencies through grants. These awards, sponsored by both public and private agencies, confer distinction on a student who wins an award in a national competition. They are often more generous than the fellowships the University is able to provide.

Students receiving external awards have two options. They may either (1) hold the outside awards in conjunction with University stipends (including research and teaching fellowships) up to the total of the standard department/program stipend plus $4,000 or (2) defer financial support awarded in their admission offer for up to one year. Students must report to their associate dean any scholarship/fellowship received from an outside agency or organization. The dean will then assist students in considering the benefits of each option.

Option 1: Supplementation of an External Fellowship

During the twelve-month academic year (September 1–August 31), the Graduate School’s stipend award, made at the time of admission, may be used to supplement the sum of all external stipend awards to a maximum stipend equal to the total of the standard department/program stipend plus $4,000. If the sum of the Graduate School’s initial stipend award and all outside awards exceeds this limit, the Graduate School’s stipend award will be reduced accordingly. In instances where an external award does not cover the full twelve-month academic year, the combined award will be determined by prorating the combined award over the period when the internal and external awards overlap.

Students who receive external fellowships providing yearly stipends that are more than the total of the standard department/program stipend plus $4,000 will retain the full external fellowship funding and will receive no university supplement.

Option 2: Deferral of Graduate School Funding

Students receiving external awards in years one through five of study may defer for up to one year the Graduate School’s stipend award made at the time of admission. Stipend awards may not be deferred beyond the sixth year of study.
ELIGIBILITY FOR FELLOWSHIPS

Students who hold Yale-administered fellowships are required to be in residence and engaged in full-time study. Permission to hold a fellowship in absentia must be obtained from the appropriate associate dean. A student who leaves New Haven, except for short vacation periods, without having such permission may have the fellowship canceled. No fellowships will be paid for any period when a student is not registered.

Students are not eligible for stipend support from the Graduate School after six years of study, but they remain eligible for student loans as long as they are enrolled at least half-time.

A fellowship will be withdrawn and a stipend withheld if the recipient’s activities become prejudicial to the purpose for which the fellowship was granted or if a student becomes ineligible to register for any reason.

OTHER MEANS OF FINANCING GRADUATE EDUCATION

Part-Time Employment

Study toward the Ph.D. degree is expected to be a full-time activity and is funded accordingly. Part-time employment for compensation, at the University or elsewhere, should not conflict with the obligations of the Ph.D. program or interfere with academic progress. International students must consult the Office of International Students and Scholars (OISS) regarding their eligibility for employment while in the United States.

Part-time employment beyond an average of ten hours per week requires permission of the director of graduate studies, who will inform the appropriate associate dean.

Students who hold student loans must report all part-time employment earnings to the Office of Financial Aid. Failure to do so may result in cancellation of the loan(s).

Loans and Work-Study

U.S. citizens may be eligible to borrow through federally subsidized loan programs. Eligibility is based on federal regulations and University policies. Information is available from the Financial Aid Office, 129 HGS.

Eligible students in the Graduate School may be able to borrow from the following federal student loan programs: Federal Direct Loans and Federal Perkins Loans.

The College Work-Study (CWS) program, which is federally funded, enables eligible graduate students to meet a portion of their academic year financial need through part-time employment.

All students applying for any of these federal programs must fill out a Free Application for Federal Student Aid (FAFSA). Information on loan and work-study programs is contained in Financial Information for Entering Graduate Students, included with the student’s letter of admission. These documents are available from the Office of Financial Aid. Information and FAFSA applications are also available at the Web site of the United States Department of Education (www.fafsa.ed.gov).

Yale currently offers a loan for international students. Features of the Yale International Loan include no requirement for a co-signer and a ten-year repayment period.
Students may apply for the Yale International Loan or any other loan of their choice. Students are encouraged to identify a loan that best suits their needs. Information is available from the Office of Financial Aid, 129 HGS.

TWO FEDERAL REGULATIONS GOVERNING TITLE IV FINANCIAL AID PROGRAMS

Satisfactory Academic Progress

Federal regulations require that students be making satisfactory academic progress each year in order to be eligible for Title IV funding (i.e., federal loans, Javits Fellowships, and College Work-Study). The standards by which satisfactory academic progress is measured are determined by the Graduate School and by individual departments. Verification of satisfactory progress is based on annual student evaluations from the directors of graduate studies and, for students in the dissertation stage, on a statement of progress from the student, the dissertation adviser, and the director of graduate studies.

Department of Education Refund Policy

Students receiving Title IV financial assistance who withdraw during a term and are entitled to a refund of any University charges will have their Title IV assistance adjusted according to a formula specified by the Department of Education. Please consult the Office of Financial Aid, 129 HGS.
University Services and Facilities

LIVING ACCOMMODATIONS

Graduate Housing—On Campus
www.yale.edu/gradhousing

The Graduate Housing Department has dormitory and apartment units for a small number of graduate and professional students. The Graduate Dormitory Office provides dormitory rooms of varying sizes and prices for single occupancy only. The Graduate Apartments Office provides unfurnished apartments consisting of efficiencies and one-, two-, and three-bedroom apartments for singles and families. Both offices are located in Helen Hadley Hall, a graduate dormitory at 420 Temple Street, and have office hours from 9 a.m. to 4 p.m., Monday through Friday.

Applications for 2011–2012 are available as of April 1 online and can be submitted directly from the Web site (www.yale.edu/graduatehousing/application.html). For new students at the University, a copy of the letter of acceptance from Yale will need to be submitted to the Dormitory or Apartments office. The Web site is the venue for graduate housing information and includes procedures, facility descriptions, floor plans, and rates. For more dormitory information, contact grad.dorms@yale.edu, tel. 203.432.2167, fax 203.432.4578. For more apartment information, contact grad.apts@yale.edu, tel. 203.432.8270, fax 203.432.4578.

Off-Campus Listing Service
www.yale.edu/gradhousing/och/index.html

Yale Off Campus Housing is a database of rental and sale listings available to the Yale community. The system has been designed to allow incoming affiliates to the University access to the online database at www.yale.edu/och. The use of your University NetID allows you immediate access to search the listings. It also allows you to set up a profile to be a roommate or search for roommates. Those without a NetID can set themselves up as guests by following the simple instructions. For answers to questions, please e-mail offcampushousing@yale.edu or call 203.432.9756.

University Properties
www.yale.edu/up

University Properties owns and operates Yale University’s nonacademic, off-campus properties in New Haven. The office is committed to enhancing the quality of life at Yale and in downtown New Haven through the development of unique retail and office environments and the revitalization of surrounding neighborhoods.

University Properties offers a variety of quality market-rate housing options to the Yale community and provides high-quality commercial space to businesses. Properties are managed by contracted management companies chosen for their professionalism and ability to work effectively with the Yale community. Several apartment properties are
leased exclusively to graduate students. Applications are accepted via the Web site listed above. As these properties are in high demand, early application is encouraged.

**Dining**

www.yale.edu/dining

Yale Dining (YD) has tailored its services to meet the particular needs of graduate and professional school students by offering meal plan options that allow flexibility and value. The *Any 10 Meal Plan* offers meal service at the Hall of Graduate Studies dining hall and University Commons. It provides ten meals per week, plus six bonus meals per year and $75 per term in points to be used for additional meals during the week or at our retail locations on campus. Nonresident students may purchase a *5 Meal Plan* with three bonus meals, good Monday through Friday.

YD locations are a popular option for all members of the Yale community. In addition to Commons and the Hall of Graduate Studies, the following retail locations are available: Divinity School Café on Prospect Street, the Café at Kline Biology Tower, the Health Center Café, Marigolds at the School of Medicine, the Thain Family Café at Bass Library, Triple E’s at 221 Whitney Avenue, Triple E’s at Payne Whitney Gymnasium, Durfee’s Convenience Store at 200 Elm Street, and uncommon at Commons. For students and staff choosing to dine in any of Yale’s residential college dining rooms, “all-you-care-to-eat” meals are offered at one affordable price for breakfast ($5), lunch ($10.25), and/or dinner ($13.25) and require the diner to be accompanied by a host from that college.

Inquiries concerning food services should be addressed to Yale Dining, 246 Church Street, PO Box 208261, New Haven CT 06520-8261; tel., 203.432.0420.

**HEALTH SERVICES**

http://yalehealth.yale.edu

The Yale Health Center is located on campus at 55 Lock Street. The center is home to Yale Health, a not-for-profit, physician-led health coverage option that offers a wide variety of health care services for students and other members of the Yale community. Services include student medicine, gynecology, mental health, pediatrics, pharmacy, laboratory, radiology, a seventeen-bed inpatient care unit, a round-the-clock acute care clinic, and specialty services such as allergy, dermatology, orthopedics, and a travel clinic. Yale Health coordinates and provides payment for the services provided at the Yale Health Center, as well as for emergency treatment, off-site specialty services, inpatient hospital care, and other ancillary services. Yale Health’s services are detailed in the *Yale Health Student Handbook*, available through the Yale Health Member Services Department, 203.432.0246, or online at www.yalehealth.yale.edu.

**Eligibility for Services**

All full-time Yale degree-candidate students who are paying at least half tuition are enrolled automatically for Yale Health Basic Coverage. Yale Health Basic Coverage is offered at no charge and includes preventive health and medical services in the departments of Student Health, Gynecology, Health Education, and Mental Health &
Counseling. In addition, treatment for urgent medical problems can be obtained twenty-
four hours a day through Acute Care.

Students on leave of absence or on extended study and paying less than half tuition are
not eligible for Yale Health Basic Coverage but may enroll in Yale Health Student Affiliate
Coverage. Students enrolled in the Division of Special Registration as nondegree special
students or visiting scholars are not eligible for Yale Health Basic Coverage but may
enroll in the Yale Health Billed Associates Plan and pay a monthly premium. Associates
must register for a minimum of one term within the first thirty days of affiliation with
the University.

Students not eligible for Yale Health Basic Coverage may also use the services on a
fee-for-service basis. Students who wish to be seen fee-for-service must register with
the Member Services Department. Enrollment applications for the Yale Health Student
Affiliate Coverage, Billed Associates Plan, or Fee-for-Service Program are available from
the Member Services Department.

All students who purchase Yale Health Hospitalization/Specialty Coverage (see
below) are welcome to use specialty and ancillary services at Yale Health Center. Upon
referral, Yale Health will cover the cost of specialty and ancillary services for these stu-
dents. Students with an alternate insurance plan should seek specialty services from a
provider who accepts their alternate insurance.

**Health Coverage Enrollment**

The University also requires all students eligible for Yale Health Basic Coverage to have
adequate hospital insurance coverage. Students may choose Yale Health Hospitalization/
Specialty Coverage or elect to waive the plan if they have other hospitalization coverage,
such as coverage through a spouse or parent. The waiver must be renewed annually,
and it is the student's responsibility to confirm receipt of the waiver by the University's
deadlines noted below.

**YALE HEALTH HOSPITALIZATION/SPECIALTY COVERAGE**

For a detailed explanation of this plan, see the *Yale Health Student Handbook*, available
online at www.yalehealth.yale.edu/handbooks/documents/student_handbook.pdf.

Students are automatically enrolled and charged a fee each term on their Student
Financial Services bill for Yale Health Hospitalization/Specialty Coverage. Students with
no break in coverage who are enrolled during both the fall and spring terms are billed
each term and are covered from August 1 through July 31. For students entering Yale for
the first time, readmitted students, and students returning from a leave of absence who
have not been covered during their leave, Yale Health Hospitalization/Specialty Coverage
begins on the day the dormitories officially open. A student who is enrolled for the fall
term only is covered for services through January 31; a student enrolled for the spring
term only is covered for services through July 31.

**Waiving Yale Health Hospitalization/Specialty Coverage** Students are permitted to
waive Yale Health Hospitalization/Specialty Coverage by completing an online waiver
form at www.yhpstudentwaiver.yale.edu that demonstrates proof of alternate coverage.
It is the student's responsibility to report any changes in alternate insurance coverage.
to the Member Services Department. Students are encouraged to review their present coverage and compare its benefits to those available under Yale Health. The waiver form must be filed annually and must be received by September 15 for the full year or fall term or by January 31 for the spring term only.

**Revoking the waiver** Students who waive Yale Health Hospitalization/Specialty Coverage but later wish to be covered must complete and send a form voiding their waiver to the Member Services Department by September 15 for the full year or fall term, or by January 31 for the spring term only. Students who wish to revoke their waiver during the term may do so, provided they show proof of loss of the alternate insurance plan and enroll within thirty days of the loss of this coverage. Yale Health premiums will not be prorated.

**Yale Health Student Two-Person and Family Plans**

A student may enroll his or her lawfully married spouse or civil union partner and/or legally dependent child(ren) under the age of twenty-six in one of two student dependent plans: the Two-Person Plan or the Student Family Plan. These plans include services described in both Yale Health Basic Coverage and Yale Health Hospitalization/Specialty Coverage. Yale Health Prescription Plus Coverage may be added at an additional cost. Coverage is not automatic and enrollment is by application. Applications are available from the Member Services Department or can be downloaded from the Web site (www.yalehealth.yale.edu) and must be renewed annually. Applications must be received by September 15 for full-year or fall-term coverage, or by January 31 for spring-term coverage only.

**Yale Health Student Affiliate Coverage**

Students on leave of absence or extended study, students paying less than half tuition, or students enrolled in the Eli Whitney Program prior to September 2007 may enroll in Yale Health Student Affiliate Coverage, which includes services described in both Yale Health Basic and Yale Health Hospitalization/Specialty Coverage. Prescription Plus Coverage may also be added for an additional cost. Applications are available from the Member Services Department or can be downloaded from the Web site (www.yalehealth.yale.edu) and must be received by September 15 for full-year or fall-term coverage, or by January 31 for spring-term coverage only.

**Yale Health Prescription Plus Coverage**

This plan has been designed for Yale students who purchase Yale Health Hospitalization/Specialty Coverage and student dependents who are enrolled in either the Two-Person Plan, the Student Family Plan, or Student Affiliate Coverage. Yale Health Prescription Plus Coverage provides protection for some types of medical expenses not covered under Yale Health Hospitalization/Specialty Coverage. Students are billed for this plan and may waive this coverage. The online waiver (www.yhpstudentwaiver.yale.edu) must be filed annually and must be received by September 15 for the full year or fall term or by January 31 for the spring term only. For a detailed explanation, please refer to the Yale Health Student Handbook.
Eligibility Changes

Withdrawal  A student who withdraws from the University during the first ten days of the term will be refunded the premium paid for Yale Health Hospitalization/Specialty Coverage and/or Yale Health Prescription Plus Coverage. The student will not be eligible for any Yale Health benefits, and the student’s Yale Health membership will be terminated retroactive to the beginning of the term. The medical record will be reviewed, and any services rendered and/or claims paid will be billed to the student on a fee-for-service basis. At all other times, a student who withdraws from the University will be covered by Yale Health for thirty days following the date of withdrawal or to the last day of the term, whichever comes first. Premiums will not be prorated or refunded. Students who withdraw are not eligible to enroll in Yale Health Student Affiliate Coverage.

Leaves of absence  Students who are granted a leave of absence are eligible to purchase Yale Health Student Affiliate Coverage during the term(s) of the leave. If the leave occurs during the term, Yale Health Hospitalization/Specialty Coverage will end on the date the leave is granted and students may enroll in Yale Health Student Affiliate Coverage. Students must enroll in Affiliate Coverage prior to the beginning of the term during which the leave is taken or within thirty days of the start of the leave. Premiums paid for Yale Health Hospitalization/Specialty Coverage will be applied toward the cost of Affiliate Coverage. Coverage is not automatic and enrollment forms are available at the Member Services Department or can be downloaded from the Web site (www.yalehealth.yale.edu). Premiums will not be prorated or refunded.

Extended study or reduced tuition  Students who are granted extended study status or pay less than half tuition are not eligible for Yale Health Hospitalization/Specialty Coverage and Yale Health Prescription Plus Coverage. They may purchase Yale Health Student Affiliate Coverage during the term(s) of extended study. This plan includes services described in both Yale Health Basic and Yale Health Hospitalization/Specialty Coverage. Coverage is not automatic, and enrollment forms are available at the Member Services Department or can be downloaded from the Web site (www.yalehealth.yale.edu). Students must complete an enrollment application for the plan prior to September 15 for the full year or fall term, or by January 31 for the spring term only.

For a full description of the services and benefits provided by Yale Health, please refer to the Yale Health Student Handbook, available from the Member Services Department, 203.432.0246, 55 Lock Street, PO Box 208237, New Haven CT 06520-8237.

Required Immunizations

Measles (rubeola), German measles (rubella), and mumps  All students who were born after January 1, 1957, are required to provide proof of immunization against measles (rubeola), German measles (rubella), and mumps. Connecticut state law requires two doses of measles vaccine. The first dose must have been given on or after January 1, 1980, and after the student’s first birthday; the second dose must have been given at least thirty (30) days after the first dose. Connecticut state law requires proof of two
doses of rubella vaccine administered on or after January 1, 1980, and after the student’s first birthday. Connecticut state law requires proof of two mumps vaccine immunizations administered on or after January 1, 1980, and after the student’s first birthday; the second dose must have been given at least thirty (30) days after the first dose. The law applies to all students unless they present (a) a certificate from a physician stating that such immunization is contraindicated, (b) a statement that such immunization would be contrary to the student’s religious beliefs, or (c) documentation of a positive blood titer for measles, rubella, and mumps.

**Meningitis** All students living in on-campus housing must be vaccinated against meningitis. The vaccine must have been received after January 1, 2007. Students who are not compliant with this state law will not be permitted to register for classes or move into the dormitories for the fall term, 2011. Please note that the State of Connecticut does not require this vaccine for students who intend to reside off campus.

**Varicella (chicken pox)** All students are required to provide proof of immunization against varicella. Connecticut state law requires two doses of varicella vaccine. The first dose must have been given on or after the student’s first birthday; the second dose must have been given at least twenty-eight (28) days after the first dose. Documentation from a health care provider that the student has had a confirmed case of the disease is also acceptable.

**TB screening** The University requires tuberculosis screening for all incoming students. This screening includes a short questionnaire to determine high-risk exposure and, if necessary, asks for information regarding resulting treatment. Please see the Yale Health student Web site (www.yalehealth.yale.edu/students) for more details and the screening form.

*Note:* Students who have not met these requirements prior to arrival at Yale University must receive the immunizations from Yale Health and will be charged accordingly.

**COMPUTING AND TELECOMMUNICATIONS**

[www.yale.edu/its](http://www.yale.edu/its)

Information Technology Services (ITS) is the central computing and communications services organization for the University, providing academic computing, data networking, telephone services, voice and video networking, computer sales, training, printing and copying services, and general user support.

Academic Computing Services (ACS) and Student Technology Collaborative (STC), units of ITS, partner to furnish and support general purpose computing clusters at many locations on campus (www.yale.edu/cluster), including the Graduate School’s McDougall Center and the graduate student residences (Helen Hadley Hall and HGS), where the computing facility is accessible to residents twenty-four hours a day (www.yale.edu/its/stc). Windows and Apple computers and laser printers are available for open use by the Yale community at Connecticut Hall, Bass Library, Dunham Laboratories, Kline Biology Tower, the Social Sciences Statistical Laboratory, and the Sterling Chemistry Laboratory.
The online purchasing site (www.yale.edu/eportal) sells computers, networking cards, and printers, as well as software and supplies. Apple, Lenovo, and Dell now support direct purchase of computers over the Internet, with systems properly configured for the Yale network. See the student computing site (www.yale.edu/its/stc/purchase) for more information and recommendations for purchasing computer supplies. Up-to-date information on pricing and ordering can be found at the ePortal Web site (www.yale.edu/eportal).

Graduate students in Arts and Sciences receive free technical support on their personal computers through the Student Technology Collaborative (www.yale.edu/its/stc). Certified technicians provide warranty support on Dell and Apple computers. Students should bring all of their supporting documentation for their computers with them to campus (especially software CDs and DVDs), to facilitate necessary repairs.

**Network Access to Yale Services and Beyond**

www.yale.edu/its/network/index.html

ITS Network Services manages Yale’s voice and data network services (www.yale.edu/its/telecom). These include basic telephone services, long distance, voice mail, operator services, conferencing services, cable TV, Internet and Internet 2 connectivity, and all the related cable and distribution facilities on the Central, Medical, and West Campuses.

Long-distance service for telephones on campus is available through the University’s private network, YALENET. All direct-dialed long-distance calls require a toll authorization number (TAN), which can be arranged through the telecommunications office, as well as through departmental offices. Prepaid phone cards and personal calling cards may also be used. Bulldog calling cards are available to address off-campus needs.

All on-campus residences, offices, and laboratories are equipped with wired Yale network outlets. Wireless network access is available in most of the buildings on campus (www.yale.edu/its/network/wireless). Both wired and wireless network access is available in the public areas of HGS, in the Sterling Memorial Library (SML) reading room, and for doctoral students in the SML carrels. Registered users can access network resources through wired or wireless connections.

Students need to register their computers to access services on the Yale network (www.yale.edu/netreg). To enhance support for graduate student research activities, the University provides network roaming access for laptop computers.

**OFFICE OF INTERNATIONAL STUDENTS AND SCHOLARS**

www.yale.edu/oiss

The Office of International Students and Scholars (OISS) coordinates services and support for Yale’s international students, faculty, staff, and their dependents. OISS assists members of the Yale international community with all matters of special concern to them and serves as a source of referral to other University offices and departments. OISS staff provide assistance with employment, immigration, personal and cultural adjustment, and family and financial matters, as well as serve as a source of general information about
living at Yale and in New Haven. In addition, as Yale University’s representative for immigration concerns, OISS provides information and assistance to students, staff, and faculty on how to obtain and maintain legal status in the United States, issues the visa documents needed to request entry into the United States under Yale’s immigration sponsorship, and processes requests for extensions of authorized periods of stay, school transfers, and employment authorization. All international students and scholars must register with OISS as soon as they arrive at Yale, at which time OISS will provide a brief orientation about immigration compliance issues as well as information about orientation activities for newly arrived students, scholars, and family members. OISS programs, like the Community Friends hosting program, daily English conversation groups and conversation partners program, U.S. culture workshops and discussions, the Taking Care of Business practical matters series, and receptions and socials for newly arrived graduate students, postdoctoral associates, and visiting scholars, provide an opportunity to meet members of Yale’s international community and become acquainted with the many resources of Yale University and New Haven. OISS welcomes volunteers from the Yale community to serve as local hosts and as English conversation partners. Interested individuals should contact OISS at oiss@yale.edu or 203.432.2305.

OISS maintains an extensive Web site (www.yale.edu/oiss) with useful information for students and scholars prior to and upon arrival in New Haven, as well as throughout their stay at Yale. As U.S. immigration regulations are complex and change rather frequently, we urge international students and scholars to check the Web site for the most recent updates or to visit the office to speak with an OISS adviser.

International students, scholars, and their families and partners can connect with OISS and the international community at Yale by several virtual means. OISS-L is the OISS electronic newsletter for Yale’s international community. YaleInternational is an interactive e-mail listserv through which more than 5,000 people connect to find roommates, rent apartments, sell cars and household goods, and keep each other informed about events in the area. Spouses and partners of Yale students and scholars will want to get involved with the organization called International Spouses and Partners at Yale (ISPY), which organizes a variety of programs for the spouse and partner community. ISPY has its own e-mail listserv. The newest additions to our communications are the OISS Facebook page and the various constituent Facebook groups. For more information, go to www.yale.edu/oiss/programs/email/index.html.

Housed in the International Center for Yale Students and Scholars at 421 Temple Street, the Office of International Students and Scholars is open Monday through Friday from 8:30 a.m. to 5 p.m., except Tuesday, when the office is open from 10 a.m. to 5 p.m.; tel., 203.432.2305.

INTERNATIONAL CENTER FOR YALE STUDENTS AND SCHOLARS

The International Center for Yale Students and Scholars, located at 421 Temple Street, across the street from Helen Hadley Hall, offers a central location for programs that both support the international community and promote cross-cultural understanding on campus. The center, home to the Office of International Students and Scholars (OISS),
provides a welcoming venue for students and scholars who want to peruse resource materials, check their e-mail, and meet up with a friend or colleague. Open until 9 p.m. on weekdays during the academic year, the center also provides meeting space for student groups and a venue for events organized by both student groups and University departments. In addition, the center has nine work carrels that can be reserved by academic departments for short-term international visitors. For more information about reserving space at the center, send a message to oiss@yale.edu or call 203.432.2305.

INTERNATIONAL STUDENT LIFE

In addition to the standard funding package for Ph.D. candidates, the Graduate School provides a number of resources specifically to international students. Among the most important of these is improved language training, both oral and written. The Center for Language Study (www.cls.yale.edu) currently offers a three-week intensive summer language program in English as a Second Language (ESL). The center has also expanded the total number of ESL courses available throughout the academic year, including a conversation partners program and an advanced writing program, as well as the number of language fellowships available to graduate students interested in this program.

The McDougal Graduate Student Center (www.yale.edu/graduateschool/mcdougal) provides services, programs, and facilities for all graduate students and facilitates student services that are particularly helpful for international students adjusting to life in New Haven. The center provides an extensive weeklong orientation program for all new students, including several events for new international students in cooperation with the Office of International Students and Scholars. The center’s staff and McDougal graduate fellows also provide special programs of interest to international students throughout the year, including cultural and social events; family programs and events; arts and music outings; workshops on cultural adjustment, safety, and health; and professional development seminars on careers, teaching, and writing. The McDougal Graduate Student Life Office cosponsors and supports the activities of many graduate student nationality groups and intercultural performance groups.

RESOURCE OFFICE ON DISABILITIES

www.yale.edu/rod

The Resource Office on Disabilities facilitates accommodations for undergraduate and graduate and professional school students with disabilities who register with and have appropriate documentation on file in the Resource Office. Early planning is critical. Documentation may be submitted to the Resource Office even though a specific accommodation request is not anticipated at the time of registration. It is recommended that matriculating students in need of disability-related accommodations at Yale University contact the Resource Office by June 4. Special requests for University housing need to be made in the housing application. Returning students must contact the Resource Office at the beginning of each term to arrange for course and exam accommodations.

The Resource Office also provides assistance to students with temporary disabilities. General informational inquiries are welcome from students and members of the
Yale community and from the public. The mailing address is Resource Office on Disabilities, Yale University, PO Box 208305, New Haven CT 06520-8305. The Resource Office is located at 35 Broadway (rear entrance), Room 222. Office hours are Monday through Friday, 8:30 a.m. to 4:30 p.m. Voice callers may reach staff at 203.432.2324; fax at 203.432.8250. The Resource Office may also be reached by e-mail (judith.york@yale.edu) or through its Web site (www.yale.edu/rod).
The Work of Yale University

The work of Yale University is carried on in the following schools:

**Yale College** Est. 1701. Courses in humanities, social sciences, natural sciences, mathematical and computer sciences, and engineering. Bachelor of Arts (B.A.), Bachelor of Science (B.S.).

For additional information, please write to the Office of Undergraduate Admissions, Yale University, PO Box 208234, New Haven CT 06520-8234; tel., 203.432.9300; e-mail, student.questions@yale.edu; Web site, www.yale.edu/admit

**Graduate School of Arts and Sciences** Est. 1847. Courses for college graduates. Master of Arts (M.A.), Master of Engineering (M.Eng.), Master of Science (M.S.), Master of Philosophy (M.Phil.), Doctor of Philosophy (Ph.D.).

For additional information, please visit www.yale.edu/graduateschool, write to graduate.admissions@yale.edu, or call the Office of Graduate Admissions at 203.432.2771. Postal correspondence should be directed to the Office of Graduate Admissions, Yale Graduate School of Arts and Sciences, PO Box 208323, New Haven CT 06520-8323.

**School of Medicine** Est. 1813. Courses for college graduates and students who have completed requisite training in approved institutions. Doctor of Medicine (M.D.). Postgraduate study in the basic sciences and clinical subjects. Combined program with the Graduate School of Arts and Sciences leading to Doctor of Medicine and Doctor of Philosophy (M.D./Ph.D.). Combined program with the Graduate School of Arts and Sciences leading to Doctor of Medicine and Master of Health Science (M.D./M.H.S.). Master of Medical Science (M.M.Sc.) from the Physician Associate Program.

For additional information, please write to the Director of Admissions, Office of Admissions, Yale School of Medicine, 367 Cedar Street, New Haven CT 06510; tel., 203.785.2643; fax, 203.785.3234; e-mail, medical.admissions@yale.edu; Web site, http://info.med.yale.edu/education/admissions

**Divinity School** Est. 1822. Courses for college graduates. Master of Divinity (M.Div.), Master of Arts in Religion (M.A.R.). Individuals with an M.Div. degree may apply for the program leading to the degree of Master of Sacred Theology (S.T.M.).

For additional information, please write to the Admissions Office, Yale Divinity School, 409 Prospect Street, New Haven CT 06511; tel., 203.432.5360; fax, 203.432.7475; e-mail, divinity.admissions@yale.edu; Web site, www.yale.edu/divinity. Online application, https://apply.divinity.yale.edu/apply

**Law School** Est. 1824. Courses for college graduates. Juris Doctor (J.D.). For additional information, please write to the Admissions Office, Yale Law School, PO Box 208215, New Haven CT 06520-8215; tel., 203.432.4995; e-mail, admissions.law@yale.edu; Web site, www.law.yale.edu

Graduate Programs: Master of Laws (LL.M.), Doctor of the Science of Law (J.S.D.), Master of Studies in Law (M.S.L.). For additional information, please write to Graduate Programs, Yale Law School, PO Box 208215, New Haven CT 06520-8215; tel., 203.432.1696; e-mail, gradpro.law@yale.edu; Web site, www.law.yale.edu
School of Engineering & Applied Science  Est. 1852. Courses for college graduates. Master of Science (M.S.), Master of Engineering (M.Eng.), and Doctor of Philosophy (Ph.D.) awarded by the Graduate School of Arts and Sciences.

For additional information, please write to the Office of Graduate Admissions, Yale School of Engineering & Applied Science, PO Box 208267, New Haven CT 06520-8267; tel., 203.432.4250; e-mail, grad.engineering@yale.edu; Web site, http://seas.yale.edu

School of Art  Est. 1869. Professional courses for college and art school graduates. Master of Fine Arts (M.F.A.).

For additional information, please write to the Office of Academic Affairs, Yale School of Art, PO Box 208339, New Haven CT 06520-8339; tel., 203.432.2600; e-mail, artschool.info@yale.edu; Web site, http://art.yale.edu

For additional information, please write to the Yale School of Music, PO Box 208246, New Haven CT 06520-8246; tel., 203.432.4155; fax, 203.432.7448; e-mail, gradmusic.admissions@yale.edu; Web site, www.music.yale.edu

School of Forestry & Environmental Studies  Est. 1900. Courses for college graduates. Master of Forestry (M.F.), Master of Forest Science (M.F.S.), Master of Environmental Science (M.E.Sc.), Master of Environmental Management (M.E.M.). Doctor of Philosophy (Ph.D.) awarded by the Graduate School of Arts and Sciences.
