

School of Public Health 2016–2017

BULLETIN OF YALE UNIVERSITY

Series 112 Number 11 August 15, 2016

BULLETIN OF YALE UNIVERSITY *Series 112 Number 11 August 15, 2016* (USPS 078-500) is published seventeen times a year (one time in May and October; three times in June and September; four times in July; five times in August) by Yale University, 2 Whitney Avenue, New Haven CT 06510. Periodicals postage paid at New Haven, Connecticut.

Postmaster: Send address changes to Bulletin of Yale University,
PO Box 208227, New Haven CT 06520-8227

Managing Editor: Kimberly M. Goff-Crews
Editor: Lesley K. Baier
PO Box 208230, New Haven CT 06520-8230

The closing date for material in this bulletin was July 25, 2016.
The University reserves the right to withdraw or modify the courses of instruction or to change the instructors at any time.

Academic and Grading Calendars

ACADEMIC CALENDAR

Summer Term 2016

July 5	T	Orientation for Advanced Professional M.P.H. and Accelerated M.B.A./M.P.H. Students
July 6	W	Classes begin for Advanced Professional M.P.H. and Accelerated M.B.A./M.P.H. summer session
Aug. 19	F	Classes end for Advanced Professional M.P.H. and Accelerated M.B.A./M.P.H. summer session

Fall Term 2016

Aug. 22–30	M–T	Orientation week for incoming M.P.H. students
Aug. 31	W	Fall-term classes begin
Sept. 2	F	<i>Monday classes meet</i>
Sept. 5	M	Labor Day. Classes do not meet
Sept. 14	W	Course registration and exemption deadline
Oct. 14	F	Last day to withdraw from a fall-term course without the course appearing on the transcript
Oct. 19–21	W–F	October recess. Classes do not meet
Nov. 18	F	November recess begins, 6 p.m.
Nov. 28	M	Classes resume
Dec. 9	F	Last day to withdraw from a fall-term course Classes end, 6 p.m. Reading period begins*
Dec. 15–21	TH–W	Final examination period

Spring Term 2017

Jan. 17	T	Spring-term classes begin
Jan. 31	T	Course registration and exemption deadline
Mar. 10	F	Last day to withdraw from a spring-term course without the course appearing on the transcript Spring recess begins, 6 p.m.
Mar. 27	M	Classes resume
Apr. 15	SA	Last day to submit M.P.H. thesis to readers for grading (if required to complete a thesis)
Apr. 28	F	Last day to withdraw from a spring-term course Classes end, 6 p.m. Reading period begins*
May 4–10	TH–W	Final examination period
May 22	M	University Commencement

*Some classes may meet during the reading period.

GRADING CALENDAR

Aug. 26	F	Final grades due for Advanced Professional M.P.H. and Accelerated M.B.A./M.P.H. summer session
Jan. 9	M	Final fall-term grades due for all students
May 1	M	Final thesis grades due
May 12	F	Final grades due for all graduating students
June 2	M	Final grades due for all returning students

The President and Fellows of Yale University

President

Peter Salovey, A.B., A.M., Ph.D.

Fellows

His Excellency the Governor of Connecticut, *ex officio*

Her Honor the Lieutenant Governor of Connecticut, *ex officio*

Joshua Bekenstein, B.A., M.B.A., Wayland, Massachusetts

Jeffrey Lawrence Bewkes, B.A., M.B.A., Old Greenwich, Connecticut

Maureen Cathy Chiquet, B.A., Purchase, New York

Peter Brendan Dervan, B.S., Ph.D., San Marino, California

Donna Lee Dubinsky, B.A., M.B.A., Portola Valley, California

Charles Waterhouse Goodyear IV, B.S., M.B.A., New Orleans, Louisiana

Catharine Bond Hill, B.A., B.A., M.A., Ph.D., Poughkeepsie, New York (*June 2019*)

Paul Lewis Joskow, B.A., Ph.D., New York, New York

William Earl Kennard, B.A., J.D., Charleston, South Carolina

Gina Marie Raimondo, A.B., D.Phil., J.D., Providence, Rhode Island (*June 2020*)

Emmett John Rice, Jr., B.A., M.B.A., Bethesda, Maryland (*June 2017*)

Eve Hart Rice, B.A., M.D., Bedford, New York (*June 2021*)

Kevin Patrick Ryan, B.A., M.B.A., New York, New York (*June 2018*)

Annette Thomas, S.B., Ph.D., London, England (*June 2022*)

Douglas Alexander Warner III, B.A., Hobe Sound, Florida

Lei Zhang, B.A., M.A., M.B.A., Beijing, China

The Officers of Yale University

President

Peter Salovey, A.B., A.M., Ph.D.

Provost

Benjamin Polak, B.A., M.A., Ph.D.

Secretary and Vice President for Student Life

Kimberly Midori Goff-Crews, B.A., J.D.

Senior Vice President for Operations

Jack Francis Callahan, Jr., B.A., M.B.A.

Vice President and General Counsel

Alexander Edward Dreier, A.B., M.A., J.D.

Vice President for Finance and Chief Financial Officer

Stephen Charles Murphy, B.A.

Vice President for New Haven and State Affairs and Campus Development

Bruce Donald Alexander, B.A., J.D.

Vice President for Human Resources and Administration

Michael Allan Peel, B.S., M.B.A.

Vice President for Alumni Affairs and Development

Joan Elizabeth O'Neill, B.A.

Vice President for West Campus Planning and Program Development

Scott Allan Strobel, B.A., Ph.D.

Vice President for Communications

Eileen Mary O'Connor, B.S., J.D.

School of Public Health Administration and Faculty

ADMINISTRATION

Paul D. Cleary, Ph.D., Dean
Brian P. Leaderer, M.P.H., Ph.D., Deputy Dean
Linda M. Brady, B.A., Special Adviser to the Dean
Frank Grosso, Ph.D., Associate Dean, Student Affairs
Martin Klein, M.P.H., Ph.D., Associate Dean, Development and External Affairs
Melinda M. Pettigrew, Ph.D., Associate Dean, Academic Affairs
Robert Kanoff, B.S., Assistant Dean, Finance and Administration
Elizabeth Claus, M.D., Ph.D., Director of Medical Research
Mayur M. Desai, M.P.H., Ph.D., Director of Medical Studies
Michael Greenwood, M.A., Director of Communications
Mary Keefe, B.A., Director of Admissions
Kaveh Khoshnood, M.P.H., Ph.D., Director of Undergraduate Studies
Andre Massiah, M.B.A., Director of Financial Aid
Elaine O'Keefe, M.S., Executive Director of the Office of Public Health Practice
Rafael Pérez-Escamilla, Ph.D., Director of the Office of Public Health Practice
Felicia Spencer, M.A., Director, Career Management Center
Christian Tschudi, Ph.D., Director of Graduate Studies
Alyson Zeitlin, B.A., Director of Faculty Affairs
Candice van Emmenes, B.S., Human Resources Generalist

FACULTY

Biostatistics

Heather Allore, Ph.D. Associate Professor (Internal Medicine)
Peter M. Aronow, Ph.D., Assistant Professor (Political Science)
Russell Barbour, Ph.D., Associate Research Scientist
Cynthia Brandt, M.D., Professor (Emergency Medicine)
Eugenia Buta, Ph.D., Associate Research Scientist
Lisa Calvocoressi, Ph.D., Associate Research Scientist
Maria Ciarleglio, Ph.D., Assistant Professor
Elizabeth B. Claus, M.D., Ph.D., Professor
Forrest W. Crawford, Ph.D., Assistant Professor
Feng Dai, M.S., Ph.D., Research Scientist
James Dziura, Ph.D., Associate Professor (Emergency Medicine)
Denise Esserman, Ph.D., Associate Professor (on leave, spring 2017)
Stephen Gaffney, Ph.D., Associate Research Scientist
Erich Greene, Ph.D., Associate Research Scientist
Ralitza Gueorguieva, Ph.D., Senior Research Scientist
Theodore R. Holford, Ph.D., Professor

Hao Huang, M.D., M.P.H., Research Scientist
Ratnakar Josyula, Ph.D., Associate Research Scientist
Michael Kane, Ph.D., Assistant Professor
Tassos Kyriakides, Ph.D., Associate Research Scientist
Kuang-Yao Lee, Ph.D., Associate Research Scientist
Haiqun Lin, M.D., Ph.D., Associate Professor
Shuangge Ma, Ph.D., Associate Professor
Robert W. Makuch, Ph.D., Professor
Peter N. Peduzzi, Ph.D., Professor
Claude Petit, Ph.D., Lecturer
Joseph Scheeren, Ph.D., Lecturer
Marilyn Jane Stolar, Ph.D., Associate Research Scientist
Ning Sun, Ph.D., Research Scientist
Jeffrey P. Townsend, Ph.D., Associate Professor
Hongyuan Wang, Ph.D., Assistant Clinical Professor
Zheng Wang, Ph.D., Associate Research Scientist
Zuoheng Wang, Ph.D., Associate Professor
Joshua Warren, Ph.D., Assistant Professor
Michael Wininger, Ph.D., Assistant Clinical Professor
Xiaoqing Yu, Ph.D., Associate Research Scientist
Daniel Zelterman, Ph.D., Professor
Heping Zhang, Ph.D., Professor (on leave, spring 2017)
Hongyu Zhao, Ph.D., Professor

Chronic Disease Epidemiology

Edward A. Bortnichak, Ph.D., Lecturer
Michael B. Bracken, M.P.H., Ph.D., Professor Emeritus
Sarah Calabrese, Ph.D., Associate Research Scientist
Brenda Cartmel, Ph.D., Senior Research Scientist
Shayna Cunningham, Ph.D., Research Scientist
Amy S. Darefsky, M.P.H., Ph.D., Lecturer
Mayur M. Desai, M.P.H., Ph.D., Associate Professor
Vincent T. DeVita, Jr., M.D., Professor (Internal Medicine)
Andrew T. DeWan, M.P.H., Ph.D., Associate Professor
John F. Dovidio, Ph.D., Professor (Psychology)
Robert D. Dubrow, M.D., Ph.D., Professor
Jennifer Edelman, Ph.D., Assistant Professor (Internal Medicine)
Leah Ferrucci, Ph.D., Associate Research Scientist
Thomas Gill, M.D., Professor (Internal Medicine)
Cary Gross, M.D., Professor (Internal Medicine)
Nicola L. Hawley, Ph.D., Assistant Professor
Amber Hromi-Fiedler, Ph.D., Associate Research Scientist
Jeannette R. Ickovics, Ph.D., Professor (Social and Behavioral Sciences) (on leave,
fall 2016)
Melinda L. Irwin, M.P.H., Ph.D., Professor (Social and Behavioral Sciences)
Beth A. Jones, M.P.H., Ph.D., Research Scientist

Anne Marie Z. Jukic, Ph.D., Assistant Professor
 Danya E. Keene, Ph.D., Assistant Professor
 Trace S. Kershaw, M.P.H., Ph.D., Professor (Social and Behavioral Sciences)
 Erica Leifheit-Limson, Ph.D., Associate Research Scientist
 Becca R. Levy, Ph.D., Professor (Social and Behavioral Sciences)
 Judith H. Lichtman, M.P.H., Ph.D., Associate Professor
 Elan D. Louis, M.S., M.D., Professor (Neurology)
 Lingeng Lu, M.D., Research Scientist
 Xiaomei Ma, M.S., Ph.D., Associate Professor
 Ruth McCorkle, Ph.D., R.N., F.A.A.N., Professor (Nursing)
 Alice M. Miller, J.D., Assistant Clinical Professor
 Joan Monin, Ph.D., Assistant Professor (Social and Behavioral Sciences)
 Lloyd M. Mueller, Ph.D., Lecturer
 Jewel M. Mullen, M.P.H., M.D., Lecturer
 Marcella Nunez-Smith, M.D., Associate Professor (Internal Medicine)
 Elaine O'Keefe, M.S., Lecturer
 John E. Pachankis, Ph.D., Associate Professor
 Catherine Panter-Brick, Ph.D., Professor (Anthropology)
 Andrew Papachristos, Ph.D., Associate Professor (Sociology)
 Rafael Pérez-Escamilla, Ph.D., Professor (Social and Behavioral Sciences)
 James Rawlings, M.P.H., R.P.H., Clinical Instructor
 Harvey A. Risch, M.D., Ph.D., Professor
 Peter Salovey, Ph.D., Professor (Psychology; Social and Behavioral Sciences)
 Marlene B. Schwartz, Ph.D., Senior Research Scientist (Psychology)
 Fatma Shebl, M.D., Ph.D., Assistant Professor
 Douglas Shenson, M.P.H., M.A., M.S., M.D., Associate Clinical Professor
 Megan V. Smith, Ph.D., Assistant Professor (Psychiatry)
 Denise E. Stevens, Ph.D., Lecturer
 Jacob K. Tebes, Ph.D., Professor (Psychiatry; Social and Behavioral Sciences)
 Mary E. Tinetti, M.D., Professor (Internal Medicine)
 Peter H. Van Ness, M.P.H., Ph.D., Lecturer
 Rong Wang, M.P.H., Associate Research Scientist
 Shiyi Wang, M.D., Ph.D., Assistant Professor
 Marney White, Ph.D., Associate Professor
 Kim Ann Yonkers, M.D., Professor (Psychiatry)

Environmental Health Sciences

Paul T. Anastas, Ph.D., Professor (Forestry & Environmental Studies)
 Diane D. Aye, M.P.H., Ph.D., Lecturer
 Michelle Bell, M.S., M.S.E., Ph.D., Professor (Forestry & Environmental Studies)
 Sandy Bogucki, M.D., Ph.D., Associate Professor (Emergency Medicine)
 Jonathan B. Borak, M.D., Clinical Professor
 Priscilla F. Canny, Ph.D., Lecturer
 Gail Charnley, Ph.D., Lecturer
 Ying Chen, Ph.D., Research Scientist
 Howard Cohen, Ph.D., Lecturer

Nicole C. Deziel, Ph.D., Assistant Professor
Arthur B. DuBois, M.D., Professor Emeritus
Jan D. Dunn, Ph.D., Lecturer
Cheryl Fields, M.P.H., Lecturer
Janneane F. Gent, Ph.D., Research Scientist
Gary L. Ginsberg, Ph.D., Lecturer
Josephine Hoh, Ph.D., Associate Professor
Caroline Johnson, Ph.D., Assistant Professor
Brian P. Leaderer, M.P.H., Ph.D., Professor (on leave, spring 2017)
Dewei Li, M.Sc., Ph.D., Lecturer
Lawrence E. Marks, Ph.D., Professor
Joan E. McGovern, Lecturer
Mark Russi, M.P.H., M.D., Professor (Internal Medicine)
Martin D. Slade, M.P.H., Lecturer
Jan Adrianas Stolwijk, Ph.D., Emeritus
Meredith H. Stowe, Ph.D., Lecturer (Internal Medicine)
Vasilis Vasiliou, Ph.D., Professor
Catherine Yeckel, Ph.D., Assistant Clinical Professor
Yawei Zhang, M.P.H., M.D., Ph.D., Associate Professor (Surgery)
Yong Zhu, Ph.D., Associate Professor (on leave, spring 2017)

Epidemiology of Microbial Diseases

Nadia Abdala, Ph.D., D.V.M., Research Scientist
Haritha Adhikarla, Ph.D., Associate Research Scientist
Serap Aksoy, Ph.D., Professor
Jorge A. Alfaro-Murillo, Ph.D., Associate Research Scientist
Frederick L. Altice, M.D., Professor (Internal Medicine)
John F. Anderson, Ph.D., Clinical Professor
Theodore Andreadis, Ph.D., Clinical Professor
Martine Y. K. Armstrong, M.D., Senior Research Scientist Emeritus
Philip Armstrong, Sc.D., Associate Clinical Professor
Geoffrey Attardo, Ph.D., Research Scientist
Robert S. Baltimore, M.D., Professor (Pediatrics)
Douglas Brackney, Ph.D., Assistant Clinical Professor
Richard Bucala, M.D., Ph.D., Professor (Internal Medicine)
Adalgisa Caccone, M.S., Ph.D., Senior Research Scientist (Ecology and Evolutionary Biology)
Michael Cappello, M.D., Professor (Pediatrics)
Matthew L. Cartter, M.D., Associate Clinical Professor
James E. Childs, Sc.D., Senior Research Scientist
Theodore H. Cohen, M.D., Dr.P.H., Associate Professor
J. Lucian Davis, M.D., Associate Professor
Louise M. Dembry, M.D., Professor (Internal Medicine)
Amanda Durante, M.P.H., Ph.D., Lecturer
David Durham, Ph.D., Associate Research Scientist
Erol Fikrig, M.D., Professor (Internal Medicine)

Durland Fish, Ph.D., Professor Emeritus
 Gerald H. Friedland, M.D., Senior Research Scientist (Internal Medicine)
 Alison P. Galvani, Ph.D., Professor
 Lauretta E. Grau, Ph.D., Associate Research Scientist
 James L. Hadler, M.P.H., M.D., Clinical Professor
 Robert Heimer, Ph.D., Professor (on leave, 2016–2017)
 Debbie L. Humphries, M.P.H., Ph.D., Clinical Instructor
 Kaveh Khoshnood, M.P.H., Ph.D., Associate Professor
 Albert I. Ko, M.D., Professor
 Nikolay Kolev, Ph.D., Research Scientist
 Peter J. Krause, M.D., Senior Research Scientist
 Diane McMahon-Pratt, Ph.D., Professor
 I. George Miller, M.D., Professor (Pediatrics)
 Goudarz Molaei, Ph.D., Associate Clinical Professor
 Leonard E. Munstermann, Ph.D., Senior Research Scientist
 Martial Ndeffo Mbah, Ph.D., Research Scientist
 Linda M. Niccolai, Ph.D., Associate Professor
 Elijah Paintsil, M.D., Associate Professor (Pediatrics)
 Sunil Parikh, M.D., M.P.H., Assistant Professor
 Curtis L. Patton, Ph.D., Professor Emeritus
 Melinda M. Pettigrew, Ph.D., Professor
 Virginia E. Pitzer, Sc.D., Assistant Professor
 Jeffrey R. Powell, Ph.D., Professor (Ecology and Evolutionary Biology)
 Nancy H. Ruddle, Ph.D., Professor Emerita
 Eugene D. Shapiro, M.D., Professor (Pediatrics)
 Jonathan P. Smith, M.P.H., Lecturer
 Andre N. Sofair, M.D., Associate Professor (Internal Medicine)
 Lynn E. Sosa, M.D., Assistant Clinical Professor
 Gregory H. Tignor, D.Sc., Associate Professor Emeritus
 Christian Tschudi, Ph.D., Professor
 Daniel M. Weinberger, Ph.D., Assistant Professor
 Brian Weiss, Ph.D., Research Scientist
 Elsie Wunder, Ph.D., Associate Research Scientist
 Dan Yamin, Ph.D., Associate Research Scientist
 Kimberly M. Yousey-Hindes, M.P.H., Lecturer

Health Policy and Management

Rene Almeling, Ph.D., Associate Professor (Sociology)
 Thomas Balczak, M.D., Lecturer
 Steven L. Bernstein, M.D., Professor (Emergency Medicine)
 Marna Parke Borgstrom, M.P.H., Lecturer
 Elizabeth H. Bradley, M.B.A., Ph.D., Professor
 Marie Brault, Ph.D., Associate Research Scientist
 Susan H. Busch, Ph.D., Professor
 Marguerite M. Callaway, M.S., M.B.A., Lecturer
 Maureen E. Canavan, Ph.D., Associate Research Scientist

Gayle L. Capozzalo, M.S.P.H., Lecturer
Xi Chen, Ph.D., Assistant Professor
Katrina H. Clark, M.P.H., Lecturer
Paul D. Cleary, Ph.D., Professor
Zack Cooper, Ph.D., Assistant Professor
Leslie Curry, M.P.H., Ph.D., Senior Research Scientist
Martha Dale, M.P.H., Lecturer
Richard D'Aquila, M.P.H., Lecturer
Amy Davidoff, Ph.D., Senior Research Scientist
Henry G. Dove, Ph.D., Lecturer
David Fiellin, M.D., Professor (Internal Medicine)
Howard Forman, M.B.A., M.D., Professor (Radiology and Biomedical Imaging)
Abigail S. Friedman, Ph.D., Assistant Professor
Shelley D. Geballe, M.P.H., J.D., Assistant Clinical Professor
Alan Gerber, Ph.D. Professor (Political Science)
William Gillespie, M.B.A., M.D., Lecturer
Sarah M. Horwitz, M.P.H., Ph.D., Associate Professor Emeritus
James F. Jekel, M.P.H., M.D., Professor Emeritus
Bruce Jennings, M.A., Lecturer
Amy C. Justice, M.D., Ph.D., Professor (Internal Medicine)
Edward H. Kaplan, Ph.D., Professor (School of Management)
Marissa King, Ph.D., Assistant Professor (School of Management)
Martin Klein, Ph.D., M.P.H., Lecturer
Harlan M. Krumholz, M.D., Professor (Internal Medicine)
Mary Alice Lee, M.S.N., Ph.D., Lecturer
Lowell S. Levin, M.P.H., Ed.D., Professor Emeritus
Erika L. Linnander, Lecturer
Zahirah McNatt, M.H.S.A., Lecturer
Stephen M. Merz, M.H.S.A., Lecturer
Chimaeze D. Ndumele, Ph.D., Assistant Professor
Ingrid M. Nembhard, Ph.D., Associate Professor
A. David Paltiel, Ph.D., Professor
Edieal J. Pinker, Ph.D., Professor (School of Management)
Robert A. Rosenheck, M.D., Professor (Psychiatry)
Joseph Ross, M.D., Associate Professor (Internal Medicine)
Mark J. Schlesinger, Ph.D., Professor
Jason L. Schwartz, Ph.D., Assistant Professor
Jody L. Sindelar, Ph.D., Professor
Michael Skonieczny, Lecturer
Stephanie Spangler, M.D., Lecturer
Kristina Talbert-Slagle, Ph.D., Associate Research Scientist
Hong Wang, M.D., Ph.D., Associate Clinical Professor
Reza Yaesoubi, Ph.D., Assistant Professor

History of the Yale School of Public Health

The Yale School of Public Health is one of the oldest nationally accredited schools of public health in the country. It was one of the eight existing schools first accredited by the American Public Health Association in 1946, though its origins date back three decades earlier as a department in the Yale School of Medicine, a status it maintains today.

In 1914 Yale University received an endowment from the Anna M. R. Lauder family to establish a chair in public health in the School of Medicine. This chair was filled in 1915 by Charles-Edward Amory Winslow, who was to be a central figure in the development of public health at Yale for thirty years. In 1920 Winslow set forth a definition of public health:

Public health is the science and the art of preventing disease, prolonging life and promoting physical health and efficiency through organized community efforts for the sanitation of the environment, the control of community infections, the education of the individual in principles and personal hygiene, the organization of medical and nursing services for the early diagnosis and preventive treatment of disease, and the development of the social machinery which will ensure to every individual a standard of living adequate for the maintenance of health; organizing these benefits in such a fashion as to enable every citizen to realize his birthright of health and longevity.

In the early 1920s Winslow's Department of Public Health at Yale was a catalyst for public health reform in Connecticut, and his health surveys – prepared in collaboration with other members of the faculty and students – led to considerable improvements in public health organization across the country. He also successfully campaigned to improve health laws in Connecticut and for the passage of a bill that created the State Department of Public Health.

Winslow focused on “the education of undergraduate medical students along the lines of preventive medicine.” He also established a one-year program leading to a Certificate in Public Health, which later became the Master of Public Health degree. From the beginning, Winslow sought to build bridges between the Department of Public Health, the Sheffield Scientific School, and the Graduate School of Arts and Sciences by making courses available to students in the other schools. He was also able to establish Bacteriology, Pathology, and Public Health as a single, unified department in the Graduate School.

Winslow looked to a number of existing departments (Bacteriology, Immunology, Medicine, Pathology, Pediatrics, Physiological Chemistry, Sanitary Engineering, and Zoology) to supplement his own courses in public health principles, public health administration, and vital statistics. He established a comprehensive nonmedical program that by 1925 graduated eighteen students with a Certificate in Public Health, ten with a Ph.D., and four with a Dr.P.H. Students specialized in administration, bacteriology, or statistics.

During Winslow's thirty years at Yale, hygiene developed into preventive medicine; bacteriology evolved into microbiology to include parasitology and virology; classic epidemiology evolved into clinical epidemiology; control of communicable diseases became chronic disease control; and public health assimilated the social dimensions of sickness and health and appropriated such disciplines as medical economics and medical care

organization. It was due to Winslow's innovative foresight and commitment to interdisciplinary education that the department's academic programs earned recognition as a nationally accredited School of Public Health in 1946.

In the early 1960s, the Yale Department of Public Health merged with the Section of Epidemiology and Preventive Medicine, a unit within the Department of Internal Medicine. In 1964 the new department moved into its own building, the Laboratory of Epidemiology and Public Health (LEPH), which was designed by Philip Johnson and continues as its primary location for research and teaching.

Concurrent with the move into LEPH, the Rockefeller Foundation bequeathed its arbovirus research unit, including its scientists and research staff, to Yale. The arrival of virologists Wilbur Downs, Nobel Prize winner Max Theiler, Jordi Casals, Sonja Buckley, and others began a rapid expansion of public health at Yale. Their groundbreaking work on tropical diseases set the stage for a division of international health that focused on basic health care and delivery in underserved populations.

Meanwhile, as public health successes in infectious disease control (polio, measles, etc.) were changing medical demands nationally, the School also broadened its focus to address the growing burden of chronic diseases such as cardiovascular disease, cancer, and issues surrounding aging. During these years, the Master of Public Health curriculum was also reorganized into four divisions (biostatistics, epidemiology, hospital administration, and environmental health).

In the late 1960s and early 1970s, health policy and the psychosocial and behavioral determinants of health gained focus as academic specialties. Today, faculty and students also bring expertise in genomics, mathematical modeling, behavioral economics, and innovative technologies to the field, the bench, and the classroom to address evolving public health challenges and advance health promotion in the era of globalization.

A century after Winslow's appointment, Public Health continues to strengthen its interdisciplinary research partnerships with numerous entities at the School of Medicine and across Yale's campus. In its dual capacity as a nationally accredited School of Public Health and a school within the Yale School of Medicine, it honors Winslow's commitment to public health education across disciplines and community practice through an array of degrees offered to a wide audience, ranging from undergraduates to advanced professionals, in conjunction with Yale College, the Graduate School, and six of Yale's professional schools.

Master of Public Health

Yale's Master of Public Health (M.P.H.) degree program is designed for highly motivated students with related work experience or a professional degree as well as a substantial interest in an area of public health. A unique sequencing of courses, community-based programmatic activities, and field or laboratory research provides students with multiple opportunities to define their specialty and tailor their course of study.

Individualized programs are shaped by frequent interactions with faculty through courses, field experiences, and the thesis. An important component of the M.P.H. program is the faculty-student relationship, institutionalized in the form of an advisory system. Students are expected to work with their adviser in selecting appropriate courses, deciding on their internship and thesis, and integrating learning from all their experiences.

M.P.H. students focus their studies in one of the following departments: Biostatistics, Chronic Disease Epidemiology, Epidemiology of Microbial Diseases, Environmental Health Sciences, or Health Policy and Management. In addition, students may focus their studies in programs in the Social and Behavioral Sciences division and in the Health Policy Program (HP) or the Health Care Management Program (HCM). Students select their department/division/program at the time of application.

The Advanced Professional M.P.H. Program is available for individuals with doctoral-level degrees in a field related to public health and for medical students. Students in the AP Program apply to one of six tracks: Applied Biostatistics and Epidemiology; Health Policy; Social and Behavioral Sciences; Global Health; Preventive Medicine; and Occupational and Environmental Medicine.

The B.A.-B.S./M.P.H. Select Program gives Yale College students interested in the field of public health the opportunity to earn a bachelor's degree from Yale College and an M.P.H. degree from the Yale School of Public Health in a five-year joint-degree program.

The Accelerated M.B.A./M.P.H. Program in Health Care Management enables students to earn an M.B.A. degree from the Yale School of Management and an M.P.H. degree from the Yale School of Public Health in a twenty-two-month integrated program.

The Global Health Concentration emphasizes a multidisciplinary, problem-solving approach to global health issues that encourages creativity and innovation while fostering a global perspective. Students in the Global Health Concentration may complete this concentration while they satisfy the requirements of their respective department/division/program. Successful completion of the concentration will be recorded on the student's transcript when he or she graduates.

The Regulatory Affairs Track prepares students for future roles in the area of quality control and regulatory affairs. This track operates within the existing YSPH academic structure and will be recorded on the student's transcript when he or she graduates if all track requirements have been met. Students complete all of the core and departmental requirements as well as the required courses for the track.

All M.P.H. students are urged to develop programs of study that include courses from other departments within YSPH and throughout the University in order to benefit from the strengths of Yale's professional and graduate schools and learn ways to understand the complexity and multidimensionality of most public health issues.

Students in the traditional two-year M.P.H. program are required to complete 20 course units, which include the core curriculum, departmental/divisional/program requirements, and electives both within YSPH and in other schools at the University (with the permission of the academic adviser). Course units are not given for seminars and colloquia.

Full-time students must carry a minimum of 4 course units per term for four terms and must complete all course requirements (including the thesis) within five years of matriculation. A thesis is not required for students in Health Policy or Health Care Management.

Part-time student status is granted to those students taking fewer than 4 course units per term. Part-time students are encouraged to take at least 2 course units per term and must complete all course requirements (including the thesis) within five years of matriculation.

CORE CURRICULUM FOR THE TRADITIONAL TWO-YEAR M.P.H. DEGREE PROGRAM

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 505a	Introduction to Statistical Thinking I (not required for BIS)	1
BIS 505b	Introduction to Statistical Thinking II (not required for BIS, HP, or HCM; students in EMD or SBS can take BIS 505b or CDE 534b)	1
CDE/EMD 508a	Principles of Epidemiology I	1
EPH 100a	Professional Skills Seminar	n/a
EPH 515a	Ethics and Public Health: An Introduction	n/a
EPH 520c	Summer Internship	n/a
EPH 525b	Thesis (not required for HP or HCM)	2
One of the following:*		
CDE 505a	Social and Behavioral Foundations of Health	1
CDE 537b	Social and Interpersonal Influences on Health	1
One of the following:		
EHS 503b	Public Health Toxicology	1
EHS 510a	Principles of Environmental Health	1
One of the following:		
HPM 510a	Introduction to Health Policy and Health Systems	1
HPM 560b	Health Economics and U.S. Health Policy	1
Students in HCM only:		
†MGT/HPM 698b	Health Care Policy, Finance, and Economics	1

*CDE 537b is recommended for students with a social science background.

†This course is offered in the School of Management.

Public Health Practice requirement All students in the M.P.H. program are required to complete a Public Health Practice experience. YSPH Public Health Practice requirement guidelines are outlined in Appendix I. There are several options for satisfying this requirement:

EPH 500b	Public Health Practicum	1
*EPH 520c	Summer Internship	n/a
EPH 542b	Practice-Based Community Health Research	1
EPH 555b	Practicum in Climate Change, Sustainability, and Public Health	1
HPM 555a or b	Health Policy or Health Care Management Practicum	1
CDE 596b	Global Health and Justice Practicum	2

*With the exception of those in the Advanced Professional M.P.H. program and the Accelerated M.B.A./M.P.H. program, all M.P.H. students *must* complete a summer internship, typically 10–12 weeks and no less than 8 weeks in duration. The summer internship may be used to complete the practice requirement for the M.P.H. degree with prior approval from the Office of Public Health Practice.

Competencies of the Core Curriculum

Upon completing the core curriculum of the M.P.H. program, the student will be able to:

- Demonstrate a knowledge base in the disciplines of biostatistics, chronic and infectious disease epidemiology, health systems, public policy, social and behavioral sciences, and environmental health.
- Apply basic research skills to specific public health problems in both group and individual settings, including the ability to define problems; construct, articulate, and test hypotheses; draw conclusions; and communicate findings to a variety of audiences.
- Explain the interrelationships among a multitude of factors that can impact a public health problem, including scientific, medical, environmental, cultural, social, behavioral, economic, political, and ethical factors.
- Review, critique, and evaluate public health reports and research articles.
- Apply public health concepts, principles, and methodologies obtained through formal course work to actual problems experienced in the community or work environment.
- Critically evaluate programs, interventions, and outcomes that relate to public health practice.
- Apply ethical standards and professional values as they relate to the practice of public health.
- Demonstrate sensitivity to the social context within which public health professionals practice.

M.P.H. DEPARTMENTS, DIVISIONS, PROGRAMS, TRACKS, AND CONCENTRATIONS

Biostatistics Department

Hongyu Zhao, Ph.D., Chair

Biostatistics is a scientific discipline that focuses on developing new statistical methodology and theory to address important questions in the biological and health sciences, including study designs, data collection and analysis, as well as result interpretation. In addition to independent methodological and theoretical developments, the faculty in the Department of Biostatistics are involved in a wide variety of collaborative research efforts throughout the University, including at the School of Public Health and the School of Medicine. We bring these innovations into practice through active participation in many disciplines at Yale and beyond. In addition to course work, students gain real-world experiences through intern opportunities and a master's thesis. Our students are well prepared for positions in public/governmental and nonprofit agencies, medical centers, and various industries, as well as for doctoral studies in biostatistics and related fields.

DEPARTMENTAL REQUIREMENTS FOR THE M.P.H. IN BIOSTATISTICS

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 525a and b	Seminar in Biostatistics and Journal Club	n/a
BIS 540a	Fundamentals of Clinical Trials	1
BIS 623a	Applied Regression Analysis	1
BIS 625a	Categorical Data Analysis	1
BIS 628b	Longitudinal and Multilevel Data Analysis	1
BIS 630b	Applied Survival Analysis	1
BIS 678a	Statistical Consulting	1
BIS 679b	Advanced Statistical Programming in SAS and R	1
BIS 681b	Statistical Consulting Lab	1
*STAT 541a	Probability Theory	1
*STAT 542b	Theory of Statistics	1
EPH 525b	Thesis	2

*These courses are offered in the Graduate School of Arts and Sciences.

COMPETENCIES FOR THE M.P.H. IN BIOSTATISTICS

Upon receiving an M.P.H. with a concentration in Biostatistics, the student will be able to:

- Describe concepts of probability, random variation, and commonly used statistical probability distributions.
- Develop an efficient design for collecting, recording, and storing data collected in the conduct of public health and medical research.
- Develop sample size and statistical power calculations for basic study designs including those utilized in clinical trials.

- Design efficient computer programs for study management, statistical analysis, as well as presentations using SAS and other programming languages.
- Produce edited data sets suitable for statistical analyses.
- Apply informatics techniques with vital statistics and public health records in the description of public health characteristics and in public health research and evaluation.
- Perform analyses of stated hypotheses using a variety of analytical tools including analysis of variance, multiple regression, nonparametric statistics, logistic regression, multivariate analyses, and methods for analyzing rates and failure time data.
- Interpret results of statistical analyses and use these results to make relevant inferences from data.
- Produce working tables and statistical summaries describing research in health science.
- Develop written presentations based on statistical analyses for both public health professionals and educated lay audiences.
- Develop oral presentations based on statistical analyses for both public health professionals and educated lay audiences.

Regulatory Affairs Track

Robert W. Makuch, Ph.D., Director

Every drug, medical device, diagnostic test, and food sold in the United States and other countries throughout the world must meet rigorous standards that are intended to insure that all products satisfy a set of safety and performance objectives. Scientists must possess the knowledge and expertise to create and implement high-quality systems as well as understand the environment encompassing regulatory compliance. Other essential skills include project management and leadership, scientific tools that allow for proper risk assessment and risk management strategies, and the ability to clearly communicate the regulatory decisions made.

The Regulatory Affairs Track is an interdisciplinary program that may be combined with any departmental concentration. Four courses are required. The track covers a wide array of regulatory affairs topics, including complex issues involving food and drug law, ethics, clinical trials, epidemiology, risk analysis, and adverse event reporting requirements and systems.

The Regulatory Affairs Track is directed by Professor Robert Makuch, who has extensive experience working with pharmaceutical companies and government agencies on regulatory affairs issues. The track includes a focus on global regulatory similarities and differences among countries, including China, where Professor Makuch has led more than twenty training programs for senior delegations of the Chinese FDA since 2008.

REQUIREMENTS FOR THE M.P.H. IN THE REGULATORY AFFAIRS TRACK

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 540a	Fundamentals of Clinical Trials	1
BIS 575b	Introduction to Regulatory Affairs	1

Two of the following:

BIS 561b	Advanced Topics and Case Studies in Multicenter Clinical Trials	1
CDE 650a	Introduction to Evidence-Based Medicine and Health Care	1
EHS 511b	Principles of Risk Assessment	1
HPM 570a	Cost-Effectiveness Analysis and Decision Making	1
HPM 588a	Public Health Law	1

COMPETENCIES FOR THE REGULATORY AFFAIRS TRACK

Upon completion of the track, the student will be able to:

- Utilize the best scientific and ethical standards to insure that food, pharmaceutical, and medical and diagnostic devices meet quality and regulatory standards.
- Develop/use leadership and management skills for conducting/overseeing research and clinical studies that are required by regulatory agencies.
- Develop processes that insure clear and consistent decisions to the public and to regulatory agencies.
- Assess/develop risk management strategies that can be used to get new products to the market swiftly, while assuring the consumer and regulatory bodies that efficacy and safety have been preserved.

Chronic Disease Epidemiology Department

Judith H. Lichtman, M.P.H., Ph.D., Chair

Epidemiology is the study of the frequency, distribution, and causes of diseases in human populations. Chronic Disease Epidemiology (CDE) aims to enhance understanding about the determinants of chronic diseases in populations and how to intervene most effectively to reduce morbidity and mortality due to chronic diseases. CDE strives to advance public health by promoting a research-based approach to the prevention and management of chronic disease. By focusing on the health of populations, as opposed to individuals, CDE utilizes places (neighborhoods, cities, states, countries), institutions (schools, housing developments, correctional facilities, workplaces), and health care facilities (newborn nurseries, nursing homes, public health clinics, hospitals) as its laboratories.

CDE students learn how to identify the types of data needed, choose appropriate data collection methods, collect the data, and analyze the data appropriately so that the whole research effort leads to the improvement of the health of populations. The CDE curriculum emphasizes critical thinking, based on thorough knowledge of research methods, and its application to the scientific literature, to the development of research protocols, and to the design, implementation, and analysis of epidemiologic investigations. A principal research instrument of the chronic disease epidemiologist is often the questionnaire. The development of valid, reliable, and unambiguous questionnaires is a skill taught to all CDE students. Increasingly, epidemiologists also make use of genetic and biologic markers to indicate exposure to potentially damaging agents or as signs of increased

susceptibility to or early onset of disease. Students learn the role of these methodologies throughout the program through course work, seminars, and practicum experiences.

Students learn about the role of epidemiology in a broad range of public health and medical areas, including the fields of aging, cancer, cardiovascular disease, global health, molecular and genetic epidemiology, perinatal and reproductive epidemiology, and psychosocial epidemiology, all areas in which the CDE department has particular strength. Among the resources available to students are the Yale Cancer Center; the Connecticut Tumor Registry (the oldest of its kind in the world); the Center for Perinatal, Pediatric, and Environmental Epidemiology; the Yale Program on Aging; and the Center for Interdisciplinary Research on AIDS. M.P.H. graduates of the CDE department find employment in a variety of research, public health practice, and advocacy settings, including academic institutions; public health agencies at the international, national, state, and local levels; the pharmaceutical industry; charitable foundations; and a variety of other nonprofit organizations. For example, graduates may obtain positions in such federal agencies as the National Institutes of Health (NIH) or the Centers for Disease Control and Prevention (CDC). Nonprofit agencies, such as cancer or heart associations, also recruit graduates to participate in or direct community health programs. Private industries, including pharmaceutical companies, find the quantitative skills of CDE graduates useful in monitoring drug safety and in conducting clinical research. Many CDE graduates subsequently pursue doctoral degrees in public health or other professional or academic fields.

DEPARTMENTAL REQUIREMENTS FOR THE M.P.H. IN CHRONIC DISEASE EPIDEMIOLOGY

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
*CDE 516b	Principles of Epidemiology II	1
CDE 523b	Measurement Issues in Chronic Disease Epidemiology	1
*CDE 525a and b	Seminar in Chronic Disease Epidemiology	n/a
*CDE 534b	Applied Analytic Methods in Epidemiology	1
EPH 525	Thesis	2

*Must be completed in the first year.

One of the following:

BIS 538b	Survey Sampling: Methods and Management	1
BIS 540a	Fundamentals of Clinical Trials	1
BIS 623a	Applied Regression Analysis	1
BIS 625a	Categorical Data Analysis	1
BIS 626a	Gerontologic Biostatistics: Statistical Methods for Clinical Research with Older Study Participants and for Basic Aging Research	1
BIS 628b	Longitudinal and Multilevel Data Analysis	1
BIS 630b	Applied Survival Analysis	1

One of the following:

CDE/EHS 502b	Physiology for Public Health	1
CDE 532b	Epidemiology of Cancer	1
CDE 535b	Epidemiology of Heart Disease and Stroke	1
CDE 562a	Nutrition and Chronic Disease	1

Chronic Disease Epidemiology students are advised to take *two* additional CDE elective courses.

COMPETENCIES FOR THE M.P.H. IN CHRONIC DISEASE EPIDEMIOLOGY

Upon receiving an M.P.H. with a concentration in Chronic Disease Epidemiology, the student will be able to:

- Evaluate the scientific merit and feasibility of epidemiologic study designs.
- Describe the epidemiology of common chronic diseases with more in-depth knowledge of a specialty area.
- Apply basic principles of health promotion and disease prevention to prevent and control chronic diseases.
- Synthesize information from a variety of epidemiologic and related studies.
- Design and carry out epidemiologic studies at an intermediate level.
- Analyze data and draw appropriate inferences from epidemiologic studies at an intermediate level.
- Demonstrate oral and written communication and presentation skills to effectively communicate and disseminate results to various professional and community audiences.
- Describe basic pathophysiology of selected chronic diseases.
- Identify, interpret, and use routinely collected data on disease occurrence.
- Review, critique and evaluate epidemiologic reports and research articles at an intermediate level.

Social and Behavioral Sciences Division

Trace S. Kershaw, Ph.D., Division Head

The overall purpose of the Social and Behavioral Sciences (SBS) division, within the CDE department, is to provide instruction in the theory and methods of the social and behavioral sciences that emphasize the social, psychological, and behavioral influences on health, illness, and recovery. The primary emphases are focused on (1) understanding the psychosocial, behavioral, community, and societal influences on health in the general population, including those who are disadvantaged; and (2) creating multilevel interventions that eliminate barriers to health, from infancy to old age.

The SBS curriculum takes an interdisciplinary approach and combines courses in social and behavioral sciences and epidemiology. SBS students will take courses in epidemiologic methods and biostatistics as well as courses in SBS-related methods and practical and advanced skills for the development and implementation of interventions in health promotion and disease prevention. In addition, SBS students will conduct a thesis that draws on a topic and methods related to the social and behavioral sciences.

**DIVISIONAL REQUIREMENTS FOR THE M.P.H.
IN SOCIAL AND BEHAVIORAL SCIENCES**

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
CDE 516b	Principles of Epidemiology II	1
CDE 525a and b	Seminar in Social and Behavioral Sciences	n/a
CDE 537b	Social and Interpersonal Influences on Health	1
CDE 574b	Developing a Health Promotion and Disease Prevention Intervention	1
EPH 525	Thesis	2
One of the following:		
BIS 505b	Introduction to Statistical Thinking II	1
CDE 534b	Applied Analytic Methods in Epidemiology	1
One of the following:		
CDE 580b	Qualitative Research Methods	1
CDE 676b	Questionnaire Development	1
One of the following:		
CDE 531a	Health and Aging	1
CDE 545b	Health Disparities by Race and Social Class	1
CDE 568b	Public Health Communications	1
CDE 572a	Obesity Prevention and Lifestyle Interventions	1
CDE 573a	Social and Cultural Factors in Mental Health and Illness	1
CDE 581a	Stigma and Health	1
CDE 585a	Sexuality, Health, and Human Rights	1
CDE 594a	Maternal-Child Public Health Nutrition	1
CDE 596b	Global Health and Justice Practicum	2
HPM 545b	Health Disparities	1

Remaining elective courses may include any course in social and behavioral sciences from across the University at level 300 or above, with approval of course instructor and YSPH faculty adviser.

**COMPETENCIES FOR THE M.P.H.
IN SOCIAL AND BEHAVIORAL SCIENCES**

Upon receiving an M.P.H. with a concentration in Social and Behavioral Sciences, the student will be able to:

- Identify the effects of social, psychological, and behavioral factors on individual and population health, including prevention, treatment, and management of chronic disease, adjustment to illness, adherence to treatment regimens, and promotion of recovery.
- Analyze health from multiple levels, including the individual, social group, community, and society.
- Critically evaluate and interpret the public health scientific literature as presented in professional journals and the popular media, including descriptive, analytic, and intervention studies.

- Construct research hypotheses and design a study to test these hypotheses.
- Describe how culture, social inequities, and biology influence health across the life span.
- Apply social, psychological, and behavioral theory in the design, implementation, and evaluation of prevention interventions aimed toward: (a) reducing psychological risk factors (e.g., racism); (b) increasing psychosocial well-being (e.g., coping with chronic illness); (c) increasing health-promoting behaviors (e.g., exercise); and (d) decreasing health-damaging behaviors (e.g., risky sex).
- Develop procedures and training materials to implement effective behavioral interventions.
- Identify ways to address health inequalities and promote health equity.
- Describe the appropriate statistical analyses to examine different types of research questions in the social and behavioral sciences.
- Demonstrate oral and written communication and presentation skills to effectively communicate and disseminate results to various professional and community audiences.
- Explain the dynamic interaction between policies and the social and behavioral sciences.
- Apply ethical principles involved in social and behavioral sciences as they relate to public health.

Environmental Health Sciences Department

Vasilis Vasiliou, Ph.D., Chair

People are exposed to a wide range of biological, chemical, and physical environmental stressors at home, work, and school as they go about their daily activities, such as working, commuting, eating, drinking, and exercising. An estimated 30 percent of the global burden of disease is attributable to environmental exposures that could be prevented. The Department of Environmental Health Sciences (EHS) equips students with interdisciplinary training to recognize and assess the impact of environmental hazards on human health and to identify solutions to reduce exposures to those hazards and prevent diseases in the population.

Students in EHS can select an emphasis in Environmental Exposure Science and Epidemiology, Environmental Toxicology, or Risk Assessment. Within these emphasized areas, there is flexibility for students to design, with their adviser, a program to meet individual needs. Students can take advantage of the wide variety of courses relevant to environmental health offered by the department and throughout the University, particularly those in the School of Forestry & Environmental Studies.

M.P.H. graduates of the EHS department find employment in city, state, and federal government agencies; environmental consulting firms; nongovernmental organizations; pharmaceutical companies; and private sector companies in the area of environmental or occupational health and safety. They also take research positions in academic organizations and government agencies. In addition, many students go on to pursue their Ph.D. and independent research careers.

DEPARTMENTAL REQUIREMENTS FOR THE M.P.H.
IN ENVIRONMENTAL HEALTH SCIENCES

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
EHS 503b	Public Health Toxicology	1
EHS 507a	Environmental Epidemiology	1
EHS 508b	Assessing Exposures to Environmental Stressors	1
EHS 510a	Principles of Environmental Health	1
EHS 525a and b	Seminar and Journal Club in Environmental Health (4 terms)	n/a
EPH 525b	Thesis	2

Note: Students may apply for exemptions from these requirements based on previous course work, at the discretion of the course instructor.

COMPETENCIES FOR THE M.P.H.
IN ENVIRONMENTAL HEALTH SCIENCES

Upon receiving an M.P.H. with a concentration in Environmental Health Sciences, the student will be able to:

- Discuss the basic principles of how contaminants are introduced into the air, water, soil, and food and then transported through the environment.
- Describe the mechanisms of toxicity of biological, chemical, and physical stressors, including absorption, distribution, metabolic transformation, elimination, and genetic susceptibility.
- Understand emerging concepts in public health toxicology such as the exposome, bioanalytical methods for measuring exposure, and governmental regulation of toxicology assessment.
- Design and apply epidemiological, toxicological, statistical, and exposure assessment techniques to evaluate risks associated with environmental hazards in the occupational, residential, and community environments.
- Apply the basic principles of risk management to develop a solution to mitigate risks associated with exposure to environmental hazards.
- Review, critique, and evaluate the scientific merit of environmental epidemiologic, toxicological, and exposure studies.
- Evaluate the scientific merit and feasibility of environmental epidemiology study designs.
- Synthesize information from published work on a complex environmental health issue.
- Coordinate an environmental epidemiology study, with minimal supervision.
- Write and present research findings to professional audiences.

Epidemiology of Microbial Diseases Department

Albert I. Ko, M.D., Chair

Microbial disease epidemiology is the science of the cause, distribution, frequency of, and resistance to infections caused by viruses, parasites, and bacteria, and of the distribution, transmission, and control of these agents.

The M.P.H. curriculum for the Department of Epidemiology of Microbial Diseases (EMD) is designed to train the student to understand the epidemiology of the major infectious agents, the diseases they cause, and the host response to those diseases. The interaction of the agent (parasite, bacterium, or virus) with the host and the influence of the environment on both agent and host are studied. The curriculum considers the role of age, immunological response, genetics, natural history of vectors, geographical distribution, and transmission and transport of agents. In addition to epidemiology courses, the department's faculty teach microbiology courses relating to bacteria, viruses, and parasites – including classification, replication, biochemistry, genetics, immunology, and pathogenesis – essential to the understanding of the epidemiology of microbial disease. Through these experiences the student gains a clear understanding of the quantitative and qualitative biological spectrum of microbial diseases.

Using a problem-solving approach the student learns about surveillance through collection and analysis of data followed by synthesis of information as a basis for public health decisions. The same approach is used to investigate epidemics and to study basic biologic problems.

Emphasis is placed on the application of epidemiological concepts to intervention in transmission cycles and disease progression. Intervention may be accomplished through such measures as vaccination, antimicrobial therapy, vector control, or behavior modification. The student is encouraged to obtain a solid laboratory foundation for diagnosis, for population-based serologic surveys, and for understanding the molecular basis of the disease process and intervention strategies. Third World infectious disease problems and their solutions are considered extensively.

Nearly half of EMD graduates in the M.P.H. program enter public health practice at the local, state, or national level, and a portion of the remainder enter hospital, medical center, or industrial programs. Many students continue graduate and professional education beyond the M.P.H. degree.

**DEPARTMENTAL REQUIREMENTS FOR THE M.P.H.
IN EPIDEMIOLOGY OF MICROBIAL DISEASES**

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
EMD 512a	Immunology for Epidemiologists	1
EMD 518a and b	Principles of Infectious Diseases I and II	2
EMD 525a and b	Seminar in Epidemiology of Microbial Diseases	n/a
EPH 525b	Thesis	2

One of the following:

BIS 505b	Introduction to Statistical Thinking II	1
CDE 534b	Applied Analytic Methods in Epidemiology	1

One of the following:

CDE 516b	Principles of Epidemiology II	1
EMD 553b	Transmission Dynamic Models for Understanding Infectious Diseases	1

Students are required to choose at least two additional EMD courses from the list of approved EMD electives (<http://publichealth.yale.edu/emd/curriculum/mph/curriculum.aspx>) in collaboration with their adviser.

COMPETENCIES FOR THE M.P.H. IN EPIDEMIOLOGY OF MICROBIAL DISEASES

Upon receiving an M.P.H. with a concentration in Epidemiology of Microbial Diseases, the student will be able to:

- Define the scope and worldwide impact of infectious diseases.
- Describe the processes that drive transmission and maintenance of infectious agents.
- Describe the epidemiology of the major infectious diseases worldwide, as well as risk exposures and behaviors as these relate to transmission.
- Describe the host genetic and immunologic factors that affect transmission and disease progression.
- Describe pathogen-related determinants that contribute to transmission and disease.
- Explain the interrelationship between the environment and the emergence and maintenance of infectious diseases in populations.
- Describe and critically evaluate approaches for the prevention and control of infectious diseases and define the issues that are key to their effective use.
- Apply principles and concepts obtained through course work to design and implement studies on the etiology, detection, prevention, or control of infectious diseases in the laboratory and field.
- Define the ethical challenges in infectious disease research.

Health Policy and Management Department

Susan H. Busch, Ph.D., Chair

The goal of the Department of Health Policy and Management (HPM) is to address the critical issues in improving public health, especially the health of high-risk and vulnerable populations. The department offers two M.P.H. programs: Health Policy and Health Care Management.

Health Policy Program

Susan H. Busch, Ph.D., Director

The specific objectives of the Health Policy program are: (1) to provide its students with a basic foundation of knowledge in public health and health policy, and (2) to teach concepts, principles, and scientific skills necessary for health services policy development and evaluation and health management. The Health Policy program – within the Department of Health Policy and Management – aims to have students develop an understanding of the importance of data and research as policy and management tools. Students are

taught to anticipate future needs relative to expanding technology, changing patterns of community health, and emerging societal and programmatic needs.

The program provides a unified approach to policy. It is built on the recognition that issues of health policy cannot be divorced from principles of sound management, nor can health care management or policy be developed without a fundamental understanding of morbidity, mortality, and epidemiologic methods. Further, the program recognizes that leaders cannot make successful decisions about the delivery of health care nor solve the health problems affecting society over the next decades without extensive analytic and decision-making skills. Students need to be able to translate sound scientific evidence into effective health policy. The program emphasizes training in quantitative methods, economics, financing, epidemiology, and evaluative methods for policy and management. Social and behavioral sciences are integral parts of many courses throughout the two-year curriculum.

Students design their own sequence of courses in health policy, and they may also specialize in particular substantive areas (e.g., addiction, health economics, vulnerable populations, global health, consumer decision making, or public health modeling). Students are required to take an integrative seminar in health policy.

Graduates of the program in Health Policy are employed in both the public and private sectors, including federal and state agencies, for-profit and nonprofit health care organizations, hospitals, and private consulting firms, as well as in research.

DEPARTMENTAL REQUIREMENTS FOR THE M.P.H. IN HEALTH POLICY

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
HPM 510a	Introduction to Health Policy and Health Systems	1
HPM 514b	Health Politics, Governance, and Policy	1
HPM 560b	Health Economics and U.S. Health Policy	1
HPM 583b	Methods in Health Services Research	1
HPM 586a	Microeconomics for Health Policy and Health Management	1
HPM 597b	Capstone Course in Health Policy	1
One of the following:		
HPM 570a	Cost-Effectiveness Analysis and Decision Making	1
HPM 588a	Public Health Law	1

The thesis (EPH 525) and BIS 505b, Introduction to Statistical Thinking II, are not required in HPM.

COMPETENCIES FOR THE M.P.H. IN HEALTH POLICY

Upon receiving an M.P.H. with a concentration in Health Policy, the student will be able to:

- Evaluate the efficiency of public policies using economic concepts.
- Identify market failures in the market for public health activities and health care.
- Conduct decision analysis to evaluate prevention, screening, and treatment alternatives in public health and clinical medicine.

- Critically evaluate both the methods and application of cost-effectiveness analysis to inform public health decision making.
- Assess statistical findings and empirical literature to enhance policy design and implementation.
- Synthesize the research literature, assessing strengths and weaknesses of published findings, to guide evidence-informed policy making.
- Describe and assess the historical evolution of how different countries' systems for financing and delivering health care have evolved and influenced the health of their populations.
- Describe the role of the major U.S. political institutions in health policy and politics.
- Identify and evaluate different strategies for financing, regulatory, and delivery system reform.
- Influence health policy and management decision making.
- Understand strategies of media advocacy to effectively reshape public awareness and opinion on health-related issues.
- Describe conceptual frameworks for political agenda setting.
- Assess how well different governance arrangements and policy designs result in a health care system that is responsive to differences in health needs among subsets of the population.
- Describe legal perspectives and institutions that affect health policy and public health, including assessment of legal and regulatory environments in the context of public health.
- Understand the ethical distinctions and professional norms associated with different paradigms for policy analysis and their implications for health policy.
- Demonstrate written communication skills to effectively communicate in professional health policy and community settings.
- Demonstrate oral communication and presentation skills to effectively communicate in professional health policy and community settings.
- Demonstrate leadership, team-based collaboration, and management skills.

Health Care Management Program

Howard Forman, M.D., Director

Ingrid Nembhard, Ph.D., Associate Director

Future health care managers will be involved in a wide range of settings, including hospitals, health systems, pharmaceutical and biotechnology companies, health maintenance organizations, managed care companies, insurance companies, and consulting. The Health Care Management program—within the Department of Health Policy and Management—was designed with the realization that both management training and public health training are needed to adequately prepare future leaders in health care management. The program is offered in conjunction with the Yale School of Management (SOM). The management courses at SOM, combined with HPM offerings and an integrative course in the second year, give students an excellent foundation for work in the field.

**DEPARTMENTAL REQUIREMENTS FOR THE M.P.H.
IN HEALTH CARE MANAGEMENT**

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
HPM 561b	Managing Health Care Organizations	1
HPM 583b	Methods in Health Services Research	1
HPM 586a	Microeconomics for Health Policy and Health Management	1
HPM 699a and b	Colloquium in Health Care Leadership	0.5
*MGT/HPM 502a	Fundamentals of Accounting and Finance	1
*MGT 525b	Competitive Strategy	1
*MGT 621a	Managing Social Enterprises	1
*MGT 657b	Creating Health Care and Life Science Ventures	1
*MGT/HPM 698b	Health Care Policy, Finance, and Economics	1
*MGT 856b	Managing Marketing Programs	0.5
*MGT 879b	Health Care Operations	0.5
*MGT 887a	Negotiations	0.5

*These courses are offered in the School of Management.

The thesis (EPH 525) and BIS 505b, Introduction to Statistical Thinking II, are not required in HPM.

**COMPETENCIES FOR THE M.P.H.
IN HEALTH CARE MANAGEMENT**

Upon receiving an M.P.H. with a concentration in Health Care Management, the student will be able to:

- Conduct financial analyses, including reading and analyzing financial statements.
- Conduct economic analyses, including cost-effectiveness analysis, to inform health management decision making.
- Apply operations management concepts to address organizational performance issues in health service organizations.
- Apply the principles of marketing analysis and planning to public health programs and health service organizations.
- Utilize statistical analysis skills to conduct health systems and policy research.
- Utilize research design and data management skills to conduct health policy and management research.
- Evaluate health care financing, regulatory, and delivery systems.
- Demonstrate written communication skills to effectively communicate in health policy, management, and community settings.
- Demonstrate oral communication and presentation skills to effectively communicate in health policy, management, and community settings.
- Utilize advocacy, persuasion, and negotiation skills to influence health policy and management decision making.
- Perform strategic analysis and planning for health care organizations.
- Describe legal perspectives on health policy and management issues, including assessment of legal and regulatory environments in the context of public health.

- Apply ethical decision making in a health care context.
- Apply management problem-solving skills to improve functioning of organizations and agencies in health systems.
- Demonstrate leadership, team-based collaboration, and conflict management skills.
- Coach and provide constructive feedback to colleagues.
- Work with and incorporate perspectives of culturally diverse groups.

Public Health Modeling Concentration

A. David Paltiel, Ph.D., Director

Students in the traditional two-year M.P.H. program may complete this concentration while they satisfy the requirements of their respective departments, divisions, or programs.

Beginning fall 2016, the Public Health Modeling Concentration (PHMC) will provide rigorous training in *systems thinking*: the explicit portrayal of real-world processes – their “physics,” their interactions, and their dynamics – that leave populations vulnerable to risk and disease. The concentration will train students to generate evidence about how those processes might behave under different specifications, with or without intervention. Modeling serves as a practical means of assembling the existing evidence base about mechanisms and conducting formal assessments in situations where financial, logistical, temporal, and/or ethical obstacles may conspire against the implementation and study of those mechanisms in real life.

REQUIREMENTS FOR THE M.P.H. PUBLIC HEALTH MODELING CONCENTRATION

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
EMD 553b	Transmission Dynamic Models for Understanding Infectious Diseases	1
EPH 520c	Summer Internship (a substantive modeling component is required)	n/a
EPH 581a and b	Seminar for Modeling in Public Health (two terms)	n/a
HPM 570a	Cost-Effectiveness Analysis and Decision Making	1
One of the following:		
BIS 557a	Computational Statistics	1
EMD 538a	Quantitative Methods for Infectious Disease Epidemiology	1
HPM 573b	Advanced Topics in Modeling Health Care Decisions	1
One additional elective course chosen from a preapproved list or by approval of the concentration committee*		1

*A list of preapproved elective courses is available on the Public Health Modeling Concentration Web site: <http://publichealth.yale.edu/modeling>.

COMPETENCIES FOR THE M.P.H. PUBLIC HEALTH MODELING CONCENTRATION

Each student in the Public Health Modeling Concentration will master the core curriculum competencies and the competencies for the student's department/division/program. In addition, upon receiving an M.P.H. degree in the Public Health Modeling Concentration, students will be able to:

- Identify questions in public health policy and practice that may be amenable to model-based approaches.
- Explain why modeling is particularly pertinent to describing the processes that drive transmission and control of infectious diseases.
- Demonstrate a working knowledge of the subdisciplines and methods that pertain to modeling, including: probability theory; decision analysis; cost-effectiveness analysis; simulation methods (e.g., Markov models, individual-based models, compartmental models, Monte Carlo methods).
- Apply public health modeling concepts, principles, and methodologies obtained through formal course work to specific problems. This includes: (1) defining research questions and elaborating testable hypotheses; (2) developing and explaining model-based approaches to address those questions and to test those hypotheses; (3) identifying, assembling, and managing the data needed to inform model structure and parameterization; (4) designing efficient computer programs to manage data, simulate models, and present model output using appropriate modeling software (e.g. Microsoft Excel, R, MATLAB); and (5) interpreting and communicating findings to a variety of academic, government, advocacy, and general audiences.
- Review, critique, and interpret the findings of model-based public health reports and research articles, with a mature appreciation of the practical problems of applying these methods in the evaluation of medical technologies and public health policies.
- Demonstrate sensitivity to the social, cultural, human rights, and ethical context within which public health modeling may be employed.
- Appreciate the challenges of adapting and implementing model-based approaches in limited-resource communities, vulnerable populations, and other special settings.

Global Health Concentration

Rafael Pérez-Escamilla, Ph.D., Director

Students in the traditional two-year M.P.H. program may complete this concentration while they satisfy the requirements of their respective departments, divisions, or programs.

The multidisciplinary approach of the Global Health Concentration (GHC) encourages creativity and innovation, while fostering a global perspective on public health. The concentration emphasizes an integrative, problem-solving approach to global health issues and to diseases and conditions that afflict low- and middle-income countries. Students who complete this concentration will be well prepared for positions in a variety of sectors/organizations – public and private, national, bilateral and multilateral – dedicated to global health challenges.

All students in the GHC will complete five global health courses, a global health-focused internship, and a global health capstone course. The internship must be conducted in a low- to middle-income country during the summer between the first and second years of the M.P.H. program. If students have already had 10–12 weeks of previous global health experience, they can do an internship based in the United States or another high-income country as long as it is pertinent to global health; otherwise, they must do an internship abroad. This alternative option must be approved by the GHC office prior to the start of the internship. The global health capstone course will provide an integrative “hands-on” problem-solving experience that will allow GHC students to hone all of the acquired GHC competencies. Students are strongly encouraged to write a global health-related thesis (as determined by their department/division/program).

REQUIREMENTS FOR THE M.P.H. GLOBAL HEALTH CONCENTRATION

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
EMD/HPM 566b	Critical Issues in Global Health (taken in first year)	1
EPH 520c	Summer Internship (must be global health-related in a low- to middle-income country)	n/a
EPH 591a	Global Health Foundations (taken in first year)	n/a
Global Health Capstone Course		1
Three global health courses selected from at least two of the five perspectives on public health*		3

*The five perspectives on public health are (1) biomedicine, (2) epidemiology, (3) psychosocial/social and behavioral/anthropology, (4) development/political economy, and (5) ethics/history/humanities. A list of courses offered in each of the five areas is available on the GHC Web site. Please note that all courses listed may not be offered each term.

Students pursuing the GHC may also propose courses not listed here as potential GHC electives. In this case, students must complete the required approval form, which is available on the GHC Web site. Requests must be approved before the YSPH course registration deadline. Upon receiving the form, the YSPH GHC program will let the student know if the course meets GHC elective requirements.

COMPETENCIES FOR THE M.P.H. GLOBAL HEALTH CONCENTRATION AND THE ADVANCED PROFESSIONAL M.P.H. PROGRAM GLOBAL HEALTH TRACK

Each student in the GHC will master the core curriculum competencies and the competencies for the student’s department/division/program. In addition, upon receiving an M.P.H. degree in the GHC, the student will be able to:

- Describe the major causes of morbidity and mortality in the world, including an understanding of the global burden of disease.
- Describe cross-national determinants of health based on courses selected from the five perspectives on public health: biomedicine; epidemiology; psychosocial/social and behavioral/anthropology; development/political economy; and ethics/history/humanities.

- Analyze global health problems taking into account their social, political, economic, legal, and human rights dimensions.
- Understand and critically assess the different components of the global health governance infrastructure.
- Assess global health issues from an interdisciplinary perspective, including public health disciplines, medicine, international relations, environmental studies, political science, law, anthropology, and others.
- Apply necessary leadership skills to serve as bridges between the global health research and practice settings.
- Apply research methods in the design, monitoring, and evaluation of global health initiatives.
- Explain and propose solutions for the unique challenges involved in conducting public health research in low-resource settings.
- Describe and analyze different roles of global public health practitioners and apply this to individual career development.

ADVANCED PROFESSIONAL M.P.H. PROGRAM

Mayur M. Desai, M.P.H., Ph.D., Director

The eleven-month Advanced Professional M.P.H. Program provides rigorous public health training to:

1. individuals with a doctoral-level (or international equivalent) degree in a field related to public health (e.g., physicians, dentists, veterinarians, attorneys, and those with a doctorate in the biological, behavioral, or social sciences);
2. individuals with a master's degree and at least two years of relevant work experience;
3. individuals with a bachelor's degree and at least five years of relevant work experience; and
4. students who have completed their third year in an accredited medical, dental, or podiatric school in the United States.

The program is designed for mature individuals with clear goals in public health. Students can enter the program to gain skills in the public health sciences and to prepare for careers in a variety of settings, including academia; local, national, or international public health agencies; industry; and nonprofit foundations and research organizations. Physicians in preventive medicine, occupational and environmental medicine, and aerospace medicine residency programs can enter the program to complete their M.P.H. degree requirement.

Students concentrate in one of six tracks: Applied Biostatistics and Epidemiology, Student and Behavioral Sciences, Health Policy, Global Health, Preventive Medicine, or Occupational and Environmental Medicine. The program begins with an intensive seven-week summer session (July–August), followed by two full-time terms of study. After completing the seven-week summer session, students may choose to complete the remainder of the program on a part-time basis; however, all requirements must be completed within three years of the date of matriculation.

Curriculum for the Advanced Professional M.P.H. Program

APPLIED BIOSTATISTICS AND EPIDEMIOLOGY TRACK

Core Requirements

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 515c	Accelerated Biostatistics	2
CDE 505c	Accelerated Social and Behavioral Foundations of Health	1
CDE 515c	Accelerated Epidemiology	1
EPH 100a	Professional Skills Seminar	n/a
EPH 515a	Ethics and Public Health: An Introduction	n/a

One of the following:

HPM 510a	Introduction to Health Policy and Health Systems	1
HPM 560b	Health Economics and U.S. Health Policy	1

One of the following:

EHS 503b	Public Health Toxicology	1
EHS 507a	Environmental Epidemiology	1
EHS 510a	Principles of Environmental Health	1
EHS 511b	Principles of Risk Assessment	1
EHS 575a	Introduction to Occupational and Environmental Medicine	1

One of the following:

CDE 596b	Global Health and Justice Practicum	2
EPH 500b	Public Health Practicum	1
EPH 542b	Practice-Based Community Health Research	1

Track Requirements

CDE 534b	Applied Analytic Methods in Epidemiology	1
----------	--	---

One of the following:

BIS 540a	Fundamentals of Clinical Trials	1
CDE 650a	Introduction to Evidence-Based Medicine and Health Care	1

Two of the following:

BIS 623a	Applied Regression Analysis	1
BIS 625a	Categorical Data Analysis	1
BIS 628b	Longitudinal and Multilevel Data Analysis	1
BIS 630b	Applied Survival Analysis	1

Two additional biostatistics and/or epidemiology courses 2

Two elective courses 2

One of the following capstone courses:

CDE 574b	Developing a Health Promotion and Disease Prevention Intervention	1
CDE 617b	Developing a Research Proposal	1
EPH 608b	Frontiers of Public Health	1

SOCIAL AND BEHAVIORAL SCIENCES TRACK**Core Requirements**

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 515c	Accelerated Biostatistics	2
CDE 505c	Accelerated Social and Behavioral Foundations of Health	1
CDE 515c	Accelerated Epidemiology	1
EPH 100a	Professional Skills Seminar	n/a
EPH 515a	Ethics and Public Health: An Introduction	n/a

One of the following:

HPM 510a	Introduction to Health Policy and Health Systems	1
HPM 560b	Health Economics and U.S. Health Policy	1

One of the following:

EHS 503b	Public Health Toxicology	1
EHS 507a	Environmental Epidemiology	1
EHS 510a	Principles of Environmental Health	1
EHS 511b	Principles of Risk Assessment	1
EHS 575a	Introduction to Occupational and Environmental Medicine	1

One of the following:

CDE 596b	Global Health and Justice Practicum	2
EPH 500b	Public Health Practicum	1
EPH 542b	Practice-Based Community Health Research	1

Track Requirements

CDE 534b	Applied Analytic Methods in Epidemiology	1
----------	--	---

One of the following:

CDE 577b	Interdisciplinary Research Methods in the Social and Behavioral Sciences	1
CDE 580b	Qualitative Research Methods	1

Two of the following (or permission of academic adviser to substitute):

CDE 531a	Health and Aging	1
CDE 545b	Health Disparities by Race and Social Class	1
CDE 572a	Obesity Prevention and Lifestyle Interventions	1
CDE 573a	Social and Cultural Factors in Mental Health and Illness	1
CDE 581a	Stigma and Health	1
CDE 585a	Sexuality, Health, and Human Rights	1
CDE 594a	Maternal-Child Public Health Nutrition	1

Four elective courses 4

One of the following capstone courses:

CDE 574b	Developing a Health Promotion and Disease Prevention Intervention	1
CDE 617b	Developing a Research Proposal	1
EPH 608b	Frontiers of Public Health	1

HEALTH POLICY TRACK

Core Requirements

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 515c	Accelerated Biostatistics	2
CDE 505c	Accelerated Social and Behavioral Foundations of Health	1
CDE 515c	Accelerated Epidemiology	1
EPH 100a	Professional Skills Seminar	n/a
EPH 515a	Ethics and Public Health: An Introduction	n/a

One of the following:

EHS 503b	Public Health Toxicology	1
EHS 507a	Environmental Epidemiology	1
EHS 510a	Principles of Environmental Health	1
EHS 511b	Principles of Risk Assessment	1
EHS 575a	Introduction to Occupational and Environmental Medicine	1

One of the following:

CDE 596b	Global Health and Justice Practicum	2
EPH 500b	Public Health Practicum	1
EPH 542b	Practice-Based Community Health Research	1
HPM 555a or b	Health Policy or Health Care Management Practicum	1

Track Requirements

HPM 510a	Introduction to Health Policy and Health Systems	1
HPM 514b	Health Politics, Governance, and Policy	1
HPM 570a	Cost-Effectiveness Analysis and Decision Making	1
HPM 583b	Methods in Health Services Research	1
HPM 586a	Microeconomics for Health Policy and Health Management	1

One additional Health Policy and Management course 1

Three elective courses 3

One of the following capstone courses:

HPM 561b	Managing Health Care Organizations	1
HPM 597b	Capstone Course in Health Policy	1

GLOBAL HEALTH TRACK**Core Requirements**

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 515c	Accelerated Biostatistics	2
CDE 505c	Accelerated Social and Behavioral Foundations of Health	1
CDE 515c	Accelerated Epidemiology	1
EPH 100a	Professional Skills Seminar	n/a
EPH 515a	Ethics and Public Health: An Introduction	n/a

One of the following:

HPM 510a	Introduction to Health Policy and Health Systems	1
HPM 560b	Health Economics and U.S. Health Policy	1

One of the following:

EHS 503b	Public Health Toxicology	1
EHS 507a	Environmental Epidemiology	1
EHS 510a	Principles of Environmental Health	1
EHS 511b	Principles of Risk Assessment	1
EHS 575a	Introduction to Occupational and Environmental Medicine	1

One of the following:

CDE 596b	Global Health and Justice Practicum	2
EPH 500b	Public Health Practicum	1
EPH 542b	Practice-Based Community Health Research	1

Track Requirements

EMD/HPM 566b	Critical Issues in Global Health	1
EPH 591a	Global Health Foundations	n/a

One of the following:

CDE 534b	Applied Analytic Methods in Epidemiology	1
HPM 583b	Methods in Health Services Research	1

Three Global Health courses from at least two of the five perspectives on public health (list of courses published each fall) 3

Three elective courses 3

One of the following capstone courses:

CDE 574b	Developing a Health Promotion and Disease Prevention Intervention	1
CDE 617b	Developing a Research Proposal	1
EPH 608b	Frontiers of Public Health	1
HPM 561b	Managing Health Care Organizations	1
HPM 597b	Capstone Course in Health Policy	1

PREVENTIVE MEDICINE TRACK

Core Requirements

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 515c	Accelerated Biostatistics	2
CDE 505c	Accelerated Social and Behavioral Foundations of Health	1
CDE 515c	Accelerated Epidemiology	1
EPH 100a	Professional Skills Seminar	n/a
EPH 515a	Ethics and Public Health: An Introduction	n/a

One of the following:

HPM 510a	Introduction to Health Policy and Health Systems	1
HPM 560b	Health Economics and U.S. Health Policy	1

One of the following:

CDE 596b	Global Health and Justice Practicum	2
EPH 500b	Public Health Practicum	1
EPH 542b	Practice-Based Community Health Research	1

Track Requirements

CDE 534b	Applied Analytic Methods in Epidemiology	1
EHS 575a	Introduction to Occupational and Environmental Medicine	1

One of the following:

CDE 541a	Community Health Program Evaluation	1
CDE 562a	Nutrition and Chronic Disease	1
CDE 572a	Obesity Prevention and Lifestyle Interventions	1

One of the following:

BIS 538b	Survey Sampling: Methods and Management	1
BIS 540a	Fundamentals of Clinical Trials	1
CDE 650a	Introduction to Evidence-Based Medicine and Health Care	1

One of the following:

EHS 503b	Public Health Toxicology	1
EHS 511b	Principles of Risk Assessment	1

Four elective courses 4

One of the following capstone courses:

CDE 574b	Developing a Health Promotion and Disease Prevention Intervention	1
CDE 617b	Developing a Research Proposal	1
EPH 608b	Frontiers of Public Health	1

**OCCUPATIONAL AND ENVIRONMENTAL MEDICINE TRACK
(YALE OEM FELLOWS)**

Core Requirements

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 505a	Introduction to Statistical Thinking I	1
CDE 505a	Social and Behavioral Foundations of Health	1
CDE/EMD 508a	Principles of Epidemiology I	1
EHS 503b	Public Health Toxicology	1
EPH 100a	Professional Skills Seminar	n/a
EPH 515a	Ethics and Public Health: An Introduction	n/a

One of the following:

HPM 510a	Introduction to Health Policy and Health Systems	1
HPM 560b	Health Economics and U.S. Health Policy	1

Track Requirements

CDE 534b	Applied Analytic Methods in Epidemiology	1
EHS 505a	Fundamentals of Occupational Hygiene, Safety, and Ergonomics	1
EHS 511b	Principles of Risk Assessment	1
EHS 573b	Epidemiological Issues in Occupational and Environmental Medicine	1
EHS 575a	Introduction to Occupational and Environmental Medicine	1
EPH 525b	Thesis	2
Four elective courses		4

Note: Yale Occupational and Environmental Medicine Fellows may count their practicum year, accredited by the Accreditation Council for Graduate Medical Education, as the required practice experience for the M.P.H. program.

**OCCUPATIONAL AND ENVIRONMENTAL MEDICINE TRACK
(11-MONTH STUDENTS)**

Core Requirements

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 515c	Accelerated Biostatistics	2
CDE 505c	Accelerated Social and Behavioral Foundations of Health	1
CDE 515c	Accelerated Epidemiology	1
EHS 511b	Principles of Risk Assessment	1
EPH 100a	Professional Skills Seminar	n/a
EPH 515a	Ethics and Public Health: An Introduction	n/a

One of the following:

HPM 510a	Introduction to Health Policy and Health Systems	1
HPM 560b	Health Economics and U.S. Health Policy	1

One of the following:

CDE 596b	Global Health Justice Practicum	2
EPH 500b	Public Health Practicum	1
EPH 542b	Practice-Based Community Health Research	1

Track Requirements

CDE 534b	Applied Analytic Methods in Epidemiology	1
EHS 503b	Public Health Toxicology	1
EHS 505a	Fundamentals of Occupational Hygiene, Safety, and Ergonomics	1
EHS 573b	Epidemiological Issues in Occupational and Environmental Medicine	1
EHS 575a	Introduction to Occupational and Environmental Medicine	1

Three elective courses 3

One of the following capstone courses:

CDE 574b	Developing a Health Promotion and Disease Prevention Intervention	1
CDE 617b	Developing a Research Proposal	1
EPH 608b	Frontiers of Public Health	1

Competencies for the Advanced Professional M.P.H. Program

CORE CURRICULUM

Upon completing the core curriculum of the M.P.H. program, the student will be able to:

- Demonstrate a knowledge base in the disciplines of biostatistics, chronic and infectious disease epidemiology, health systems, public policy, social and behavioral sciences, and environmental health.
- Apply basic research skills to specific public health problems in both group and individual settings, including the ability to define problems; construct, articulate, and test hypotheses; draw conclusions; and communicate findings to a variety of audiences.
- Explain the interrelationships among a multitude of factors that can impact a public health problem, including scientific, medical, environmental, cultural, social, behavioral, economic, political, and ethical factors.
- Review, critique, and evaluate public health reports and research articles.
- Apply public health concepts, principles, and methodologies obtained through formal course work to actual problems experienced in the community or work environment.
- Critically evaluate programs, interventions, and outcomes that relate to public health practice.
- Apply ethical standards and professional values as they relate to the practice of public health.
- Demonstrate sensitivity to the social context within which public health professionals practice.

APPLIED BIostatISTICS & EPIDEMIOLOGY TRACK

Upon receiving an M.P.H. degree in the Advanced Professional M.P.H. Program, with a concentration in Applied Biostatistics and Epidemiology, the student will be able to:

- Describe intermediate to advanced concepts of random variation and commonly used statistical probability distributions.
- Develop an efficient design for collecting, recording, and storing data collected in the conduct of public health and medical research.
- Design efficient computer programs for study management, statistical analysis, as well as presentation using SAS and other programming languages.
- Produce edited data sets suitable for statistical analyses.
- Produce working tables and statistical summaries describing research in health science.
- Evaluate the scientific merit and feasibility of epidemiologic study designs.
- Describe the epidemiology of common chronic diseases.
- Synthesize information from a variety of epidemiologic and related studies.
- Design and carry out epidemiologic studies, with minimal supervision.
- Analyze data and draw appropriate inferences from epidemiologic studies at an intermediate to advanced level, using a variety of analytical tools.
- Write an NIH-type epidemiologic research proposal.
- Identify, interpret, and use routinely collected data on disease occurrence.
- Review, critique, and evaluate epidemiologic reports and research articles, as well as the broader health sciences literature, at an intermediate level, using principles of epidemiology and biostatistics.
- Develop written presentations based on intermediate to advanced statistical and epidemiologic analyses for both public health professionals and educated lay audiences.

SOCIAL & BEHAVIORAL SCIENCES TRACK

Upon receiving an M.P.H. degree in the Advanced Professional M.P.H. Program, with a concentration in Social and Behavioral Sciences, the student will be able to:

- Identify the effects of social, psychological, and behavioral factors on individual and population health, including prevention, treatment, and management of chronic disease, adjustment to illness, adherence to treatment regimens, and promotion of recovery.
- Analyze health from multiple levels, including the individual, social group, community, and society.
- Critically evaluate and interpret the public health scientific literature as presented in professional journals and the popular media, including descriptive, analytic, and intervention studies.
- Construct research hypotheses and design a study to test these hypotheses.
- Apply social, psychological, and behavioral theory in the design, implementation, and evaluation of prevention interventions aimed toward: (a) decreasing health-damaging behaviors (e.g., risky sex); (b) increasing health-promoting behaviors (e.g., exercise); and (c) increasing psychosocial well-being (e.g., coping with chronic illness).

- Design an intervention aimed at changing a particular health behavior or preventing a disease.
- Develop procedures and training materials to implement effective behavioral interventions.
- Describe how culture, social inequities, and biology influence health across the lifespan.
- Identify ways to address health inequalities and promote health equity.
- Describe the appropriate statistical analyses to examine different types of research questions in the social and behavioral sciences.
- Demonstrate oral and written communication and presentation skills to effectively communicate and disseminate results to various professional and community audiences.
- Explain the dynamic interaction between policies and the social and behavioral sciences.
- Apply the ethical principles involved in social and behavioral sciences as they relate to public health.
- Write an NIH-type research proposal.

HEALTH POLICY TRACK

Upon receiving an M.P.H. degree in the Advanced Professional M.P.H. Program, with a concentration in Health Policy, the student will be able to:

- Apply the principles of microeconomics (e.g., markets and market failure) in a health policy context.
- Conduct economic analysis, including cost-effectiveness analysis, to inform public health decision making.
- Describe and assess the historical evolution of the U.S. health care system.
- Describe the role of the major U.S. political institutions in health policy and politics.
- Utilize statistical analysis skills to conduct health systems and policy research.
- Utilize research design and data management skills to conduct health policy and management research.
- Evaluate health care financing, regulatory, and delivery systems.
- Demonstrate written communication skills to effectively communicate in professional health policy and community settings.
- Demonstrate oral communication and presentation skills to effectively communicate in professional health policy and community settings.
- Describe conceptual frameworks for political agenda setting.
- Perform strategic analysis and planning for public health care organizations.
- Evaluate health policies in terms of efficiency, efficacy, equity, and feasibility.
- Describe legal perspectives on health policy and management issues, including assessment of legal and regulatory environments in the context of public health.
- Apply ethical decision making in a health care context.
- Demonstrate leadership, team-based collaboration, and management skills.
- Work with and incorporate the perspectives of culturally diverse groups.

GLOBAL HEALTH TRACK

Upon receiving an M.P.H. degree in the Advanced Professional M.P.H. Program, with a concentration in Global Health, the student will be able to:

- Describe the major causes of morbidity and mortality in the world and in the world's major regions.
- Describe the epidemiology, transmission, and pathogenesis of global infectious diseases, including neglected tropical diseases.
- Apply burden of disease measures to the analysis of global health disparities.
- Explain the causes of global health disparities.
- Review methods available to control each of the world's major diseases.
- Evaluate which disease control measures would be most appropriate for a given setting.
- Describe cross-national determinants of health, including globalization, international trade policy, practices of multinational corporations, urbanization, migration, international conflict, and environmental change.
- Analyze global health problems, taking into account their social, political, economic, legal, and human rights dimensions.
- Critically assess the global health governance infrastructure and analyze alternative approaches for health care delivery, regulation, and financing.
- Apply relevant concepts and theories to policy and management challenges faced by health systems in low-, middle-, and high-income countries.
- Assess global health issues from an interdisciplinary perspective, including public health disciplines, medicine, international relations, environmental studies, political science, law, anthropology, and others.
- Apply necessary leadership skills to serve as bridges between the global health research and practice settings.
- Apply quantitative and qualitative research methods to global health issues.
- Explain and propose solutions for the unique challenges involved in conducting public health research in low-resource settings.

PREVENTIVE MEDICINE TRACK

Upon receiving an M.P.H. degree in the Advanced Professional M.P.H. Program, with a concentration in Preventive Medicine, the student will be able to:

- Evaluate the scientific merit and feasibility of epidemiologic study designs.
- Construct research hypotheses and design a study to test these hypotheses.
- Synthesize information from a variety of epidemiologic and related studies.
- Describe the appropriate statistical analyses to examine different types of epidemiologic and social and behavioral research questions.
- Identify, interpret, and use routinely collected data on disease occurrence.
- Review, critique, and evaluate epidemiologic reports and research articles at an intermediate level.
- Write an NIH-type research proposal.
- Apply social, psychological, and behavioral theory in the design, implementation, and evaluation of prevention interventions.
- Describe the role of health behavior in disease.

- Evaluate and interpret health behavior change interventions.
- Review, interpret, and evaluate epidemiologic reports and research articles pertaining to occupational and environmental risk factors.
- Review, interpret, and evaluate toxicological reports and research articles pertaining to occupational and environmental risk factors.
- Synthesize complex data sources about occupational and environmental hazards to make inferences about human risk.

OCCUPATIONAL & ENVIRONMENTAL MEDICINE TRACK

Upon receiving an M.P.H. degree in the Advanced Professional M.P.H. Program, with a concentration in Occupational and Environmental Medicine, the student will be able to:

- Evaluate the scientific merit and feasibility of occupational and environmental health study designs.
- Describe and apply alternative strategies for assessment of occupational and environmental exposures.
- Design and conduct an occupational/environmental health study, with minimal supervision.
- Review, interpret, and evaluate epidemiologic reports and research articles pertaining to occupational and environmental risk factors.
- Review, interpret, and evaluate toxicological reports and research articles pertaining to occupational and environmental risk factors.
- Synthesize complex data sources about occupational and environmental hazards to make inferences about human risk.
- Evaluate work, home, and other environments for potential hazardous exposures.
- Utilize industrial hygiene principles to develop a plan to evaluate and control workplace hazards.
- Communicate occupational and environmental health information to employers, workers, professional audiences, and the general public, orally and in writing.

B.A.-B.S./M.P.H. SELECT PROGRAM

The Select Program in Public Health gives Yale College students interested in the field of public health the opportunity to earn a bachelor's degree from Yale College and an M.P.H. degree from the Yale School of Public Health in a five-year joint program.

A total of 18 course units is required for the M.P.H. degree. Students in the B.A.-B.S./M.P.H. program affiliate with one of seven departments or programs at the School of Public Health. Their primary adviser comes from this department/program, and their specific requirements within the five-year program are defined by this affiliation. Several course requirements can be taken while a senior at Yale College, with the remaining requirements satisfied during the one-year enrollment at the School of Public Health.

In their four years of Yale College enrollment, students complete a standard Yale College major, which consists of at least 36 course credits, 32 of which must be Yale College undergraduate approved courses credits. Two of those Yale College courses may be counted as electives toward the M.P.H. degree requirements. These electives must be on the School of Public Health's list of approved courses.

The remaining 4 course credits of the 36 required for a Yale College degree are typically taken at YSPH in order to fulfill the M.P.H. degree requirements. Students may take additional YSPH courses while at Yale College, as long as they complete the required 32 undergraduate courses.

Students accepted into the B.A.-B.S./M.P.H. program typically take four or more of the following YSPH courses during their senior year:

BIS 505a and b, Introduction to Statistical Thinking I and II

CDE 505a, Social and Behavioral Foundations of Health

CDE/EMD 508a, Principles of Epidemiology I

EPH 515a, Ethics and Public Health: An Introduction

EHS 503b, Public Health Toxicology

or

EHS 510a, Principles of Environmental Health

HPM 510a, Introduction to Health Policy and Health Systems

or

HPM 560b, Health Economics and U.S. Health Policy

Before beginning their fifth year at YSPH, students complete a public health internship during the summer between the fourth and fifth years of the B.A.-B.S./M.P.H. program. Information about the summer internship is available at <http://publichealth.yale.edu/internship>. Students are in full-time residence at the School of Public Health during their fifth year in the program, during which time they complete the remaining required courses and the master's thesis. Information on each department's degree requirements is available at <http://publichealth.yale.edu/admissions/programs/mpH>.

Yale College students may apply to YSPH for the joint program in the fall term of their junior year. Candidates for admission must present evidence of a commitment to public health, as well as quantitative skills. In addition, a year of college-level mathematics and a year of science and social science are strongly preferred, though some of these expectations can be completed after applying to the program. Additional expectations may apply to particular departments or programs. Applicants must complete YSPH application forms and submit transcripts, SAT scores, two letters of recommendation (at least one from an instructor in a Yale course), and a personal statement. Approval by the dean of the student's residential college is also required.

Financial aid, if provided during the fifth year, will come from YSPH. The School cannot guarantee that the financial aid award in the fifth year will be equivalent to previous awards.

Further information about this program may be obtained from the Office of Student Affairs, 47 College St., Suite 108, New Haven CT 06510, 203.785.6260, or online at <http://publichealth.yale.edu/admissions/programs/select/index.aspx>.

SHANGHAI JIAO TONG B.S./M.P.H. DUAL-DEGREE PROGRAM

The Shanghai Jiao Tong B.S./M.P.H. Dual-Degree Program in public health gives undergraduate students interested in the field of public health the opportunity to earn a B.S. degree from the Shanghai Jiao Tong University (SJTU) and an M.P.H. degree from the Yale School of Public Health (YSPH) in a five-year joint program.

As participants in the dual-degree program, students will complete their first three academic years at SJTU (including potential study-abroad opportunities that are part of the regular SJTU curriculum). The fourth and fifth academic years of the program will take place at YSPH. After the successful completion of all SJTU requirements (including all requirements for course credits and graduation thesis), students will receive a B.S. degree from SJTU at the end of their fourth academic year; and after successful completion of all program requirements at Yale, students will receive an M.P.H. from Yale at the end of their fifth academic year.

SJTU students wishing to apply to the dual-degree program will become eligible to do so in the third year of their academic program at SJTU. Applicants must be in the top of their student cohort (e.g., the third-year class of which they are a member) at SJTU. SJTU students may apply to the dual-degree program between October 1 and November 1 of the third year of their academic program. Students must notify the registry at SJTU of their intent to apply to the program. A committee at SJTU will preselect at most twenty of the most qualified applicants and notify Yale of the intent of those students to apply. Applications must be submitted to the YSPH via its online application system. The registry at SJTU must also be notified of the intent to apply. Students may apply for a concentration in Biostatistics, Chronic Disease Epidemiology, Environmental Health Sciences, Epidemiology of Microbial Diseases, Health Care Management, Health Policy, or Social and Behavioral Sciences.

SJTU students admitted to the program will spend the entire fourth and fifth years of the program in residence at YSPH taking prescribed classes. A total of 20 course units is required for the Yale M.P.H. degree. Students admitted to the program will also participate in a public health-related internship during the summer between the end of the fourth academic year and the start of the fifth academic year. The internship must be approved by the YSPH Office of Public Health Practice.

Further information about this program may be obtained from the Office of Student Affairs, 47 College St., Suite 108, New Haven CT 06510, 203.785.6260, or on the Web at <http://publichealth.yale.edu>.

YALE-NUS COLLEGE CONCURRENT-DEGREE PROGRAM

The Yale-NUS College Concurrent-Degree Program in public health gives undergraduate students interested in the field of public health the opportunity to earn a bachelor's degree from Yale-NUS College (Yale-NUS) and an M.P.H. degree from the Yale School of Public Health (YSPH) in a five-year joint program.

As part of the concurrent-degree program, students will complete their first three academic years at Yale-NUS (including potential study-abroad opportunities that are part of the regular Yale-NUS curriculum). The first term of the fourth academic year will then take place at YSPH. In order to satisfy each student's bachelor's degree requirements, the second term of the fourth academic year will take place at Yale-NUS in Singapore. The entire fifth academic year will take place at YSPH.

Yale-NUS students wishing to apply to the concurrent-degree program will become eligible to do so in the third year of their academic program at Yale-NUS. Applicants must be among the top students in their cohort (e.g., the third-year class of which they are a member) at Yale-NUS. Yale-NUS students may apply to the concurrent-degree program between October 1 and November 1 of the third year of their academic program at Yale-NUS. Applications must be submitted to YSPH via its online application system. The registry at Yale-NUS must also be notified of the intent to apply. Students must apply for a concentration in Biostatistics, Chronic Disease Epidemiology, Environmental Health Sciences, Epidemiology of Microbial Diseases, Health Policy, or Social and Behavioral Sciences. Yale-NUS students admitted to the concurrent-degree program will not be eligible to apply for a concentration in Health Care Management.

The first term of the fourth academic year will be spent at YSPH taking 4 credits and beginning work on a capstone project (e.g., senior thesis). The second term of the fourth academic year will be spent at Yale-NUS, where the student will complete a capstone project, take two approved public health-related modules at Yale-NUS or the National University of Singapore, and take one elective/major module. The entire fifth year of the program will be spent in residence at YSPH taking prescribed classes. A total of 18 course units is required for the M.P.H. degree. Students may, with prior approval, count two courses in their major (e.g., Life Sciences, Mathematics, Computer Science, etc.) or selective electives at Yale-NUS toward the M.P.H. degree requirements of the concurrent-degree program.

As part of the program, Yale-NUS students admitted to the concurrent-degree program will participate in a public health-related internship during the summer between the end of the fourth academic year and the start of the fifth academic year. The internship must be approved by the YSPH Office of Public Health Practice. Students who are not U.S. citizens must complete the internship outside of the United States.

Further information about this program may be obtained from the Office of Student Affairs, 47 College St., Suite 108, New Haven CT 06510, 203.785.6260, or on the Web at <http://publichealth.yale.edu>.

ACCELERATED M.B.A./M.P.H. PROGRAM IN HEALTH CARE MANAGEMENT

The Accelerated M.B.A./M.P.H. Program in Health Care Management enables students to earn an M.B.A. degree from the Yale School of Management (SOM) and an M.P.H. degree from the Yale School of Public Health (YSPH) in a twenty-two-month integrated program. The program is designed to provide future health care leaders with the interdisciplinary training and perspective needed to address complex and multidimensional industry challenges.

Students begin the program with an intensive summer session at YSPH, where they complete M.P.H. core courses in Biostatistics, Epidemiology, and Social and Behavioral Sciences. The first year is spent at SOM, and students take courses at both schools during the final year.

Curriculum for the Accelerated M.B.A./M.P.H. in Health Care Management

In this program, students complete a minimum of 14 course units at YSPH and 52 course units at SOM, which include 33 units of core requirements and 19 elective course units. The 14 course units completed at YSPH can be applied to the 19 elective course units required at SOM.

YALE SCHOOL OF PUBLIC HEALTH

Core Requirements

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 515c	Accelerated Biostatistics	2
CDE 505c	Accelerated Social and Behavioral Foundations of Health	1
CDE 515c	Accelerated Epidemiology	1
EHS 510b	Principles of Environmental Health	1
EPH 100a	Professional Skills Seminar	n/a
EPH 515a	Ethics and Public Health: An Introduction	n/a

Health Care Management Requirements

HPM 561b	Managing Health Care Organizations	1
HPM 570a	Cost-Effectiveness Analysis and Decision Making	1
HPM 583b	Methods in Health Services Research	1
HPM 698b	Health Care Policy, Finance, and Economics	1
*HPM 699a and b	Colloquium in Health Care Leadership (four terms)	1
Three electives at YSPH		3
One of the following global health courses:†		
CDE 551b	Global Noncommunicable Disease	1
EMD/HPM 566b	Critical Issues in Global Health	1
HPM 576b	Comparative Health Care Systems	1

Public Health Practice Requirement

One of the following four:

EPH 500b	Public Health Practicum	1
EPH 520c	Summer Internship (approval required)	n/a
EPH 542b	Practice-Based Community Health Research	1
HPM 555a or b	Health Care Management Practicum	1

*Students may replace the second year of HPM 699a and b with an elective at YSPH.

†Students may select an alternative global health course from the Global Health Concentration course list.

YALE SCHOOL OF MANAGEMENT

Core Requirements

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
MGT 401a	Managing Groups and Teams	1
MGT 402a	Basics of Accounting	2
MGT 403a	Probability Modeling and Statistics	2
MGT 404a	Basics of Economics	2.5
MGT 405a	Modeling Managerial Decisions	2
MGT 408a	Introduction to Negotiation	0.5
MGT 410a	Competitor	2
MGT 411a	Customer	2
MGT 412a	Investor	2
MGT 413b	State and Society	2
MGT 417a	Power and Politics	2
MGT 418b	Global Virtual Teams	2
MGT 420b	Employee	2
MGT 421b	Innovator	2
MGT 422b	Operations Engine	2
MGT 423a	Sourcing and Managing Funds	2
MGT 425b	The Global Macroeconomy	2
MGT 430b	The Executive	2
International Experience (during spring break)		n/a

*Competencies for the Accelerated M.B.A./M.P.H.
in Health Care Management*

CORE CURRICULUM

Upon completing the core curriculum of the M.P.H. program, the student will be able to:

- Demonstrate a knowledge base in the disciplines of biostatistics, chronic and infectious disease epidemiology, health systems, public policy, social and behavioral sciences, and environmental health.
- Apply basic research skills to specific public health problems in both group and individual settings, including the ability to define problems; construct, articulate, and test hypotheses; draw conclusions; and communicate findings to a variety of audiences.
- Explain the interrelationships among a multitude of factors that can impact a public health problem, including scientific, medical, environmental, cultural, social, behavioral, economic, political, and ethical factors.
- Review, critique, and evaluate public health reports and research articles.
- Apply public health concepts, principles, and methodologies obtained through formal course work to actual problems experienced in the community or work environment.
- Critically evaluate programs, interventions, and outcomes that relate to public health practice.

- Apply ethical standards and professional values as they relate to the practice of public health.
- Demonstrate sensitivity to the social context within which public health professionals practice.

HEALTH CARE MANAGEMENT PROGRAM

Upon receiving an M.P.H. degree in the Accelerated M.B.A./M.P.H. Program in Health Care Management, the student will be able to:

- Conduct financial analyses, including reading and analyzing financial statements.
- Conduct economic analyses, including cost-effectiveness analysis, to inform health management decision making.
- Apply operations management concepts to address organizational performance issues in health service organizations.
- Apply the principles of marketing analysis and planning to public health programs and health service organizations.
- Utilize statistical analysis skills to conduct health systems and policy research.
- Utilize research design and data management skills to conduct health policy and management research.
- Evaluate health care financing, regulatory, and delivery systems.
- Demonstrate written communication skills to effectively communicate in health policy, management, and community settings.
- Demonstrate oral communication and presentation skills to effectively communicate in health policy, management, and community settings.
- Utilize advocacy, persuasion, and negotiation skills to influence health policy and management decision making.
- Perform strategic analysis and planning for health care organizations.
- Describe legal perspectives on health policy and management issues, including assessment of legal and regulatory environments in the context of public health.
- Apply ethical decision making in a health care context.
- Apply management problem-solving skills to improve functioning of organizations and agencies in health systems.
- Demonstrate leadership, team-based collaboration, and conflict management skills.
- Coach and provide constructive feedback to colleagues.
- Work with and incorporate perspectives of culturally diverse groups.

OTHER JOINT-DEGREE PROGRAMS

In addition to the joint-degree programs previously discussed, the Yale School of Public Health offers the following joint-degree programs in collaboration with the Yale Graduate School of Arts and Sciences and other Yale professional schools:

Divinity M.Div./M.P.H. and M.A.R./M.P.H.

Forestry & Environmental Studies M.F./M.P.H., M.F.S./M.P.H., M.E.Sc./M.P.H., M.E.M./M.P.H.

Graduate School of Arts and Sciences M.A./M.P.H. with the Jackson Institute for Global Affairs; International and Development Economics; and the MacMillan Center for International and Area Studies

Law J.D./M.P.H.

Management M.B.A./M.P.H.

Medicine M.D./M.P.H. (please see the Advanced Professional M.P.H.) and M.M.Sc./M.P.H. with the Physician Associate Program

Nursing M.S.N./M.P.H.

Joint-degree candidates must apply to and be accepted by each school. Students should contact admissions offices at both schools to learn about admissions requirements and deadlines. Joint-degree students must fulfill degree requirements for both programs. YSPH students are typically required to complete a minimum of 15 course units toward the M.P.H. degree. Advisers from the respective schools will assist students with mapping curriculum. For specific degree requirement information, students should contact the YSPH registrar.

Master of Science in Public Health

The Master of Science (M.S.) degree program in Public Health (PH) is designed with an emphasis on mastering the skills in individual specialty areas within public health. Programs are currently offered in Biostatistics and Chronic Disease Epidemiology. The length of study leading to the M.S. degree is one year full-time for the Chronic Disease Epidemiology track and two years full-time for the Biostatistics track. Part-time students must complete the degree within five years of matriculation.

The M.S. in PH is offered through the School's affiliation with the Graduate School of Arts and Sciences. The Graduate Studies Executive Committee (GSEC) and the director of graduate studies (DGS) are responsible for overseeing the progress of M.S. students.

BIOSTATISTICS TRACK (BIS)

The M.S. in Biostatistics is a two-year program. It is designed to train students to meet the growing need in managed care organizations, medical research, and the pharmaceutical industry for graduates with technical skills in data analysis. In contrast to the more general M.P.H. degree, the M.S. degree emphasizes the mastery of biostatistical skills from the beginning of the plan of study. While graduates of this program may apply to the Ph.D. degree program, the M.S. degree is itself quite marketable as a terminal degree.

Degree Requirements

The Biostatistics track requires the completion of thirteen required and elective courses (excluding the Ethics course, EPH 600b; the Seminar, BIS 525a and b; and the Summer Internship, BIS 695c) and satisfactory completion of the Master's Thesis Research.

Curriculum

REQUIRED COURSES

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
†BIS 525a and b	Seminar in Biostatistics and Journal Club	n/a
BIS 540a	Fundamentals of Clinical Trials	1
BIS 623a	Applied Regression Analysis	1
BIS 625a	Categorical Data Analysis	1
BIS 628b	Longitudinal and Multilevel Data Analysis	1
BIS 630b	Applied Survival Analysis	1
BIS 650a,b	Master's Thesis Research	2
BIS 678a	Statistical Consulting	1
BIS 679b	Advanced Statistical Programming in SAS and R	1
BIS 681b	Statistical Consulting Lab	1
†BIS 695c	Summer Internship in Biostatistical Research	n/a
‡CDE 508a	Principles of Epidemiology I	1
†EPH 600b	Research Ethics and Responsibility	n/a
*STAT 541a	Probability Theory	1
*STAT 542b	Theory of Statistics	1

*These courses are offered in the Graduate School of Arts and Sciences.

†These courses do not count toward the thirteen required courses.

‡Students entering the program with an M.P.H. or relevant graduate degree may be exempt.

In addition, students must complete two elective courses chosen from the list below. Students will also be required to take a Professional Skills Seminar (dates and times announced during the fall term).

Biostatistics electives are to be selected from these courses: BIS 557a, Computational Statistics; BIS 567a, Bayesian Statistics; BIS 643b, Theory of Survival Analysis; BIS 646b, Nonparametric Statistical Methods and Their Applications; BIS 651b, Spatial Statistics in Public Health; and BIS 691b, Theory of Generalized Linear Models. Students demonstrating a mastery of topics covered by the required courses may replace them with more advanced courses but must receive written permission from the DGS prior to enrolling in the substitute courses.

Competencies

Upon receiving an M.S. in the Biostatistics track of Public Health, the student will be able to:

- Describe advanced concepts of probability, random variation, and commonly used statistical probability distributions.
- Develop an efficient design for collecting, recording, and storing data collected in the conduct of public health and medical research.
- Develop sample size and statistical power calculations for basic study designs including those utilized in clinical trials.
- Design efficient computer programs for study management, statistical analysis, as well as presentation using SAS and other programming languages.
- Produce edited data sets suitable for statistical analyses.
- Apply advanced informatics techniques with vital statistics and public health records in the description of public health characteristics and in public health research and evaluation.
- Perform analyses of stated hypotheses using a variety of analytical tools including analysis of variance, multiple regression, nonparametric statistics, logistic regression, multivariate analyses, and methods for analyzing rates and failure-time data.
- Interpret results of advanced statistical analyses and use these results to make relevant inferences from data.
- Produce working tables and statistical summaries describing research in health science.
- Develop written presentations based on intermediate to advanced statistical analyses for both public health professionals and educated lay audiences.
- Develop oral presentations based on intermediate to advanced statistical analyses for both public health professionals and educated lay audiences.

Master's Thesis

In the second year of the program, the student is required to execute a program of independent research under the direction of a faculty member. This project usually falls into one of these main areas:

1. Development of a new statistical theory or methodology.
2. A computer-based simulation study to illustrate properties of an existing method.
3. The analysis of a real data set.

The student is required to prepare a written thesis under the supervision of a Biostatistics faculty member. Upon completion of the thesis, the student will make an oral presentation of the results of his/her work.

For specific instructions on the organization, mechanics, and publication of the thesis, see Appendix II: Thesis Guidelines.

CHRONIC DISEASE EPIDEMIOLOGY TRACK (CDE)

There is a high demand for well-trained graduates in chronic disease epidemiology. This track provides intensive training in epidemiology and research methods for medical and health care professionals, or others seeking the skills necessary to conduct epidemiological research in their professional practice.

Applicants should have a basic understanding of quantitative science and statistics. It is recommended that candidates have strong science backgrounds and demonstrated competency in statistical analysis and logical thinking. Applicants from rigorous programs in the biological or social sciences will be given preference. At a minimum, applicants should have one year of course work in statistics or the equivalent prior to enrolling in this program. Summer courses are available to fulfill this requirement. Full-time applicants are preferred.

Degree Requirements

The CDE track consists of required and elective course work and satisfactory completion of the Capstone experience. A total of ten courses is required (excluding the Ethics course, EPH 600b; and Seminar, CDE 525). It is expected that this program will be completed during a single academic year. Students with an M.P.H. or relevant graduate degree may be eligible to substitute advanced courses for some of the required courses. Written permission of the DGS is required prior to enrolling in substitute courses.

Curriculum

REQUIRED COURSES

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 623a	Applied Regression Analysis	1
BIS 625a	Categorical Data Analysis	1
BIS 630b	Applied Survival Analysis	1
CDE/EMD 508a	Principles of Epidemiology I	1
CDE 516b	Principles of Epidemiology II	1
CDE 523b	Measurement Issues in Chronic Disease Epidemiology	1
†CDE 525a,b	Seminar in Chronic Disease Epidemiology/Social and Behavioral Sciences	n/a
*CDE 617b	Developing a Research Proposal	1
†EPH 600b	Research Ethics and Responsibility	n/a

Suggested electives (three courses are required):

BIS 540a	Fundamentals of Clinical Trials	1
BIS 561b	Advanced Topics and Case Studies in Multicenter Clinical Trials	1
BIS 643b	Theory of Survival Analysis	1
BIS 645b	Statistical Methods in Human Genetics	1
CDE/EHS 520b	Case-Based Learning for Genetic and Environmental Diseases	1
CDE 531a	Health and Aging	1
CDE 532b	Epidemiology of Cancer	1
CDE 533b	Topics in Perinatal Epidemiology	1
CDE 535b	Epidemiology of Heart Disease and Stroke	1
CDE 562a	Nutrition and Chronic Disease	1
CDE 597a	Genetic Concepts in Public Health	1
*CDE 600a or b	Directed Readings	1
CDE 634a	Advanced Applied Analytical Methods in Epidemiology and Public Health	1
CDE 650a	Introduction to Evidence-Based Medicine and Health Care	1

*In the capstone course CDE 617b, the student is required to develop a grant application that is deemed reasonably competitive by the instructor. An alternative to this capstone course is an individualized tutorial (CDE 600a or b), in which the student completes a manuscript that is suitable for submission for publication in a relevant journal.

†These courses do not count toward the ten required courses.

Competencies

Upon receiving an M.S. in the Chronic Disease Epidemiology track of Public Health, the student will be able to:

- Explain and apply the terminology and definitions of epidemiology.
- Evaluate the scientific merit and feasibility of epidemiologic study designs.
- Describe the epidemiology of common chronic diseases.
- Synthesize information from a variety of epidemiologic and related studies.
- Design epidemiologic studies at an intermediate level.
- Analyze data and draw appropriate inferences from epidemiologic studies at an intermediate to advanced level, using a variety of analytical tools including multivariate logistic regression, Poisson regression, linear regression, and survival analysis.
- Write an epidemiologic research proposal or a publishable epidemiologic article.
- Identify, interpret, and use routinely collected data on disease occurrence.
- Review, critique, and evaluate epidemiologic reports and research articles at an intermediate level.

Doctoral Degree

Doctoral training has been part of Yale's mission since early in its history. The University awarded the first Ph.D. in North America in 1861, and the doctoral program in public health began with the establishment of the department in 1915. Six years later, in 1922, Yale conferred the Doctor of Philosophy (Ph.D.) in Public Health on two candidates.

Within the Yale academic community, the Ph.D. is the highest degree awarded by the University. The School of Public Health offers studies toward the Ph.D. degree through its affiliation with the Graduate School of Arts and Sciences. The Graduate School makes the final decisions on accepting students into the program, admission to candidacy, and awarding the degree.

The primary mission of the doctoral program in Public Health (PH) is to provide scholars with the disciplinary background and skills required to contribute to the development of our understanding of better ways of measuring, maintaining, and improving the public's health. The core of such training includes the mastery of research tools in the specialty discipline chosen by the candidate. Public health spans disciplines that use tools available in the laboratory, field research, social sciences, the public policy arena, and mathematics. Students engage in a highly focused area of research reflecting scholarship at the doctoral level but are exposed to a broad view of public health as seen in the diverse research interests of the School's faculty.

COMPETENCIES FOR THE PH.D. IN PUBLIC HEALTH

Upon receiving a Ph.D. in Public Health, the student will be able to:

- Critically evaluate public health and related literature.
- Discuss and critically evaluate the broad literature of the student's discipline.
- Review in depth the background and research advances in the student's specific research area.
- Apply at an advanced level the research methodology of the student's broader discipline and, in particular, the student's specific research area.
- Present research to colleagues and professionals on a national and international level at professional meetings.
- Design a course in the student's broad discipline.
- Explain the principles of research ethics and apply these principles to specific research projects.
- Design and conduct an advanced, original research project in the student's discipline.
- Generate data to create publishable manuscripts that represent important contributions to the literature.

ACADEMIC ADVISING

Each student is assigned to an academic adviser at the time of matriculation. The academic adviser is available for help with general academic questions, course selections, choosing a dissertation project, and preparation for the qualifying examinations. A student may request a change of his or her academic adviser by writing to the director of

graduate studies (DGS). The request must be agreed upon by both the previous and new academic advisers.

TEACHING FELLOWSHIPS

Teaching and research experience is regarded as an integral aspect of the graduate training program and is typically completed during the second and third years of study. First-year students are encouraged to focus their efforts on course work and in most instances are not permitted to serve as Teaching Fellows. However, first-year students may be allowed to serve as Teaching Fellows if they have been awarded advanced standing. Advanced standing is only available to students who have completed previous graduate study at Yale (e.g., M.S. or M.P.H. programs). If a student has been awarded one year of advanced standing, he or she will be allowed to teach in both the fall and spring terms of the first year. If a student has been awarded one term of advanced standing, he or she will only be allowed to teach during the spring term of the first year.

All doctoral students are required to serve as teaching fellows for four terms at the TF10 or 20 level, typically during years two and three. Graduate research assistantship opportunities may take the place of teaching in the third year of study. With the permission of the DGS, the total teaching requirement beyond two terms may be reduced for students who are awarded a fellowship supported by outside funding or who are a graduate research assistant. Two terms of teaching are required of all students; four terms are required of students on YSPH-supported fellowships or training grants. During the first term of teaching, students must attend a training session conducted by the Graduate Teaching Center.

DEGREE REQUIREMENTS

There are five departments in PH in which doctoral students may choose a specialty. Requirements for each department vary and are outlined below under Departmental Requirements. In addition, all candidates for the Ph.D. degree must conform to the requirements of the Graduate School of Arts and Sciences.

Required Course Work

Generally, the first two years are devoted primarily to course work. Each student must satisfactorily complete a minimum of ten courses or their equivalent and must satisfy the individual departmental requirements (see below for course requirements in each department). All first-year PH doctoral students are required to participate in a course covering both practical and theoretical issues in research ethics (EPH 600b, Research Ethics and Responsibility); this course is in addition to the minimum required courses. The Graduate School requires that Ph.D. students achieve a grade of Honors in at least two full-term doctoral-level courses. Additionally students must maintain a High Pass average. (This applies to courses taken after matriculation in the Graduate School and during the nine-month academic year.)

Qualifying Examinations

The required qualifying examinations are usually taken at the end of the second year of study. In order to meet the different departmental needs, each department has developed a qualifying examination format; details are provided in each departmental program description below. The qualifying examinations serve to demonstrate that the candidate has mastered the background and the research tools required for dissertation research. The qualifying examinations are usually scheduled in June, generally within a three-week period.

Prospectus Guidelines

Before the end of the spring term of the third year, each student must submit a Dissertation Prospectus, i.e., a written summary of the planned nature and scope of the dissertation research, together with a provisional title for the dissertation. It is strongly recommended that students begin working with their thesis adviser on this process early in the third year. Ideally students should submit the names of Dissertation Advisory Committee (DAC) members during the fall term of the third year and then submit the prospectus during the spring term of the third year. Students must have both the DAC members and the prospectus approved by the end of the third year (May).

The DAC consists of at least three members, including the thesis adviser, who must have a Graduate School appointment and will chair the committee. Two members are expected to be Yale School of Public Health faculty, but participation of faculty members from other departments is encouraged. An additional committee member may be selected from outside the University if he or she is a recognized authority in the area of the dissertation; a supporting curriculum vitae must be provided. The student should also submit a one-page specific aims (for the research plan) and a rationale for each committee member. The proposed DAC members must sign the one-page specific aims stating that they have agreed to serve on the committee. The Graduate Studies Executive Committee (GSEC) prefers that students submit this one-page specific aims document for approval prior to developing the prospectus. Once the GSEC approves the student's DAC and specific aims, the student works with his or her committee to develop the prospectus.

The purpose of the prospectus is to formalize an understanding between the student, the DAC, and the GSEC regarding the scholarship of a proposed dissertation project. The prospectus should:

- Provide a detailed description of the research plan as outlined below, including title, topic, background, significance, study questions, analytic plan, and methods;
- Establish a consensus between the student, the DAC, and the GSEC that the research plan meets the requisite standards of originality, scope, significance, and virtuosity;
- Formalize the DAC's willingness to work with the student to see the proposed research plan to successful completion.

The prospectus should be written in clear, plain English with minimal jargon, abbreviations, or colloquialisms and is limited to a *maximum* of twenty pages (double-spaced). All tables, graphs, figures, diagrams, and charts must be included within the twenty-page limit. References are not part of the page limit. Be succinct and remember that there is no requirement to use all twenty pages. A prospectus found not to comply with these requirements will be returned without review.

The following format should be used (similar to NIH guidelines):

1. Title of proposed dissertation (can be a working title).
2. Specific aims (one page): A self-contained description of the project, which should be informative to other persons working in the same or related fields. State concisely the goals of the proposed research and summarize the expected outcome(s), including the impact that the results of the proposed research will exert on the research field(s) involved.
3. Research strategy: Use the following subsections:
 - a. Significance: This section should place the research project in context and describe the proposed research in a manner intelligible to a nonspecialist. This should include a brief but critical evaluation of the relevant literature and a description of how the proposed research project will advance scientific knowledge and/or technical capability in one or more broad fields.
 - b. Innovation: Explain how the application challenges and seeks to shift current research paradigm(s). Describe any novel theoretical concepts, approaches or methodologies, instrumentation, or interventions to be developed or used, and any advantage(s) over existing methodologies, instrumentation, or interventions.
 - c. Approach: Outline the research project envisioned at this time and sketch out the plan to attain the overall goals of the project. Describe the overall strategy, methodology, and analyses to be used. Include preliminary data, if available. Acknowledge pitfalls and limitations of the research, and if possible suggest alternative strategies.
4. References: Should be included at the end (not counted in the page limit).

The prospectus submitted to the GSEC must be the version approved by the student's DAC and must be submitted together with the Submission of Dissertation Prospectus form.

The GSEC will review the prospectus and may request changes to either the DAC or the prospectus. Once the GSEC has approved the prospectus, it will be submitted to the Graduate School registrar.

Weekly meetings with the chair of the DAC are recommended. Regular face-to-face meetings of the full DAC are invaluable and are expected throughout the student's research toward the thesis. The DAC is expected to meet at least twice each year, and more frequently if necessary. Since dissertation progress reports at the Graduate School are due at the close of the spring term, it is advised that one of the meetings be scheduled in March or April. In doing so, the thesis adviser, student, and DGS will have current information on the student's progress for use in completing the dissertation progress report online. The student schedules the meetings of the DAC. The chairperson of the DAC, i.e., the thesis adviser, produces a summary report outlining progress and plans for the coming year. The document is to be distributed to the other committee members for comments. The student and the DGS are to receive a copy of the document from the DAC chair.

Because the prospectus is required fairly early in the dissertation research, the content of a thesis may change over time, and thus the student should not feel bound by what is submitted. However, major changes to the direction of research described in the prospectus should be discussed with the DAC and approved by the GSEC.

Admission to Candidacy

After all predissertation requirements are successfully completed (course requirements for the chosen department, grades of Honors in at least two full-term doctoral-level courses, an overall High Pass average, pass the qualifying examination, and approval of the dissertation prospectus by the GSEC), the student will be admitted to candidacy for the Ph.D. degree. These requirements are typically met in three years. Customarily, students who have not been admitted to candidacy will not be permitted to register for the fourth year. Exceptions must be approved in advance by the DGS and the Graduate School associate dean. When students advance to candidacy, the registrar's office automatically submits a petition for the awarding of the M.Phil. degree.

THE THESIS/DISSERTATION

The Ph.D. thesis in PH should be of publishable quality and represent a substantial contribution to the advancement of knowledge in a field of scholarship. The Graduate School policy in regard to the dissertation is as follows:

The dissertation should demonstrate the student's mastery of relevant resources and methods and should make an original contribution to knowledge in the field. The originality of a dissertation may consist of the discovery of significant new information or principles of organization, the achievement of a new synthesis, the development of new methods or theories, or the application of established methods to new materials. Normally, it is expected that a dissertation will have a single topic, however broadly defined, and that all parts of the dissertation will be interrelated. This does not mean that sections of the dissertation cannot constitute essentially discrete units. Dissertations in the physical and biological sciences, for example, often present the results of several independent but related experiments. Given the diverse nature of the fields in which dissertations are written and the wide variety of topics that are explored, it is impossible to designate an ideal length for the dissertation. Clearly, however, a long dissertation is not necessarily a better one. The value of a dissertation ultimately depends on the quality of its thought and the clarity of its exposition. In consultation with their faculty advisers and the director of graduate studies, students should give serious thought to the scale of proposed dissertation topics. There should be a reasonable expectation that the project can be completed in two to three years.

The dissertation may be presented as a single monograph resulting in a major publication, or as (typically) a minimum of three first-authored scientific papers. One or more of the papers should be published, accepted for publication, or be in submission. The collected paper option does not imply that any combination of papers would be acceptable. For example, three papers related to background material (review papers), or three papers that reported associations of three unrelated exposures, or three papers of the same exposure but reporting different outcomes would not be acceptable. Rather, it is expected that the papers represent a cohesive, coherent, and integrated body of work. For example, one paper might be a systematic review and meta-analysis of the topic, another might develop a new methodological approach, and the third might apply those new methods to an area of current public health interest. In the collected paper option,

the final thesis must include introductory and discussion chapters to summarize and integrate the published papers.

The DAC reviews the progress of the dissertation research and decides when the dissertation is ready to be submitted to the readers. This decision is made based on a closed defense of the dissertation. The dissertation defense involves a formal oral presentation to the DAC and other invited faculty. Upon completion of the closed defense, the chair of the DAC submits its recommendation to the GSEC, and its recommendation of suitable readers.

There will be a minimum of three readers, one of whom is at YSPH. The second reader can be from YSPH or another Yale department. Both Yale readers must hold a Graduate School appointment, and at least one should be a senior faculty member. The third reader must be selected from outside the University. All readers must be recognized authorities in the area of the dissertation. The outside reader must submit a curriculum vitae for review by the GSEC. The outside reader should be an individual who has not coauthored a publication(s) with members of the student's DAC and/or the student within the preceding three years. Members of the DAC are not eligible to serve as readers. After the completed readers' reports are received by the Graduate School, they are reviewed by the DGS and the GSEC prior to making a School of Public Health recommendation to the Graduate School that the degree be awarded. The DAC may be asked to comment on the readers' reports before recommendations are made to the Graduate School.

Oral Presentation of the Doctoral Dissertation

Doctor of Philosophy (Ph.D.) dissertations in PH must be presented in a public seminar. This presentation is scheduled after the closed defense, after submission of the dissertation to the readers, and preferably prior to the receipt and consideration of the readers' reports. At least one member each of the DAC and GSEC is expected to attend the presentation. It is expected to be presented during the academic term in which the dissertation was submitted and must be widely advertised within YSPH.

DEPARTMENTAL REQUIREMENTS

The specific requirements with regard to courses, qualifying examinations, and admission to candidacy set by PH departments are described below.

Biostatistics

Biostatistics involves the development and application of sound statistical and mathematical principles to research in the health sciences. Because original theoretical research in biostatistics flows from medical research, it is essential that the foundations of methodological development be firmly grounded in sound principles of statistical inference and a thorough knowledge of the substantive area that provides the source of the medical questions being addressed. Thus, the Department of Biostatistics encourages excellent methodological work that is motivated by sound science that includes but is not limited to active collaborations with other investigators.

Research collaborations for biostatisticians take place both within and across departments in YSPH, as well as with other departments in the School of Medicine and the University at large. Areas of current research include development of general methods that have wide applicability across different areas of health research, as well as more specific techniques for dealing with the underlying processes that give rise to the data of interest. A broad range of health topics addressed by students in this department include chronic diseases such as cancer, genetic epidemiology, clinical research, and mathematical models for infectious diseases.

Graduates of the doctoral program in Biostatistics are employed in universities throughout the country, as well as in such dedicated research institutions as the National Institutes of Health. In addition, graduates have pursued careers in the pharmaceutical industry, in which they are actively involved in the evaluation of new therapeutic strategies.

REQUIRED COURSE WORK

Students in the department of Biostatistics prepare for their qualifying examination by taking the courses listed below. Course waivers must be recommended by the academic adviser and approved by the DGS.

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 525a and b	Seminar in Biostatistics and Journal Club	n/a
BIS 557a	Computational Statistics	1
BIS 567a	Bayesian Statistics	1
BIS 610b	Applied Area Readings for Qualifying Exams	1
BIS 628b	Longitudinal and Multilevel Data Analysis	1
BIS 643b	Theory of Survival Analysis	1
BIS 646b	Nonparametric Statistical Methods and Their Applications	1
BIS 678a	Statistical Consulting	1
BIS 691b	Theory of Generalized Linear Models	1
BIS 695c	Summer Internship in Biostatistical Research	n/a
†CDE 508a	Principles of Epidemiology I	1
EPH 600b	Research Ethics and Responsibilities	n/a
†EPH 608b	Frontiers of Public Health	1
*STAT 610a	Statistical Inference	1
*STAT 612a	Linear Models	1

*These courses are offered in the Graduate School of Arts and Sciences.

†Students entering the program with an M.P.H. degree may be exempt.

In consultation with their academic adviser, students choose a minimum of four additional electives that will best prepare them for dissertation work. Students funded by specific fellowships may be subject to additional requirements and should discuss this with their adviser.

QUALIFYING EXAMINATION

The qualifying examination has two parts, the first being a written examination that demonstrates competence with the use of statistical principles to develop methods of application. The second involves the critical review of the statistical literature, report writing, and oral defense of a specific biomedical topic agreed upon by the candidate and the BIS faculty adviser that will be evaluated by a committee approved by the BIS faculty.

RESEARCH EXPERIENCE

In a number of courses, especially Statistical Consulting (BIS 678a), students gain actual experience with various aspects of research including preparation of a research grant, questionnaire design, preparation of a database for analysis, and analysis and interpretation of real data. In addition, doctoral students can gain research experience by working with faculty members on ongoing research studies prior to initiating dissertation research, which includes but is not limited to BIS 695c. During the summer following the first year of course work, candidates are required to take a research rotation that is approved by the department and communicated to the DGS.

THE DISSERTATION

The department strives for doctoral dissertations that have a strong methodological component motivated by an important health question. Hence, the dissertation should include a methodological advance or a substantial modification of an existing method motivated by a set of data collected to address an important health question. The dissertation must also include the application of the proposed methodology to real data. A fairly routine application of widely available statistical methodology is not acceptable as a dissertation topic. Candidates are expected not only to show a thorough knowledge of the posed health question, but also to demonstrate quantitative skills necessary for the creation and application of novel statistical tools.

Chronic Disease Epidemiology

Epidemiology is the study of disease in populations. Such populations may be groups of people in certain geographic areas, people with a common disease, or people with some suspected risk factor. The Department of Chronic Disease Epidemiology (CDE) has traditionally focused on either chronic or noninfectious diseases, although in recent years the artificiality of this distinction has become obvious and the view has been broadened. A recent thesis, for example concerned the perinatal transmission of HIV/AIDS, and others have examined the viral etiology of cancer.

The department is perhaps best known for its doctoral programs in the epidemiology of aging, cancer, perinatal diseases, genomics, HIV/AIDS, and psychosocial disorders. However, students in the department often work on projects with other departments within YSPH, other departments in the School of Medicine, and other schools within the University. Thus there are numerous opportunities for creating an experientially rich doctoral program.

Graduates from the department's doctoral program are found on the faculties of universities throughout the world, at the highest levels of federal and international research programs, and in leadership positions in numerous private and public foundations and institutions.

REQUIRED COURSE WORK

Students in the CDE department are expected to complete a minimum of fifteen courses (not including CDE 610b and EPH 600b) from the following courses or their equivalents. Students may choose the traditional Epidemiology concentration or the Social and Behavioral Sciences concentration as noted below. Students must declare their concentration by the end of the first year with approval from their academic adviser. Students supported by training grants may be subject to additional requirements and should discuss whether there are training-specific requirements with the principal investigator of the grant.

Epidemiology concentration

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
CDE/EHS 502b	Physiology for Public Health	1
CDE/EMD 508a	Principles of Epidemiology I	1
CDE 516b	Principles of Epidemiology II	1
CDE 523b	Measurement Issues in Chronic Disease Epidemiology	1
CDE 534b	Applied Analytic Methods in Epidemiology	1
CDE 610b	Applied Area Readings for Qualifying Exams	1
CDE 617b	Developing a Research Proposal	1
CDE 619a	Advanced Epidemiologic Research Methods	1
CDE 634a	Advanced Applied Analytic Methods in Epidemiology and Public Health	1
CDE 650a	Introduction to Evidence-Based Medicine and Health Care	1
EPH 600b	Research Ethics and Responsibilities	n/a
†EPH 608b	Frontiers of Public Health	1

In consultation with their dissertation adviser, students choose three 600-level course units in Biostatistics as well as three additional electives that will best prepare them for their dissertation research.

†Students entering the program with an M.P.H. degree may be exempt.

Social and Behavioral Sciences concentration

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
CDE/EMD 508a	Principles of Epidemiology I	1
CDE 516b	Principles of Epidemiology II	1
CDE 534b	Applied Analytic Methods in Epidemiology	1
CDE 573a	Social and Cultural Factors in Mental Health and Illness	1
CDE 574b	Developing a Health Promotion and Diseases Prevention Intervention	1
CDE 610b	Applied Area Readings for Qualifying Exams	1
CDE 617b	Developing a Research Proposal	1
CDE 634a	Advanced Applied Analytic Methods in Epidemiology and Public Health	1

CDE 650a	Introduction to Evidence-Based Medicine and Health Care	1
CDE 676b	Questionnaire Development	1
EPH 600b	Research Ethics and Responsibilities	n/a
†EPH 608b	Frontiers of Public Health	1

In consultation with their dissertation adviser, students choose three 600-level course units in Biostatistics as well as three additional electives that will best prepare them for their dissertation research.

†Students entering the program with an M.P.H. degree may be exempt.

QUALIFYING EXAMINATION

The qualifying examinations in CDE entail a three-part system emphasizing biostatistics, epidemiologic methods, and the student's chosen specialty area.

The examination covering epidemiological methods includes both an in-class and a take-home portion. One faculty member is responsible for coordinating this examination, and the examination content is developed by the overall faculty. The specialty area examination is usually prepared in a tutorial with one or more faculty members in the term prior to the exam.

RESEARCH EXPERIENCE

In a number of courses, students gain actual experience with various aspects of research including preparation of a research grant, questionnaire design, preparation of a database for analysis, and analysis and interpretation of real data. In addition, doctoral students can gain research experience by working with faculty members on ongoing research studies prior to initiating dissertation research.

THE DISSERTATION

For the doctoral dissertation, some candidates will design and develop their own research protocol, collect the data, and conduct appropriate analyses. However, epidemiologic studies are often large, time-consuming, and expensive enterprises that often cannot be realistically completed within the time frame expected for a doctoral dissertation. Consequently, some dissertations often result from “piggy-backing” the dissertation research onto a larger study being conducted by a faculty member. If a student has previously documented experience with data collection, the doctoral dissertation may emphasize the statistical analysis of a data set in such a way as to address a new hypothesis. However the thesis is constructed, the department requires that the research makes a significant contribution to new knowledge in the field of epidemiology.

Environmental Health Sciences

The Environmental Health Sciences (EHS) doctoral program focuses on how environmental agents – physical, chemical, and biological – affect human health, considered within the general framework of epidemiology and public health. Students are skilled in research, assessment, and evaluation of the impact of environmental stressors; they identify potentially adverse environmental agents, assess their exposures, determine their

impact on health, and estimate the consequent risk. The Ph.D. emphasizes the preparation of students for scholarly careers in research and teaching.

The EHS doctoral program offers two concentrations: (1) Environmental Epidemiology & Exposure Science and (2) Environmental & Molecular Toxicology.

REQUIRED COURSE WORK

Environmental Epidemiology & Exposure Science concentration

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 505a	Introduction to Statistical Thinking I	1
BIS 505b	Introduction to Statistical Thinking II	1
CDE/EMD 508a	Principles of Epidemiology I	1
*EHS 503b	Public Health Toxicology	1
EHS 507a	Environmental Epidemiology	1
EHS 508b	Assessing Exposures to Environmental Stressors	1
*EHS 510a	Principles of Environmental Health Sciences	1
*EHS 525a,b	Seminar in Environmental Health	n/a
EHS 600b	Research Ethics and Responsibilities	n/a
‡EHS 620a,b	Research Rotations	2
†EPH 608b	Frontiers of Public Health	1

*Additional readings are assigned for Ph.D. students.

†Students entering the doctoral program with an M.P.H. degree are exempt from EPH 608b and may request waiver of other courses taken during the M.P.H.

‡Students give presentations at the end of the research rotation and are graded based on rotation work and presentation.

Recommended electives (three minimum), generally taken in the second year:

BIS 511a	GIS Applications in Epidemiology and Public Health	1
BIS 639b	Descriptive Analysis of Public Health Data	1
BIS 623a	Applied Regression Analysis	1
BIS 625a	Categorical Data Analysis	1
BIS 628b	Longitudinal and Multilevel Data Analysis	1
CDE 617b	Developing a Research Proposal	1
EHS 520b	Case-Based Learning for Genetic and Environment Interactions	1
EHS 545b	Molecular Epidemiology	1
EHS 580b	Environmental Hormones and Human Health	1

Environmental & Molecular Toxicology concentration

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 505a	Introduction to Statistical Thinking I	1
BIS 505b	Introduction to Statistical Thinking II	1
CDE/EMD 508a	Principles of Epidemiology I	1
*EHS 503b	Public Health Toxicology	1
*EHS 510a	Principles of Environmental Health Sciences	1
*EHS 525a,b	Seminar in Environmental Health	n/a
EHS 545b	Molecular Epidemiology	1
EHS 600b	Research Ethics and Responsibilities	n/a

EHS	Developmental Origins of Health and Disease (in development)	1
‡EHS 620a,b	Research Rotations	2
†EPH 608b	Frontiers of Public Health	1

*Additional readings are assigned for Ph.D. students.

†Students entering the doctoral program with an M.P.H. degree are exempt from EPH 608b and may request waiver of other courses taken during the M.P.H.

‡Students give presentations at the end of the research rotation and are graded based on rotation work and presentation.

Recommended Electives (three minimum), generally taken in the second year:

BIS 639b	Descriptive Analysis of Public Health Data	1
CDE 617b	Developing a Research Proposal	1
EHS 508b	Assessing Exposures to Environmental Stressors	1
EHS 520b	Case-Based Learning for Genetic and Environment Interactions	1
EHS 537a	Water, Sanitation, and Global Health	1
EHS/CDE 502b	Physiology for Public Health	1

QUALIFYING EXAMINATION

A qualifying examination that will serve as the formal test prior to admission to candidacy for the Ph.D. program will be administered after completion of thirteen course units and generally before the end of the second year. Accordingly, the student should complete this examination within two years after entering the program. The student's DAC will administer this qualifying examination. The exam consists of an evaluation of a written prospectus and an oral presentation and defense of the research proposal. The proposal will be on the student's thesis project, written in NRSA format. Within two weeks of completing the written segment, the student will present and defend the thesis proposal to the dissertation advisory committee. The possible outcomes are (a) pass unconditionally, (b) pass conditionally, with further study suggested (or required) in one or more areas, or (c) fail, with or without the option to retake the examination after the areas of concern have been identified and the student has had time to prepare. If a student receives an unconditional pass, the committee should note whether it is an unconditional pass with distinction.

Once the student has passed the qualifying examination without conditions, and the GSEC has approved the prospectus, the student will be admitted to candidacy

RESEARCH REQUIREMENTS

Two research rotations during the first academic year in EHS laboratories able to accommodate students are required of each student, one in the fall term and one in the second term. In consultation with the student's academic adviser, an additional rotation may be offered during the summer between the first and second years. Research rotations will be available for both "dry" (i.e., statistical analysis) and "wet" (i.e., bench) laboratory research groups. The student will meet with the EHS graduate faculty member at the beginning of the rotation for an explanation of the goals and expectations of a student in the laboratory. The student will become familiar with the research models, approaches,

and methods utilized by the research group through interactions with other laboratory/ research personnel and from laboratory manuscripts. The student is expected to spend at least fifteen hours per week working in the laboratory or research group and to present a rotation seminar at the end of the rotation period.

In years three and beyond, students are expected to present annually to their DAC and the rest of the Ph.D. students and faculty in a departmental retreat or during an EHS Doctoral Research-in-Progress seminar.

Epidemiology of Microbial Diseases

The goals for doctoral students in the department of Epidemiology of Microbial Diseases (EMD) are to obtain a current theoretical and practical base of epidemiological and microbiological principles, to master research methods, and to apply these skills to investigations of the biology of infectious organisms of public health importance, their transmission, and the epidemiology of the diseases they cause. The approach is multidisciplinary and includes in-depth ecological, pathogenic, clinical, cellular, immunological, and molecular aspects of infectious diseases, their causative agents, vertebrate hosts, and vectors.

REQUIRED COURSE WORK

Courses in biostatistics, epidemiology, and microbiology are strongly recommended. The specific courses taken depend on the background of individual students and their stated research interests. An individual program that includes courses, seminars, and research rotations is developed by the student and his or her academic adviser. All students are required to complete three distinct research rotations. These are done in the fall and spring terms and in the summer between the first and second years. Students will be asked to prepare a brief presentation at the end of each rotation. These research rotations (EMD 670) are graded and account for three of the required ten courses. In addition, students are required to complete course work in epidemiology (EMD 508a or CDE 516b) and in breadth of public health (EPH 608b, *Frontiers of Public Health*). Both courses may be waived if the student enters the program with an M.P.H. degree.

The following courses are suggested courses that are appropriate for Ph.D. students in EMD. However, other courses in YSPH or in other departments may also be appropriate.

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
*CBIO 602a	Molecular Cell Biology	1
CDE/EMD 508a	Principles of Epidemiology I	1
CDE 516b	Principles of Epidemiology II	1
EMD 538a	Quantitative Methods for Infectious Disease Epidemiology	1
EMD 539b	Introduction to Public Health Surveillance	1
EMD/CDE 543a	Global Aspects of Food and Nutrition	1
EMD 548b	Observing Earth from Space	1
EMD 550b/682b	Biology of Insect Disease Vectors	1
EMD 553b	Transmission Dynamic Models for Understanding Infectious Diseases	1

EMD 567a	Tackling the Big Three: Malaria, TB, and HIV in Resource-Limited Settings	1
EMD 680a	Advanced Topics in Tropical Parasitic Diseases	1
EPH 600b	Research Ethics and Responsibilities	n/a
†F&ES 500a	Landscape Ecology	1
HPM 570a	Cost-Effectiveness Analysis and Decision Making	1
*PATH 650b	Cellular and Molecular Biology of Cancer	1

*These courses are offered in the School of Medicine.

†This course is offered in the School of Forestry & Environmental Studies.

RESEARCH REQUIREMENTS

Three research training modules are required of all students, and each term involves a different investigator. These are offered as formal courses, and there will be a brief presentation to the department at the end of each rotation. Each term is graded and recorded on the student's transcript. Investigators act as tutors and monitor the progress of the work, although students are given a certain amount of independence in their work. Rotations are defined broadly, including experiments in the more traditional wet laboratory setting, as well as work in the field and on the computer.

QUALIFYING EXAMINATION

EMD has adopted an oral and written qualifying examination format. The qualifying examination serves as an opportunity for the faculty to evaluate students before their admission to candidacy for the Ph.D. degree. It also serves as a valuable learning experience, where a student has a chance to read critically and in-depth with various faculty members on both the thesis topic and two other topics of interest to the student. The other two topics should ideally be in areas which will expand the dissertation topic to subject matters not covered in the courses. The second component includes writing a research proposal on the proposed dissertation topic. The oral examination takes the form of questions from members of the committee based on the readings and an oral defense of the research proposal.

Detailed information regarding the EMD qualifying examination is available from the EMD representative to the GSEC or the coordinator of graduate student affairs.

Health Policy and Management

The doctoral program in the Department of Health Policy and Management (HPM) emphasizes application of theory and methods to important policy and management topics. It is designed to educate students to apply knowledge derived from public health, social sciences (political science, organizational behavior, and microeconomics), and other areas to crucial public health topics. The program educates students to conduct research on the forefront of health services research, management of health care organizations, policy analysis, and health economic issues. Students are prepared for academic, research, and policy careers in both the public and the private sectors in public health.

The program requires individuals to develop expertise in one of three disciplines and then to apply this discipline to a more specialized area; the latter becomes their area of distinction.

AREAS OF DISCIPLINARY CONCENTRATION

Disciplinary background and methods are important to meaningful application of theory and methods to key public health topics. Students in HPM will specialize in one of the following disciplines: Economics; Organizational Theory and Management; or Political and Policy Analysis.

MENTORING AND ADVISING

A hallmark of our program is the low student-to-faculty ratio and the high student and faculty interaction. Students work closely with their adviser and with a number of faculty with common interests, either a specific topic or a policy area. The adviser or set of advisers conducts independent readings with the student in preparation for the dissertation. In addition, the student works on research with faculty throughout the student’s time in the program. The student’s DAC works closely with the student and has informal as well as formal meetings.

COURSE WORK

Students will complete the following course work or the equivalent of the topic areas covered in these courses. This course listing represents a suggested program of study. The standard number of courses taken is eighteen (excluding EPH 600b and EPH 608b), with the option of obtaining credits for previous courses. With the approval of the academic adviser and DGS, alternative courses that better suit the needs of the student may satisfy the course work requirement. The departmental representative to the GSEC, in conjunction with the student’s adviser, is responsible for determining if core course requirements have been satisfied by previous course work or alternative courses. If so, the student should apply for a course waiver through the Graduate School. HPM students can only waive up to two of the eighteen courses.

Methods and Statistics (minimum of 4 courses)

<i>Course number</i>	<i>Course title</i>	<i>Course units</i>
BIS 623a	Applied Regression Analysis	1
BIS 625a	Categorical Data Analysis	1
BIS 628b	Longitudinal and Multilevel Data Analysis	1
CDE 580b	Qualitative Research Methods in Public Health	1
*ECON 556a	Topics in Empirical Economics and Public Policy	1
*ECON 558a	Econometrics	1
HPM 583b	Methods in Health Services Research	1
*PLSC 500a	Statistics	1
*PLSC 503b	Quantitative Methods	1
*PLSC 504a	Advanced Quantitative Methods	1
*SOCY 580a	Introduction to Methods in Quantitative Sociology	1
*SOCY 581b	Intermediate Methods in Quantitative Sociology	1
*SOCY 582a	Statistics III: Advanced Quantitative Analysis for Social Scientists	1
*STAT 660	Multivariate Statistical Methods for the Social Sciences	1
*STAT 665	Data Mining and Machine Learning	1

Health Policy and Management (minimum of 4 courses, all with Ph.D. readings)

HPM 510a	Introduction to Health Policy and Health Systems	1
HPM 514b	Health Politics, Governance, and Policy	1
HPM 560b	Health Economics and U.S. Health Policy	1
HPM 561b	Managing Health Care Organizations	1
HPM 570a	Cost-Effectiveness Analysis and Decision Making	1
HPM 573b	Advanced Topics in Modeling Health Care Decisions	1
HPM 587a	Advanced Health Economics	1
HPM 590b	Addiction, Economics, and Public Policy	1
HPM 597b	Capstone Course in Health Policy	1
†HPM 617a and b	Colloquium in Health Services Research	n/a

Area of depth (minimum of 4 courses, all with Ph.D. readings)

See below for courses by area 4

Individualized readings (required)

HPM 610b	Applied Area Readings	1
----------	-----------------------	---

Additional courses

‡CDE 508a	Principles of Epidemiology I	1
EPH 600b	Research Ethics and Responsibilities	n/a
‡EPH 608b	Frontiers of Public Health	1

*These courses are offered in the Graduate School of Arts and Sciences

†HPM 617 is required of all Ph.D. students but does not count toward the total number of required courses.

‡Students entering the program with an M.P.H. degree may be exempt.

DISCIPLINARY CONCENTRATION COURSE WORK**Required courses in Economics**

*ECON 545a	Microeconomics	1
*†ECON 558a	Econometrics	1

†ECON 558a may count as methods/statistics course or disciplinary concentration course, but not both.

In addition, students take two field courses in a concentration area in which they plan to develop expertise. Sets of courses across topics can be selected to meet research interests. Concentration areas are:

Behavioral Economics

*MGMT 758b	Foundations of Behavioral Economics	1
*PSYC 553a	Behavioral Decision Making I: Choice	1
*PSYC 554a	Behavioral Decision Making II: Judgment	1

Industrial Organization

*ECON 600a	Industrial Organization I	1
*ECON 601b	Industrial Organization II	1

Labor Economics

*ECON 630a	Labor Economics	1
*ECON 631b	Labor Economics	1
*ECON 776b	Economics of Population	1

Public Finance

*ECON 556a	Topics in Empirical Economics and Public Policy	1
*ECON 680a	Public Finance I	1
*ECON 681b	Public Finance II	1

Required courses in Organizational Theory and Management

HPM 600	Directed Readings: Organizational Behavior and Theory in Health Care	1
*MGMT 731	Organizations and Management II: Organizations and the Environment	1
*MGMT 733	Theory Construction	1
*MGMT 736b	Organizations and Management I: Inside Organizations	1

Required courses in Political and Policy Analysis

Four courses are required, selected in consultation with the adviser. Suggested courses are:

*PLSC 617b	Deliberative Democracy and Beyond	1
*PLSC 766a	Politics and Markets	1
*PLSC 800a	Introduction to American Politics	1
*PLSC 801a	Political Preferences and American Political Behavior	1
*PLSC 802b	Collective Action and Choice	1
*PLSC 803b	American Politics III: Institutions	1
*PSYC 647b	Social Science and Institutional Design: The Empirical Evaluation of Legal Policies and Practices	1
*SOCY 557b	Political Sociology	1

*These courses are offered in the Graduate School of Arts and Sciences.

QUALIFYING EXAMS

Students take qualifying exams in each of these three areas: (1) health policy and management, (2) empirical analysis and/or statistics, and (3) the student's area of concentration. Typically these are taken in the summer after two years of course work.

RESEARCH REQUIREMENTS

All students are expected to develop their research skills through working with HPM faculty on research. Students are expected to attend the departmental research seminar for faculty and are also expected to attend the doctoral research seminar.

DISSERTATION

Students' doctoral dissertations should have a strong disciplinary base, often with an interdisciplinary approach, applying theory and rigorous methods to a significant public health policy or management topic.

M.D./PH.D. PROGRAM REQUIREMENTS

All M.D./Ph.D. students must meet with the director of graduate studies in Public Health if they are considering affiliating with PH. Students in this program are expected to meet the guidelines listed below in the time frame outlined. The DGS must approve any variations to these requirements.

Teaching

One term of teaching will be required. If students teach beyond this requirement, they can be compensated. If a student has served as a teaching assistant elsewhere on campus, this experience may be counted toward the requirement. DGS approval is required to waive the teaching requirement on the basis of previous Yale teaching experience.

Rotations/Internships

Students should do two rotations/internships with potential advisers in YSPH. These short-term research projects will be with a specific principal investigator and can be (1) in a lab, (2) field work, or (3) analysis of an existing dataset. The purpose of these rotations/internships is to learn lab technique and/or to allow the student time to determine if the PI's research interests are compatible with the student's research interests. These rotations/internships are usually done during the summer between the first and second year of medical school course work. In some cases students may need to defer this until the summer after the second year after taking certain courses and/or completing readings so that they possess the background necessary for a successful rotation/internship.

Required Course Work

M.D./Ph.D. students are generally expected to take the same courses as traditional Ph.D. students. Departmental requirements may vary; therefore, students should confer with the DGS and/or their Ph.D. adviser.

Timeline for Qualifying Exam

Students generally will take medical school courses in years one and two. Students can take PH doctoral courses in years one and two before they affiliate if scheduling allows. Once affiliated with the PH program, students will complete all course requirements for the department. This generally takes a minimum of two terms but can take up to four terms after affiliating with PH. The qualifying exam is commonly completed after the fourth term of affiliation with the Ph.D. program in PH but can sometimes be done earlier with approval of the Ph.D. adviser and DGS.

Prospectus Timeline

Following completion of the qualifying exam, students should focus on the prospectus, which must be approved by the PH Graduate Studies Executive Committee (GSEC) before the end of the student's sixth term as an affiliated Ph.D. student in PH.

Admission to Candidacy

To be admitted to candidacy, students must: (1) satisfactorily complete the course requirements for their department as outlined above, achieve grades of Honors in at least two full-term doctoral-level courses, and achieve an overall High Pass average; (2) obtain an average grade of High Pass on the qualifying exam; and (3) have the dissertation prospectus approved by the GSEC. All Ph.D. students must be admitted to candidacy before the start of the fourth year in the Ph.D. program (i.e., before the start of the seventh term).

Course Descriptions

Courses designated “a” meet in the fall term only.

Courses designated “b” meet in the spring term only.

Courses designated “a and b” are yearlong courses.

Courses designated “c” meet in the summer term.

Bracketed courses are not offered in the current academic year.

BIOSTATISTICS

BIS 505a, Introduction to Statistical Thinking I This course provides an introduction to the use of statistics in epidemiology and public health. Topics include descriptive statistics, probability distributions, parameter estimation, hypothesis testing, and simple linear regression, as well as an introduction to sample size and power calculations for a variety of commonly used study designs. Statistical analysis using the Statistical Analysis Systems (SAS) software and development of communication skills relative to the presentation of these analyses are introduced. E. Claus

BIS 505b, Introduction to Statistical Thinking II This continuation of BIS 505a covers multiple regression, analysis of variance, nonparametric tests, survival analysis, poisson regression, and logistic regression. The course concludes with a review of commonly used statistical methods. As in the first term, the Statistical Analysis Systems (SAS) software package is used for statistical analysis. Prerequisite: BIS 505a. D. Zelerman

BIS 511b, GIS Applications in Epidemiology and Public Health The study of epidemiology often seeks to determine associations between exposure risk and disease that are spatially dependent. Geographic information systems (GIS) are modern computer-based tools for the capture, storage, analysis, and display of spatial information. GIS technologies are just beginning to be used for public health planning and decision making. Public health applications of GIS provide cost-effective methods for evaluation interventions and modeling future trends, and also provide a visual tool for data exploration. This class teaches the technical and design aspects of implementing a GIS project in public health and provides students with basic tools for using GIS. Examples are given to introduce a variety of applications in the field of epidemiology. T. Holford

BIS 515c, Accelerated Biostatistics This intensive seven-week summer course provides a comprehensive introduction to the use of statistics in the fields of epidemiology, public health, and clinical research. Students gain experience conducting and interpreting a broad range of statistical analyses. Topics include descriptive statistics, rules of probability, probability distributions, parameter estimation, hypothesis testing, sample size estimation, analysis of variance, nonparametric tests, and linear regression. Through computer laboratory sessions, students become familiar with the SAS statistical software package. Course is worth 2 course units. Enrollment limited to students in the Advanced Professional M.P.H. and Accelerated M.B.A./M.P.H. programs. Auditors are not allowed. M. Ciarleglio

BIS 525a and b, Seminar in Biostatistics and Journal Club The BIS departmental seminar fosters engagement with innovative statistical researchers outside Yale and exposes students to new ideas in statistical research that they may not encounter in their traditional course work. Topics discussed in seminar talks vary, but a major theme is statistical-methodological innovation in the service of public health. Although no credit or grade is awarded, satisfactory performance will be noted on the student's transcript. J. Warren, M. Kane

[**BIS 538b, Survey Sampling: Methods and Management** This course reviews the major sampling plans: simple stratified, systematic, and cluster random sampling. The uses of weighted data and ratio estimation are discussed. The course emphasizes application of methodology, including use of SAS and discussion of other software packages such as R and Stata. Prerequisite: BIS 505b or equivalent. Not offered in 2016–2017]

BIS 540a, Fundamentals of Clinical Trials This course addresses issues related to the design, conduct, analysis, and interpretation of clinical trials. Topics include protocol development, examination and selection of appropriate experimental design, methods of randomization, sample size determination, appropriate methods of data analysis including time-to-event (possibly censored) data, non-inferiority studies, and interim monitoring and ethical issues. Prerequisites: BIS 505a or equivalent and second-year status. R. Makuch

BIS 557a, Computational Statistics This is a course in the theory and practice of statistical computing. The goal of the course is to develop analytical and computational skills that will enable students to solve computational challenges in their own research. The course covers basic mathematical and statistical techniques that statisticians use when analyzing data and models for which there is no ready-made software. Every component of the course covers theoretical concepts, implementation details, and applications to real data or common statistical models that students will encounter in practice. This course is not an introduction to programming, nor is it a survey of software packages for doing statistics; the course covers fundamentals of using the R language, but students are expected to be already familiar with basic concepts in programming. F. Crawford

BIS 561b, Advanced Topics and Case Studies in Multicenter Clinical Trials This course addresses advanced issues related to the design, conduct, monitoring, and analysis of multicenter randomized clinical trials. Topics include organizational, regulatory, and human rights issues; an overview of design strategies; advanced topics in sample size estimation and monitoring; data management and quality assurance procedures; cost-effectiveness and quality of life; and case studies of vaccine trials, factorial trials, primary and secondary prevention trials, large simple trials, strategy trials, and cost-effectiveness. The case studies include many of the classical and landmark clinical trials, such as the polio vaccine field trial, Physicians Health Study, and the trials of AZT for the treatment of AIDS. Prerequisite: BIS 505a. P. Peduzzi

BIS 567a, Bayesian Statistics Bayesian inference is a method of statistical inference in which prior beliefs for model parameters can be incorporated into an analysis and updated once data are observed. This course is designed to provide an introduction to basic aspects of Bayesian data analysis including conceptual and computational methods.

Broad major topics include Bayes's theorem, prior distributions, posterior distributions, predictive distributions, and Markov chain Monte Carlo sampling methods. We begin by motivating the use of Bayesian methods, discussing prior distribution choices in common single parameter models, and summarizing posterior distributions in these settings. Next, we introduce computational methods needed to study multi-parameter models. R software will most often be used. We then apply these methods to more complex modeling settings including linear, generalized linear, and hierarchical models. Discussion of model comparisons and adequacy is also presented. J. Warren

BIS 575b, Introduction to Regulatory Affairs This course provides students with an introduction to regulatory affairs science, as these issues apply to the regulation of food, pharmaceuticals, and medical and diagnostic devices. The course covers a broad range of specialties that focus on issues including legal underpinnings of the regulatory process, compliance, phases of clinical testing and regulatory milestones, clinical trials design and monitoring, quality assurance, post-marketing study design in response to regulatory and other needs, and post-marketing risk management. The complexities of this process require awareness of leadership and change management skills. Topics to be discussed include: (1) the nature and scope of the International Conference on Harmonization, and its guidelines for regulatory affairs in the global environment; (2) drug development, the FDA, and principles of regulatory affairs in this environment; (3) the practice of global regulatory affairs from an industry perspective; (4) description/structure/issues of current special importance to the U.S. FDA; (5) historical background and FDA jurisdiction of food and drug law; (6) the drug development process including specification of the important milestone meetings with the FDA; (7) risk analysis and approaches to its evaluation; (8) use of Bayesian statistics in medical device evaluation, a new approach; (9) use of data monitoring committees and other statistical methods for regulatory compliance; (10) developments in leadership and change management; and (11) food quality assurance including risk analysis/compliance/enforcement. Through course participation, students also have opportunities to meet informally with faculty and outside speakers to explore additional regulatory issues of current interest. R. Makuch

BIS 600a,b, Independent Study or Directed Readings Independent study or directed readings on a specific research topic agreed upon by faculty and student. By arrangement with faculty.

BIS 610b, Applied Area Readings for Qualifying Exams Required of BIS Ph.D. students, in preparation for qualifying exams. Readings arranged with specific faculty in related research area. By arrangement with faculty.

BIS 623a, Applied Regression Analysis This course covers linear regression, estimation, and testing hypotheses in multivariate regression, regression diagnostics, analysis of variance, and adjusting for covariates. Emphasis is on the application of methods. The R programming environment is used throughout the course. Prerequisite: BIS 505b or equivalent. M. Kane

BIS 625a, Categorical Data Analysis This course presents methods for analyzing categorical data in public health, epidemiology, and medicine. Topics include discrete distributions, log-linear models, and logistic regression. Emphasis is placed on the application

of the methods and the interpretation of results by applying the techniques to a variety of data sets. Prerequisite: BIS 505b or equivalent. Z. Wang

[BIS 626a, Gerontologic Biostatistics: Statistical Methods for Clinical Research with Older Study Participants and for Basic Aging Research] This course addresses the statistical issues that arise in the design, conduct, analysis, and interpretation of clinical research with older study participants and of basic aging research. Special attention is given to the conceptual understanding of the challenges involved in aging research and to the practical application of methods for meeting those challenges. Topics include issues such as multicomponent intervention clinical trials, triggered sampling observational designs, and transition modeling. All topics are illustrated with case studies from the Yale Program on Aging. Prerequisite: BIS 505a/b. Not offered in 2016–2017]

BIS 628b, Longitudinal and Multilevel Data Analysis This course covers methods for analyzing data in which repeated measures have been obtained for individuals over time. Different methods are discussed to handle both continuous and discrete longitudinal response data. Both subject-specific and population averaged approaches are covered (with particular reference to capturing the heterogeneity between different individuals). Some of the approaches covered include linear, nonlinear, and generalized mixed effects models, as well as generalized estimating equations. The course also covers exploratory methods, approaches for handling missing data, and possibly transition models and advanced topics such as multivariate longitudinal responses, nonparametric longitudinal responses, the joint consideration of longitudinal and survival data, and the joint consideration of longitudinal and spatial data. Emphasis is placed on applying the methods, understanding underlying assumptions, and interpreting results. Both SAS and S-Plus software are used throughout the course. Prerequisites: BIS 623a and 625a. H. Lin

BIS 630b, Applied Survival Analysis This course demonstrates statistical methods for analyzing and interpreting time-to-failure data. The techniques described include the construction and analysis of failure rates, survival curves, significant tests for comparing survival curves, parametric models, and semiparametric models for the analysis of time-to-failure data including the proportional hazards model. Skills for using statistical software to perform the analyses are developed. In addition, study design is covered, including sample size and power calculations. Prerequisites: BIS 505a and 505b; and BIS 623a or 625a. Knowledge of single variable calculus is expected. M. Ciarleglio

[BIS 639b, Descriptive Analysis of Public Health Data] The analysis of publically available health data provides insight into ways of exploring disease etiology, especially when considering temporal and spatial trends in disease rates and corresponding changes that are related to putative etiologic agents. Age-period-cohort models have been an effective analytical strategy for exploring disease trends and generating hypotheses for putative risk factors to be explored using analytical studies. This course introduces methodology for extracting disease rates from public sources and using them to analyze temporal-spatial trends for disease. It also uses survey data on exposure to putative risk factors and results from analytical studies to quantify the extent that known etiology can account for disease trends. This information is also used to assess the impact of public health policy on disease control. Prerequisites: BIS 505a and 505b; and BIS 623a or 625a. Not offered in 2016–2017]

BIS 643b, Theory of Survival Analysis This course presents the statistical theory underlying survival analysis. It covers different models of censoring and the three major approaches to analyzing this type of data: parametric, nonparametric, and semiparametric methods. The application of this theory through some exemplary data sets is also presented. Prerequisites: STAT 541a and 542b. Offered every other year. S. Ma

[**BIS 645b/CB&B 647b/GENE 645b, Statistical Methods in Human Genetics** Probability modeling and statistical methodology for the analysis of human genetics data are presented. Topics include population genetics, single locus and polygenic inheritance, linkage analysis, genome-wide association studies, quantitative trait locus analysis, rare variant analysis, and genetic risk predictions. Prerequisites: BIS 505a and b, or equivalent; and permission of the instructor. Offered every other year. Not offered in 2016–2017]

[**BIS 646b, Nonparametric Statistical Methods and Their Applications** Nonparametric statistical procedures including recursive partitioning techniques, splines, bootstrap, and other sample reuse methods are introduced. Some of the supporting theory for these methods is proven rigorously, but some is described heuristically. Advantages and disadvantages of these methods are illustrated by medical and epidemiological studies. Students may be required to compare these methods with parametric methods when analyzing data sets. Familiarity with basic statistical theory and computer languages is assumed. Prerequisites: STAT 541a and 542b. Not offered in 2016–2017]

[**BIS 648a, Statistical Methods for Sequence Data Analysis** The availability of massive amounts of sequencing data has generated both great promises and significant challenges for biological and biomedical researchers. This course focuses on the statistical and computational issues arising from the analysis of these data. Topics to be covered include data pre-processing, allele calling, RNA-seq analysis, ChIP-seq analysis, and metagenomics data analysis. The course combines methodology expositions with real data examples to illustrate the discussed methods. Not offered in 2016–2017]

BIS 650a,b, Master's Thesis Research The thesis is the culmination of the student's educational experience in Biostatistics. Students work with faculty advisers in designing their project and writing the thesis. Detailed guidelines for the thesis are outlined in Appendix II. H. Zhao

[**BIS 651b, Spatial Statistics in Public Health** Statistical methods for the analysis of spatial data that arise from health studies are developed in order to account for spatially correlated outcomes. Techniques to be discussed include methodology for continuous responses such as inverse distance weighting and Kriging. Bayesian models for smoothing disease risk maps are derived. Environmental exposure models are developed. In addition, spatial/temporal models are discussed that allow the analysis of both sources of correlation. Techniques are illustrated using data from ongoing studies. Prerequisites: STAT 541a and 542b. Not offered in 2016–2017]

BIS 678a, Statistical Consulting This class offers the chance for students to gain experience and practical knowledge working as a biostatistician in a real-world setting. Students collaborate with an investigator, designing and implementing statistical approaches to further clinical research efforts under the supervision of an instructor. This class prepares

students for further, unsupervised collaborations in their careers as biostatisticians with an emphasis on developing effective oral and written communication skills. Prerequisites: BIS 623a and BIS 625a; open to second-year Biostatistics doctoral and M.S. students, or by permission of the instructors. P. Peduzzi, M. Kane, D. Esserman

BIS 679a, Advanced Statistical Programming in SAS and R This class offers students the chance to build on basic SAS and R programming skills. Half of the term is spent working with SAS learning how to create arrays, format data, merge and subset data from multiple sources, transpose data, and write and work with macros. The second half of the term is spent working with R learning how to work with data, program functions, write simulation code using loops, and bootstrap. Prerequisites: BIS 505a and basic knowledge of both SAS and R. D. Esserman

BIS 681b, Statistical Consulting Lab This class offers the opportunity for students to gain experience and practical knowledge by working as a practicing biostatistician in a “real-world” setting, a statistical consulting lab supervised by instructors in the Department of Biostatistics. The course is primarily aimed at having graduate students in Biostatistics provide statistical consultation to other graduate students at the Yale School of Public Health and Yale School of Medicine who are working on their thesis/research projects: i.e., students helping students. Prerequisites: BIS 623a, BIS 625a, and BIS 678a; open to second-year Biostatistics doctoral and M.S. students, or by permission of the instructors. P. Peduzzi, M. Kane, D. Esserman

[**BIS 691b, Theory of Generalized Linear Models** This course considers a class of statistical models that generalize the linear model through the link functions of response mean. Major varieties of GLMs including models for Gaussian, Gamma, binomial, un/ordered polynomial, and Poisson responses are discussed. Goodness of fit of the models and overdispersion are considered. Extensions to correlated responses are examined through the approaches of quasi-likelihood and generalized estimating equation. The course covers both theoretical and applied aspects of data analytic issues arising from practice. Prerequisites: STAT 542b, BIS 623a, and some knowledge of matrix calculation. Offered every other year. Not offered in 2016–2017]

BIS 692b/CB&B 645b/STAT 645b, Statistical Methods in Genetics and Bioinformatics Introduction to problems, algorithms, and data analysis approaches in computational biology and bioinformatics; stochastic modeling and statistical methods applied to problems such as mapping disease-associated genes, analyzing gene expression microarray data, sequence alignment, and SNP analysis. Statistical methods include maximum likelihood, EM, Bayesian inference, Markov chain Monte Carlo, and some methods of classification and clustering; models include hidden Markov models, Bayesian networks, and the coalescent. The limitations of current models, and the future opportunities for model building, are critically addressed. Prerequisite: STAT 538a, 542b, or 661a. Prior knowledge of biology is not required, but some interest in the subject and a willingness to carry out calculations using R is assumed. H. Zhao

BIS 695c, Summer Internship in Biostatistical Research The purpose of this course is to provide students with the opportunity of gaining practical experience in the analysis and the development of biostatistical methods as part of a health sciences research team

including medicine, public health, pharmaceutical industry, or health care delivery. This experience provides a basis for developing a dissertation thesis proposal that has practical significance for addressing important scientific questions. Students work with a biostatistics faculty mentor to select a suitable placement for the summer intern, and a one-page description of the plans will be submitted to the instructor at least three weeks prior to starting the program, for approval within two weeks. The internship must be full-time: 35–40 hours per week for 10–12 weeks during the summer. Upon completion of the internship, a written report of the work must be submitted to the instructor no later than October 1. Prerequisite: completion of one year of the Ph.D. or M.S. program or permission of the instructor. H. Zhao

CHRONIC DISEASE EPIDEMIOLOGY

CDE 502b/EHS 502b, Physiology for Public Health The objective of this course is to provide a comprehensive working knowledge of the primary physiologic and metabolic systems that respond to environmental stressors. A major emphasis of the course is to analyze potential health consequences of these stressors: examining vulnerabilities affected by age, chronic disease, and sedentary lifestyle, as well as protection afforded by healthy lifestyle factors. C. Yeckel

CDE 505a/PSYC 657a, Social and Behavioral Foundations of Health This course provides students with an introduction to social and behavioral science issues that influence patterns of health and health care delivery. The focus is on the integration of biomedical, social, psychological, and behavioral factors that must be taken into consideration when public health initiatives are developed and implemented. The course emphasizes the integration of research from the social and behavioral sciences with epidemiology and biomedical sciences. M. White

CDE 505c, Accelerated Social and Behavioral Foundations of Health This intensive seven-week summer course provides students with an introduction to social and behavioral science issues that influence patterns of health and health care delivery. The focus is on the integration of biomedical, social, psychological, and behavioral factors that must be taken into consideration when public health initiatives are developed and implemented. This course emphasizes the integration of research from the social and behavioral sciences with epidemiology and biomedical sciences. Not open to students in the traditional two-year M.P.H. program. T. Kershaw

CDE 508a/EMD 508a, Principles of Epidemiology I This course presents an introduction to epidemiologic definitions, concepts, and methods. Topics include history of epidemiology, descriptive epidemiology, measurement of disease occurrence and association, study design (ecologic, cross-sectional, case-control studies, cohort, and intervention), surveillance, measurement validity and screening, random variation and precision, bias, confounding, effect modification, and causality. The course also teaches skills for quantitative problem solving and for understanding epidemiologic concepts in the published literature. L. Niccolai

CDE 515c, Accelerated Epidemiology This intensive seven-week summer course provides a comprehensive overview of epidemiologic concepts and methods. Topics include measurements of disease frequency and association, study design (including randomized and non-randomized controlled trials, cohort studies, case-control studies, cross-sectional studies, and ecologic studies), screening principles, reliability and validity, bias, confounding, and effect modification. After completing this course, students are able to calculate and interpret epidemiologic parameters, identify the strengths and weaknesses of various study designs, and apply the principles and methods of epidemiology to the design and analysis of new studies. Not open to students in the traditional two-year M.P.H. program. M. Desai

CDE 516b, Principles of Epidemiology II This is an intermediate-level course on epidemiologic principles and methods. The course covers bias, introduction to multivariable analysis for confounder control and assessment of effect modification, indirect standardization, matching, residual confounding, survival analysis, randomized controlled trials including cluster-randomized trials, multiplicity and subgroup analysis, sample size and power, meta-analysis, screening, genetic association studies, use of biomarkers in epidemiology, and epidemic investigation. Through lectures, class discussion, readings from the peer-reviewed literature in both chronic and infectious disease epidemiology, and homework assignments, students learn to (1) evaluate the scientific merit and feasibility of epidemiologic study designs; (2) review, critique, and evaluate epidemiologic reports and research articles; (3) perform epidemiologic calculations; and (4) draw appropriate inferences from epidemiologic data, all at the intermediate level. Prerequisites: CDE/EMD 508a and BIS 505a. F. Shebl

CDE 520b/EHS 520b, Case-Based Learning for Genetic and Environmental Diseases This course covers the basic concepts, methodology, and up-to-date research approaches central to understanding genetic and environmental causes of human diseases. Lectures are based on comprehensive illustrations with several historical landmark studies; real-life stories, cartoons, and videos are used throughout. Students leave the class with an appreciation of genetics and an understanding of how to appropriately use the study designs, analyses, and interpretations to discover disease susceptibility genes. In addition, students learn how epigenetics affects disease presentation. Critically, students are expected to equip themselves to tackle the causes of the disease of their own interest. Participation in in-class as well as out-of-class discussions, take-home quiz sets, hands-on exercises with real data, and a presentation are the criteria for the final grade. No prerequisites. J. Hoh

CDE 523b, Measurement Issues in Chronic Disease Epidemiology This course addresses the measurement issues in chronic disease epidemiology from a practical perspective. The first part of the course covers the use and limitations of currently available techniques for measuring exposure to a number of etiologic factors such as diet, alcohol, tobacco, physical activity, psychological stress, and environmental exposures. The latter part of the course focuses on the measurement of outcome for some of the major chronic diseases, along with some practical considerations involved in conducting chronic disease epidemiology research. Prerequisite: CDE/EMD 508a. J. Lichtman

CDE 525a and b, Seminar in Chronic Disease Epidemiology & Social and Behavioral Sciences This seminar is conducted in two series: once a month it focuses on speakers and topics of particular relevance to CDE students, and once a month it focuses on speakers and topics of particular relevance to SBS students. Students are introduced to research activities of the department's faculty members, with regular presentations by invited researchers and community leaders. The CDE series is required of first-year CDE students. The SBS series is required of first-year SBS students. Cross-attendance is optional. Although no credit or grade is awarded, satisfactory performance will be noted on the student's transcript. N. Hawley, D. Keene

CDE 531a/PSYC 664a, Health and Aging This course explores the ways psychosocial and biological factors influence aging health. Topics include interventions to improve mental and physical health; effects of ageism on health; racial and gender health disparities in later life; and how health policy can best adapt to the growing aging population. Students have the opportunity to engage in discussions and to develop a research proposal on a topic of interest. B. Levy

CDE 532b, Epidemiology of Cancer This course applies epidemiologic methods to the study of cancer etiology and prevention. Introductory sessions cover cancer biology, carcinogenesis, cancer incidence, and mortality rates in the United States, and international variation in cancer rates. The course then focuses on risk factors for cancer (including tobacco, alcohol, hormonal factors, diet, radiation, and obesity/physical activity) and on major cancer sites (including colon, breast, and prostate). Emphasis is placed on critical reading of the literature. Prerequisite: CDE/EMD 508a. B. Cartmel

CDE 533b, Topics in Perinatal Epidemiology This course focuses on reproduction, pregnancy, and delivery. Students obtain a foundation in reproductive biology with practical applications to epidemiologic research. Current and landmark studies in perinatal epidemiology are critically reviewed from a methodological perspective. Topics studied may include issues such as infertility, miscarriage, fetal growth retardation, pregnancy complications, preterm labor and delivery, aspects of prenatal care, congenital malformations, SIDS, and infant mortality. Students actively participate in a seminar format and develop an understanding of what evidence is needed to establish causal relationships in this specialty. Implications of research findings for public health policy, individual decision making, and future studies are considered. A.M. Jukic

CDE 534b, Applied Analytic Methods in Epidemiology This computer lab-based course provides students with a comprehensive overview of data management and data analysis techniques. The SAS statistical software program is used. Students learn how to create and manipulate data sets and variables using SAS; identify appropriate statistical tests and modeling approaches to evaluate epidemiologic associations; and perform a broad array of univariate, bivariate, and multivariate analyses using SAS and interpret the results. Prerequisites: BIS 505a, CDE/EMD 508a, and students must have taken or currently be taking BIS 505b (or, for Advanced Professional M.P.H. students, successful completion of BIS 515c and CDE 515c). M. Desai

CDE 535b, Epidemiology of Heart Disease and Stroke Heart disease and stroke are among the leading causes of death and disability among industrialized nations. This course introduces students to the major categories of cerebrovascular and cardiovascular disease. Students are challenged to think about how individual diseases contribute to the epidemic of vascular disease in the United States. In this course, students learn basic principles about the rates of disease, risk factors, clinical trial results, and outcomes of heart disease and stroke. Through the analysis of actual studies, students apply basic epidemiology to critically evaluate current literature and topics in this field. Sessions include a clinical overview of a specific disease or risk factor, as well as highly interactive discussion of a specific epidemiologic topic or principle. Students are encouraged to develop their own solutions to current gaps in the epidemiologic literature. J. Lichtman

CDE 537b, Social and Interpersonal Influences on Health Social relationships, such as friends, family, romantic partners, neighbors, and coworkers, are an important part of our lives. They are the targets of our behaviors, for example, when we help, love, fight, and discriminate against others. They are the basis of our feelings of status and self-esteem and why we experience the majority of our emotions. Importantly, social relationships have strong influences on our mental and physical health. The purpose of this class is to learn about different ways of conceiving of our social environment, and learning how these social factors can contribute to our mental and physical health. We critically review the literature that examines the associations between social factors and mental and physical health. We address several social concepts, and in each case discuss how they “get under the skin” to influence health. This course is recommended for those with a background in social and behavioral sciences or a keen interest in social and interpersonal influences on health. J. Monin

CDE 541a, Community Health Program Evaluation This course develops students’ skills in designing program evaluations for public health programs, including non-governmental and governmental agencies in the United States and abroad. Students learn about different types of summative and formative evaluation models and tools for assessment. The course content is based on an ecological framework, principles of public health ethics, a philosophy of problem-based learning, and critiques of evaluation case studies. Students write evaluation plans for a specific existing public health program. Students may also work as a team with a local community health agency reviewing their evaluation plans and providing guidance on developing a program evaluation plan for one of the agency’s public health programs. D. Stevens

CDE 543a/EMD 543a/GLBL 567a, Global Aspects of Food and Nutrition The course presents a core topic in global health and development that is at the intersection of science, society, and policy. The course familiarizes students with leading approaches to analyzing the causes of malnutrition in countries around the world and to designing and evaluating nutrition interventions. It covers micronutrient and macronutrient deficiencies; approaches to reducing malnutrition; the cultural, economic, environmental, agricultural, and policy context within which malnutrition exists; and the relationships between common infections and nutritional status. D. Humphries

CDE 545b, Health Disparities by Race and Social Class: Application to Chronic Disease Epidemiology One of four overarching goals of Healthy People 2020 is to “achieve health equity, eliminate disparities, and improve the health of all groups.” This course explores disparities in the chronic diseases that contribute disproportionately to ill health, resource utilization, reduced quality of life, and mortality. Taking a life course perspective as we explore disparities across the spectrum of chronic diseases, we focus on differences in health between diverse racial/ethnic and/or socioeconomic groups, primarily in the United States. The primary focus of this course is on understanding the determinants and consequences of health disparities, learning to critically evaluate health disparities research, and thinking creatively about elimination strategies. A sound foundation in epidemiological methods and a working knowledge of the major chronic diseases are required. Prerequisites: CDE/EMD 508a, and CDE 505a or 571b. B. Jones

CDE 547a, Climate Change and Public Health This course takes an interdisciplinary approach to examining relationships between climate change and public health. After placing climate change in the context of the Anthropocene and planetary health and exploring the fundamentals of climate change science, the course covers impacts of climate change on public health, including heat waves; occupational heat stress; air pollution; wildfires; aeroallergens; vector-borne, foodborne, and waterborne diseases; water scarcity; food security; migration; violent conflict; natural disasters; and health benefits of climate change mitigation. The course integrates climate justice issues and adaptation strategies into the discussion of specific topics. The course is reading-intensive and makes ample use of case studies, with a focus on critical reading of the literature and identifying research gaps and needs. R. Dubrow

CDE 551b, Global Noncommunicable Disease This course focuses on the contemporary burden of noncommunicable diseases (NCDs), with a particular focus on the health impact of NCDs in low- and middle-income countries. The first part of the course briefly covers the etiology and global distribution of four key NCDs: cardiovascular disease, cancer, chronic respiratory disease, and diabetes. We then discuss the shared behavioral, metabolic, and physiologic risk factors for these diseases and explore how NCDs are associated with economic development, globalization, and the demographic and health transitions. The second half of the course focuses concretely on approaches to NCD intervention, from individual-level approaches to coordinated global action. The last five lectures are by guest speakers offering insight into the successes and challenges of their own intervention attempts. N. Hawley

CDE 562a, Nutrition and Chronic Disease This course provides students with a scientific basis for understanding the role of nutrition and specific nutrients in the etiology, prevention, and management of chronic diseases. Nutrition and cancer are particularly emphasized. Other topics addressed include cardiovascular diseases, osteoporosis, obesity, diabetes mellitus, and aging. Implications for federal nutrition policy (dietary guidelines, dietary supplement regulations, food labeling, etc.) are discussed. Prerequisites: biology, biochemistry, and physiology helpful. L. Ferrucci

CDE 568b, Public Health Communications This course is an introduction to the theory, design, and implementation of public health communication. The class time is a highly interactive seminar using role playing, media production techniques, and case

studies – whenever possible incorporating the students’ experiences and global public health events, especially those that are or recently have been in the news such as Zika and Ebola. The goal is to enhance students’ abilities in message design, crisis response, and communication of scientific information in nontechnical language to the general public. The work focuses on subjects such as the choice of media channels with a special emphasis on new media, understanding and including the intended audience in any communications, as well as prior research and post-evaluation of communication efforts. R. Bazell

CDE 572a, Obesity Prevention and Lifestyle Interventions This course reviews the methods and evaluation of obesity prevention and lifestyle interventions conducted in multiple settings (e.g., individual, family, and community settings, as well as policy-level interventions). Topics include physical activity, nutrition, and weight-loss interventions in various populations (children, adults, those who are healthy, and those with chronic diseases). The course combines didactic presentations, discussion, and a comprehensive review of a particular lifestyle intervention by students. This course is intended to increase the student’s skills in evaluating and conducting obesity prevention and lifestyle interventions. M. Irwin

CDE 573a, Social and Cultural Factors in Mental Health and Illness This course provides an introduction to mental health and illness with a focus on the complex interplay between risk and protective factors and social and cultural influences on mental health status. We examine the role of social and cultural factors in the etiology, course, and treatment of substance misuse; depressive, anxiety, and psychotic disorders; and some of the severe behavioral disorders of childhood. The social consequences of mental illness such as stigma, isolation, and barriers to care are explored, and their impact on access to care and recovery considered. The effectiveness of the current system of services and the role of public health and public health professionals in mental health promotion are discussed. M. Smith

CDE 574b, Developing a Health Promotion and Disease Prevention Intervention The primary objective of the course is to gain experience in intervention research by developing a health promotion and disease prevention intervention. Students choose a health problem (e.g., physical inactivity, smoking, HIV risk) and develop an intervention focused on favorably changing the determinants and behavior that influence the health problem. The course emphasizes transferring concepts from the abstract to the concrete. Students develop an intervention manual consisting of actual intervention materials and methods that specifically outline how the intervention will be designed, conducted, evaluated, and disseminated. Throughout the course, students participate in a peer review process to evaluate and give feedback for each section of the intervention manual. T. Kershaw

CDE 580b, Qualitative Research Methods in Public Health This is a course about doing qualitative social research in public health. The course, which has both theoretical and practical components, introduces students to various epistemological, philosophical, and ethical considerations that are involved with qualitative research methods and the practice of social science research more generally. Additionally, students gain hands-on experience with some of the strategies and techniques that are needed to conduct qualitative research. D. Keene

CDE 581a, Stigma and Health This course engages students in conceptualizing stigma as a fundamental cause of adverse health. After reviewing conceptual models of stigma, students examine the multiple mechanisms—both structural and individual—through which stigma compromises the health of a large proportion of U.S. and global populations. Given the relevance of identity and stress to the study of stigma and health, the empirical platform of the course is complemented by considering the relevance of conceptual models of identity, intersectionality, and minority stress. The course reviews social/behavioral and epidemiological methods for studying stigma. Students compare individual- and structural-level interventions to reduce both stigma at its source and its downstream impact on individual health. Class content is organized around themes that cut across all stigmatized conditions and identities. However, students devote course assignments to individual stigmas of their choice. Therefore, students can expect to explain stigma as a predicament that affects nearly all individuals at some point in the life course while developing expertise in one or two stigmas that are particularly relevant to their interests. J. Pachankis

CDE 582a, Regulatory and Scientific Issues Relating to Tobacco Use This course provides students with an understanding of nicotine dependence and tobacco addiction and related research methods. Specific topics include animal models of nicotine dependence; genetics of tobacco addiction; imaging methods for tobacco addiction; measurement of tobacco addiction, including self-report, biomarkers; the effects of various ingredients (additives, flavors) on palatability, inhalability, and addictiveness; interventions for addiction reduction; smoking initiation and progression in adolescents; the role of public health policy in addiction reduction; and training in research methods. M. White

CDE 585a/GLBL 529a/LAW 20568, Sexuality, Gender, Health, and Human Rights The course explores the application of human rights perspectives and practices to issues in regard to sexuality and health. It addresses the necessity—and complexity—of adding nuanced rights perspectives to programming and advocacy on sexual health. Through reading, interactive discussion, paper presentation, and occasional outside speakers, students learn the tools and implications of applying rights to a range of sexuality and health-related topics. The overall goal is twofold: to engage students in the world of global sexual health and rights policy making as a field of social justice and public health action; and to introduce them to conceptual tools that can inform advocacy and policy formation and evaluation. A. Miller

CDE 594a, Maternal-Child Public Health Nutrition This course examines how nutrition knowledge gets translated into evidence-informed maternal-child food and nutrition programs and policies. Using multisectorial and interdisciplinary case-study examples, the course highlights (a) socioeconomic, cultural, public health, and biomedical forces that determine maternal-child nutrition well-being; and (b) how this understanding can help shape effective programs and policies capable of improving food and nutrition security of women and children. Topics include maternal-child nutrition programs, food assistance and conditional cash-transfer programs, and the Dietary Guidelines for Americans. Prerequisites: CDE 508a and BIS 505a. R. Pérez-Escamilla

CDE 596b/LAW 30168, Global Health and Justice Practicum This course fuses didactic and experiential learning on critical topics at the intersection of public health, rights, and justice in the twenty-first century. Students have the opportunity to explore analytic and practical frameworks that engage a diverse range of legal frameworks and processes that act as key mediators of health, including producing or responding to health disparities in the United States and worldwide. Readings and project approaches draw from legal, public health, historical, anthropological, and other fields to introduce students to the multiple lenses through which health issues can be tackled, and to build their competence to work with colleagues in other disciplines around such interventions. Because of the substantial time commitment involved, with both classroom and experiential learning, the Global Health and Justice Practicum is worth 2 course units. Enrollment limited to twelve. A. Kapczynski, A. Miller, G. Gonsalves, C. Ricardo

CDE 597a, Genetic Concepts in Public Health This course is geared toward public health students with an interest in genetics, but no previous genetics course work. The course spends a significant amount of time dedicated to introductory genetic principles from the central dogma of DNA-RNA-protein to how the human genome is organized. The course continues with discussions specifically related to disease gene mapping and finally covers topics including gene-environment interactions, genetic screening, and ethics. Students leave the course with a basic understanding of genetic concepts and how these are applied in a public health setting. The course prepares interested students for more advanced course work in genetic epidemiology, statistical genetics, or human genetics. A. DeWan

CDE 600a,b, Independent Study or Directed Readings Independent study or directed readings on a specific research topic agreed upon by faculty and student. By arrangement with faculty.

CDE 610b, Applied Area Readings for Qualifying Exams Required of CDE Ph.D. students, in preparation for qualifying exams. Readings arranged with specific faculty in related research area. By arrangement with faculty.

CDE 617b, Developing a Research Proposal Each student develops a research grant proposal independently. This includes the development of a research question, specific aims, study hypotheses, reviewing and summarizing relevant scientific literature, choosing a study design, and developing a data collection and analysis strategy. Students meet with the instructor and submit drafts of sections of the grant proposal throughout the course and make interim presentations to the class on their progress. During the final weeks of the course, each grant proposal is reviewed for feedback. Students then revise their proposal based on the reviewers' comments and resubmit the revised proposal to the instructor for a final grade. Prerequisite: BIS 505a, BIS 505b (can be taken concurrently), CDE 516b (can be taken concurrently), doctoral status, or permission of the instructor. Auditors are not allowed. X. Ma

CDE 619a, Advanced Epidemiologic Research Methods This advanced course focuses on quantitative issues and techniques relevant to the design and analysis of observational epidemiologic studies. Starting with formal definitions of the commonly used epidemiologic parameters, and assuming a working knowledge of ANOVA and linear regression,

the course covers analyses based on various related types of regression, e.g., logistic, Poisson, Cox, etc. The GLIM and PECAN computer programs are described and used throughout. Students analyze and discuss data sets of generally increasing complexity. Prerequisites: BIS 505a, 505b, doctoral status, or permission of the instructor. H. Risch

CDE 634a, Advanced Applied Analytic Methods in Epidemiology and Public Health

The goal of this course is to provide students with the knowledge and necessary skills to carry out advanced analytic methods in epidemiology and public health. Through lectures and readings, students are introduced to various advanced modeling techniques that are commonly used in epidemiology and public health. In addition, students are taught how to use, manipulate, and understand the provided programming codes using the relevant software. Students have the chance to practice through laboratory times and multiple exercises. Students are trained on interpreting the results of the relevant method, describing the method, and presenting the results. The analytic techniques covered include propensity score analysis, principal component analysis, factor analysis, cluster analysis, nested-case control analysis, case-cohort analysis, structural equation modeling, mediation, and quantile regression. F. Shebl

CDE 650a, Introduction to Evidence-Based Medicine and Health Care Evidence-based medicine and health care use best current evidence in addressing clinical or public health questions. This course introduces principles of evidence-based practice in formulating clinical or public health questions, systematically searching for evidence, and applying it to the question. Types of questions include examining the comparative effectiveness of clinical and public health interventions, etiology, diagnostic testing, and prognosis. Particular consideration is given to the meta-analytic methodology of synthesizing evidence in a systematic review. Also addressed is the role of evidence in informing economic analysis of health care programs and clinical practice guidelines. Using a problem-based approach, students contribute actively to the classes and small-group sessions. Students complete a systematic review in their own field of interest using Cochrane Collaboration methodology. Prerequisite: students must have passed CDE 516b, or obtain permission of the instructor. S. Wang

CDE 670a,b, Advanced Field Methods in Public Health The course offers direct experience in field methods in chronic disease epidemiology or social and behavioral sciences for doctoral students and advanced M.P.H. students. Students are expected to actively participate as part of a research team (8–10 hours per week) doing field research in some aspect of chronic disease epidemiology or social and behavioral sciences. It is expected that their progress will be directly supervised by the principal investigator of the research project. This course can be taken for one or two terms and may be taken for credit. Prerequisite: arrangement with a faculty member must be made in advance of registration. T. Kershaw

CDE 676b, Questionnaire Development This course is designed to direct students through the process of questionnaire selection and development for use in health research. Questionnaires and surveys are used extensively in medical, epidemiological, and public health research. The specific questionnaire utilized has great potential to affect research conclusions. Students learn to critically evaluate existing measures and how to construct

questionnaires for use in health research. Topics include constructs and operational definitions, writing and evaluating questionnaire items, item scaling, domain sampling, item wording and readability, test bias, and item weighting and scoring. Students learn how to evaluate psychometric indicators (e.g., internal consistency, reliability and validity coefficients). Students are required to construct a questionnaire and are guided through all phases of questionnaire development, including item generation, scaling decisions, survey design, pilot testing, data collection, reliability analysis, and calculation of validity coefficients. The practical learning goal is to generate a publication-level questionnaire to evaluate a unique exposure history or health-related construct. By course end, students are able to critically evaluate existing measures and have the skills necessary to develop psychometrically valid tools for research. Prerequisites: CDE/EMD 508a and BIS 505b (may be taken concurrently). M. White

ENVIRONMENTAL HEALTH SCIENCES

EHS 502b/CDE 502b, Physiology for Public Health The objective of this course is to provide a comprehensive working knowledge of the primary physiologic and metabolic systems that respond to environmental stressors. A major emphasis of the course is to analyze potential health consequences of these stressors: examining vulnerabilities affected by age, chronic disease, and sedentary lifestyle, as well as protection afforded by healthy lifestyle factors. C. Yeckel

EHS 503b/F&ES 896b, Public Health Toxicology This course is designed to serve as a foundation for understanding environmental toxicology. It includes basic principles of toxicology, mechanisms of toxicity and cellular defense, and the fundamental interactions between chemicals and biological systems. Human exposure to foreign chemicals and their adverse effects are considered, as is the importance of federal and state agencies in protecting public health. Through the use of case studies, the course provides insights into prevention of mortality and morbidity resulting from environmental exposure to toxic substances, the fundamentals of risk assessment and regulatory toxicology, and the causes underlying the variability in susceptibility of people to chemicals. V. Vasiliou

[**EHS 505a, Occupational Exposure Assessment and Control** This course offers an introduction to methods used to protect the health and safety of workers. Topics include exposure assessment for identifying and evaluating chemical and physical hazards; ergonomics; health and safety standards; personal protective devices; management programs to control hazards; injury and illness record-keeping; and worker's compensation programs. Case studies complement traditional lectures. Offered every other year. Not offered in 2016–2017]

EHS 507a, Environmental Epidemiology Environmental epidemiology provides insights about epidemiology studies on various environmental exposures and human health outcomes. The potentials and the limitations of environmental epidemiology are explored as they are inherent in the design of suitable studies and as they manifest themselves in actual studies that have been conducted. The analysis and interpretation of such studies, as well as the consequences for the design and conduct of proposed studies, are examined. Prerequisites: CDE/EMD 508a and BIS 505a, or permission of the instructor. Y. Zhang

[EHS 508b/F&ES 897b, Assessing Exposures to Environmental Stressors This course examines human exposure to environmental stressors as it applies to environmental epidemiology and risk assessment. Indirect and direct methods of assessing exposures are reviewed and case studies are presented. Not offered in 2016–2017]

EHS 510a, Principles of Environmental Health Environmental Health focuses on human health effects of exposure to chemical, physical, and biological agents in the community, workplace, and home. This course teaches the principles and tools related to recognizing, assessing, understanding, and mitigating the impacts of environmental agents. Topics include air and water pollution, foodborne illness, climate change, energy use, occupational health, children's health, environmental justice, and pesticide use. N. Deziel

EHS 511b/F&ES 893b, Principles of Risk Assessment This course introduces students to the nomenclature, concepts, and basic skills of quantitative risk assessment (QRA). The goal is to provide an understanding necessary to read and critically evaluate QRA. Emphasis is on the intellectual and conceptual basis of risk assessment, particularly its dependence on toxicology and epidemiology, rather than its mathematical constructs and statistical models. Specific cases consider the use of risk assessment for setting occupational exposure limits, establishing community exposure limits, and quantifying the hazards of environmental exposures to chemicals in air and drinking water. J. Borak, C. Fields

EHS 520b/CDE 520b, Case-Based Learning for Genetic and Environmental Diseases This course covers the basic concepts, methodology, and up-to-date research approaches central to understanding genetic and environmental causes of human diseases. Lectures are based on comprehensive illustrations with several historical landmark studies; real-life stories, cartoons, and videos are used throughout. Students leave the class with an appreciation of genetics and an understanding of how to appropriately use the study designs, analyses, and interpretations to discover disease susceptibility genes. In addition, students learn how epigenetics affects disease presentation. Critically, students are expected to equip themselves to tackle the causes of the disease of their own interest. Participation in in-class as well as out-of-class discussions, take-home quiz sets, hands-on exercises with real data, and a presentation are the criteria for the final grade. No prerequisites. J. Hoh

EHS 525a and b, Seminar and Journal Club in Environmental Health Students are introduced to a wide variety of research topics, policy topics, and applications in environmental health science. The course consists of seminar presentations and journal club meetings that alternate weekly. The seminar series includes biweekly presentations by EHS faculty and outside experts, followed by a discussion period. The journal club series includes student presentations and discussion on one or two scientific literatures related to the seminar topic of the following week. This course is designed to promote critical thinking regarding current topics in environmental health science as well as to help students develop topics for their theses. Although no credit or grade is awarded, satisfactory performance will be noted on the student's transcript. Y. Chen

EHS 537a/EMD 537a/GLBL 569a, Water, Sanitation, and Global Health Water is essential for life, and yet unsafe water poses threats to human health globally, from the poorest to the wealthiest countries. More than two billion people around the world lack access to clean, safe drinking water, hygiene, and sanitation (WASH). This course focuses on the role of water in human health from a public health perspective. The course provides a broad overview of the important relationships between water quality, human health, and the global burden of waterborne diseases. It discusses the basics of water compartments and the health effects from exposures to pathogenic microbes and toxic chemicals in drinking water. It also covers different sanitation solutions to improve water quality and disease prevention and discusses future challenges and the need for intervention strategies in the new millennium. Y. Chen, E. Wunder

[**EHS 545b, Molecular Epidemiology** Many diseases are the outcome of a complex inter-relationship between multiple genetic, epigenetic, and environmental factors. This course covers basic concepts of human genetics as well as recent discoveries in the field of epigenetics, which are fundamental to understanding how individuals differ in their susceptibility to environmental agents and how these susceptibilities change over time. Current knowledge of molecular approaches to identifying specific genetic variations and epigenetic alterations associated with human diseases are introduced, and their roles in gene-environment interactions and disease development are discussed. The course includes formal lectures, article discussions, and laboratory components, which provide hands-on experiences of some commonly used molecular techniques for detecting genetic and epigenetic changes. Not offered in 2016–2017]

EHS 573b, Epidemiological Issues in Occupational and Environmental Medicine This course explores issues around the detection and characterization of health outcomes from environmental and occupational exposures. Case studies include infectious disease outbreaks, cancer clusters in the general environment and within industrial settings, ground-water contaminations and birth defects, lung diseases and cancers following the World Trade Center attacks, health sequelae in military populations, radon exposures and lung cancers in miners and in the general population, exposures among marginalized populations. The course is taught in discussion format by occupational and environmental medicine faculty. There is a take-home final examination. M. Russi, M. Slade

EHS 575a, Introduction to Occupational and Environmental Medicine This course presents a broad overview of the principles of occupational and environmental medicine. The major diseases of environmental origin and the major hazards – chemical, physical, and biologic – and settings in which they occur are examined. C. Redlich, M. Stowe

[**EHS 585a/FE&S 898a, The Environment and Human Health** This course provides an overview of the critical relationships between the environment and human health. The class explores the interaction between health and different parts of the environmental system including water, indoor and outdoor air, environmental justice, and occupational health. Other topics include exposure assessment, case studies of environmental health disasters, links between climate change and health, and integration of scientific evidence on environmental health. Students learn about current key topics in environmental

health and how to critique and understand scientific studies. The course incorporates lectures and discussion. Enrollment limited to twenty-five. Not offered in 2016–2017]

EHS 600a,b, Independent Study or Directed Readings Independent study or directed readings on a specific research topic agreed upon by faculty and student. By arrangement with faculty.

EHS 610b, Applied Area Readings for Qualifying Exams Required of EHS Ph.D. students, in preparation for qualifying exams. Readings arranged with specific faculty in related research area. By arrangement with faculty.

EHS 620a and b, Research Rotation This course is required of all EHS Ph.D. students during their first academic year. The research rotations are in EHS laboratories that are able to accommodate students. Research rotations are available for both “dry” (i.e., statistical analysis) and “wet” (i.e., bench) laboratory research groups. The student meets with the EHS graduate faculty member at the beginning of the rotation for an explanation of the goals and expectations of a student in the laboratory. The student becomes familiar with the research models, approaches, and methods utilized by the research group through interactions with other laboratory/research personnel and from laboratory manuscripts. The student is expected to spend at least fifteen hours per week working in the laboratory or research group and to present a rotation seminar at the end of the rotation period. V. Vasilioiu

EPIDEMIOLOGY AND PUBLIC HEALTH

EPH 100a, Professional Skills Seminar The Professional Skills Seminar is intended to prepare M.P.H. students for leadership positions as public health professionals. Material covered includes public speaking, presentation skills, professional writing, negotiation and conflict resolution, and networking and social media. Attendance at all sessions is required (elective for Advanced Professional M.P.H. students), and some homework is a part of the program. Although no credit or grade is awarded, satisfactory performance will be noted on the student’s transcript. F. Spencer, K. Shay

EPH 500b, Public Health Practicum This course is one of the options available to students to fulfill the practice requirement for the M.P.H. degree. The course design combines experiential learning and guided classroom discussion. Students are assigned to a field placement in an appropriate setting that affords the opportunity to apply public health concepts and competencies learned in the classroom through a practice experience that is relevant to the student’s areas of specialization. Emphasis is placed on situating students in community-based organizations and other public health service settings such as local or state health departments, where they can work on authentic public health problems and issues. This course provides a means for students to gain exposure to the mission and activities of diverse public health organizations and thus may help to inform their decisions about professional work pursuits upon completion of the M.P.H. degree. Open only to second-year M.P.H. students, Advanced Professional M.P.H. students, and Accelerated M.B.A./M.P.H. students. E. O’Keefe, D. Frankel-Gramelis

EPH 515a, Ethics and Public Health: An Introduction This four-session seminar introduces students to the ethical implications of public health programs, policies, and research initiatives; their historical roots; and the regulations and guidelines governing human subjects research in the United States and internationally. Case studies are used to demonstrate selected ethical challenges in public health policy, practice, and research. In addition, students learn the functions and procedures of Yale's Human Research Protection Program and complete its Web-based training on human subjects research. M.P.H. students are required to take the course during the first year of the program. K. Khoshnood

EPH 520c, Summer Internship The Internship is a degree requirement that is completed in the summer between the first and second academic years. Students work with their faculty advisers, the Career Management Center, and the Office of Public Health Practice to identify suitable public health placements such as medical care facilities, community agencies, public health departments, research projects, laboratories, and other sites engaged in public health activities. The internship experience sometimes serves as a basis for the M.P.H. thesis. The internship is displayed on the transcript with a grade of "S" (Satisfactory) upon completion. A course unit is *not* given for the summer internship.

All students, with the exception of those in the Advanced Professional M.P.H. Program and the Accelerated M.B.A./M.P.H. Program, *must* complete an approved Summer Internship. The Summer Internship may be used to complete the practice requirement for the M.P.H. degree with prior approval from the Office of Public Health Practice.

EPH 525b, Thesis The thesis (2 course units) is typically a yearlong project that is completed in the second academic year and is the culmination of the student's educational experience at YSPH. It is frequently a report of a small research project performed independently by the student. Students work with faculty advisers in designing their project and in writing the thesis. Detailed guidelines for the thesis are outlined in Appendix II.

The thesis is not a requirement for students in the Health Care Management, Health Policy, or Advanced Professional M.P.H. programs (except for those in the Occupational and Environmental Medicine track).

EPH 542b, Practice-Based Community Health Research This course is one of the options available to students to fulfill the practice requirement for the M.P.H. degree. The course develops students' skills in planning and implementing practice-based community health research projects. The course content is based on an ecological framework, principles of community and public health ethics, and a teaching strategy of significant learning experiences and team-based learning. Given the current emphasis on using evidence-based practices in public health, this course helps students develop skills in turning practice activities and data into evidence. Teams of four to six students work on a community-driven research project at a local agency based on proposals submitted by a range of community organizations. Through this exercise and related assignments throughout the term, students develop skills in planning and implementing practice-based research projects, including developing project timelines, logic models, and program impact theories. D. Humphries

EPH 555b, Practicum in Climate Change, Sustainability, and Public Health This course is one of the options available to students to fulfill the practice requirement for the M.P.H. degree. In this course, interdisciplinary student teams carry out applied research or practice projects in the area of climate change, sustainability, and public health. Each team works with a sponsoring organization (e.g., unit within Yale, local health department, state agency, community organization, other nongovernmental organization). As a prerequisite for enrollment, the course requires participation in the fall-term Climate Change, Sustainability, and Public Health Leadership Training Workshop, a partnership among the Climate Change and Health Initiative, the Global Health Leadership Institute, and the Office of Sustainability. In October, students apply to join a team, and in November the selected students participate in this weekend workshop, which provides training on leadership, strategic problem solving, and policy/applied research implementation. Teams use these skills to further conceptualize and plan their projects, which they then implement in this spring-term course. R. Dubrow

EPH 591a, Global Health Foundations Global Health Foundations is a weekly seminar intended to expose students in the health professions to key issues in global health research and practice. The course features faculty from across the health professional schools and other global health experts from around the world. Its collaborative nature provides a rich environment for interdisciplinary dialogue. The goal of the course is for students to attain a good understanding of key issues upon which they may base future research, service, and clinical pursuits in the field of global health. Although no course credit is awarded, satisfactory performance is noted on the student's transcript. M. Skonieczny

EPH 600b, Research Ethics and Responsibility This course seeks to introduce major concepts in the ethical conduct of research and some of the personal and professional issues that researchers encounter in their work. Sessions are run in a seminar/discussion format. Prerequisite: doctoral student or postdoctoral status only. C. Tschudi

EPH 608b, Frontiers of Public Health This course is designed for Ph.D. and Advanced Professional M.P.H. students. It explores the major public health achievements in the last century in order to provide students with a conceptual interdisciplinary framework by which effective interventions are developed and implemented. Discussions examine the advances across disciplines of biomedical research, epidemiology and biostatistics, environmental and behavioral sciences, and health policy and management services that led to these major public health achievements. The course examines global and national trends in the burden of disease and underlying determinants of disease, which pose new challenges; and it covers new approaches that are on the forefront of addressing current and future public health needs. A. Ko

EPIDEMIOLOGY OF MICROBIAL DISEASES

EMD 508a/CDE 508a, Principles of Epidemiology I This course presents an introduction to epidemiologic definitions, concepts, and methods. Topics include history of epidemiology, descriptive epidemiology, measurement of disease occurrence and association, study design (ecologic, cross-sectional, case-control studies, cohort, and

intervention), surveillance, measurement validity and screening, random variation and precision, bias, confounding, effect modification, and causality. The course also teaches skills for quantitative problem solving and for understanding epidemiologic concepts in the published literature. L. Nicolai

EMD 512a, Immunology for Epidemiologists This course is designed to introduce students to the fundamentals of immunology including antigens, antibodies, methods for detecting antibodies, cells of the immune system, products of such cells, and immune mechanisms. Experience is gained in the analysis of primary research papers with relevance to immunologic aspects of epidemiologic studies. Prerequisite: two terms of college biology. P. Krause

EMD 518a, Principles of Infectious Diseases I This course explores the epidemiology and biology of infectious agents and the diseases they cause. Through a theme-based, integrated approach, students learn about the epidemiology, pathogenesis, prevention, and control of bacteria, viruses, and eukaryotic parasites of public health importance. Emphasis is placed on epidemiological methods, routes of transmission, host-pathogen interactions, and mechanisms of virulence. The course also teaches skills for understanding and evaluating the published literature, specifically through class discussions and oral presentations of assigned readings by students. Topics covered include gastrointestinal, respiratory, and sexually transmitted pathogens. M. Pettigrew

EMD 518b, Principles of Infectious Diseases II This course explores the epidemiology and biology of infectious agents and the diseases they cause. Through a theme-based, integrated approach, students learn about the epidemiology, pathogenesis, prevention, and control of bacteria, viruses, and eukaryotic parasites of public health importance. Emphasis is placed on epidemiological methods, routes of transmission, host-pathogen interactions, and mechanisms of virulence. The course also teaches skills for understanding and evaluating the published literature, specifically through class discussions and oral presentations of assigned readings by students. The course builds upon concepts covered in EMD 518a and introduces new topics such as infectious causes of chronic diseases; and vector-borne, zoonotic, and emerging pathogens. J. Childs

EMD 525a and b, Seminar in Epidemiology of Microbial Diseases This is a weekly seminar series offered by EMD faculty. The presentations describe the ongoing research activities in faculty laboratories as well as in EMD-affiliated centers. The talks introduce the department's research activities as well as associated resources in the area. Attendance is required of first-year EMD students. Although no credit or grade is awarded, satisfactory performance will be noted on the student's transcript. V. Pitzer

EMD 530b, Health Care Epidemiology: Improving Health Care Quality through Infection Prevention The history, descriptive epidemiology, surveillance methods, risk analysis methods, and economics of nosocomial infections are outlined in this introductory course. In-depth explorations of host, agent, and environmental factors influencing typical nosocomial illnesses in pediatric and adult services are reviewed by clinical faculty. Descriptive and analytical epidemiological methods are emphasized. L. Dembry, D. Banach

EMD 533a, Implementation Science Implementation science can be defined as the study of facilitators and barriers to the adoption and integration of evidence-based practices into health care policy and delivery. Examples include comparisons of multiple evidence-based interventions; adaptation of interventions according to population and setting; approaches to scale-up of effective interventions; and development of innovative approaches to improve health care delivery and health. This course explores implementation science using a seminar format; each session begins with a brief presentation of focal topic content followed by critical thinking and dialogue. Students apply the content each week in the development of a potential research project using implementation science in their area of interest and expertise. Throughout the course, faculty and students bring case studies and illustrations from the literature to illustrate key concepts and challenges in the conceptualization and implementation of studies using these methods. L. Davis

[**EMD 536b, Investigation of Disease Outbreaks** This course provides students with the basic skills and perspectives necessary to investigate acute disease outbreaks. The emphasis is on the use of epidemiology to investigate outbreaks of infectious diseases, although the methods are not limited and can be applied to outbreaks of noninfectious diseases as well. Through this course, it is hoped that students will gain a better appreciation of epidemiology as the science of public health and of the use of epidemiology to guide public health interventions and the development of public health policy. Offered every other year. Not offered in 2016–2017]

EMD 537a/EHS 537a/GLBL 569a, Water, Sanitation, and Global Health Water is essential for life, and yet unsafe water poses threats to human health globally, from the poorest to the wealthiest countries. More than two billion people around the world lack access to clean, safe drinking water, hygiene, and sanitation (WASH). This course focuses on the role of water in human health from a public health perspective. The course provides a broad overview of the important relationships between water quality, human health, and the global burden of waterborne diseases. It discusses the basics of water compartments and the health effects from exposures to pathogenic microbes and toxic chemicals in drinking water. It also covers different sanitation solutions to improve water quality and disease prevention and discusses future challenges and the need for intervention strategies in the new millennium. Y. Chen, E. Wunder

EMD 538a, Quantitative Methods for Infectious Disease Epidemiology This course provides an overview of statistical and analytical methods that apply specifically to infectious diseases. The assumption of independent outcomes among individuals that underlies most traditional statistical methods often does not apply to infections that can be transmitted from person to person. Therefore, novel methods are often needed to address the unique challenges posed by infectious disease data. Topics include analysis of outbreak data, estimation of vaccine efficacy, time series methods, and Markov models. The course consists of lectures and computer labs in which students gain experience analyzing example problems using a flexible computer programming language (MATLAB). V. Pitzer

EMD 539b, Introduction to Public Health Surveillance Surveillance is one of the fundamental activities of public health organizations and is critical for understanding disease burden, impacts of interventions, and the detection of unusual events. The first

part of the course provides an overview of the types of surveillance systems and their strengths and weakness, sources of data for surveillance, and controversies resulting from surveillance activities. The second part of the course focuses on methods used to analyze surveillance data, with a particular focus on practical application. There is a focus throughout on the critical evaluation of surveillance data from different sources. D. Weinberger

EMD 540a, Responding to Violent Conflict: Epidemiologic Methods and Public Health Interventions In this course we discuss how epidemiological methods are applied to understand specific health consequences of violent conflicts, including infectious diseases, mental health, maternal/child health, and chronic health problems. In addition, we critically examine interventions employed to mitigate these negative consequences and assess the evidentiary basis for their efficacy with the goal of understanding what makes some interventions more successful than others. Throughout the course, we consider inevitable ethical challenges of conducting research in fragile settings and with vulnerable populations who often lack basic services and are suffering human rights violations. K. Khoshnood

EMD 543a/CDE 543a/GLBL 567a, Global Aspects of Food and Nutrition The course presents a core topic in global health and development that is at the intersection of science, society, and policy. The course familiarizes students with leading approaches to analyzing the causes of malnutrition in countries around the world and to designing and evaluating nutrition interventions. It covers micronutrient and macronutrient deficiencies; approaches to reducing malnutrition; the cultural, economic, environmental, agricultural, and policy context within which malnutrition exists; and the relationships between common infections and nutritional status. D. Humphries

EMD 548b/ARCG 762b^U/F&ES 726b/G&G 562b^U, Observing Earth from Space A practical introduction to satellite image analysis of Earth's surface. Topics include the spectrum of electromagnetic radiation, satellite-borne radiometers, data transmission and storage, computer image analysis, the merging of satellite imagery with GIS and applications to weather and climate, oceanography, surficial geology, ecology and epidemiology, forestry, agriculture, archaeology, and watershed management. Prerequisites: college-level physics or chemistry, two courses in geology and natural science of the environment or equivalents, and computer literacy. X. Lee

EMD 550b/682b, Biology of Insect Disease Vectors Insects transmit pathogens that cause many emerging and re-emerging human and agriculture-related diseases. Many of these diseases, which are referred to as neglected tropical diseases (NTDs), have a dramatically negative impact on human health in the developing world. Furthermore, they cause indirect devastation by significantly reducing agricultural productivity and nutrient availability, exacerbating poverty and deepening disparities. This course introduces students to the biological interactions that occur between major groups of important disease vectors and the pathogens they transmit. Lectures cover current research trends that relate to the ecology and physiology of insect vectors. Course content focuses on how these aspects of vector biology relate to the development and implementation of innovative and effective disease-control strategies. Prerequisite: full year of college/university-level biology, or permission of the instructor(s). S. Sksoy, B. Weiss

EMD 553b, Transmission Dynamic Models for Understanding Infectious Diseases This course is an introduction to the use of transmission dynamic models as tools for studying the complex patterns that arise from the interaction between pathogens and hosts. Topics covered include the structure, parameterization, and analysis of simple mathematical models. Questions addressed include: Why do some pathogens fail to spread effectively in a host community while others increase in prevalence before eventual elimination? Why do some infections oscillate in frequency while others occur at relatively constant levels over long periods of time? How is it possible that an intervention could perversely increase the burden of disease in the community, even as it reduces the overall prevalence of infection? The course consists of lectures and practical exercises in which students gain experience designing and manipulating mathematical models of infectious diseases by hand and with the open-source programming language R. Knowledge of algebra is assumed, and familiarity with basic calculus concepts is helpful. There are no formal prerequisites, but students without any familiarity with infectious diseases are encouraged to contact the instructor before registering. This course is required of students in the Public Health Modeling concentration. T. Cohen

EMD 563a or b, Laboratory and Field Studies in Infectious Diseases The student gains hands-on training in laboratory or epidemiologic research techniques. The term is spent working with EMD faculty in a single laboratory or epidemiology research group. Students choosing to work in the laboratory gain experience in molecular biology, basic immunology, parasitology, virology, bacteriology, or vector biology. Students may also choose to work on a non-laboratory-based epidemiology research project. These students gain experience in epidemiologic methods including study design, field data collection including human cases, vectors, and environmental parameters, data analysis, and epidemiological modeling. Prerequisite: permission of the instructor. M. Pettigrew

EMD 566b/HPM 566b, Critical Issues in Global Health The course focuses on critical challenges to the health of the poor in low- and middle-income countries and pays particular attention to how these health gaps can be addressed in low-cost and highly effective ways. The course covers the architecture, politics, and governance of global health; key trends in approaches to meeting the health needs of the poor in low- and middle-income countries; and how science and technology can be harnessed for this purpose. It examines the burden of disease and the determinants of this burden; covers the leading causes of illnesses, disability, and preventable death from communicable and noncommunicable diseases, with special attention to women and children; and focuses particular attention on key health systems issues and recent efforts to overcome them, especially in low-income settings. K. Khoshnood

EMD 567a, Tackling the Big Three: Malaria, TB, and HIV in Resource-Limited Settings Malaria, tuberculosis, and HIV account for more than five million deaths worldwide each year. This course provides a deep foundation for understanding these pathogens and explores the public health issues that surround these infectious diseases in resource-limited settings. Emphasis is placed on issues in Africa, but contrasts for each disease are provided in the broader developing world. The course is divided into three sections, each focusing in depth on the individual infectious disease as well as discussions of interactions among the three diseases. The sections consist of three to four lectures each on the

biology, individual consequences, and community/public health impact of each infectious disease. Discussion of ongoing, field-based research projects involving the diseases will be led by relevant faculty (research into practice). The course culminates with a critical discussion of major public health programmatic efforts to tackle these diseases, such as those of PEPFAR, the Bill & Melinda Gates Foundation, the Global Fund, and the Stop TB Partnership. Prerequisite: EMD 518a. S. Parikh

EMD 670a and b, Advanced Research Laboratories This course is required of all EMD Ph.D. students and is taken for three terms. The course offers experience in directed research and reading in selected research laboratories. The first two terms must be taken in the first year of the doctoral program, and the third term is normally taken in the summer after the first year. Open only to doctoral students. C. Tschudi

EMD 680a/MBIO 680a, Advanced Topics in Tropical Parasitic Diseases An introductory topic-based course in modern parasitology. For each topic there is an introductory lecture followed by a journal club-like discussion session of relevant papers selected from the literature. The course provides an introduction to basic biological concepts of parasitic eukaryotes causing diseases in humans. Topics include strategies used by parasitic eukaryotes to establish infections in the host and approaches to disease control, through either chemotherapy, vaccines, or genomics. In addition, emphasis is placed on evaluating the quality and limitation of scientific publications and developing skills in scientific communication. Prerequisite: permission of the instructor. D. McMahon-Pratt, C. Tschudi

EMD 695a,b/E&EB 961a^U/960b^U, Studies in Evolutionary Medicine I and II This two-term course begins in January. Students learn the major principles of evolutionary biology and apply them to issues in medical research and practice by presenting and discussing original papers from the current research literature. Such issues include lactose and alcohol tolerance; the hygiene hypothesis and autoimmune disease; human genetic variation in drug response and pathogen resistance; spontaneous abortions, immune genes, and mate choice; parental conflicts over reproductive investment mediated by genetic imprinting; life history trade-offs and the evolution of aging; the evolution of virulence and drug resistance in pathogens; the evolutionary genetics of humans and their pathogens; the ecology and evolution of disease; the evolutionary origin of diseases; and the emergence of new diseases. Students develop a research proposal based on one of their own questions in spring term, spend the summer on a research project related to their research proposal, and write a paper based on the results of their research in fall term. Credit and grades are awarded for each term. Only students who have engaged in summer research projects may enroll in the fall term. Admission is by competitive application only. Forms are available on the E&EB department Web site. J. Childs, P. Turner, S. Stearns

HEALTH POLICY AND MANAGEMENT

HPM 502a/MGT 502a, Foundations of Accounting and Valuation Distinguishing value creation from redistribution is a key problem faced by any economy. Modern accounting practices are focused on this problem, and knowledge of them is extremely useful. Further, value creation activities in a modern society can become complex and abstract, and accounting practices have developed accordingly. While worthy of a lifetime of study,

the purpose of this course is to enable the student to gain a foundation upon which a deep understanding of accounting can be built. One cannot have a sensible discussion of accounting as assessing value without having some idea of what value means and how to think about it. Therefore, this course begins by exploring the basic determinants of value and the techniques used to assess it: discounting cash flow and risk/return analysis. These techniques are based on the timing and statistical properties of cash flow. With this introduction, the course then turns to the more fundamental processes of generating cash flow by creating value through the production and delivery of goods or services and then converting that value into cash flows. The basic financial statements, balance sheets, income statements, and cash flow statements as well as the accounting mechanics with which they are built are introduced in this context. S. Garstka

HPM 510a, Introduction to Health Policy and Health Systems This course provides an introduction to the making, understanding, and consequences of health policy. The design and performance of the health care system are assessed, with particular attention to the complex and often contested manner in which health care is organized, financed, and delivered in the United States. The course also considers the fundamental concerns—such as cost, access, and quality—that shape the development of health policy and health systems in all countries, and it looks to the health systems of other countries in order to understand the advantages and disadvantages of alternative approaches. An overview of the important actors in the health care and political systems is provided, and students are introduced to methods for understanding the behavior of these policy makers and stakeholders. Health issues are placed in the context of broader social goals and values. J. Schwartz

HPM 514b, Health Politics, Governance, and Policy This course is designed to familiarize students with the various processes by which governmental health policy is made in the United States, and with current policy debates. One focus of the course is to understand the politics underlying the successes and failures of health policy making during the course of the twentieth century. This includes a discussion of the relevant governmental institutions, political actors, the major national programs that have been established, and how political actors use resources and set their strategies. M. Schlesinger

HPM 542b, Health of Women and Children The focus of this course is women's and children's health and health care in the United States. Emerging health issues and related health policy are presented and discussed in terms of epidemiology, including racial/ethnic disparities and effects of poverty; utilization and financing of children's health care; and existing programs and public policies that facilitate access to care. Data sources and data needs are identified. Topics may include history of MCH programs and policy, Medicaid and SCHIP, low birth weight and infant mortality, maternal mortality, reproductive health, breast and cervical cancer screening, pediatric oral health, pediatric asthma, childhood obesity, adolescent health care and teen pregnancy, children with special health care needs, childhood injuries and injury prevention. Students are expected to critically evaluate the public health implications of selected conditions and the effect of public policy on availability, accessibility, acceptability of services, and accountability in health care for women and children. M. A. Lee

HPM 545b, Health Disparities This course explores our nation's striking inequities in morbidity, mortality, and injury (including by race, ethnicity, socioeconomic and immigration status, gender, and geography), with particular focus on the social determinants of the inequities. Through readings drawn from multiple disciplines, the course examines such topics as the impacts on health of poverty and inequality in income, wealth, and education; overt and implicit discrimination; residential segregation and poverty concentration and associated differential exposures to environmental hazards and health-promoting resources; differential access to, and quality of, health care; and the role of law as a determinant of health inequity. A variety of interventions to address health inequities are reviewed and critiqued, as are some of the ways law and policy are being used as a tool to promote health equity. S. Geballe

[HPM 546a, Ethical Issues in Public Health This course is a study of ethical and social dimensions of public health policy and practice both within the United States and globally. Public health always has a normative as well as a scientific aspect. Social legitimacy and public trust are always essential to effective public health. Ideals of human rights, individual liberty, social justice and equality, community, solidarity, and the common good are central to public health policy and practice. At the same time, however, existing structures of power, coercion, discrimination, and stigma also shape those policies and practices.

Important frameworks of ethical and political theory are explained and compared, including utilitarianism, rights theory, theories of social and global justice, and democratic and elitist theories of governance. These frameworks are then applied to selected public health issues. Topics include global health justice, the ethical implications of studies of the social determinants of health, the cultural framing of health and illness, ethical issues in infectious disease control, and ethical conflicts arising in health promotion and behavior modification interventions in cases such as smoking and obesity. Environmental health and the global health effects of climate change are also explored. Not offered in 2016–2017]

HPM 555a and b, Health Policy or Health Care Management Practicum This course is one of the options available to HPM students to fulfill the practice requirement for the M.P.H. degree. The practicum is a project-based learning experience. Students work 8–10 hours per week for one or two terms. The Health Policy Practicum allows students to work on current state and/or local health policy issues while placed with state and/or local legislative or executive agency policy makers, or with senior staff at a nonprofit health policy or advocacy group. The Health Management Practicum allows students to focus on current issues confronting a hospital department while working under the guidance of a departmental administrator. Students are required to attend the first week of class to enroll. Prerequisite: permission of the instructor. This class is not open to first-year M.P.H. students in the fall term. S. Busch (HCM), R. Stahl (HCM), S. Geballe (HP)

HPM 560b, Health Economics and U.S. Health Policy This course introduces students to the organization and operation of the American health care system. The course examines systems of health care delivery and finance and recent trends in their organization, including the growth of managed care. The course seeks to provide students with an understanding of the existing structure of the system and with conceptual frameworks. Z. Cooper

HPM 561b/MGT 630b, Managing Health Care Organizations This course is designed to integrate previous course work in management and in public health to further students' understanding of organizational, managerial, and strategic issues facing health care organizations (HCOs) and the health care workforce. The course provides students with a foundation for developing, implementing, and analyzing efforts to improve HCOs' performance. A major objective of the course is to sharpen the leadership, problem solving, and presentation skills of those who aim to hold operational and strategic positions in health care organizations. Through case studies, readings, in-class exercises, and class discussions, students learn analytic frameworks, concepts, tools, and skills necessary for leading and managing organizational learning, quality improvement, innovation, and overall performance in health care organizations. I. Nembhard

HPM 566b/EMD 566b, Critical Issues in Global Health The course focuses on critical challenges to the health of the poor in low- and middle-income countries and pays particular attention to how these health gaps can be addressed in low-cost and highly effective ways. The course covers the architecture, politics, and governance of global health; key trends in approaches to meeting the health needs of the poor in low- and middle-income countries; and how science and technology can be harnessed for this purpose. It examines the burden of disease and the determinants of this burden; covers the leading causes of illnesses, disability, and preventable death from communicable and noncommunicable diseases, with special attention to women and children; and focuses particular attention on key health systems issues and recent efforts to overcome them, especially in low-income settings. K. Khoshnood

HPM 570a, Cost-Effectiveness Analysis and Decision Making This course introduces students to the methods of decision analysis and cost-effectiveness analysis in health-related technology assessment, resource allocation, and clinical decision making. The course aims to develop technical competence in the methods used; practical skills in applying these tools to case-based studies of medical decisions and public health choices; and an appreciation of the uses and limitations of these methods at the levels of national policy, health care organizations, and individual patient care. D. Paltiel

HPM 573b, Advanced Topics in Modeling Health Care Decisions This course develops students' technical competencies in managerial decision making using spreadsheet simulation models. The course aims to enhance skills in developing, implementing, and analyzing spreadsheet models to inform decisions concerning health care resource allocation, technology assessment, and clinical decision making. Students also acquire skills in conducting, presenting, and critically evaluating modeling studies in health care. The course consists of lectures, in-class labs, practical exercises, and a final project through which students gain experience in developing and evaluating simulation models to guide health care decisions. R. Yaesoubi

[HPM 575b/GLBL 821b, Making Policy Choices to Improve Health in Low Income Settings Using data and customized analytical techniques, students explore ways to formulate and assess policy and program options that address the most pressing health/nutrition/population (HNP) challenges in developing countries. The course examines a series of eight to ten new analytical frameworks and techniques that have been developed

and applied over the past five years to major HNP challenges in Africa, Asia, and Latin America, with important impacts on the ground. Students contribute to shaping the agenda for further development of innovative methods for global health policy research and advisory services, and pursue their own mini-project on an HNP issue of their choosing. Prerequisite: introductory economics or permission of the instructor. Not offered in 2016–2017]

HPM 576b, Comparative Health Care Systems This course examines the basic structure of health care systems across countries, with a focus on how system design can impact the provision of care. Health care systems evolve within distinct cultures; consequently, these systems vary substantially in the ways they finance, organize, and deliver care. In spite of these differences, the aims of health care systems worldwide are often quite similar: chiefly, to facilitate access to high-quality care that improves health at a reasonable cost. Over the course of the term we identify themes in how countries organize their health care systems, examine the strengths and weaknesses of various approaches to the payment and delivery of health care, and explore specific examples of ongoing efforts to reform health systems. Recurring concepts include the role of public and private systems in financing and delivering health care, the impact of the local environment on the structure of health care systems, and the effect of health system design on patient and provider behavior. C. Ndumele

HPM 583b, Methods in Health Services Research This course introduces students to both quantitative and qualitative methods for research in health services. Topics include research objectives and hypotheses formulation, study design, sampling techniques, measurement, data analysis, results presentation, and discussion. Students synthesize these skills in the final paper. Prerequisite: BIS 505a. X. Chen

HPM 586a, Microeconomics for Health Policy and Health Management This course introduces students to microeconomics, with an emphasis on topics of particular relevance to the health care sector. Attention is paid to issues of equity and distribution, uncertainty and attitudes toward risk, and alternatives to price competition. This course is designed for students with minimal previous exposure to economics. A. Friedman

HPM 587a, Advanced Health Economics This course applies the principles learned in Microeconomics for Health Policy and Health Management (HPM 586) to the health of individuals, to health care institutions and markets, as well as to health care policy. The economic aspects of health behaviors, hospital markets, cost-benefit analysis, regulation, and the market for physician services are covered. Prerequisite: microeconomics or permission of the instructor. S. Busch

HPM 588a, Public Health Law This course focuses on the law of population health, examining the legal powers and duties of federal, state, and local governments to promote and protect the health of their communities, as well as the constraints placed on those powers to protect individual rights. A course designed specifically for students with no legal training, it introduces students to the multiple ways the law can be used as a tool to advance public health, including through direct and indirect regulation to alter the information and built environments; through governments' power to tax and spend to fund public health programs and services, and in ways that can influence individual and

corporate behavior; and through the courts. Students gain basic proficiency in finding, reading, and interpreting primary legal sources, in applying the law to public health problems, and in identifying ways to most effectively influence legislative, administrative, and judicial lawmaking processes to promote and protect (and also thwart efforts to impede) public health. Prerequisite: HPM 514b or permission of the instructor. S. Geballe

[HPM 589a, Leadership and Public Health This course examines in depth several key conceptual frameworks related to leadership, with application to a variety of public health and medical topics. The class focuses on four interrelated challenges: (1) working across boundaries defined by roles, power, and race; (2) managing common resources to maximize social welfare; (3) anticipating and responding to change at social, organizational, and individual levels; and (4) understanding paradoxes in leadership in a complex world. Assignments include active participation and attendance in class sessions; a midterm reflection paper; a group experience resulting in a short paper; and a final paper that uses concepts developed in the class and readings to analyze the leadership landscape associated with a public health or medical problem chosen by the student, and to determine whether the leadership is addressing the problem effectively and why. Not offered in 2016–2017]

HPM 590b/ECON 461b, Addiction, Economics, and Public Policy Smoking, alcoholism, and use of illicit drugs are addictions that are increasingly studied by economists. Overeating resulting in obesity can also be viewed as an addiction. This class studies economic and policy issues relating to these four addictions. Specifically, the class covers (1) models of substance use including rational addiction and behavioral economics, (2) alternative views on whether, why, and how to intervene in personal decisions, (3) facts and findings from the literature on each addiction, and (4) policies related to each. Policy issues include supply and demand sides of illicit drugs; how to prevent drug-related crime; taxes on alcohol, cigarettes, and soda; treatment effectiveness; legal interventions such as the case against the tobacco companies; the role of public information and private marketing; and paying people for good habits. Prerequisite: microeconomics. J. Sindelar

[HPM 592a/GLBL 322a/HLTH 450a/PLSC 121a, Strategic Thinking in Global Health This course defines and applies a set of core principles regarding development and implementation of grand strategy and problem solving in global health. Students come to understand and apply principles of grand strategy and strategic problem solving, which are taught at both a conceptual and a practical level as applied to common problems in global health. Students develop expertise in political and policy analysis as well as organizational theory and leadership skills that are central to addressing global health issues in low- and middle-income countries. Not offered in 2016–2017]

HPM 597b, Capstone Course in Health Policy This course is designed as the capstone educational experience for students concentrating in health policy. It integrates previous course work in health policy and public health and facilitates students' transition from the academic setting into the world of professional policy analysis. Students practice different approaches to policy formulation, policy analysis, and policy implementation. As part of their course assignments, students use various strategies to frame policy debates to promote desired outcomes. There is extensive work on improving oral and

written presentation skills pertinent to current, applied policy dilemmas. Prerequisite: HPM 510a or equivalent. M. Schlesinger

HPM 600a,b, Independent Study or Directed Readings Independent study or directed readings on a specific research topic agreed upon by faculty and student. By arrangement with faculty.

HPM 601b/F&ES 862b/PSYC 601b, The Science of Science Communication The simple dissemination of valid scientific knowledge does not guarantee it will be recognized by non-experts to whom it is of consequence. The science of science communication is an emerging, multidisciplinary field that investigates the processes that enable ordinary citizens to form beliefs consistent with the best available scientific evidence, the conditions that impede the formation of such beliefs, and the strategies that can be employed to avoid or ameliorate such conditions. This course surveys, and makes a modest attempt to systematize, the growing body of work in this area. Special attention is paid to identifying the distinctive communication dynamics of the diverse contexts in which non-experts engage scientific information, including electoral politics, governmental policy making, and personal health decision making. D. Kahan

HPM 610b, Applied Area Readings Required of HPM Ph.D. students, in preparation for qualifying exams. Readings arranged with specific faculty in related research area. By arrangement with faculty.

HPM 617a,b, Colloquium in Health Services Research This seminar focuses on the analysis of current issues in health policy and on state-of-the-art methodological issues in health services research. The format includes guest speakers and presentations of ongoing research projects by YSPH and other faculty and graduate students. Students participate in critical discussions of the issues that arise in both types of sessions. Prerequisite: doctoral status or permission of the instructor. Z. Cooper

HPM 620a/b, Readings in Health Services Research In-depth readings, discussion, and analysis of topics specific to health policy research. Optional for Ph.D. students choosing this area of depth. By arrangement with faculty.

HPM 630b, Advanced Readings in Health Services Research In-depth readings, discussion, and analysis of topics specific to health services research. Optional for Ph.D. students choosing this area of depth. By arrangement with faculty.

HPM 697a/b, Health Policy Leadership Seminar This seminar introduces students to innovative health policy leaders with experience in federal, state, and local government, nonprofit policy/advocacy organizations, business, and/or health policy-oriented foundations. The speakers cover a range of current health policy issues and also reflect on their own career paths. The seminar, required of Health Policy students, meets once a month for the full academic year. Although no credit or grade is awarded, satisfactory performance will be noted on the student's transcript. S. Geballe

HPM 698b/MGT 698b, Health Care Policy, Finance, and Economics This course teaches students the critical skills in analyzing and working within the health care industry. The first part of the course focuses on the economic and financial drivers of the

domestic health care system, including private and public financing and delivery models. In the latter part of the course, students learn about current issues of importance to this \$3 trillion industry. The course is part didactic/part seminar in style, with team projects and presentations as a major component of the grade. Open to M.P.H. students in Health Care Management, SOM students, and others with permission of the instructor. H. Forman

HPM 699a,b/MGT 699a,b, Colloquium in Health Care Leadership This seminar series, meeting on the medical school campus, introduces the students to leading figures in health care: public sector, private sector, and third sector executives and leaders discuss their career paths and current insights into the evolution and revolution in health care delivery and services. The course provides credit in the spring term for a full year of attendance. Only students who have been attending fall sessions can enroll in the spring. H. Forman

Tuition, Expenses, and Financial Aid

The standard student budget for M.P.H. students for the nine-month academic year 2016–2017 is as follows:

Tuition	\$41,800
Activity Fee	395
Course Materials and Copy Fees	1,080
Yale Hospitalization/Specialty Coverage	2,264
Room and Board	14,692
Personal	3,985
Total Budget	\$64,216

TUITION RATES

Full-Time

Matriculated students who are enrolled in the M.P.H. program and are taking 4 or more course units in a term are considered full-time and must pay two full years of tuition (four terms). Students may not shorten the four-term requirement by accumulating course units sufficient to graduate at the end of three terms. Full-time students must carry a minimum of 4 course units in their final term. Course unit changes may impact tuition as well as financial aid.

Part-Time

Matriculated students taking fewer than 4 course units in a term are considered part-time students. Part-time students pay tuition on a per-course basis (\$4,180 per course unit). Part-time students are encouraged to take at least 2 course units per term. Students enrolled in the M.P.H. program must take at least 3 course units to be eligible for financial aid. Tuition and fees may be adjusted if a student adds or drops courses.

Advanced Professional M.P.H. Program

Students enrolled in the Advanced Professional M.P.H. Program pay two full terms of tuition and \$10,450 tuition for the summer module.

Accelerated M.B.A./M.P.H. Program in Health Care Management

Students enrolled in the Accelerated M.B.A./M.P.H. Program in Health Care Management pay \$10,450 tuition for the summer module and four terms of tuition equivalent to tuition rates at the School of Management.

Joint-Degree Students

Joint-degree students – excepting those in the Accelerated M.B.A./M.P.H. Program – with the Graduate School of Arts and Sciences (including the M.A./M.P.H. with the Jackson Institute for Global Affairs); the schools of Divinity, Forestry & Environmental

Studies, Law, Management, and Nursing; and the Physician Associate Program in the School of Medicine pay three terms of tuition to YSPH.

Joint M.D./M.P.H. students pay one-half the annual tuition at the Yale School of Medicine.

Yale Faculty and Staff

Yale faculty and staff members who are taking individual courses for credit will be charged tuition on a per-course basis (\$4,180 per course unit). Yale faculty and staff who have matriculated in the M.P.H. program pay the appropriate tuition rate (full-time or part-time).

Auditors and Nonmatriculated Students

Auditors not affiliated with Yale University pay tuition on a per-course basis (\$4,180 per course unit) and are required to receive the permission of the instructor as well as the permission of the registrar. Nonmatriculated students who enroll in the summer session also pay tuition on a per-course basis (\$4,180 per course unit).

Individuals affiliated with Yale (but not currently paying tuition at Yale) will be charged half of the per-course rate to audit a course (\$2,090 per course unit). Permission of the registrar and the course instructor is required.

M.S. in Biostatistics Students

M.S. students are required to pay two full years of tuition to the Graduate School of Arts and Sciences and should refer to the bulletin of the Graduate School.

Ph.D. Students

Ph.D. students should refer to the bulletin of the Graduate School of Arts and Sciences for information about tuition and fees.

TUITION REBATE AND REFUND POLICY

On the basis of the federal regulations governing the return of federal student aid (Title IV) funds for withdrawn students, the rebate and refund of tuition is subject to the following policy.

1. For purposes of determining the refund of federal student aid funds, any student who withdraws from YSPH during the first 60 percent of the term will be subject to a pro rata schedule that will be used to determine the amount of Title IV funds a student has earned at the time of withdrawal. A student who withdraws after the 60 percent point has earned 100 percent of the Title IV funds. In 2016–2017, the last days for refunding federal student aid funds will be November 2, 2016, in the fall term and March 31, 2017, in the spring term.
2. For purposes of determining the refund of institutional aid funds and for students who have not received financial aid:
 - a. 100 percent of tuition will be rebated for withdrawals that occur on or before the end of the first 10 percent of the term (September 9, 2016, in the fall term and January 26, 2017, in the spring term).

- b. A rebate of one-half (50 percent) of tuition will be granted for withdrawals that occur after the first 10 percent but on or before the last day of the first quarter of the term (September 24, 2016, in the fall term and February 10, 2017, in the spring term).
 - c. A rebate of one-quarter (25 percent) of tuition will be granted for withdrawals that occur after the first quarter of a term but on or before the day of midterm (October 24, 2016, in the fall term and March 6, 2017, in the spring term).
 - d. Students who withdraw for any reason after midterm will not receive a rebate of any portion of tuition.
3. The death of a student will cancel charges for tuition as of the date of death, and the bursar will adjust the tuition on a pro rata basis.
 4. If the student has received student loans or other forms of financial aid, funds will be returned in the order prescribed by federal regulations; namely, first to Federal Direct Unsubsidized Loans, if any; then to Federal Perkins Loans; Federal Direct Graduate PLUS Loans; next to any other federal, state, private, or institutional scholarships and loans; and, finally, any remaining balance to the student.
 5. Recipients of federal and/or institutional loans who withdraw are required to have an exit interview before leaving Yale. Students leaving Yale receive instructions on completing this process from Yale Student Financial Services.

Tuition Rebate and Refund Policy for Summer Session

If the student withdraws during the first week of the program, 100 percent of the tuition will be refunded.

Withdrawal during week two of the program will result in a 50 percent refund of tuition.

Withdrawal between weeks two and four will result in a 25 percent tuition refund.

Tuition will not be refunded for withdrawals after week four of the summer session.

STUDENT ACCOUNTS AND BILLS

Student accounts, billing, and related services are administered through the Office of Student Financial Services, which is located at 246 Church Street. The office's Web site is <http://student-accounts.yale.edu>.

Bills

Yale University's official means of communicating monthly financial account statements is through the University's Internet-based system for electronic billing and payment, Yale University eBill-ePay. Yale does not mail paper bills.

Student account statements are prepared and made available twelve times a year at the beginning of each month. Payment is due in full by 4 p.m. Eastern Time on the first business day of the following month. E-mail notifications that the account statement is available on the University eBill-ePay Web site (www.yale.edu/sis/ebep) are sent to all students at their official Yale e-mail addresses and to all student-designated authorized payers. From the eBill-ePay Web site, students can designate up to three authorized

payers to access the eBill-ePay system in order to view the monthly student account statements and make online payments.

Bills for tuition, room, and board are available during the first week of July, due and payable by August 1 for the fall term; and during the first week of November, due and payable by December 1 for the spring term. The Office of Student Financial Services will impose late fees of \$125 per month (up to a total of \$375 per term) if any part of the term bill, less Yale-administered loans and scholarships that have been applied for on a timely basis, is not paid when due. Nonpayment of bills and failure to complete and submit financial aid application packages on a timely basis may result in the student's involuntary withdrawal from the University.

No degrees will be conferred and no transcripts will be furnished until all bills due the University are paid in full. In addition, transcripts will not be furnished to any student or former student who is in default on the payment of a student loan.

The University may withhold registration and certain University privileges from students who have not paid their term bills or made satisfactory payment arrangements by the day of registration. To avoid delay at registration, students must ensure that payments reach Student Financial Services by the due dates.

Payments

There are a variety of options offered for making payments. Yale University eBill-ePay (www.yale.edu/sis/ebep) is the *preferred* means for payment of your monthly student account bill. The ePayments are immediately posted to the student account. There is no charge to use this service. Bank information is password-protected and secure, and a printable confirmation receipt is available. On bill due dates, payments using the eBill-ePay system can be made up to 4 p.m. Eastern Time in order to avoid late fees.

For those who choose to pay the student account bill by check, remittance advice with mailing instructions is available on the eBill-ePay Web site. All bills must be paid in U.S. currency. Checks must be payable in U.S. dollars drawn on a U.S. bank. Payments can also be made via wire transfer. Instructions for wire transfer are available on the eBill-ePay Web site.

Yale does *not* accept credit card payments.

A processing charge of \$25 will be assessed for payments rejected for any reason by the bank on which they were drawn. In addition, the following penalties may apply if a payment is rejected:

1. If the payment was for a term bill, a \$125 late fee will be charged for the period the bill was unpaid.
2. If the payment was for a term bill to permit registration, the student's registration may be revoked.
3. If the payment was given to settle an unpaid balance in order to receive a diploma, the University may refer the account to an attorney for collection.

Yale Payment Plan

The Yale Payment Plan (YPP) is a payment service that allows students and their families to pay tuition, room, and board in ten equal monthly installments throughout the year based on individual family budget requirements. It is administered by the University's Office of Student Financial Services. The cost to enroll in the YPP is \$100 per contract. The deadline for enrollment is June 25. Additional details concerning the Yale Payment Plan are available at <http://student-accounts.yale.edu/ypp>.

FINANCIAL AID POLICIES FOR M.P.H. STUDENTS

The YSPH Student Financial Aid Office is located in the Office of Student Affairs, 47 College Street. Andre Massiah, Director of Financial Aid, can be reached at 203.785.5417 or andre.massiah@yale.edu. The financial aid policies at YSPH are designed to assist all students as equitably as possible. Financial aid awards are determined annually based on the estimated cost of attendance for the year in which aid is awarded. Continuing students are required to reapply for aid for their second year. The estimated student budget includes all projected costs related to academic and living expenses. The budget does not include expenses related to maintaining an automobile.

Though YSPH awards a limited number of merit scholarships, the majority of Yale financial aid is awarded on the basis of demonstrated financial need.

Federal Veterans Education Benefits

The M.P.H. program is approved for Federal Veterans Education benefits under the GI Bill. To check your eligibility for benefits, visit the Web site www.benefits.va.gov/gibill. Additional information about military benefits is available on the YSPH Web site at http://publichealth.yale.edu/admissions/finaid/mpm/military_benefits.aspx. To be enrolled, see the registrar.

Loans

For 2016–2017, all U.S. citizens or permanent residents of the United States are eligible to borrow up to \$33,000 from the Federal Direct Unsubsidized loan program. This amount may vary depending on what other financial aid a student may be receiving. Federal Direct loans generally have a ten-year repayment period beginning six months after a student graduates or drops below half-time enrollment.

Eligibility

Students who are matriculated in the M.P.H. program and are registered for 3 or more course units per term are eligible to apply for federal financial aid. Please note that course registration changes may impact financial aid eligibility as well.

International Students

International students are not eligible to receive need-based grants from YSPH or federal loan programs. International students may be considered for merit-based scholarships from YSPH.

Reporting Outside Resources

Additional financial support in the form of loans, scholarships, fellowships, additional family support, or employment of any type must be reported to the Financial Aid Office. Any such changes may result in a proportional reduction in the financial aid awarded, either federal loans or school grants. Students who receive a full tuition scholarship are not eligible for the YSPH grant.

Satisfactory Academic Progress (SAP)

Information on SAP as it affects federal financial aid programs is available online at <http://publichealth.yale.edu/about/gateways/students>.

Academic Policies

FACULTY ADVISERS

Each student is assigned a faculty adviser upon entering the M.P.H. program. It is the responsibility of the student and the faculty adviser to work together to select courses, monitor academic progress, and develop career plans. For a variety of reasons a student may wish to change his or her faculty adviser. The change of adviser form is available online at <http://publichealth.yale.edu/about/gateways/students>.

COURSE REGISTRATION

The beginning of each term is considered a “shopping period” in which students attend classes they are interested in taking. All students must complete the online registration by September 14 in the fall term and January 31 in the spring term to avoid a \$50 late fee. At the end of the shopping period, all registrations are considered final. *Note: Courses cannot be added after the registration deadline without permission of the faculty adviser and the registrar.* See below for information on withdrawing from courses.

Many departments require students to take electives toward their M.P.H. degree. Electives used toward degree requirements are to be used to enhance the student’s public health competencies as they pursue the M.P.H. degree. Thus, electives are typically health-related. Exceptions can be made if the student can justify that the elective course content will enhance his or her public health competencies and public health career goals.

Students are allowed to enroll in courses in other Yale schools if there is space available and if the instructor agrees. Students must receive written permission from the registrar of the Law School and the School of Management for any courses taken at those schools. *Note: An additional course material fee may apply to courses taken outside YSPH.*

One course unit is awarded for any full-term course (not seminars or colloquia) taken in the Graduate School or another professional school. Credit is not granted for courses that are taken on a pass/fail or credit/no credit basis. All courses taken outside of YSPH must be graded (H, HP, P) in order to receive a course unit. Courses taken at Yale College (undergraduate) must typically be at the 300-series level or above in order to receive a course unit toward the M.P.H. degree. Some 200-series courses at Yale College may count if approved by the student’s faculty adviser.

Nonmatriculated part-time study in the M.P.H. program is available with the course instructor’s permission. Nonmatriculated part-time students are individuals who attend classes and participate fully in a course; complete assignments, papers, or examinations; and receive a transcript attesting to completion of the course, credit hours, and a grade. A nonmatriculated student is limited to no more than two courses per term and a maximum of three courses total. All course requirements will be completed by the end of the term. Exceptions must be negotiated with the course instructor.

Part-time nonmatriculated students pay tuition on a per-course basis (\$4,180 per course unit). In the event a nonmatriculated student is accepted to and enrolls in a degree program at the Yale School of Public Health, the student is permitted to apply the maximum three courses toward the degree. However, there will be no modification in tuition.

Taking YSPH courses as a nonmatriculated student does not guarantee acceptance into any program at the Yale School of Public Health.

COURSE WITHDRAWAL

Students may withdraw from a course with the approval of their faculty adviser. Course withdrawal forms are available online at <http://publichealth.yale.edu/about/gateways/students>. Students may withdraw from a course until October 14 in the fall term and March 10 in the spring term without the course appearing on the transcript. From those dates until the last day of classes (December 9, fall term; April 28, spring term) a student may withdraw from a course; however, the course will appear on the transcript with a letter grade of “W”

First-year students are not allowed to withdraw from Introduction to Statistical Thinking I (BIS 505a) or Principles of Epidemiology I (CDE/EMD 508a).

EXEMPTION FROM REQUIRED COURSES

Students who feel they have previously covered the material being presented in a required course (not an elective) can request a “course exemption” directly from the course instructor. The instructor must sign the course exemption form (available online at <http://publichealth.yale.edu/about/gateways/students>). Exemption forms must be submitted to the registrar by the stated registration deadline. Students are still required to register for exempted courses. Exempted courses will be listed on the transcript with a grade of “Q.” Exempted courses cannot be used to satisfy the course unit requirement for the M.P.H. degree.

GRADING SYSTEM

The YSPH grading system is designed to foster an atmosphere of cooperative learning. Consequently, YSPH does not compute the grade point average (GPA) or class rank of its students. Students are graded only to provide them with a formal evaluation of their understanding of the concepts presented in their courses.

All YSPH courses are graded Honors (H), High Pass (HP), Pass (P), or Fail (F). The Internship, seminars, and colloquia receive a grade of Satisfactory (S) upon successful completion. The grade of “Q” indicates courses for which a student has received a course exemption.

1. A grade of Honors should be assigned for performance that is distinguished. This reflects contributions that go beyond the requirements for the course, either in terms of the creativity of their application, the complexity of the settings in which the ideas are applied, or their ability to build on the methods and ideas taught in the class.
2. A grade of High Pass should be assigned for students who have demonstrated a proficiency in the use of class material. Students earning this grade not only understand the material that was taught but can also deploy it in constructive ways for new problems.
3. A grade of Pass should be assigned for students who have demonstrated an understanding of the class material. They must be able to accurately describe ideas and methods and identify contexts in which they are appropriately used. Passing

grades indicate that students are capable of performing competently in this domain as public health professionals.

4. A grade of Fail should be assigned to students who cannot demonstrate an acceptable understanding of the core ideas, methods, or other class material and thus lack competence in this domain of public health.

The instructor for each course will determine the specific performance criteria that correspond to each of these tiers of academic achievement. Consequently, quantitative thresholds for particular grades may vary from one course to the next and in some courses may depend on factors (e.g., class participation) that are not readily quantified.

A failure in any course remains on the student's transcript. If the course is retaken, it is listed again on the transcript with the new grade.

It is expected that instructors will require all course assignments, including term papers and exams, to be submitted by the last day of the term. In very rare cases, students may receive a grade of Incomplete (I). The instructor and the associate dean for student affairs will jointly review each case to approve permission for a student to submit work after the end of the term. Permission may be granted because of an incapacitating illness, a serious family emergency, or another matter of comparable import. If the instructor and the associate dean cannot reach a consensus, the matter will be referred to the Committee on Academic Progress for resolution. The instructor and the associate dean will stipulate the date on which the student's late work will be due (this date cannot exceed three months from the last day of the term) and will determine the date on which the instructor is expected to submit a course grade to the registrar. If the student's work has not been completed by the stipulated date, the grade of Incomplete (I) will be converted to a failing grade (F).

Students with a grade of Incomplete will not be allowed to participate in YSPH Commencement activities.

The transcript is a permanent record. Grade changes may only be made if the instructor reports to the registrar that a clerical or computational error has resulted in an inaccurate grade. The University considers an instructor's evaluation of the quality of a student's work to be final. Disputes about a course grade that are alleged to result from discrimination based on race, sex, religion, national or ethnic origin, or handicap are resolved through the University's student grievance procedures.

TUTORIAL SUPPORT

Students experiencing academic difficulty should seek prompt assistance. Students should first discuss the problem with the course instructor. Course instructors can suggest that a student's academic difficulties be addressed by a course's teaching assistant (TA). If after working with the TA the student continues to experience difficulty, the course instructor can recommend that specific tutorial assistance be provided to the student. The instructor should contact the associate dean for student affairs to arrange tutorial assistance.

All M.P.H. student transcripts are reviewed by the associate dean for student affairs at the end of each term. Advisers have access to each advisee's transcript both as an early warning of academic difficulty and as an aid to planning course load and selection.

ACADEMIC STANDARDS

Students in the M.P.H. program must pass all core and departmental requirements. Any student who fails a required course must retake it and pass it. The Committee on Academic Progress will review the academic performance of a student whose record in any term shows significant decline, or if there is a reason for concern about the overall quality of a student's work.

Any student who receives a failing grade in the summer session will be withdrawn from the M.P.H. program.

Academic Probation

The Committee on Academic Progress will place students whose academic work is unsatisfactory on Academic Probation. The committee will take into account the personal situation of the student, but a failing grade in any course will normally result in Academic Probation. Students who receive failing grades in two or more courses during a term, or who receive a second failing grade after being placed on Academic Probation, will be withdrawn from the M.P.H. program. Academic dismissal will be recorded on the student's transcript.

Information on Satisfactory Academic Progress (SAP) as it affects federal financial aid programs is available online at <http://publichealth.yale.edu/about/gateways/students>.

CHANGE OF DEPARTMENT

Departmental changes may be requested during the spring term of the *first* academic year. Students who wish to change departments must apply in writing to the chair of the requested department to do so. In addition to a written statement about why they want to transfer, students submit a copy of an unofficial YSPH transcript. If the change is approved, the student must submit a change of department form to the Office of Student Affairs. Students must be sure to fulfill all course requirements for the new department. Change of department forms are available online at <http://publichealth.yale.edu/about/gateways/students>.

Note: Because of the number of requirements and the sequencing of courses, students may not switch into the Health Care Management Program or the Health Policy Program.

OTHER CHANGES AND APPEALS IN EDUCATIONAL PROGRAM

Other significant changes in a student's educational program should be discussed with the student's faculty adviser and requested in writing to the Committee on Academic Progress. Appeals resulting from decisions made by the Committee on Academic Progress must be addressed to the dean of Public Health, with the description of the basis for appeal. Appeals are heard by the Committee of Permanent Officers, whose decision is final.

YSPH COMMITTEE ON ACADEMIC AND PROFESSIONAL INTEGRITY (CAPI)

Guiding Principles

Honesty, professional integrity, and a commitment to the health of the public provide strong foundations for our educational mission at the Yale School of Public Health (YSPH). We create a community of scholarship through the free and lively exchange of ideas in the classrooms, laboratories, clinics, organizations, and neighborhoods in which we serve. We promote scientific rigor, courage, and compassion to guide us in the work we do—designed to prevent disease and promote health.

The YSPH *Code of Academic and Professional Integrity* is intended to foster our School's exceptional learning environment and to support conduct that will distinguish our faculty, students, and staff in our lives at YSPH, the University, New Haven, and the broader scientific, policy, and public health communities in which we live and work.

ACADEMIC INTEGRITY

The Yale School of Public Health community, including faculty, students, and staff, supports the highest standards of academic integrity. All academic work—completed individually or in small groups, in the classroom, laboratory, or community—affords an unparalleled opportunity to put forth new and innovative ideas to promote the science and practice of public health.

Faculty will provide clear guidelines for students on the parameters of all course work, including homework assignments, papers, and examinations. Students must contact the professor for clarification if there is any question about these guidelines. Students must complete their work independently or in small groups, as per instruction, always striving to put forth their own best ideas to accomplish their goals. Students are strongly encouraged to build on a strong tradition of public health by utilizing the many excellent print and online resources available to stimulate thinking and promote innovation. In so doing, students must also consult guidelines to insure proper citation of published work.

- Citation Guide from *Chicago Manual of Style*: http://chicagomanualofstyle.org/tools_citationguide.html
- Various citation resources: <http://library.duke.edu/research/citing>

COMMUNITY STANDARDS

The YSPH community is inclusive in nature, respecting the diverse backgrounds and views of all its members. Faculty, students, and staff must aspire to standards of conduct that further distinguish the School as a center of professional and personal integrity. We must adhere to ethical guidelines and the highest standards of professional and personal behavior. We abide by the principles of the *Human Relations Code of Conduct, Yale University School of Medicine*:

Yale University School of Medicine is committed to the promotion of personal and professional development of all individuals in its community, and encourages dialogue that will foster the growth, well-being, and dignity of all its members. In pursuit of these goals, the School is dedicated to maintaining an environment which places

the highest priority on collegial relationships, mutual respect, and sensitivity among students, faculty, staff, and patients. An educational community functions best when there is civility and respect for the dignity and worth of each individual.

It must be ensured that our School is free from discrimination and acts of intolerance based on race, gender, sexual orientation, religion, national origin, ancestry, age, or physical handicap. This commitment remains consonant with the obligation to protect open and wide-ranging public discourse. The principle of freedom of expression that might otherwise protect even the most offensive public speech does not protect, nor does it even encompass, a right to threaten the dignity and privacy of an individual. Such personally directed behavior will not be tolerated; it is antithetical to academic values, debilitates its victims, compromises the offenders, and undermines the University's fundamental commitment to individual freedom and respect for all its members. Furthermore acts of intolerance may destroy the very atmosphere wherein freedom of expression is otherwise tolerated and cherished.

Code of Academic and Professional Integrity

HONOR CODE

The Honor Code explicates the highest ethical standards to which we must hold ourselves, our peers, and our colleagues. Honesty, respect, and trust are hallmarks of the science and practice of public health. They must be nurtured at all times in our classrooms and in our work beyond the classroom. Upon arrival at YSPH, all students will sign an Honor Code that states:

By enrolling in the Yale M.P.H. program, I am accepting the responsibility to promote and uphold the Code of Academic and Professional Integrity.

I understand that the work I submit must represent my own efforts; that I will conduct myself with dignity, integrity, and honesty in my studies; that I will uphold the directions of my faculty and complete all my work in the spirit it was assigned. I understand I must honestly represent my credentials, abilities, and situation as I further my career as a public health professional.

I agree to be held accountable for maintaining the atmosphere of honesty and professionalism at Yale University and within the greater academic community. In the spirit of my professional development—where I should not tolerate misconduct in my professional setting—I also agree to contact the appropriate faculty member, or the associate dean of student affairs, if I witness a violation of this Code of Academic and Professional Integrity by any of my peers.

Upon completion of all written assignments and examinations, students will sign the following statement:

I have not given, received, or witnessed inappropriate exchange of information on this assignment, and I certify that this is my own original work.

BEHAVIORS SUBJECT TO DISCIPLINARY ACTION

Students at YSPH freely associate themselves with the University, and in doing so affirm their commitment to the University's principles of honesty and academic integrity. They are expected to abide by all University regulations, as well as local, state, and federal laws. The forms of behavior subject to disciplinary action include, but are not limited to:

1. **Cheating and plagiarism** Plagiarism and cheating are understood to include all forms of misrepresentation in academic and professional work, such as:
 - a. Failure to acknowledge ideas and phrases used in an essay or assignment that were gained from another writer, including the Internet. Any direct quotation must be specifically attributed, and any other reliance on a reference must be acknowledged.
 - b. Cheating on examinations, problem sets, and any other form of assignment or test.
 - c. Falsification and/or fabrication of data, or misrepresentation in any report on research or other work.
 - d. Submission of the same paper in more than one course or as a thesis, unless explicit permission from the instructors has been obtained in advance.
 - e. Use of prepared notes in an examination or communicating with another person during an examination (including take-home examinations) unless specifically authorized by the instructor.
 - f. Use of electronic files belonging to another person, or electronically sharing files when this is specifically prohibited by the instructor.
2. **Misrepresentation or lying**
 - a. Misrepresentation or lying in applications for admission or financial aid.
 - b. Misrepresentation or lying during a formal or informal inquiry by School or University officials. If the Committee on Academic and Professional Integrity has found that the student purposefully misled the committee during its deliberations, the committee may consider that factor as grounds for imposing a more severe penalty.
3. **Violation of Yale University rules/functions**
 - a. Disruption of a legitimate function or activity of the University community, including disruption of classes and meetings, blocking entrances and exits to University buildings, unauthorized occupation of any space on the Yale campus, or preventing the free expression or dissemination of ideas.
 - b. Unauthorized or fraudulent use of University services, equipment, or facilities, such as computer equipment, telephones, or letterhead.
 - c. Misuse, alteration, or fabrication of University credentials or documents, such as an identification card, academic transcript, or grade list.
 - d. Violation of University rules for using information technology services and facilities, including computers, the University network, and electronic mail.
 - e. Misuse or unauthorized removal of materials in University libraries or laboratories.
 - f. Trespassing on University property to which access is prohibited.
 - g. Theft, misuse of funds, or willful damage to University property.

- h. Refusal to comply with the direction of a University Police Officer or other University official, including a member of faculty, acting in the performance of his or her duties.
 - i. Interference with the proper operation of safety or security devices, including fire alarms, electronic gates, or sprinkler systems.
4. **Illegal activity** Any behavior prohibited by law may be subject to criminal prosecution as well as to a charge by the Committee on Academic and Professional Integrity.
- a. Illegal behaviors directed against the University or the University community.
 - b. Possession or use of explosives or weapons on University property.
 - c. Unlawful manufacture, possession, use, or distribution of illicit drugs or alcohol on University property or as part of any University activity.

BEHAVIORS NOT COVERED UNDER CAPI

The Yale School of Public Health follows the University's policy that governs cases pertaining to assault on, or coercion, harassment, or intimidation of any member of the University community for any reason, including harassment on the basis of race, sex, sexual orientation, color, religion, national or ethnic origin, or disability. The policy and procedure covering these cases can be found at www.yale.edu/equalopportunity/complaint/dean-student.html. Complaints of sexual misconduct, including sexual harassment and sexual assault, are addressed by the University-Wide Committee on Sexual Misconduct (<http://provost.yale.edu/uwc>); see also Resources on Sexual Misconduct in the chapter Yale University Resources and Services.

More information about thesis policies and procedures is provided under Student Grievances in the chapter Administrative Policies.

Disciplinary Policies and Procedures

COMMITTEE COMPOSITION AND CHARGE

The Committee on Academic and Professional Integrity considers instances of academic infractions and other serious violations by YSPH students against the School and University communities. The committee is appointed by the dean and consists of a faculty member from each YSPH division, the associate dean for student affairs, and a student from each M.P.H. class. The dean will designate one of the faculty members as the committee chair. When members of the committee have become familiar with the details of a specific complaint, the chair will determine if any members shall be excused because of a conflict of interest.

PROCESS

The committee will collect the facts relevant to each complaint under consideration, make judgments on whether an infraction or violation has been committed, and determine a penalty where appropriate. Although deviations may be taken by the chair when appropriate to a given case, the following steps are customary:

1. The work of the committee normally begins when a member of the YSPH community (faculty, student, or staff) brings a possible violation or infraction to the attention of the committee chair or the associate dean for student affairs. The chair then requests a written statement and copies of any other materials relevant to the complaint. Based

- on these materials the chair, in consultation with the associate dean for student affairs, will decide whether the offense, if the charge is true, is of sufficient severity to bring to the attention of the committee. If so, the associate dean for student affairs will notify the student who is the subject of the complaint in writing, and provide the student with a list of the committee members and a copy of these procedures. The student should be aware of his or her rights to: (a) appear before the committee; (b) examine all written materials being provided to the committee; (c) ask for the recusal of any member of the committee for cause; (d) be accompanied by a member of the YSPH community who will act as an adviser. In the YSPH Disciplinary Process the student's adviser is not an advocate, but rather a source of support to the student. The adviser may help the student prepare for the meeting of the committee and may accompany the student to the meeting. During the meeting the adviser may quietly suggest questions or issues for the student to raise with the committee, but the adviser does not participate directly in the meeting. An adviser is optional. If so desired, a student may select a member of the YSPH community and ask that individual to act as an adviser; an adviser is not appointed by the committee.
2. The student must respond in writing to the charge of misconduct within three days of receiving notification from the associate dean for student affairs. The written response should be a statement of reasonable length which comments on the facts of the allegations of misconduct, the student's involvement in it, and any other matters that the student deems relevant.
 3. The committee will endeavor to conduct its business in such a way as to protect the privacy and personal integrity of all individuals who are involved with the case. In addition, the committee will seek to make its judgments as promptly as is consistent with the need to establish the facts of the case and to come to judgments based on those facts.
 4. The hearing will normally take place in a single continuous session, but the chair may call additional sessions if appropriate. The chair will open the meeting by reviewing the charges against the student and the procedures to be followed. The student may make a brief opening statement. The committee will then direct questions to the student as to the facts of the case, and it is the student's duty to respond truthfully. After responding to the committee's questions, the student may make a brief closing statement.
 5. The chair may call additional witnesses as appropriate, including the individual(s) who reported the possible violation. The student may ask the committee to call witnesses who can present relevant information about the facts of the case.
 6. All committee deliberations will be conducted without the presence of the student or any other person who is not a member of the committee. The committee will consider only evidence that has been presented to it at the hearing. If the committee concludes that an infraction or violation has occurred, it will then recommend an appropriate penalty. The committee's decision on the penalty will be by majority vote, except that any recommendation to suspend or expel a student must be by a two-thirds vote of the committee. Penalties will be set based upon the severity of the infraction. Any serious infraction of the Code of Academic and Professional Integrity may be grounds for dismissal.

7. At the conclusion of its hearing and deliberations, the committee will prepare a report for the YSPH dean which describes the charge of misconduct, summarizes the hearing, presents the factual findings, and outlines the committee's conclusions, including any proposed penalty. The dean will determine whether the committee's conclusion is supported by the evidence. If the dean determines that the conclusion is not supported by the evidence, the dean will remand the decision for further fact finding or deliberation. The dean will also review the proposed penalty and may approve or change it if he or she believes that a lesser or greater penalty is warranted.
8. Unless remanded by the dean for further review, the finding of an infraction or violation is final, as is the penalty upon the dean's concurrence. The dean will inform the student in writing of the result of the hearing and any penalty as soon as possible.
9. All proceedings of the Committee on Academic and Professional Integrity are confidential. Proceedings and the final determination are shared only with members of the committee, the dean, the student who is the subject of the disciplinary proceeding, and, upon the finding of a violation, the student's faculty adviser as well as the director of graduate studies. Students found in violation of the Honor Code or the Code of Academic and Professional Integrity will not be permitted to serve as Teaching Fellows.

PENALTIES

The following penalties are among those that may be recommended by the committee and imposed by the dean. Any violation of the Honor Code or the Code of Academic and Professional Integrity will result in a penalty, up to and including expulsion. The Yale School of Public Health regards cheating and plagiarism as grievous offenses that strike at the heart of academic integrity, for which the standard penalty will be two terms of suspension.

1. **Reprimand** A written statement of censure will remain in the student's file until the student graduates or withdraws.
2. **Restriction** Denial of the use of certain University facilities or of the right to participate in certain activities or to exercise certain privileges.
3. **Disciplinary Probation** The student is in official jeopardy. The commission of a second offense while on probation will normally result in suspension or expulsion. Disciplinary probation will be recorded on the student's transcript.
4. **Suspension** Separation from the University for a stated period of time. A suspended student forfeits all privileges of enrollment including residence, attendance at classes, participation in organized extracurricular activities, and use of University facilities. This penalty will be recorded on the student's transcript.
5. **Expulsion** Permanent separation from the University. This penalty will be recorded on the student's transcript.

All cases referred to the Committee on Academic and Professional Integrity will be addressed, and a decision made by the committee, regardless of whether the student voluntarily withdraws from the Yale School of Public Health prior to resolution. It will be noted on the student's transcript that the student withdrew with disciplinary charges pending. Students at the Yale School of Public Health on an F1 Student Visa who are

suspended or expelled will be subject to the requirements of the F1 Student Visa program administered by the U.S. Government. Such students should consult with the Yale Office of International Students and Scholars to understand the current requirements.

APPEAL PROCESS

A student upon whom a disciplinary penalty has been imposed by the dean of Public Health will have the right to appeal this decision to the dean of the School of Medicine on the following two grounds: (1) that the committee made procedural errors in its deliberations; or (2) that substantial new information is available that was not previously available to the committee. A written notice of appeal must be submitted to the dean of the School of Medicine within five business days after the decision of the committee and the dean of Public Health has been received. The procedures by which such an appeal will be considered and decided will be determined by the dean of the School of Medicine. There will normally be no stay of any disciplinary penalty imposed by the dean of Public Health during the appeal process.

In Conclusion

We set forth this Yale School of Public Health *Code of Academic and Professional Integrity* to provide guidance and support for professional standards expected from all members of our community. Violations of this code will be taken very seriously, and penalties will be issued to uphold these standards. More importantly, however, is the commitment by faculty, students, and staff to promote excellence in education, research, and service. By upholding academic honesty and integrity, we have a stable foundation from which to move forward in our work to enrich science and improve the health of the public.

Committee on Academic and Professional Integrity 2005–2006; updated May 2010, July 2012, May 2015

Administrative Policies

LEAVE OF ABSENCE

Students are expected to follow a continuous course of study at the School of Public Health. However, a student who wishes or needs to interrupt his or her study temporarily may request a leave of absence. There are three types of leave – personal, medical, and parental – all of which are described below. The general policies that apply to all types of leave are:

1. Any student who is contemplating a leave of absence should see the associate dean for student affairs (Frank Grosso) to discuss the necessary application procedures.
2. All leaves of absence must be approved by the associate dean for student affairs. Medical leaves also require the written recommendation of a physician on the staff of Yale Health, as described below.
3. A student may be granted a leave of absence for up to two terms. Any leave approved by the associate dean for student affairs will be for a specified period.
4. International students who apply for a leave of absence should consult with OISS regarding their visa status.
5. A student on leave of absence may complete outstanding work in any course for which he or she has been granted extensions. He or she may not, however, fulfill any other degree requirements during the time on leave.
6. A student on leave of absence is not eligible for financial aid, including loans; and in most cases, student loans are not deferred during periods of nonenrollment.
7. A student on leave of absence is not eligible for the use of any University facilities normally available to enrolled students.
8. A student on leave of absence may continue to be enrolled in Yale Health by purchasing coverage through the Student Affiliate Coverage plan. In order to secure continuous coverage from Yale Health, enrollment in this plan must be requested prior to the beginning of the term in which the student will be on leave or, if the leave commences during the term, within thirty days of the date when the leave is approved. Coverage is not automatic; enrollment forms are available from the Member Services Department of Yale Health, 203.432.0246.
9. A student on leave of absence must notify the associate dean for student affairs (Frank Grosso) in writing of his or her intention to return at least eight weeks prior to the end of the approved leave. In addition, if the returning student wishes to be considered for financial aid, he or she must submit appropriate financial aid applications to the School's financial aid office to determine eligibility.
10. A student on leave who does not return at the end of the approved leave, and does not request and receive an extension from the associate dean for student affairs, is automatically dismissed from the School.

Personal leave of absence A student who wishes or needs to interrupt study temporarily because of personal exigencies may request a personal leave of absence. The general policies governing all leaves of absence are described above. A student who is current with his or her degree requirements is eligible for a personal leave after satisfactory completion of

at least one term of study. Personal leaves cannot be granted retroactively and normally will not be approved after the tenth day of a term.

To request a personal leave of absence, the student must apply in writing before the beginning of the term for which the leave is requested, explaining the reasons for the proposed leave and stating both the proposed start and end dates of the leave and the address at which the student can be reached during the period of the leave. If the dean finds the student to be eligible, the leave will be approved. In any case, the student will be informed in writing of the action taken. A student who does not apply for a personal leave of absence, or whose application for a personal leave is denied, and who does not register for any term by the registration deadline, will be considered to have withdrawn from the School.

Medical leave of absence A student who must interrupt study temporarily because of illness or injury may be granted a medical leave of absence with the approval of the dean, on the written recommendation of a physician on the staff of Yale Health. The general policies governing all leaves of absence are described above. A student who is making satisfactory progress toward his or her degree requirements is eligible for a medical leave any time after matriculation. The final decision concerning a request for a medical leave of absence will be communicated in writing by the dean.

The School of Public Health reserves the right to require a student to take a leave for medical reasons when, on recommendation of the director of Yale Health or the chief of the of Mental Health and Counseling department, the associate dean for student affairs determines that the student is a danger to self or others because of a serious medical problem, or that the student has refused to cooperate with efforts deemed necessary by Yale Health to determine if the student is such a danger. An appeal of such a leave must be made in writing to the associate dean for student affairs no later than seven days from the date of withdrawal.

A student who is placed on medical leave during any term will have his or her tuition adjusted according to the same schedule used for withdrawals (see Tuition Rebate and Refund Policy). Before re-registering, a student on medical leave must secure written permission to return from a Yale Health physician.

Leave of absence for parental responsibilities A student who wishes or needs to interrupt study temporarily for reasons of pregnancy, maternity care, or paternity care may be granted a leave of absence for parental responsibilities. The general policies governing all leaves of absence are described above. A student who is making satisfactory progress toward his or her degree requirements is eligible for parental leave any time after matriculation.

Any student planning to have or care for a child is encouraged to meet with the associate dean for student affairs (Frank Grosso) to discuss leaves and other short-term arrangements. For many students, short-term arrangements rather than a leave of absence are possible. Students living in University housing units are encouraged to review their housing contract and the related policies of the Graduate Housing Office before applying for a parental leave of absence. Students granted a parental leave may continue to reside in University housing to the end of the academic term for which the leave was first granted, but no longer.

U.S. MILITARY LEAVE READMISSIONS POLICY

Students who wish or need to interrupt their studies to perform U.S. military service are subject to a separate U.S. military leave readmissions policy. In the event a student withdraws or takes a leave of absence from Yale School of Public Health to serve in the U.S. military, the student will be entitled to guaranteed readmission under the following conditions:

1. The student must have served in the U.S. Armed Forces for a period of more than thirty consecutive days;
2. The student must give advance written or oral notice of such service to the associate dean for student affairs. In providing the advance notice the student does not need to indicate whether he or she intends to return. This advance notice need not come directly from the student, but rather, can be made by an appropriate officer of the U.S. Armed Forces or official of the U.S. Department of Defense. Notice is not required if precluded by military necessity. In all cases, this notice requirement can be fulfilled at the time the student seeks readmission, by submitting an attestation that the student performed the service.
3. The student must not be away from the School to perform U.S. military service for a period exceeding five years (this includes all previous absences to perform U.S. military service but does not include any initial period of obligated service). If a student's time away from the School to perform U.S. military service exceeds five years because the student is unable to obtain release orders through no fault of the student or the student was ordered to or retained on active duty, the student should contact the associate dean for student affairs to determine if the student remains eligible for guaranteed readmission.
4. The student must notify the School within three years of the end of his or her U.S. military service of his or her intention to return. However, a student who is hospitalized or recovering from an illness or injury incurred in or aggravated during the U.S. military service has up until two years after recovering from the illness or injury to notify the School of his or her intent to return.
5. The student cannot have received a dishonorable or bad conduct discharge or have been sentenced in a court-martial.

A student who meets all of these conditions will be readmitted for the next term, unless the student requests a later date of readmission. Any student who fails to meet one of these requirements may still be readmitted under the general readmission policy but is not guaranteed readmission.

Upon returning to the School, the student will resume his or her education without repeating completed course work for courses interrupted by U.S. military service. The student will have the same enrolled status last held and with the same academic standing. For the first academic year in which the student returns, the student will be charged the tuition and fees that would have been assessed for the academic year in which the student left the institution. Yale may charge up to the amount of tuition and fees other students are assessed, however, if veteran's education benefits will cover the difference between the amounts currently charged other students and the amount charged for the academic year in which the student left.

In the case of a student who is not prepared to resume his or her studies with the same academic status at the same point where the student left off or who will not be able to complete the program of study, the School will undertake reasonable efforts to help the student become prepared. If after reasonable efforts, the School determines that the student remains unprepared or will be unable to complete the program, or after the School determines that there are no reasonable efforts it can take, the School may deny the student readmission.

STUDENT GRIEVANCES

The Yale School of Public Health follows the University's policy that governs any case in which a student has a complaint, including but not limited to a complaint of sexual harassment or a complaint of discrimination on the basis of race, sex, color, religion, national or ethnic origin, disability, or sexual orientation, against a member of the faculty or administration of the complainant's School. Since an instructor's evaluation of the quality of a student's work is final, this procedure does not apply in any dispute about a grade assigned to a student by a member of the faculty, unless it is alleged that the determination of the grade resulted from discrimination as described above. Similarly, this procedure does not apply to any matter inherent in the academic freedom of an instructor, such as, for example, in regard to the syllabus or contents of a course of instruction. It is also not a procedure that may be used when there is a complaint about the quality of a course or the quality of instruction in a course; such concerns may be addressed directly to the department in question. The policy and procedure can be found at www.yale.edu/equalopportunity/complaint/dean-student.html. The dean's office at YSPH would make the complaint referral to the dean of the Yale School of Medicine.

Complaints of sexual misconduct, including sexual harassment and sexual assault, may be brought to a Title IX coordinator (for inquiries or informal resolution) or to the University-Wide Committee on Sexual Misconduct (for formal resolution). For more information on the University-Wide Committee on Sexual Misconduct (UWC), see Resources on Sexual Misconduct in the chapter Yale University Resources and Services. UWC procedures can be found at <http://provost.yale.edu/uwc>.

WITHDRAWAL FROM THE M.P.H. PROGRAM

A student who wishes to withdraw from the M.P.H. program must inform the associate dean for student affairs in writing and contact the Financial Aid Office. The student must also return his/her identification card and building keys to the registrar. Students wishing to reenter the program after withdrawing must reapply through the regular admissions process.

HUMAN INVESTIGATION SAFEGUARDS

All work by faculty or students undertaken anywhere that involves human subjects in ways subject to federal or Yale guidelines must be approved by the Human Investigation Committee (HIC) at Yale. Failure to obtain HIC clearance may result in dismissal from the University. Both faculty and students should be aware that these are not pro forma requirements but serious in intent, as well as consequences, if there is failure to comply.

Consultation is available during the academic year and during the summer months. Unless their work is done entirely in a laboratory with no human subject involvement, students should assume that their work does require HIC approval. It is safer to submit the forms and be informed that HIC approval is not needed, than not to submit them and later be told that they were required. Most student research receives expedited review, but some projects are reviewed by the entire HIC, a procedure taking several weeks. Thus, students are advised to submit their HIC protocols at the earliest possible time.

The student's faculty adviser and the faculty or student YSPH representatives on the HIC can assist the student in preparing an HIC protocol. Many student research projects involving human subjects also require written informed consent. Students should make sure that all informed consent procedures and forms have been approved by the HIC. Arrangements may be made for review by mail for those students outside the New Haven area.

YSPH ALCOHOL POLICY

Any event that hosts more than fifty people and/or is open to persons under twenty-one years of age must adhere to Yale University policy (<http://aod.yalecollege.yale.edu/plan-stuff/yales-aod-policies>) by ensuring there is a licensed bartender serving alcohol and that food and non-alcoholic beverages are provided.

ADDITIONAL POLICIES

Additional University policies are kept on file in the Office of Student Affairs and are available for student reference. These policies include the Policy on Freedom of Expression, the Equal Opportunity Statement, the Sexual Harassment Policy, and the Yale University AIDS Policy.

Yale University Resources and Services

A GLOBAL UNIVERSITY

Yale continues to evolve as a global university, educating leaders and advancing the frontiers of knowledge across the entire world. The University's engagement beyond the United States dates from its earliest years. Yale has drawn students from abroad for nearly two centuries, and international topics have been represented in its curriculum for the past hundred years and more.

This year, Yale welcomed the largest number of international students and scholars in its history. The current enrollment of approximately 2,500 international students from more than 115 countries comprises 20 percent of the student body. Yale is committed to attracting the best and brightest from around the world by offering generous international financial aid packages, conducting programs that introduce and acclimate international students to Yale, and fostering a vibrant campus community. The number of international scholars (visiting faculty, researchers, and postdoctoral fellows) has also grown to nearly 2,500 each year.

Yale's globalization is guided by three overarching goals: prepare students for leadership and service in an increasingly interdependent world, attract the most talented students and scholars to Yale from around the world, and position Yale as a global university of consequence. These efforts are coordinated by several University-wide organizations, in addition to the work being done within the individual schools and programs.

The Whitney and Betty MacMillan Center for International and Area Studies (<http://macmillan.yale.edu>) is the University's focal point for teaching and research on international affairs, societies, and cultures.

The Jackson Institute for Global Affairs (<http://jackson.yale.edu>) seeks to institutionalize the teaching of global affairs throughout the University and to inspire and prepare Yale students for global citizenship and leadership.

The Office of International Affairs (<http://world.yale.edu/oia>) provides administrative support for the international activities of all schools, departments, centers, and organizations at Yale; promotes Yale and its faculty to international audiences; and works to increase the visibility of Yale's international activities around the globe.

The Office of International Students and Scholars (<http://oiss.yale.edu>) hosts orientation programs and social activities for the University's international community and is a resource for international students and scholars on immigration matters and other aspects of acclimating to life at Yale.

The Yale World Fellows Program (<http://worldfellows.yale.edu>) hosts fifteen emerging leaders from outside the United States each year for an intensive semester of individualized research, weekly seminars, leadership training, and regular interactions with the Yale community.

The Association of Yale Alumni (<http://aya.yale.edu>) provides a channel for communication between the alumni and the University and supports alumni organizations and programs around the world.

Additional information may be found on the "Yale and the World" Web site (<http://world.yale.edu>), including resources for those conducting international activities abroad and links to international initiatives across the University.

CULTURAL RESOURCES AND ATHLETIC FACILITIES

There are many ways to keep up-to-date about campus news and events. These include the YaleNews Web site, which features stories, videos, and slide-shows about Yale people and programs (<http://news.yale.edu>); the interactive Yale Calendar of Events (<http://events.yale.edu/opa>); and the University's social media channels on Facebook, Twitter, Instagram, Tumblr, LinkedIn, and YouTube.

The collections of the Yale Peabody Museum of Natural History, which celebrates the 150th anniversary of its founding in 2016, comprise more than thirteen million specimens and artifacts in ten curatorial divisions: anthropology, botany, entomology, historical scientific instruments, invertebrate paleontology, invertebrate zoology, mineralogy and meteoritics, paleobotany, vertebrate paleontology, and vertebrate zoology. About 5,000 objects are on public display, and the collections are invaluable to researchers at Yale and around the globe, offering a remarkable record of Earth, its life, and its cultures.

The Yale University Art Gallery is the oldest college art museum in the United States, having been founded in 1832 when the patriot-artist John Trumbull gave more than one hundred of his paintings to Yale College. Since then its collections have grown to more than 200,000 objects ranging in date from ancient times to the present. In addition to its world-renowned collections of American paintings and decorative arts, the gallery is noted for outstanding collections of Greek and Roman art, including artifacts from the ancient Roman city of Dura-Europos; collections of early Italian paintings; the Société Anonyme Collection of twentieth-century European and American art; modern and contemporary art and design; Asian art; African art; art of the ancient Americas; and Indo-Pacific art. In December 2012 the gallery completed a comprehensive expansion and renovation project. The expanded museum unites all three buildings – the landmark Louis Kahn building (1953), the Old Yale Art Gallery (1928), and Street Hall (1866) – into a cohesive whole with a rooftop addition by Ennead Architects (2012). The gallery is both a collecting and an educational institution, and all activities are aimed at providing an invaluable resource and experience for Yale faculty, staff, and students, as well as for the general public. For more information, please visit <http://artgallery.yale.edu>.

The Yale Center for British Art is home to the largest and most comprehensive collection of British paintings, sculpture, prints, drawings, rare books, and manuscripts outside the United Kingdom. Presented to the University by Paul Mellon (Yale College, Class of 1929), it is housed in a landmark building designed by architect Louis I. Kahn. The center reopened in spring 2016 with newly installed galleries and updated facilities, upon completion of the third phase of its building conservation project. For more information, feature stories, videos, and news of ongoing and upcoming programs and events, please visit <http://britishart.yale.edu>.

There are more than eighty endowed lecture series held at Yale each year on subjects ranging from anatomy to theology, and including virtually all disciplines.

More than five hundred musical events take place at the University during the academic year. In addition to recitals by graduate students and faculty artists, the School of Music presents the Yale Philharmonia Orchestra, the Onepo Chamber Music Series, the Duke Ellington Jazz Series, the Horowitz Piano Series, New Music New Haven, Yale Opera, and concerts at the Yale Collection of Musical Instruments, as well as performances

by the Yale Choral Artists. The Yale Summer School of Music/Norfolk Chamber Music Festival presents the New Music Workshop Chamber Choir and Conducting Workshop, along with its six-week Chamber Music Session. Many of these concerts stream live on the School's Web site (<http://music.yale.edu>), the Norfolk Web site (<http://norfolk.yale.edu>), and the Collection of Musical Instruments Web site (<http://collection.yale.edu>). Additionally, the School presents the Iseman Broadcasts of the Metropolitan Opera Live in HD free to members of the Yale community. Undergraduate organizations include the Yale Concert Band, the Yale Glee Club, the Yale Symphony Orchestra, and numerous other singing and instrumental groups. The Department of Music sponsors the Yale Collegium, Yale Baroque Opera Project, productions of new music and opera, and undergraduate recitals. The Institute of Sacred Music presents Great Organ Music at Yale, the Yale Camerata, the Yale Schola Cantorum, and many other special events.

For theatergoers, Yale and New Haven offer a wide range of dramatic productions at the University Theatre, Yale Repertory Theatre, Yale School of Drama, Yale Cabaret, Long Wharf Theatre, and Shubert Performing Arts Center.

The Payne Whitney Gymnasium is one of the most elaborate and extensive indoor athletic facilities in the world. This complex includes the 3,100-seat John J. Lee Amphitheater, the site for many indoor varsity sports contests; the Robert J. H. Kiphuth Exhibition Pool; the Brady Squash Center, a world-class facility with fifteen international-style courts; the Adrian C. Israel Fitness Center, a state-of-the-art exercise and weight-training complex; the Brooks-Dwyer Varsity Strength and Conditioning Center; the Colonel William K. Lanman, Jr. Center, a 30,000-square-foot space for recreational/intramural play and varsity team practice; the Greenberg Brothers Track, an eighth-mile indoor jogging track; the David Paterson Golf Technology Center; and other rooms devoted to fencing, gymnastics, rowing, wrestling, martial arts, general exercise, and dance. Numerous physical education classes in dance (ballet, modern, and ballroom, among others), martial arts, zumba, yoga, pilates, aerobic exercise, and sport skills are offered throughout the year. Yale undergraduates and graduate and professional school students may use the gym at no charge throughout the year. Academic term and summer memberships at reasonable fees are available for faculty, employees, postdoctoral and visiting fellows, alumni, and student spouses. Additional information is available online at <http://sportsandrecreation.yale.edu>.

During the year various recreational opportunities are available at the David S. Ingalls Rink, the McNay Family Sailing Center in Branford, the Yale Outdoor Education Center in East Lyme, the Yale Tennis Complex, and the Golf Course at Yale. Students, faculty, employees, students' spouses, and guests of the University may participate at each of these venues for a modest fee. Up-to-date information on programs, hours, and specific costs is available online at <http://sportsandrecreation.yale.edu>.

Approximately fifty club sports come under the jurisdiction of the Office of Outdoor Education and Club Sports. Most of the teams are for undergraduates, but a few are available to graduate and professional school students. Yale undergraduates, graduate and professional school students, faculty, staff, and alumni/ae may use the Yale Outdoor Education Center (OEC), which consists of 1,500 acres surrounding a mile-long lake in East Lyme, Connecticut. The facility includes overnight cabins and campsites, a pavilion and dining hall available for group rental, and a waterfront area with supervised

swimming, rowboats, canoes, stand-up paddleboards, and kayaks. Adjacent to the lake, a shaded picnic grove and gazebo are available to visitors. In another area of the property, hiking trails surround a wildlife marsh. The OEC runs seven days a week from the third week of June through Labor Day. For more information, call 203.432.2492 or visit <http://sportsandrecreation.yale.edu>.

Throughout the year, Yale graduate and professional school students have the opportunity to participate in numerous intramural sports activities. These seasonal, team-oriented activities include volleyball, soccer, and softball in the fall; basketball and volleyball in the winter; softball, soccer, ultimate, and volleyball in the spring; and softball in the summer. With few exceptions, all academic-year graduate-professional student sports activities are scheduled on weekends, and most sports activities are open to competitive, recreational, and coeducational teams. More information is available from the Intramurals Office in Payne Whitney Gymnasium, 203.432.2487, or online at <http://sportsandrecreation.yale.edu>.

HEALTH SERVICES

The Yale Health Center is located on campus at 55 Lock Street. The center is home to Yale Health, a not-for-profit, physician-led health coverage option that offers a wide variety of health care services for students and other members of the Yale community. Services include student medicine, gynecology, mental health, pediatrics, pharmacy, laboratory, radiology, a seventeen-bed inpatient care unit, a round-the-clock acute care clinic, and specialty services such as allergy, dermatology, orthopedics, and a travel clinic. Yale Health coordinates and provides payment for the services provided at the Yale Health Center, as well as for emergency treatment, off-site specialty services, inpatient hospital care, and other ancillary services. Yale Health's services are detailed in the *Yale Health Student Handbook*, available through the Yale Health Member Services Department, 203.432.0246, or online at <http://yalehealth.yale.edu/understand-your-coverage>.

Eligibility for Services

All full-time Yale degree-candidate students who are paying at least half tuition are enrolled automatically for Yale Health Basic Coverage. Yale Health Basic Coverage is offered at no charge and includes preventive health and medical services in the departments of Student Health, Gynecology, Health Education, and Mental Health & Counseling. In addition, treatment for urgent medical problems can be obtained twenty-four hours a day through Acute Care.

Students on leave of absence or on extended study and paying less than half tuition are not eligible for Yale Health Basic Coverage but may enroll in Yale Health Student Affiliate Coverage. Students enrolled in the Division of Special Registration as nondegree special students or visiting scholars are not eligible for Yale Health Basic Coverage but may enroll in the Yale Health Billed Associates Plan and pay a monthly fee. Associates must register for a minimum of one term within the first thirty days of affiliation with the University.

Students not eligible for Yale Health Basic Coverage may also use the services on a fee-for-service basis. Students who wish to be seen fee-for-service must register with the Member Services Department. Enrollment applications for the Yale Health Student

Affiliate Coverage, Billed Associates Plan, or Fee-for-Service Program are available from the Member Services Department.

All students who purchase Yale Health Hospitalization/Specialty Coverage (see below) are welcome to use specialty and ancillary services at Yale Health Center. Upon referral, Yale Health will cover the cost of specialty and ancillary services for these students. Students with an alternate insurance plan should seek specialty services from a provider who accepts their alternate insurance.

Health Coverage Enrollment

The University also requires all students eligible for Yale Health Basic Coverage to have adequate hospital insurance coverage. Students may choose Yale Health Hospitalization/Specialty Coverage or elect to waive the plan if they have other hospitalization coverage, such as coverage through a spouse or parent. The waiver must be renewed annually, and it is the student's responsibility to confirm receipt of the waiver by the University's deadlines noted below.

YALE HEALTH HOSPITALIZATION/SPECIALTY COVERAGE

For a detailed explanation of this plan, which includes coverage for prescriptions, see the *Yale Health Student Handbook*, available online at <http://yalehealth.yale.edu/understand-your-coverage>.

Students are automatically enrolled and charged a fee each term on their Student Financial Services bill for Yale Health Hospitalization/Specialty Coverage. Students with no break in coverage who are enrolled during both the fall and spring terms are billed each term and are covered from August 1 through July 31. For students entering Yale for the first time, readmitted students, and students returning from a leave of absence who have not been covered during their leave, Yale Health Hospitalization/Specialty Coverage begins on the day the dormitories officially open. A student who is enrolled for the fall term only is covered for services through January 31; a student enrolled for the spring term only is covered for services through July 31.

Waiving Yale Health Hospitalization/Specialty Coverage Students are permitted to waive Yale Health Hospitalization/Specialty Coverage by completing an online waiver form at <https://www.yhpstudentwaiver.yale.edu> that demonstrates proof of alternate coverage. It is the student's responsibility to report any changes in alternate insurance coverage to the Member Services Department. Students are encouraged to review their present coverage and compare its benefits to those available under Yale Health. The waiver form must be filed annually and must be received by September 15 for the full year or fall term or by January 31 for the spring term only.

Revoking the waiver Students who waive Yale Health Hospitalization/Specialty Coverage but later wish to be covered must complete and send a form voiding their waiver to the Member Services Department by September 15 for the full year or fall term, or by January 31 for the spring term only. Students who wish to revoke their waiver during the term may do so, provided they show proof of loss of the alternate insurance plan and enroll within thirty days of the loss of this coverage. Yale Health fees will not be prorated.

YALE HEALTH STUDENT TWO-PERSON AND FAMILY PLANS

A student may enroll his or her lawfully married spouse or civil union partner and/or legally dependent child(ren) under the age of twenty-six in one of two student dependent plans: the Two-Person Plan or the Student Family Plan. These plans include services described in both Yale Health Basic Coverage and Yale Health Hospitalization/Specialty Coverage. Coverage is not automatic, and enrollment is by application. Applications are available from the Member Services Department or can be downloaded from the Web site (<http://yalehealth.yale.edu>) and must be renewed annually. Applications must be received by September 15 for full-year or fall-term coverage, or by January 31 for spring-term coverage only.

YALE HEALTH STUDENT AFFILIATE COVERAGE

Students on leave of absence or extended study, students paying less than half tuition, or students enrolled in the Eli Whitney Program prior to September 2007 may enroll in Yale Health Student Affiliate Coverage, which includes services described in both Yale Health Basic and Yale Health Hospitalization/Specialty Coverage. Applications are available from the Member Services Department or can be downloaded from the Web site (<http://yalehealth.yale.edu>) and must be received by September 15 for full-year or fall-term coverage, or by January 31 for spring-term coverage only.

Eligibility Changes

Withdrawal A student who withdraws from the University during the first fifteen days of the term will be refunded the fee paid for Yale Health Hospitalization/Specialty Coverage. The student will not be eligible for any Yale Health benefits, and the student's Yale Health membership will be terminated retroactive to the beginning of the term. The medical record will be reviewed, and any services rendered and/or claims paid will be billed to the student on a fee-for-service basis. Assistance with identifying and locating alternative sources of medical care may be available from the Care Management Department at Yale Health. At all other times, a student who withdraws from the University will be covered by Yale Health for thirty days following the date of withdrawal. Fees will not be prorated or refunded. Students who withdraw are not eligible to enroll in Yale Health Student Affiliate Coverage. Regardless of enrollment in Yale Health Hospitalization/Specialty Coverage, students who withdraw will have access to services available under Yale Health Basic Coverage (including Student Health, Athletic Medicine, Mental Health & Counseling, and Care Management) during these thirty days to the extent necessary for a coordinated transition of care.

Leaves of absence Students who are granted a leave of absence are eligible to purchase Yale Health Student Affiliate Coverage during the term(s) of the leave. If the leave occurs during the term, Yale Health Hospitalization/Specialty Coverage will end on the date the leave is granted, and students may enroll in Yale Health Student Affiliate Coverage. Students must enroll in Affiliate Coverage prior to the beginning of the term during which the leave is taken or within thirty days of the start of the leave. Fees paid for Yale Health Hospitalization/Specialty Coverage will be applied toward the cost of Affiliate Coverage. Coverage is not automatic, and enrollment forms are available at the Member Services Department or can be downloaded from the Web site (<http://yalehealth.yale.edu>). Fees will not be prorated or refunded.

Extended study or reduced tuition Students who are granted extended study status or pay less than half tuition are not eligible for Yale Health Hospitalization/Specialty Coverage. They may purchase Yale Health Student Affiliate Coverage during the term(s) of extended study. This plan includes services described in both Yale Health Basic and Yale Health Hospitalization/Specialty Coverage. Coverage is not automatic, and enrollment forms are available at the Member Services Department or can be downloaded from the Web site (<http://yalehealth.yale.edu>). Students must complete an enrollment application for the plan prior to September 15 for the full year or fall term, or by January 31 for the spring term only.

For a full description of the services and benefits provided by Yale Health, please refer to the *Yale Health Student Handbook*, available from the Member Services Department, 203.432.0246, 55 Lock Street, PO Box 208237, New Haven CT 06520-8237.

Required Immunizations

Please access the Incoming Student Vaccination Form for graduate and professional students at <http://yalehealth.yale.edu/forms>. Connecticut state law requires that this form be completed and signed, for each student, by a physician, nurse practitioner, or physician's assistant. The deadline date for submission may be found on the form.

Measles, mumps, rubella, and varicella All students who were born after January 1, 1957, are required to provide proof of immunization against measles (rubeola), mumps, German measles (rubella), and varicella. Connecticut state law requires two doses of measles vaccine, two doses of mumps vaccine, two doses of rubella vaccine, and two doses of varicella vaccine. The first dose must have been given on or after January 1, 1980, and after the student's first birthday; the second dose must have been given at least thirty (30) days after the first dose. If dates of vaccination are not available, titer results (blood test) demonstrating immunity may be substituted for proof of vaccination. The cost for all vaccinations and/or titers rests with the student, as these vaccinations are considered to be a pre-entrance requirement by the Connecticut State Department of Public Health. Students who are not compliant with this state law will not be permitted to register for classes or move into the dormitories for the fall term, 2016.

Quadrivalent meningitis All students living in on-campus dormitory facilities must be vaccinated against meningitis. The only vaccines that will be accepted in satisfaction of the meningitis vaccination requirement are ACWY Vax, Menveo, Nimenrix, Menactra, Mencevax, and Menomune. The vaccine must have been received after January 1, 2012. Students who are not compliant with this state law will not be permitted to register for classes or move into the dormitories for the fall term, 2016. The cost for all vaccinations and/or titers rests with the student, as these vaccinations are considered to be a pre-entrance requirement by the Connecticut State Department of Public Health. Please note that the State of Connecticut does not require this vaccine for students who intend to reside off campus.

TB screening The University strongly recommends tuberculosis screening for all incoming students who have lived or traveled outside of the United States.

RESIDENCE AND DINING FACILITIES

Edward S. Harkness Memorial Hall

Harkness Hall, located only steps away from the School of Medicine and Yale New Haven Hospital, houses students from the Schools of Medicine, Nursing, and Public Health, the Physician Associate program, and other graduate and professional schools at Yale. Residents of Harkness Hall live in a secure building with single-occupancy bedrooms. Yale administrative offices occupy the first through third floors of the building. The great advantages of living in Harkness Hall are its close proximity to classes and the opportunity it provides in bringing together students from the various medical-related fields in a relaxed social setting. For additional information visit <http://housing.yale.edu>.

Dining Services

Café Med, located in Harkness Hall at the School of Medicine, is open from 7 a.m. to 7 p.m., Monday through Friday. The menu enhances convenience and choice, with a customizable salad, soup, and rice bar utilizing local and seasonal ingredients; specialty coffees and fresh pastries; a grab-and-go selection of freshly made salads, sandwiches, and entrées; and a daily hot food option. For additional information visit <http://hospitality.yale.edu/retail/cafe-med>.

RESOURCE OFFICE ON DISABILITIES

The Resource Office on Disabilities facilitates accommodations for undergraduate and graduate and professional school students with disabilities who register with and have appropriate documentation on file in the Resource Office. Early planning is critical. Documentation may be submitted to the Resource Office even though a specific accommodation request is not anticipated at the time of registration. It is recommended that matriculating students in need of disability-related course accommodations at Yale University contact the Resource Office by June 15. Special requests for University housing need to be made in the housing application. Returning students must contact the Resource Office at the beginning of each term to arrange for course and exam accommodations.

The Resource Office also provides assistance to students with temporary disabilities. General informational inquiries are welcome from students and members of the Yale community and from the public. The mailing address is Resource Office on Disabilities, Yale University, PO Box 208305, New Haven CT 06520-8305. The Resource Office is located at 35 Broadway (rear entrance), Room 222. Office hours are Monday through Friday, 8:30 a.m. to 4:30 p.m. Voice callers may reach staff at 203.432.2324; fax at 203.432.8250. The Resource Office may also be reached by e-mail (anthony.kulikowski@yale.edu) or through its Web site (<https://rod.ys.yale.edu>).

RESOURCES ON SEXUAL MISCONDUCT

Yale University is committed to maintaining and strengthening an educational, employment, and living environment founded on civility and mutual respect. Sexual misconduct is antithetical to the standards and ideals of our community, and it is a violation of Yale

policy and the disciplinary regulations of Yale College and the graduate and professional schools.

Sexual misconduct incorporates a range of behaviors including sexual assault, sexual harassment, intimate partner violence, stalking, voyeurism, and any other conduct of a sexual nature that is nonconsensual, or has the purpose or effect of threatening, intimidating, or coercing a person. Violations of Yale's Policy on Teacher-Student Consensual Relations also constitute sexual misconduct. Sexual activity requires consent, which is defined as positive, unambiguous, and voluntary agreement to engage in specific sexual activity throughout a sexual encounter.

Yale aims to eradicate sexual misconduct through education, training, clear policies, and serious consequences for violations of these policies. In addition to being subject to University disciplinary action, many forms of sexual misconduct are prohibited by Connecticut and federal law and may lead to civil liability or criminal prosecution. Yale provides a range of services, resources, and mechanisms for victims of sexual misconduct. The options for undergraduate, graduate, and professional school students are described at <http://smr.yale.edu>.

SHARE: Information, Advocacy, and Support

55 Lock Street, Lower Level

Office hours: 9 a.m.–5 p.m., M–F

24/7 hotline: 203.432.2000

<http://sharecenter.yale.edu>

SHARE, the Sexual Harassment and Assault Response and Education Center, has trained counselors available 24/7, including holidays. SHARE is available to members of the Yale community who wish to discuss any experience of sexual misconduct involving themselves or someone they care about. SHARE services are confidential and can be anonymous if desired. SHARE can provide professional help with medical and health issues (including accompanying students to the hospital), as well as advice and assistance with contacting police and/or initiating a formal or informal complaint, and it offers ongoing counseling and support. SHARE works closely with the University-Wide Committee on Sexual Misconduct, the Title IX coordinators, the Yale Police Department, and other campus resources.

If you wish to make use of SHARE's services, you can call the SHARE number (203.432.2000) at any time for a phone consultation or to set up an in-person appointment. You may also drop in on weekdays during regular business hours. Some legal and medical options are time-sensitive, so if you have been assaulted, we encourage you to call SHARE and/or the Yale Police as soon as possible. Counselors can talk with you over the telephone or meet you in person at Acute Care in the Yale Health Center or at the Yale-New Haven Emergency Room. If it is not an acute situation and you would like to contact the SHARE staff during regular business hours, you can contact Carole Goldberg, the director of SHARE (203.432.0310, carole.goldberg@yale.edu), Jennifer Czincz, assistant director (203.432.2610, jennifer.czincz@yale.edu), Amy Myers (203.436.8217, amy.myers@yale.edu), or John Criscuolo (203.494.6247, john.criscuolo@yale.edu).

Title IX Coordinators

203.432.4446

Office hours: 9 a.m.–5 p.m., M–F

<http://provost.yale.edu/title-ix>

Title IX of the Education Amendments of 1972 protects people from sex discrimination in educational programs and activities at institutions that receive federal financial assistance. Sex discrimination includes sexual harassment, sexual assault, and other forms of misconduct. The University is committed to providing an environment free from discrimination on the basis of sex.

Yale College, the Graduate School of Arts and Sciences, and the professional schools have each designated a senior administrator or faculty member to serve as a deputy Title IX coordinator, reporting to Stephanie Spangler, Deputy Provost for Health Affairs and Academic Integrity and the University Title IX Coordinator. Coordinators respond to and address specific complaints, provide information on and coordinate with the available resources, track and monitor incidents to identify patterns or systemic issues, deliver prevention and educational programming, and address issues relating to gender-based discrimination and sexual misconduct within their respective schools. Coordinators are knowledgeable about, and will provide information on, all options for complaint resolution, and can initiate institutional action when necessary. Discussions with a Title IX coordinator are confidential; at times, the coordinator may need to consult with other administrators or take action in the interest of safety. The coordinators also work closely with the SHARE Center, the University-Wide Committee on Sexual Misconduct, and the Yale Police Department.

University-Wide Committee on Sexual Misconduct

203.432.4449

Office hours: 9 a.m.–5 p.m., M–F

<http://provost.yale.edu/uwc>

The University-Wide Committee on Sexual Misconduct (UWC) is an internal disciplinary board for complaints of sexual misconduct available to students, faculty, and staff across the University, as described in the committee's procedures. The UWC provides an accessible, representative, and trained body to fairly and expeditiously address formal complaints of sexual misconduct. UWC members can answer inquiries about procedures and the University definition of sexual misconduct. The UWC is comprised of faculty, administrative, and student representatives from across the University. In UWC cases, investigations are conducted by professional, independent fact finders.

Yale Police Department

101 Ashmun Street

24/7 hotline: 203.432.4400

<http://publicsafety.yale.edu/police/sensitive-crimes-support>

The Yale Police Department (YPD) operates 24/7 and is comprised of highly trained, professional officers. The YPD can provide information on available victims' assistance services and also has the capacity to perform full criminal investigations. If you wish to speak with Sergeant Marnie Robbins Hoffman, the Sensitive Crimes & Support coordinator, she can be reached at 203.432.9547 during business hours or via e-mail at marnie.robbins@yale.edu. Informational sessions are available with the Sensitive Crimes & Support coordinator to discuss safety planning, available options, etc. The YPD works closely with the New Haven State's Attorney, the SHARE Center, the University's Title IX coordinators, and various other departments within the University. Talking to the YPD does not commit you to submitting evidence or pressing charges; with few exceptions, all decisions about how to proceed are up to you.

OFFICE OF INTERNATIONAL STUDENTS AND SCHOLARS

The Office of International Students and Scholars (OISS) coordinates services and support for Yale's 5,000 international students, faculty, staff, and their dependents. OISS staff offers assistance with issues related to employment, immigration, and personal and cultural adjustment, as well as serves as a source of general information about living at Yale and in New Haven. As Yale University's representative for immigration concerns, OISS provides assistance to students, faculty, and staff on how to obtain and maintain legal nonimmigrant status in the United States. All international students and scholars must register with OISS as soon as they arrive at Yale; see <http://oiss.yale.edu/coming>.

OISS programs, like the Community Friends hosting program, daily English conversation groups, U.S. culture workshops and discussions, bus trips, and social events, provide an opportunity to meet members of Yale's international community and become acquainted with the many resources of Yale University and New Haven. Spouses and partners of Yale students and scholars will want to get involved with the International Spouses and Partners at Yale (ISPY), which organizes a variety of programs.

The OISS Web site (<http://oiss.yale.edu>) provides useful information to students and scholars prior to and upon arrival in New Haven, as well as throughout their stay at Yale. International students, scholars, and their families and partners can connect with OISS and the Yale international community virtually through Facebook.

OISS is housed in the International Center for Yale Students and Scholars, which serves as a welcoming venue for students and scholars who want to peruse resource materials, check their e-mail, and meet up with a friend or colleague. Open until 9 p.m. on weekdays during the academic year, the center—located at 421 Temple Street, across the street from Helen Hadley Hall—also provides meeting space for student groups and a venue for events organized by both student groups and University departments. For

more information about reserving space at the center, go to <http://oiss.yale.edu/about/the-international-center/international-center-room-reservations>. For information about the center, visit <http://oiss.yale.edu/about/international-center>.

SECURITY

Yale University Security maintains a presence throughout the Medical Center area and across the Yale campus on a 24/7 basis, both through uniformed security officers and centrally monitored electronic security systems that include video cameras, card readers, intercoms, emergency blue telephones, and intrusion alarm systems.

The Yale Security Department partners with the Yale Police Department by patrolling parking facilities, pedestrian areas, and buildings using marked vehicles, bicycles, and foot patrols. Security officers are also available to assist with lockouts, perform walking escorts, and provide safe rides.

The University Security Department can be reached twenty-four hours a day, seven days a week, by calling 203.785.5555. For additional information regarding public safety at Yale, or to request additional security services for special events, please visit our Web site at <http://publicsafety.yale.edu>.

YSPH Resources for Students

OFFICE OF STUDENT AFFAIRS

47 College Street, 203.785.6260
Frank Grosso, Associate Dean
Sarah Harmon, Associate Director/Registrar

The Office of Student Affairs offers services and provides resources designed to enhance student life at YSPH. The associate dean has primary responsibility for the student experience at YSPH, represents the interests of all students to the faculty, and participates in policy decisions for the school. Dean Grosso and Sarah Harmon are available to discuss academic, extracurricular, or personal issues with YSPH students. The Office of Student Affairs also coordinates orientation, Commencement, and other student programs, and serves as the administrative liaison with YSPH student organizations. The goal of the office is to ensure that every YSPH student is productively engaged in both academic and nonacademic aspects of school life.

CAREER MANAGEMENT CENTER

47 College Street, 203.785.2827, 203.785.4285
Felicia Spencer, Director

The Career Management Center assists students in developing, managing, and implementing career plans and strategies through a number of programs and resources.

Career Counseling

The Career Management Center advises students on a wide range of career development issues, including but not limited to creating effective résumés, honing interview skills, exploring summer internship options, and discussing opportunities for post-graduation jobs or study.

Professional Skills Seminars

The Career Management Center administers a series of seminars to help prepare students to successfully manage all aspects of a job or internship search as well as equip them with the skills and knowledge to succeed in their chosen career paths. Students are trained in mock interviewing, public speaking, networking with alumni, and business communications.

Recruiting and Job Information

The Career Management Center works to attract a variety of organizations seeking to hire public health professionals. The YSPH CareerBoard, a Web-based recruitment tool, is a centralized source for posting job, internship, and fellowship opportunities.

Internship

The summer internship between the first and second years is an important learning experience, providing students with an opportunity to apply the public health theory and knowledge learned in their course work in real-world settings and explore or confirm a particular career interest. Students are expected to perform full-time work for typically ten to twelve weeks and no less than eight weeks in a public health setting, domestically or globally. The Office of Public Health Practice administers the internship program, assisting students to optimize their learning experience. The Career Management Center also helps students identify internship opportunities through on-campus recruiting, job postings, and alumni and faculty contacts.

Career Trips

The Career Management Center sponsors and organizes career trips to Washington, D.C., and New York City to help introduce students to the broad array of public health opportunities in the public, private, and nonprofit sectors.

CUSHING/WHITNEY MEDICAL LIBRARY

333 Cedar Street, 203.785.5359 (circulation desk), 203.737.2963 (public health librarian)
 John Gallagher, Director
 Kate Nyhan, Research and Education Librarian for Public Health

The Harvey Cushing/John Hay Whitney Medical Library strives to be a center of excellence that develops and sustains services and resources to support the biomedical, health, and public health care information needs of Yale University and the Yale–New Haven Medical Center. The library welcomes students to use its services, resources, and spaces for course work, research, and professional development. It is open until 2 a.m. on week-nights during the term and offers twenty-four-hour key-card access to its Computer & Study Space.

Resources

The library's collections include more than 15,000 electronic journals, 92 databases, and 33,000 electronic books, in addition to more than 250,000 print textbooks and books available for circulation or on reserve. Yale students have access to the library's electronic collections from any remote computer using VPN software. Books from other Yale libraries and Borrow Direct schools can be delivered to the medical library circulation desk, and Get It @ Yale service provides fast electronic access to chapters and articles. The special collections of the Medical Historical Library and the Cushing Center—including medical incunabula, rare books, prints, photographs, and objects—support research in the history of medicine and public health. The library also lends students chargers, display adapters, video and audio recording equipment, and laptops, and it provides free subscriptions and support for citation management software (EndNote and Refworks).

Workshops and Consultations

The library offers regular workshops on such topics as PubMed, systematic reviews, research impact, genome browsers, Embase, and Endnote; see <http://library.medicine.yale.edu/classes>. Students can also meet one-on-one with their personal librarian to discuss how to work with public health information more effectively. Typical topics include literature reviews, the differences between biomedical databases, using controlled vocabularies in fast and systematic searching, geographic information systems, research data management, citation management software, strategies for searching gray literature, how to find datasets (published, open, and licensed), and how to keep up with new publications in a particular research area. Research guides and video tutorials are available at <http://library.medicine.yale.edu/tutorials>.

Library Spaces and Technology

The library offers reservable group study spaces and conference rooms, all featuring large plasma monitors or data projectors. Individual study carrels and tables are located on all levels of the library; comfortable armchairs and a meditation room are on the lower level; a newspaper lounge is on the main floor. Windows and Macintosh computers are available in the Information Room and the 24/7 Computer & Study Space. All computers have access to the Internet, and many include productivity software such as Microsoft Office, EndNote, and other tools including desktop publishing software, statistical and mapping software (SAS, SPSS, ArcGIS, etc.), and database management software. Black-and-white and color printers/copiers/scanners are available in both spaces. In addition, the library offers two scanning stations (Windows and Macintosh) in the 24/7 space. Software on these computers includes a variety of Adobe graphics applications and Final Cut for video editing and production. The Cushing Center and a Yale Information Technology Services walk-in center are located on the lower levels.

OFFICE OF THE REGISTRAR

47 College Street, 203.785.6260
Sarah Harmon, Registrar

The registrar's office prepares course schedules, enrolls and registers students, maintains student records, and monitors academic progress. The following can be obtained from the registrar's office:

- Proof of student status. The registrar can provide a letter attesting to your student status and process loan deferment forms.
- Information on degree requirements.
- Transcripts. Copies of transcripts must be requested from the registrar's office. The transcript request form is available at <http://publichealth.yale.edu/about/gateways/students/MPH>. Two business days should be allowed for the processing of requests. There is no charge for an official transcript. By law, the registrar may only release YSPH transcripts. Prior transcripts and recommendations included in a student's application to YSPH must be obtained from their original source.

- Lockers. A limited number of lockers are available for student use during the academic year. Students are responsible for providing a lock, safeguarding the contents of the locker, and cleaning out the locker at the end of the academic year (i.e., May).
- Nondisclosure of personal information forms.

OFFICE OF ALUMNI AFFAIRS

47 College Street, 203.785.6245

Martin Klein, Associate Dean, Development and External Affairs

The YSPH Office of Alumni Affairs strengthens institutional relationships and develops and implements programs that sustain an active alumni network. The office, in collaboration with the Association of Yale Alumni in Public Health (AYAPH), facilitates the participation of more than 5,000 alumni in the life of the School and provides a voice for alumni, strengthens alumni connections with the School, and promotes alumni networking. AYAPH is led by a group of dedicated alumni volunteers who serve on its board of directors.

Alumni Day, held annually in New Haven, features a symposium on a timely public health issue, as well as an alumni awards luncheon that recognizes outstanding contributions of our alumni to the field of public health and/or in service to YSPH. Another popular alumni gathering is held in conjunction with the annual meeting of the American Public Health Association (APHA). With APHA hosting its annual meeting in a different U.S. city each year, the schedule ensures participation of graduates located throughout the United States.

YSPH has a strong alumni network, and in addition to participating in formal alumni events, graduates of YSPH routinely assist students in their career paths and networking activities. Alumni are also essential to the practice curriculum through teaching, serving as preceptors, and providing applied research sites for projects and theses.

OFFICE OF PUBLIC HEALTH PRACTICE

135 College Street

Rafael Pérez-Escamilla, Ph.D., Director

Elaine O'Keefe, Executive Director

The Office of Public Health Practice was established in 2008 to enhance public health practice education, applied research, and community-university health partnerships. The office is a bridge to domestic and international agencies engaged in public health work and serves as an on-site resource for students seeking meaningful learning experiences in the world of public health practice. Its services include helping M.P.H. students select appropriate summer internship placements and assuring that they have multiple opportunities to apply theoretical classroom knowledge to genuine public health issues through practice-oriented courses that are offered during the academic year in addition to the summer internship program.

Student Organizations and Committees

STUDENT GOVERNMENT

Student Association of Yale School of Public Health

SAYPH is organized by YSPH students for YSPH students. SAYPH works to enhance the educational experience of each student at the School by sponsoring educational and social activities, providing a forum for students' ideas and concerns, and acting as a liaison with the administration. Through SAYPH students get involved in many areas, including:

- New student orientation.
- Lecture series, films, colloquia, and other programs of interest to the public health community.
- Recruitment of new students to YSPH.
- Community service.
- Social events.
- Commencement activities.

SAYPH is headed by an Executive Committee consisting of a president, a social committee chair, professional development committee chair, community service chair, and communications chair. There are at least two departmental representatives acting as liaisons between students and the faculty and administration.

Graduate and Professional Student Senate (GPSS)

The Graduate and Professional Student Senate (GPSS or “Yale Senate”) is composed of student-elected representatives from each of the thirteen graduate and professional schools. Any student enrolled in these schools is eligible to run for a senate seat during fall elections. Senate meetings occur on alternating Thursdays and are open to the entire graduate and professional school community, as well as representatives from the Yale administration. The senate advocates for student concerns and advancement by serving as a liaison between students and Yale administration, faculty, and officers. It also facilitates social interaction among graduate and professional students, works with local groups and initiatives to provide opportunities for students to give back to the community, and provides funding for student groups and organizations. The senate supervises the Graduate and Professional Student Center at Yale (GPSCY), at 204 York Street, which provides meeting space for student organizations and is home to Gryphon's Pub. For more information, please visit <http://gpss.yale.edu>.

SPECIAL INTEREST GROUPS

Students in the School of Public Health participate in a diverse range of special interest groups, from Yale chapters of professional associations to student-run clinics and other public service organizations. For additional information, see Student Organizations at <http://publichealth.yale.edu/about/gateways/students/orgs>.

Appendix I:

YSPH Practice Requirement Guidelines

All M.P.H. candidates must complete a practicum to integrate classroom learning with real-life experience in a public health work environment, which allows them to learn from professionals in the field. M.P.H. students may fulfill the Public Health Practice Requirement by one of the following means:

1. Completing an appropriate public health summer internship – the preferred method for fulfilling the practicum requirement, as it offers a sustained and concentrated course of experiential learning.
2. Completing EPH 542b, Practice-Based Community Health Research.
3. Completing EPH 500b, Public Health Practicum, offered to second-year students and one-year professional students only.
4. Completing EPH 555b, Practicum in Climate Change, Sustainability, and Public Health.
5. Completing HPM 555a,b, Health Policy or Health Care Management Practicum, for one or two terms.
6. Completing CDE 596b/LAW 21416, Global Health Justice Practicum.

Advanced Professional M.P.H. and Accelerated M.B.A./M.P.H. students are not required to complete a summer internship and must fulfill their practicum requirement during the academic year by taking one of the courses listed above.

In planning your practicum, please refer to the following guidelines, which apply to domestic and/or global experiential learning placements that qualify as meeting the M.P.H. practicum requirement, including the summer internship and other community agency assignments that are part of approved practice courses.

1. Practicum may occur in a wide variety of settings at the local, regional, national, or international level but must be outwardly focused on a public health problem or issue. Acceptable venues would include governmental entities as well as nongovernmental and private-sector organizations with a public health component such as pharmaceutical companies, hospitals, managed care/health maintenance organizations, and consulting firms.
2. Practicum affords opportunity to participate in the full spectrum of defining, analyzing, and addressing a real-life public health problem or issue, either directly or through observation, consultation with others working on the problem, participation in relevant meetings or activities, and pertinent reading.
3. Practicum entails one or more of the following roles:
 - Assessment, monitoring, and/or surveillance of population health indicators, social determinants of health, inequities associated with race/ethnicity and socioeconomic status, environmental/occupational hazards and exposures, and other public health issues;
 - Participating in the development and/or execution of applied public health research in the biological, environmental, and social/behavioral realms that has an immediate impact on public health, including translational, evaluation, and

- epidemiological research efforts that contribute to the evidence-base and efficacy of public health practice;
- Planning, designing, implementing, and evaluating public health interventions;
 - Developing disease prevention and health promotion, media advocacy, or risk communication materials;
 - Developing, implementing, and evaluating public health laws, regulations, and policy;
 - Participating in administrative/management activities of governmental and nongovernmental public health agencies and/or health service delivery systems such as hospitals or community health centers. Activities could include quality improvement, organizational analysis and restructuring processes, strategic and business planning, organizational policy and protocol, financial management, budgeting and reimbursement processes, preparation of internal or external reports, human resources management, workforce development and credentialing, and addressing regulatory compliance issues such as audits and accreditation processes;
 - Supporting the development and goals of public health coalitions through community organizing and advocacy efforts, needs assessments, strategic and participatory community planning, leadership development, and assisting with the development and implementation of community health improvement plans that respond to local needs and priorities.
4. Practicum integrates public health theory, knowledge, and skills, and applies and reinforces the competencies in M.P.H. course work.
 5. Practicum typically aligns with the student's area of specialization.
 6. The practicum project and student role are appropriate for the M.P.H. level.
 7. The practicum agency and preceptor have requisite population health orientation, public health expertise, and infrastructure to support M.P.H.-level student learning experience.
 8. The practicum has deliverables of tangible value to the mission of the placement agency/site.

Appendix II: Thesis Guidelines

TYPES OF THESES

The following seven types of theses are acceptable:

Investigative Thesis

The investigative thesis takes an in-depth look at a specific health problem or topic, describing its public health importance and analyzing it from a disciplined perspective. This thesis should include the following:

1. Definition of the problem;
2. Presentation of the study population and the methods by which data were acquired;
3. Analysis of the results;
4. Discussion of the implications of the results;
5. Recommendations.

Research Study Demonstrating Mastery of Methodology

This type of thesis requires sophisticated analysis and application. Consequently, students should be sure of their readiness to undertake it. This thesis should include the following:

1. Statement of methodological problem;
2. Comparison of available solutions, discussing the advantages and disadvantages of each;
3. Either (a) Choice and application of one of the available solutions, or (b) Development of a new solution with discussion of the advantages and disadvantages of that solution.

Administrative Case Study

An administrative thesis defines, describes, analyzes, and interprets an actual administrative, problem-solving activity undertaken during a student's field work. A variety of standard case study formats may be employed. An administrative case study thesis should be planned in advance with appropriate techniques for systematic observation and recording of data as the project progresses. This thesis usually includes the following:

1. Definition of the problem;
2. Description of setting, structure, function, and relationships;
3. Relationship of student to problem (authority and accountability);
4. Procedural description (case description, process, outcome);
5. Analysis of events with reference to theory;
6. Assessment of the administrative solution.

Program Analysis, Evaluation, or Projection

This type of thesis examines either retrospectively or prospectively some particular health problem. This thesis should include the following:

1. Definition of the problem that the program addresses;
2. Statement of program goals and objectives;
3. Specification of available data such as the following:
 - a. Target population (characteristics, distribution, levels of protection, morbidity);
 - b. Historical information, goals, politics;
 - c. Resources and use of resources (acceptability, accessibility);
 - d. Basis of intervention, data on knowledge, attitudes and practices;
 - e. Cost analysis;
 - f. Specification of further data needs.

Special Project

This type of thesis incorporates a product useful in the teaching or practice of public health such as a curriculum, syllabus, or course for a school program or on-the-job training; specific educational aids (perhaps a computer-assisted learning experience, a programmed instruction course, or a training manual); a movie, videotape, or slide package; a pamphlet for use in health information; a set of formal administrative guidelines to implement a law or administrative decision; or architectural plans for a health facility.

In addition to the product, the student must produce a written analysis that includes the following:

1. A rationale for the product and the anticipated audience/users;
2. Review of relevant literature;
3. Reasons for the selection of the chosen medium/method, including relevant theory;
4. Proposal for method to evaluate the product;
5. Discussion of the limitations of the product.

The special project may require review by the Committee on Academic Progress.

THESIS ADVISERS (READERS)

The type of thesis, choice of topic, and details of methodology are the joint responsibility of the student and the thesis adviser (first reader). The thesis adviser is determined by mutual consent between the reader and the student and may or may not be the student's faculty adviser. The thesis adviser must have a faculty appointment in the Yale School of Public Health.

The first reader must have a primary or secondary faculty appointment at YSPH. Acceptable appointments are: (1) ladder faculty at the rank of assistant professor and above, and (2) non-ladder faculty at the rank of associate research scientist and above. Students must request approval for first readers who have other types of non-ladder faculty appointments at YSPH (e.g., lecturer, instructor, etc.). To request approval, students need to provide the registrar with a copy of the first reader's CV along with the thesis reader form for approval by the Committee on Academic Progress. Students unsure of whether someone has an appointment at YSPH should consult the comprehensive list of all faculty members, by department, at the front of the YSPH Bulletin.

The second reader should have a faculty appointment at YSPH, Yale University, or another outside academic institution. Students must request approval for second readers whose faculty appointment is outside of Yale or who do not have a faculty appointment at an academic institution. To do so, students must provide the registrar with a copy of the second reader's CV along with the thesis reader form for approval by the Committee on Academic Progress.

TIMELINE FOR M.P.H. THESIS

September Divisional meetings to review specific thesis requirements and timelines

October 30 Thesis reader forms (signed by both readers) due to registrar

November 2 First draft of thesis prospectus due to first reader (thesis adviser)

December 1 Final draft of thesis prospectus due to first reader (thesis adviser) and YSPH registrar (students will not be allowed to register for thesis credit the following term if the prospectus is not submitted)

Mid-March First draft of thesis due to readers (student should include a summary of major analyses and tables)

April 15 Deadline for final thesis to be submitted to readers for final grading

May 1 Deadline for final grades to be submitted to registrar from readers and for student submission of electronic copy

ORGANIZATION

The thesis must be assembled as follows:

A. Title Page (Title cannot exceed 60 characters)

B. A one-page, double-spaced abstract

The abstract is the final statement on the problem addressed by the thesis and should incorporate the most mature insights attained.

C. Acknowledgments (if desired)

D. Table of Contents

E. List of Tables (if any)

F. List of Figures (if any)

G. Body of the Thesis

The following organization of the body of the thesis is recommended:

1. Introduction

a. Brief statement of specific objectives of the investigation

b. Statement of general problem addressed by the thesis

c. Elaboration of objectives and/or hypotheses, including the relation to the general problem

2. Review of Studies Relevant to the Problem

3. Research Design

a. Specific research design and method

b. Reasons for selection

c. Method of analysis, including justification for statistical tests

4. Presentation and Analysis of Findings

This is the major portion of the thesis. The significance of the findings should be discussed and an assessment made of their applicability to current theory and practice. Analysis and discussion may be presented together in one chapter or separately in two chapters.

5. Conclusions

- a. Summary of findings
- b. Limitations of findings and other limitations of the study
- c. Conclusions based on the study
- d. Relevant recommendations for program development or further research

H. References

A list of the pertinent references consulted in preparing the thesis should be included. Any standard and consistent format for presentation of footnotes and references is acceptable.

I. Appendix or Appendices

ELECTRONIC SUBMISSION OF THESIS

The final, completed version of the thesis must be submitted electronically, by midnight on May 1, at www.etsadmin.com/publichealthyle.

DEAN'S PRIZE FOR OUTSTANDING THESIS

The Dean's Prize for Outstanding Thesis may be awarded to a small number (maximum of four) of students for extraordinary academic achievement on the M.P.H. thesis. Thesis advisers who recognize a student's work as truly exceptional may nominate the student for this prize. Winners are announced at the YSPH Commencement ceremony.

THESIS PENDING (DELAYED SUBMISSION OF THESIS)

Students who have not received final grades from both readers and submitted their thesis electronically by May 1 will be considered "thesis pending" and will receive a grade of "Incomplete" for the thesis. Students who are "thesis pending" will not be allowed to participate in the Commencement ceremony and will not receive the M.P.H. degree until all requirements are complete.

Students who are "thesis pending" are given one year to complete the thesis without penalty. At the end of the one-year period, the grade of "Incomplete" will be changed to a grade of "F" if the thesis has not been submitted. The student will be required to register for the thesis course and pay the per course unit tuition charge (\$4,180 per course unit) in order to submit the completed thesis. All M.P.H. degree requirements including the thesis must be completed within five years of the student's date of matriculation.

PUBLICATION GUIDELINES

The thesis may be published independently. It also may be published under joint or multiple authorship if advisers or agency personnel have contributed significantly to the final product. Significance is interpreted to mean contributions such as expanding

theory or techniques of analysis in ways beyond the usual role of an adviser. Supplying the database does not entitle the supplier to authorship. When students work on sponsored research, the thesis adviser and the student should sign a letter of agreement on funding, use of database or materials, deadlines, publication rights, and authorship before work on the thesis begins.

PUBLICATION PROCESS FOR THE M.P.H. THESIS

The following are publication guidelines that are intended to avoid miscommunication and differential expectations of authorship between students and thesis advisers.

1. When the prospectus is submitted, thesis advisers will discuss publication with students, including desire for publication, description of the publication process, possible venues, authors, determination of authorship order, and logistics.
2. If the thesis adviser provides the data, then the adviser should create a written publication/data sharing agreement. The agreement should be signed by both the adviser and the student before work on the thesis is started. The agreement should include at the minimum:
 - Process for order of authorship
 - Timeline for publication and process if timeline is not met
 - Process and expectations of revisions
3. If the thesis adviser does not provide the data, then the thesis adviser should work with the student to draft a similar document to be completed and signed by the student and the primary data source. Guidelines should be consistent with any established policies of the primary data source. This should be done whether or not the thesis adviser is included as an author on the publication.
4. In general, if the manuscript has not been submitted for publication within a year after graduation, the thesis adviser will have the right to prepare the manuscript for publication.

The Work of Yale University

The work of Yale University is carried on in the following schools:

Yale College Est. 1701. Courses in humanities, social sciences, natural sciences, mathematical and computer sciences, and engineering. Bachelor of Arts (B.A.), Bachelor of Science (B.S.).

For additional information, please visit <http://admissions.yale.edu>, e-mail student.questions@yale.edu, or call 203.432.9300. Postal correspondence should be directed to Office of Undergraduate Admissions, Yale University, PO Box 208234, New Haven CT 06520-8234.

Graduate School of Arts and Sciences Est. 1847. Courses for college graduates. Master of Advanced Study (M.A.S.), Master of Arts (M.A.), Master of Science (M.S.), Master of Philosophy (M.Phil.), Doctor of Philosophy (Ph.D.).

For additional information, please visit <http://gsas.yale.edu>, e-mail graduate.admissions@yale.edu, or call the Office of Graduate Admissions at 203.432.2771. Postal correspondence should be directed to Office of Graduate Admissions, Yale Graduate School of Arts and Sciences, PO Box 208323, New Haven CT 06520-8323.

School of Medicine Est. 1810. Courses for college graduates and students who have completed requisite training in approved institutions. Doctor of Medicine (M.D.). Post-graduate study in the basic sciences and clinical subjects. Five-year combined program leading to Doctor of Medicine and Master of Health Science (M.D./M.H.S.). Combined program with the Graduate School of Arts and Sciences leading to Doctor of Medicine and Doctor of Philosophy (M.D./Ph.D.). Master of Medical Science (M.M.Sc.) from the Physician Associate Program.

For additional information, please visit <http://medicine.yale.edu/education/admissions>, e-mail medical.admissions@yale.edu, or call the Office of Admissions at 203.785.2643. Postal correspondence should be directed to Office of Admissions, Yale School of Medicine, 367 Cedar Street, New Haven CT 06510.

Divinity School Est. 1822. Courses for college graduates. Master of Divinity (M.Div.), Master of Arts in Religion (M.A.R.). Individuals with an M.Div. degree may apply for the program leading to the degree of Master of Sacred Theology (S.T.M.).

For additional information, please visit <http://divinity.yale.edu>, e-mail divinity.admissions@yale.edu, or call the Admissions Office at 203.432.5360. Postal correspondence should be directed to Admissions Office, Yale Divinity School, 409 Prospect Street, New Haven CT 06511.

Law School Est. 1824. Courses for college graduates. Juris Doctor (J.D.). For additional information, please visit www.law.yale.edu, e-mail admissions.law@yale.edu, or call the Admissions Office at 203.432.4995. Postal correspondence should be directed to Admissions Office, Yale Law School, PO Box 208215, New Haven CT 06520-8215.

Graduate Programs: Master of Laws (LL.M.), Doctor of the Science of Law (J.S.D.), Master of Studies in Law (M.S.L.). Doctor of Philosophy (Ph.D.) awarded by the Graduate School of Arts and Sciences. For additional information, please visit www.law.yale.edu, e-mail gradpro.law@yale.edu, or call the Graduate Programs Office at

203.432.1696. Postal correspondence should be directed to Graduate Programs, Yale Law School, PO Box 208215, New Haven CT 06520-8215.

School of Engineering & Applied Science Est. 1852. Courses for college graduates. Master of Science (M.S.) and Doctor of Philosophy (Ph.D.) awarded by the Graduate School of Arts and Sciences.

For additional information, please visit <http://seas.yale.edu>, e-mail grad.engineering@yale.edu, or call 203.432.4252. Postal correspondence should be directed to Office of Graduate Studies, Yale School of Engineering & Applied Science, PO Box 208267, New Haven CT 06520-8267.

School of Art Est. 1869. Professional courses for college and art school graduates. Master of Fine Arts (M.F.A.).

For additional information, please visit <http://art.yale.edu>, e-mail artschool.info@yale.edu, or call the Office of Academic Affairs at 203.432.2600. Postal correspondence should be directed to Office of Academic Affairs, Yale School of Art, PO Box 208339, New Haven CT 06520-8339.

School of Music Est. 1894. Graduate professional studies in performance, composition, and conducting. Certificate in Performance, Master of Music (M.M.), Master of Musical Arts (M.M.A.), Artist Diploma (A.D.), Doctor of Musical Arts (D.M.A.).

For additional information, please visit <http://music.yale.edu>, e-mail gradmusic.admissions@yale.edu, or call the Office of Admissions at 203.432.4155. Postal correspondence should be directed to Yale School of Music, PO Box 208246, New Haven CT 06520-8246.

School of Forestry & Environmental Studies Est. 1900. Courses for college graduates. Master of Forestry (M.F.), Master of Forest Science (M.F.S.), Master of Environmental Science (M.E.Sc.), Master of Environmental Management (M.E.M.). Doctor of Philosophy (Ph.D.) awarded by the Graduate School of Arts and Sciences.

For additional information, please visit <http://environment.yale.edu>, e-mail fesinfo@yale.edu, or call the Office of Admissions at 800.825.0330. Postal correspondence should be directed to Office of Admissions, Yale School of Forestry & Environmental Studies, 195 Prospect Street, New Haven CT 06511.

School of Public Health Est. 1915. Courses for college graduates. Master of Public Health (M.P.H.). Master of Science (M.S.) and Doctor of Philosophy (Ph.D.) awarded by the Graduate School of Arts and Sciences.

For additional information, please visit <http://publichealth.yale.edu>, e-mail ysph.admissions@yale.edu, or call the Admissions Office at 203.785.2844.

School of Architecture Est. 1916. Courses for college graduates. Professional degree: Master of Architecture (M.Arch.); nonprofessional degree: Master of Environmental Design (M.E.D.). Doctor of Philosophy (Ph.D.) awarded by the Graduate School of Arts and Sciences.

For additional information, please visit <http://architecture.yale.edu>, e-mail gradarch.admissions@yale.edu, or call 203.432.2296. Postal correspondence should be directed to the Yale School of Architecture, PO Box 208242, New Haven CT 06520-8242.

School of Nursing Est. 1923. Courses for college graduates. Master of Science in Nursing (M.S.N.), Post Master's Certificate, Doctor of Nursing Practice (D.N.P.). Doctor of Philosophy (Ph.D.) awarded by the Graduate School of Arts and Sciences.

For additional information, please visit <http://nursing.yale.edu> or call 203.785.2389. Postal correspondence should be directed to Yale School of Nursing, Yale University West Campus, PO Box 27399, West Haven CT 06516-7399.

School of Drama Est. 1925. Courses for college graduates and certificate students. Master of Fine Arts (M.F.A.), Certificate in Drama, One-year Technical Internship (Certificate), Doctor of Fine Arts (D.F.A.).

For additional information, please visit <http://drama.yale.edu>, e-mail ysd.admissions@yale.edu, or call the Registrar/Admissions Office at 203.432.1507. Postal correspondence should be directed to Yale School of Drama, PO Box 208325, New Haven CT 06520-8325.

School of Management Est. 1976. Courses for college graduates. Master of Business Administration (M.B.A.), Master of Advanced Management (M.A.M.). Doctor of Philosophy (Ph.D.) awarded by the Graduate School of Arts and Sciences.

For additional information, please visit <http://som.yale.edu>. Postal correspondence should be directed to Yale School of Management, PO Box 208200, New Haven CT 06520-8200.

The University is committed to basing judgments concerning the admission, education, and employment of individuals upon their qualifications and abilities and affirmatively seeks to attract to its faculty, staff, and student body qualified persons of diverse backgrounds. In accordance with this policy and as delineated by federal and Connecticut law, Yale does not discriminate in admissions, educational programs, or employment against any individual on account of that individual's sex, race, color, religion, age, disability, status as a protected veteran, or national or ethnic origin; nor does Yale discriminate on the basis of sexual orientation or gender identity or expression.

University policy is committed to affirmative action under law in employment of women, minority group members, individuals with disabilities, and protected veterans.

Inquiries concerning these policies may be referred to Valarie Stanley, Director of the Office for Equal Opportunity Programs, 221 Whitney Avenue, 3rd Floor, 203.432.0849. For additional information, see www.yale.edu/equalopportunity.

Title IX of the Education Amendments of 1972 protects people from sex discrimination in educational programs and activities at institutions that receive federal financial assistance. Questions regarding Title IX may be referred to the University's Title IX Coordinator, Stephanie Spangler, at 203.432.4446 or at titleix@yale.edu, or to the U.S. Department of Education, Office for Civil Rights, 8th Floor, 5 Post Office Square, Boston MA 02109-3921; tel. 617.289.0111, fax 617.289.0150, TDD 800.877.8339, or ocr.boston@ed.gov.

In accordance with federal and state law, the University maintains information on security policies and procedures and prepares an annual campus security and fire safety report containing three years' worth of campus crime statistics and security policy statements, fire safety information, and a description of where students, faculty, and staff should go to report crimes. The fire safety section of the annual report contains information on current fire safety practices and any fires that occurred within on-campus student housing facilities. Upon request to the Office of the Deputy Vice President for Human Resources and Administration, PO Box 208322, 2 Whitney Avenue, Suite 810, New Haven CT 06520-8322, 203.432.8049, the University will provide this information to any applicant for admission, or prospective students and employees may visit <http://publicsafety.yale.edu>.

In accordance with federal law, the University prepares an annual report on participation rates, financial support, and other information regarding men's and women's intercollegiate athletic programs. Upon request to the Director of Athletics, PO Box 208216, New Haven CT 06520-8216, 203.432.1414, the University will provide its annual report to any student or prospective student. The Equity in Athletics Disclosure Act (EADA) report is also available online at <http://ope.ed.gov/athletics>.

For all other information relating to the School of Public Health, please telephone 203.785.6260; consult the Web site, <http://publichealth.yale.edu>; or write to the Office of Student Affairs, School of Public Health, 47 College Street, Suite 108, New Haven CT 06510.
